Lucy had met Ralph at a jazz concert and soon began to visit his shabby, one-room apartment in a cheap rent district of the city. Her feeling toward him was one of helpless physical attraction, intensified, no doubt, by the fact that she had become a marijuana smoker.

"I was still trying to avoid my parents' constant questions," Lucy said, continuing her story in the sunny living room of her parents' home in a well-to-do suburb. "Then Ralph offered me a solution to the whole problem. He suggested I move in with him."

"By that time I was hooked on 'H'—as heroin is known in the trade. I didn't graduate to it just like that. It was Ralph's constant coaxing that won me over. Everybody who is a heroin user always wants to get everybody else hooked on the stuff. They hate a knocker against narcotics."

"At least that's how it was at first. Soon I found out my problems were multiplied by the hundreds."

At Ralph's insistence, Lucy stole out of her house one night with two suitcases full of clothes. She moved in with Ralph. That night they "celebrated" by giving her a shot of heroin.

"I used to watch Ralph get a fix (that's what the users call taking a shot) and I would see him turn from someone sullen and indifferent into a gay person I loved. I knew that smoking pot made me feel as if I were riding on top of the world. Of course, between reefer I was moody and nervous. But Ralph would manage to keep me supplied, just as Hank had."

I asked Lucy if she had taken any money with her when she left home and she redented in painful embarrassment.

"I knew my mother had her own little fund in a teapot in the kitchen," she said finally. "There was \$200 in it. I took that."

Narcotics agents say that, according to interviews with youthful dope addicts they nab, some other form of delinquency always comes before the dope. Lucy is a comparative exception. In her case things were reversed. However, police will admit that there are undoubtedly many teen-age users of

dope whose cases never come up in the courts because their parents find out in time and manage to hush things up.

Lucy went back to the night in Ralph's apartment that she took her first fix of H.

"Ralph started me on speedballs, which are half cocaine and half heroin. I took to it like a kid to candy. I liked it immediately. All of a sudden everything in life seemed to be clarified. No more worries, no more problems."

Lucy's \$200 soon disappeared, most of it spent for heroin. Soon she found out where Ralph got his money. The pawn ticket for the gun that he had dropped at her parents' home had been swapped back. He would disappear some nights with the weapon. Then he would come back with varying amounts of money. Ralph was a thief and a robber.

At that point, Lucy recalls, her upbringing got the best of her for a while. She told Ralph both of them ought to get jobs.

"I had bleached my hair a dizzy sort of blonde color, thinking it would help hide me from my parents and the private detectives they hired. My skin became a sickly yellowish gray almost as if I had jaundice. I had gone from 120 pounds to about 105. I looked frowsy and terrible and nobody would hire me."

Then one night Ralph didn't come home. Lucy waited in terror until he finally returned the following afternoon. He had been picked up for questioning by a policeman and released.

"Ralph asked me to marry him. He said we ought to take precautions in case he was arrested again. First of all, it would look better if we were married instead of living together. Secondly, he gave me instructions on getting stuff to him in case he was kept in jail."

The marriage, Lucy said, was meaningless.

"All you want to do is get fixed up and then sit around with other hypos and maybe listen to jazz. You don't talk too much. Loud noises bother you. You don't care where you live or how you look as long as you've got H. Most hypos are just plain dirty."

"By the time you find out there is no glamor or fun in being hooked on narcotics, it's too late."

Ralph's predictions came true. A few weeks later he was arrested by a narcotics squad agent. A policeman came to the apartment to question Lucy. When he left, she packed her clothes and left, too. She found a furnished room in a different part of the city.

"I remembered all the ways Ralph had told me to get H to him in jail. I knew he had taken a small supply hidden on his person. He told me if he was kept in jail to write him a letter on paper soaked in a strong heroin solution. I was to dry the paper, soak it again, dry it, and so on. This way a lot of heroin is absorbed. When a user in jail gets a letter he thinks has been soaked, he takes a spoonful of water and heats it with a match. The warm water soaks up the dried heroin on the paper. It doesn't make a strong solution, but it's better than nothing."

But Lucy didn't write to Ralph or try to see him. First of all, she was afraid for herself. Second of all, she was out of money. And she craved H.

"Oh, how I craved it. I was lost, but good."

So strong was her desire that Lucy had to make a decision about earning money. She could think of only two easy ways. One was to start picking up men for money. Her suburban upbringing cast that aside.

"By that time I had a 2-cap (capsule) a day habit. That isn't gigantic—some hypos take 10 caps a day. But it was big enough to make me decide to try to earn money by peddling the stuff to others."

Lucy had gone with Ralph several times to buy heroin. She knew a few people in the business. She decided to offer herself as a seller of dope.

"It can be a profitable business, all right. Why does it cost so much? Because of enforcement. The police, the narcotics agents keep the price up by catching up with so many sources of the stuff. If they didn't, many more people would be taking dope, believe me."

Hiroshima

REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. HAYS of Arkansas. Mr. Speaker, today an American plane is dropping flowers upon the city of Hiroshima to mark the sixth anniversary of the dropping of the atomic bomb. This should be a splendid symbol of the friendship which the people of America bear for the people of Japan and of the aspirations of both nations for lasting peace. One of the heroes of Hiroshima was Dr. Kiyoshi Tanimoto, pastor of the Methodist Church. In February of this year Dr. Tanimoto visited our country and I had the privilege of talking with him. It was evident that he entertained no bitterness toward the United States and that, if his people had felt any resentment over our action, such sentiment had vanished as a result of occupation policies which he described as compassionate and constructively helpful.

Dr. Tanimoto's interpretation of the significance of Hiroshima is presented in a recent article by Glenn Everett in the columns of the Messenger, an outstanding church publication. As a Christian minister, Dr. Tanimoto is doing much to strengthen the ties between our nations and to give voice to the hopes of millions of people in both hemispheres for a just and lasting peace. In the faith of such men as Dr. Tanimoto and in the application of Christian principles to the problems of our world can be found the best assurances of peace based upon justice and freedom.

Under leave to extend my remarks, I include Dr. Tanimoto's account, as follows:

On the morning of August 6, 1945, we in Hiroshima underwent one of the most terrible experiences in the history of mankind when our city was struck without warning by an atomic bomb.

I was helping a friend move some of his household possessions into the suburbs, he having helped me the week before move some furnishings of my church, since we were told by authorities to anticipate an attack on Hiroshima, though we supposed it would be fire bombs from B-29's, such as Tokyo and other cities had suffered, not by a new secret weapon. I happened to be behind a hill 2 miles from the spot where the bomb exploded and thus was protected from its burning flash. However, we saw the flash, many times brighter than the sun, streak through midair, and we were instantly filled with terror. Instinctively I dived be-

tween two rocks in a garden and in about 10 seconds a great blast of air struck me. Five miles away my mother-in-law reported they heard a great explosion, but in Hiroshima itself it was too deafening to be heard by the human ear.

I ran to the top of the hill and when I reached there I could see the whole city was on fire. Then I realized it was a total attack, and that all of Hiroshima had, in an instant, been blasted and set afire. Within 10 minutes up the hill toward me came a most dreadful procession, thousands of people seeking to escape from the center of the city. Shocking to say, many were completely naked, their clothes entirely burned off. Great strips of burned flesh hung from arms and chests. Though many were in great pain, all were suffering from such a state of shock that there were no outcries. The silent procession was unearthly. I thought I was seeing a procession of ghosts.

My mind shrank with horror at what I saw, but I ran toward the city, toward my home and church, and the neighborhood association for which I had responsibility as leader. All the way I met more thousands of these pitiful victims. Then for a long time I was blocked from reaching the central island of the city by the intense heat of the fires.

There followed many dreadful hours I do not like to recall. My wife and child fortunately made good their escape from the debris of our house, though many thousands were burned to death when trapped in the wreckage of buildings.

When at last I reached my church, it was in ruins and all else around it. Of my neighborhood association of 150 persons only 30 survived, and of those many others were doomed to keen disappointment to learn many months later that they too must die—victims of radiation sickness. The official figures say 100,000 died in Hiroshima of the attack, but actually I am certain it was 170,000, with 80,000 more dying later indirectly of injuries or hardship.

For many days we did not learn what it was that struck Hiroshima, only that it was a new weapon. Only later did we learn that it was an atomic bomb and that we had been the first human beings upon whom this dreadful weapon has been used.

How did the people of Hiroshima feel about the bomb, those fortunate ones who survived, though often with the loss of all members of their family and possessions? They said simply, "Shi-kata-ganai (it cannot be helped)."

This was their reaction because this had been war. The Japanese people themselves had nothing to say about entering the war. They were led by dictatorial leaders and had been trained to do what the Emperor and government directed. But they realized that Japan's leaders had started the war at Pearl Harbor. Pearl Harbor led to Hiroshima. So it could not be helped.

The Japanese mind has an oriental fatalism that is strange to the West. We have been accustomed since the earliest remembrances of history to earthquakes, typhoons, famines, and other natural disasters which take many lives. So the atomic bomb was accepted in the same spirit as a natural disaster, though it was a much greater disaster than the people of Hiroshima had ever seen before.

Within a few days the Japanese people learned from their Emperor that it was necessary to surrender, and as quickly as the war had begun 4 years before, it now ended. Then came the American troops. The people of Hiroshima, having seen the atomic bomb, expected dreadful treatment at the hands of their enemies. But the Christian character of the American people now in peacetime asserted itself.

The first troops of the occupation, instead of levying hard new sacrifices upon the

people of Hiroshima, expressed most heartfelt sympathy for the pitiful state in which they found them. Instead of asking the people for tribute, in the manner of oriental conquerors, they gave us gifts of food. The people were amazed.

Near to Hiroshima was a camp where American prisoners of war had been confined. These prisoners were liberated as soon as word of the surrender had come. We knew that they had been most harshly treated because our military dealt so with their own Japanese civilian prisoners, and would have dealt thus with me had I been put in prison for pro-American feeling as was many times threatened during the war.

Yet when these prisoners marched through the suburbs they had with them packages of food and chocolate which had been dropped to them from airplanes by the American Red Cross. And seeing the children, who, having lost their parents in the atomic attacks, were without food and care, these soldiers, though hungry themselves, gave the famished children their chocolate. At first, the children were afraid to touch the gifts. Then a Japanese soldier who was with the Americans, as guide, said to the children and the adults standing by, "Take the candy; it is not poison."

The children swooped in on the gifts and ate ravenously and followed the American prisoners along the road in a laughing and affectionate mood. Many were the adults who wept openly to see such a sight. Thus was Christian love able to prove itself a more powerful weapon than the atomic bomb in winning Japan.

The atomic bomb had not destroyed the will of Hiroshima. Those who were left would have fought on. But when they saw such Christian compassion and spirit as was displayed by American soldiers after the surrender, they realized America was a good Nation and there was much bitterness against our own Japanese leaders who had led the people into war against such a Nation.

A SPIRITUAL REBIRTH

There now came in Hiroshima a most wonderful spiritual rebirth. Although the people had suffered greatly and there were many now feeling great loneliness because of loss of all their loved ones, there seemed a new spirit to rise from the ashes. People turned toward God in their moment of supreme disaster. They found in God a comfort.

There were six preachers of the Christian faith left in Hiroshima. Our churches were destroyed and all other buildings were now hospitals for the injured, so we went for our services to the great plaza where had formerly stood the railroad station, and there we preached the gospel of Christ. Many came and listened, often 200 or more. They stood silently, having nowhere to sit, and they remained thus, never going away while the service was in progress. Each of the preachers spoke in turn a message of evangelism. Six preachers, each talking half an hour, made a 3-hour service, but the people never left, and afterward they asked for Bibles that they might study the new religion which preached redemptive love.

This was a moving sight to see. A visiting Army chaplain, after attending a service, took me to his tent, and there showed me all his possessions, Bibles, hymn books, vestments and other things, and said that I must take what I needed. I could not accept such generosity, but he pressed upon me a great armload of things. Thus did the universal love of Christ which can unite mankind manifest itself. We are serving together the same Lord and Father, the conqueror and the conquered. And all are brothers again.

I lay ill for 2 months with the effects of radiation sickness which I had contracted by being among the wounded immediately after

the bombing. There came to me a young woman from my congregation who was filled with sorrow. She said, "This bomb was God's judgment upon us. We were not filled with love of God and did not do His bidding. We must learn to live better and then no such judgment will be visited upon us again."

This is typical of the spirit of those who survived Hiroshima. We are ashamed that we have taken up arms and war in the past and desire to make it unmistakable now that we wish only peace. We are ashamed, too, that we did not do more to help the injured and dying in Hiroshima, but thought only of ourselves and often ran away. Japan has had a new spiritual reawakening and Hiroshima has in particular experienced it in this catastrophe. This has been a great period for Christian evangelism in Japan.

MATERIAL AID

Great though the spiritual rebirth of Hiroshima was, we faced in the Christian churches many practical problems of rebuilding. Since all our parishioners had lost their worldly possessions and were themselves the recipients of charity, we had no money with which to rebuild, but were dependent on the gifts of our friends abroad for quite some period. The financial problems which are common to all churches were to us most difficult and have limited our work to much less than it should have been.

On August 6, 1948, on the anniversary of the bomb, which is to all people of Hiroshima a day of most special remembrance for the thousands who have died, we organized and inaugurated the Hiroshima Peace Center Foundation. We want in the future to make Hiroshima a great center for the international movement for peace. We who have suffered so much from war, who offer the vivid proof that war, if it continues, will destroy mankind's civilization, desire to make of our sacrifice a symbol. We wish to labor for peace as hard as previously man has labored for war.

The Peace Center Foundation has two purposes. The first is educational. Japan has been raised for many years on a feudalistic concept of nationalism. The school children of Japan were scarcely taught that other nations existed. All attention was centered on the divine Emperor. The Emperor has now shed his divinity and Japan has entered upon the international scene ideologically as well as politically. Our people need much education about the United Nations and about international cooperation in general to accept this ideological change. Already we have held in Hiroshima, last August 6, a conference of students and teachers who pledged their support to the United Nations Educational, Scientific, and Cultural Organizations (UNESCO) and promise to further its aims in Japan. We hope to hold other such conferences in Hiroshima, which to all Japan and to most of the world has a special significance as a place to hold peace conferences.

Also the literature which we publish will, for the world in general, have much significance, and win an especially attentive audience, for all know deeply how we feel and how great is our testimony against war.

The second purpose of the Peace Center Foundation is to render social service. Hiroshima has many unique problems because of the atomic devastation. The most touching of these is our orphans. Over 6,000 children lost their parents on that single day. They are now entering school and need guidance and protection. The Peace Center is administering the work of the moral adoption program.

Also we have juvenile delinquents who because of disruption of family life have been led astray and live on the streets. We have many old people whose families are gone and who lack means of support. For all these

and for the many others who hunger and thirst, we feel it our divine command to bring help. With such funds as are available to it, the peace center will labor to dress these remaining wounds of war.

We people of Hiroshima are convinced that as long as a Christian conscience rules America's foreign policy and as long as this Nation remains dedicated to the ideals of a Christian world peace wherein all nations and races may be brothers in the oneness of God's love, this world is safe. We pray that the people of America may fulfill their destiny to be God's agents of bringing peace to all mankind.

We are praying for the leadership of America in this hour of crisis. We are praying because we have found that God's love is a greater weapon in the destiny of man than the atom bomb.

Fraudulent Propaganda Concerning the Covenant of Human Rights

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. BURDICK. Mr. Speaker, false propaganda concerning the proposed Covenant of Human Rights which in due time will be presented to this country for ratification is being unwittingly circulated by teachers in our public schools, superintendents, church organizations, civic organizations, or any organization that will distribute the literature.

The document that is being circulated, publicized, and extolled is a document called the Universal Declaration of Human Rights. This document contains the contents of a declaration passed by the United Nations December 10, 1948. It was not passed in the form of a convention or treaty—it was passed as an expression of principles upon which all members of the United Nations could agree. The fact is that almost anybody would approve the general statements. It is in a class with those documents declaring that the moving parties are against sin.

This document was prepared and circulated by the United Nations Department of Public Information, March 1949. It has, therefore, been circulated throughout the United States for over 2 years.

This universal declaration of human rights is not the proposed human rights covenant which is intended to reach this country as a convention of the United Nations, to be approved by the Senate of the United States. Why was this document named the "Universal Declaration of Human Rights," and the actual proposition to be put up for our approval, labeled the "Covenant of Human Rights?" The explanation seems plain. By the circulation of a document on human rights to which almost everyone agreed, the people of the United States could be propagandized to approve the actual Human Rights Convention which is vicious and contains within it the seeds of

the destruction of our Constitution and laws.

Other conventions will come before the Senate, in fact one is before it now—the Genocide Convention which is also vicious and designed to destroy our liberties. It is, therefore, inescapable as a conclusion that the circulation of this innocently worded document was premeditatedly circulated by the United Nations to inoculate the people and kindle in them a desire to insist upon the approval of a far different but almost identically labeled document, which when approved may destroy free speech, free press, and our criminal jurisdiction for the protection of our citizens.

This fraudulent decoy which is being circulated states as to free speech as follows:

Everyone has the right to freedom of opinion and expression, here follow words amplifying this right.

Now what does the real human rights convention say about free speech?

Everyone shall have the right to freedom of expression, subject to such restrictions as are provided by law or are necessary for the protection of national security, public order, safety, health, or morals, or the rights, freedoms, or reputations of others.

Our Federal Constitution provides, concerning free speech:

Congress shall make no law respecting the establishment of religion, or prohibiting the free exercise thereof; or abridging free speech, or the press; or the right of the people peacefully to assemble and petition the Government for a redress of grievances.

In the Covenant of Human Rights free speech is so hedged in with restrictions and conditions that if carried out there will remain no free speech; there will remain no free press.

In the Genocide Convention which is now before the Senate and recommended for approval by the President, there is a provision that any statement made which hurts the feelings of any group or any member of a group is not only a crime, but the jurisdiction to try a person for that crime is transferred to the judicial branch of the United Nations. Suppose I say in North Dakota that Marshal Stalin is a murderer and that he has slain millions to dispose of those whom he is afraid will supplant him; I would be injuring the feelings of Stalin and his group of dictator supporters. Being a member of the United Nations, Russia would enter a complaint against me for the crime. Where would I be tried? In North Dakota, or anywhere in the United States? No; I would be tried for my alleged crime wherever the judicial branch of the United Nations determined. I could be sent to Russia for trial. Even though I had spoken the truth about Stalin, I would find myself being tried for a United Nations crime in the very country whose feelings I had hurt.

Anyone can see that this destroys our Constitution completely in the protection of life and liberty. It destroys our judicial system designed for both the protection of the public and the accused.

I do not believe that the educators of the United States would circulate this "bogus" universal human rights document if they knew they were circulating and extolling an entirely different document than the actual one proposed for the adoption of the Senate. It is the slyest, the most incipient, the most cowardly attempt that could be devised by the United Nations to put over the various conventions that are to come before the Senate of the United States for ratification.

The crime of such a campaign of propaganda lies in the fact that our children are being indoctrinated with a program on general human rights, and this leads them to approve a different document of human rights which may destroy our Constitution and laws of this Union and the constitutions and laws of the various States of the Union. This propaganda is more dangerous to this Republic than anything the Communists have yet done to destroy it.

If time would permit I could go further and take the provisions one by one in this universal human rights document, and then go over the provisions of the covenant of human rights and show conclusively that the first is objectionable, while the latter contains, when approved by the Senate, the vicious power to take away the liberties of the people of the United States.

The propaganda has gone so far in our schools that important newspapers like the Christian Science Monitor carry items such as the following:

HUMAN RIGHTS TO BE GALLUP ESSAY THEME

The Universal Declaration of Human Rights has been selected as the theme to be developed by American high-school children for entry to this year's Gallup award competition. The award is made each year to 50 high-school newspapers for services to advance the cause of world peace and mutual understanding among peoples of all nations. School papers are urged to organize one major activity a month illustrating some aspect of the declaration, such as sponsoring a model session of the Human Rights Commission, or showing a UN film on the subject. (UNESCO World Review.)

Just remember that the Covenant of Human Rights is not discussed at all. The whole discussion centers around the Universal Human Rights Document, which is not the document that will come to this country for approval. Those who are behind this campaign to explain one thing in order to put over a far different thing are either guilty of perpetrating a perfect fraud on the school children of the United States or are entirely ignorant and unaware of what they are doing.

My conclusion is that not only educational people but many people including the august court of appeals of the State of California have been misled by this universal human rights document. In the case of Fujii against the State of California, where the provisions of the Charter of the United Nations, as approved by the Senate were under consideration, the court, in order to bolster up its decision, that the Charter as approved by the Senate was the supreme law of the land, referred to and quoted from this universal human rights document, which the court should have known, or by

the exercise of ordinary inquiry could have known, had no force and effect in this country. It appeared that the court, in determining that the Charter, as approved, superseded the laws of the State of California and annulled them, was in search of more authority to sustain this stand, and therefore quoted from a document which had no standing in this country.

The lamentable thing about the circulation of this document of Universal Human Rights is the fact that the taxpayers of the United States are paying for it. What is the United States actually paying toward the support of the United Nations? Total assessments for 1951 were \$47,798,600, of which we paid \$19,529,204, or more than the total payment of 56 other countries. We pay over six times as much as Russia, three and a half times as much as Great Britain. We pay six and a half times as much as France, and the United States and Great Britain pay over half of the whole cost of keeping up the United Nations. Then, again, Britain borrows the money from us so that we are paying that bill also. With loans and gifts to every country on earth except Russia, we are paying the entire bill except \$3,000,000.

The countries who pay practically nothing have a voice in putting on these assessments. Are we always to remain as an impotent Santa Claus in an organization banded together to preserve the peace? What have these 56 countries who vote assessments against us done in the Korean War? What will they do in any war? If we are to pay the expenses of the United Nations, the expenses of armed demonstrations, and furnish the men to be killed while these other countries complacently sit on the side lines and say, "Sic 'em," anyone ought to see that we are into something that we should get out of at the earliest possible moment.

Truce and Peace Aren't Synonymous

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, August 6, 1951

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Truce and Peace Aren't Synonymous," from the Mason City (Iowa) Globe-Gazette of recent date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRUCE AND PEACE AREN'T SYNONYMOUS

It would be sheer folly to hazard a precise forecast about the ultimate outcome of the current truce negotiations in Korea. There are too many imponderables for even an educated guess. But there are some things that appear reasonably sure.

Foremost is the certainty that the life-and-death struggle between communism and the free world—or between the new Russian imperialism and the United States, if you prefer to state it that way—will not be re-

solved by any decision or course of action growing out of the present negotiations.

If a real armistice is reached—and this is by no means assured at this time—it will be no more than an armed truce. The Communist world can be counted on to step up preparations for the next phase of the struggle. So also will the free world if it is capable of an intelligent realism.

FOR THE KREMLIN TO SAY

What happens next in the contest for world domination on the one hand, survival on the other, is dependent on the Kremlin. The advantage which always resides in a power bent on aggression is with our adversary. He can pick both the time and the place of the next open warfare.

Will it be Germany? Will it be Yugoslavia? Will it be Formosa? Will it be Indochina—or India? Or will it be oil-rich Iran flush against the Russian border? The last possibility looks most plausible, but the Stalinists are capable of a deceptive change of pace. They're not always governed by the obvious logic of a situation.

The Kremlin can be counted on to proceed with its nefarious plot to absorb the free nations of the world while talking peace all the while. Its preparations for war will be carried on behind an iron curtain and out of sight but its peace talk will be in raucous voice for all to hear.

A TEST FOR AMERICANS

This situation is going to present an acid test for the people of America. It's going to require a lot of vision and courage to keep our preparedness efforts at their maximum in the face of a lull in the fighting. Our apathy in this matter can be the Kremlin's one most valuable ally.

Then, too, there will be those who will be expecting our boys—all of them—to clear out of Korea the day after the truce is signed—assuming that a truce is signed. That just isn't the way things are going to work out.

In the first place, the prospects of an early truce are extremely dim. Even if the Communists had been defeated to the point of having to capitulate, they'd haggle and argue. That's what they did after running out on their allies in World War I.

But now—and we may as well face this fact—the Communists are bent on making it appear that they're in the driver's seat. They've taken a shellacking in Korea but they haven't as yet approached the necessity of surrendering in the field. There's a vast propaganda value in making it appear that they—rather than the UN—are dictating the terms of peace.

MERE PREVIEW OF FUTURE

Even in the preliminary meetings concerned merely with setting up a tentative agenda for the subsequent parley, the Communists have tried the patience of the UN representatives. What we've had is no more than a tiny preview of what lies ahead.

The pattern for an endless controversy has already been cut. It centers about the insistence of the Communists that the neutral zone be established along the thirty-eighth parallel, as distinguished from the present battle line, and the demand that all "foreign troops" clear out of Korea.

Whether the thirty-eighth parallel or some other line be accepted as the center of the buffer territory is probably of no more than psychological importance. But for the UN to agree to the withdrawal of all foreign troops from the peninsula would be to toss the South Koreans into the bear cage like so much raw meat.

ROTATION MAY BE SPEEDED

And herein lies the real reason why an early return to America of all our fighting forces in Korea isn't in the cards under any conceivable circumstances. If truce efforts fail, they'll be needed for further fighting;

if truce efforts succeed, they'll be needed for occupational duty.

All in all, the most that can be reasonably expected is that the cessation of fighting will make it possible to speed up the rotational plan. This will mean a reduction in the length of service for those now on duty in Korea and for those who subsequently are dispatched there for their tour of duty.

In the event of a truce at this time, or rather in the early future, there shouldn't be such a lag in business, and particularly if we avoid that apathy to the Communist peril to which I referred at the beginning of this talk with you.

That truce would not mean peace—real peace, that is. The cold war would continue. Actually our expenditure for military preparedness next year promises to be substantially greater than it has been this year, even including the cost of the Korean police action. And the year following it may well be larger still—totaling as much as \$60,000,000,000.

TREND TO BE UPWARD

While there may be some temporary slumps and transient unemployment incident to the retooling for this stepped up production of the materials of war, the general trend seems almost sure to be upward.

This year's national income was at the rate of \$300,000,000,000 for the first 6 months of this year. It may dip for a few weeks but those in position to know expect it to go higher than ever in the final quarter. Until the Communist threat has been eliminated, the military will be claiming at least \$50,000,000,000 a year as a regular budget item.

"If we can reach a truce that ends the Communist aggression in Korea," Defense Mobilizer Wilson has pointed out, "we will have won a great victory. But it will not be the final victory over aggression. Our position will be infinitely stronger than it was before Korea—but still we will not be safe."

The over-all problem will be to build an invulnerable military while at the same time maintaining an economy of abundance. I for one believe that this is possible—and particularly if the individual citizen can be brought to think more about producing more than about shorter hours or higher pay.

AGREEING WITH ACHESON

Dean Acheson, our Secretary of State, has aroused the ire of more than a few Americans by contending—along with Defense Mobilizer Wilson—that a settlement of the Korean War at the thirty-eighth parallel will constitute a victory for the UN. Far more often than not with respect to our Asia policy. I've disagreed with Mr. Acheson. But in this case I'm definitely in his corner.

To evaluate the results of our Korean police action, it's necessary to consider what would have happened if we hadn't raised a hand. This, it seems to me, rather than the extent to which we've beaten the enemy on the field of battle must be our criterion for judging.

Without the resistance on the part of UN—or United States, as you prefer—all of Korea would have fallen into the Communist basket, like a ripe plum. Before now that peninsula—pointed like a dagger at Japan, as somebody has observed—would have become a well-disciplined satellite state.

Before now too, it's reasonable to assume, the Communist march would have proceeded in other directions. The same energy exerted by the Chinese Reds in Korea assuredly would have meant overrunning Formosa.

A BLOW AT CONFIDENCE

Further to the south Communist China could have thrown more troops into French Indo-China and by this time there would be heavy Communist pressures building up in Malaya and in India.

Not to be neglected or minimized either would be the effect of a spineless United States on Japan and the Philippines. Both the Japanese and the Filipinos recognize that their security against communism rests heavily on the power of the United States—and, just as important, on the willingness of the United States to use that power.

Seeing Korea fall into Communist hands without raising a hand would have caused the Japs and the Filipinos to leave our camp and take refuge in what has come to be known as neutralism.

Somewhere along the line, unless we were ready to give up without a fight, we had to say to the Kremlin: "This far and no further." That line has been drawn. Joe Stalin has been put on notice that he will be held accountable for any and all future aggressions. That's the true meaning of the police action in Korea.

Your Government's Tarnished Word

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Freeman, of July 16, 1951. It recites just a few of the brazen deceptions by which this administration has tricked the American people during the last two decades, while its Secretary of State talks about "integrity." One can only ask in sadness: What integrity?

The editorial follows:

YOUR GOVERNMENT'S TARNISHED WORD

One-third of the adult population now living cannot remember the time when the American citizen's normal reaction was this: "If the Government says it's so, it is." You might denounce the Government for any other reason, but neither the integrity of its word nor the good faith of its promises was ever debated.

Now the intelligent citizen is so cynical that when he reads in his morning paper that the Speaker of the House or the Secretary of Defense, on leaving the White House, has said the situation is worse than anybody can imagine, he looks to see what bill happens to be pending in Congress. It may be the universal military training bill, and if that is it he says "So it is time to scare me." And nobody is scandalized when the Wall Street Journal prints this from its Washington Bureau:

"Scare tactics rehash old reports to get fresh backing for Truman's plans. The Government does not expect Russian forces to fight in Korea. Rearmament schedules assume Russia isn't ready for world war III. But officials here want to keep the people primed for a big military build-up, foreign aid, UMT and controls."

Whether the correspondent's deduction is true or not in a particular case is not the point. The point is that now everybody takes it to be a matter of governing technique that news will be slanted, handled and timed in a manner to move people in their emotions, even to influence their everyday behavior. It is as if somebody in government should say: "There is too much scare buying. We have gone a little too far. Let's ease it up." Then for a few days the news is that there will be plenty of civilian goods. In a little while somebody says: "We've gone too far.

People are complacent. We'd better stir them up." And suddenly the news is worse.

If you could draw on a chart two lines, one to represent this change in the way people think and feel about government and the other to represent the rise of the Welfare State, you would be struck by the fact that they move together. Such is the malice of events called irony. Paternalism in government has a kind of moral disability. If you are going to decide what is good for people, instead of letting them decide that for themselves, then you must treat them as children. You cannot be entirely frank with them, for if you are they may frustrate your good intentions and defeat their own welfare. Besides, there are situations, you are sure, when people cannot be trusted with the truth.

Until 1933 ours was the only Government in the world that had never broken a promise to pay or repudiated the word engraved upon its money and its bonds—not since the beginning, when one of the first acts of the United States, with no treasury and no revenue, was to undertake to redeem at face value all the forlorn debt paper issued during the War of Independence to raise money.

When the wreck of that tradition came before the Supreme Court in the gold cases a majority of the judges said there was nothing to do about an act of immorality committed by the sovereign power of government; but the minority said this was "repudiation and spoliation of citizens by their sovereign * * * The loss of reputation for fair dealing will bring us unending humiliation * * * The impending legal and moral chaos is appalling."

This occurred in the nighttime of the great depression. The Government's intentions were beneficent. Its idea was to relieve debtors and raise prices. And the people cried out acclaim of a government that would lead them the short way out of a frightful depression. The flash of expediency had overcome the spirit of good faith. The justification was that the flesh was in terrible pain. All the moral implications were swept under the rug. But when people have applauded their Government for breaking its word to ease them out of an economic crisis, how honestly may they expect it to behave in a political crisis? They were to find that out.

In view of the inner history already revealed, it is not strange that millions of people now believe President Roosevelt "lied" the country into World War II. That is bad enough. Yet worse for public morals is the fact that many believe this who ardently defend him for having done it. They say: "It was necessary. There was no other way to save the country."

In 1941 Roosevelt himself wrote: "There can be no question that in 1939 the people of the United States were determined to remain neutral in fact and in deed." That was the problem he had to solve. In the 1940 campaign he had said: "I am fighting to keep our people out of foreign wars." And again, "As your great Secretary of State said last night, 'Outstanding is the wholly unwarranted and utterly vicious charge that the President is leading us into war.'"

Immediately after Mr. Roosevelt's third election in 1940 came lend-lease. A few weeks later Mr. Hopkins, as the President's personal representative, was in London telling Mr. Churchill for sure that the United States would see England through; and on April 3, 1941, Admiral Stark, Chief of Naval Operations, was writing to all fleet commanders: "The question as to our entry into the war seems to be when and not whether."

By any previous interpretation of international law, it was an act of war for a government to give arms and munitions to a belligerent nation. Therefore, lend-lease was an act of war; yet to the people and to Congress

it was represented as the supreme measure short of war.

The Government's own afterthought on lend-lease may be found in a public document entitled "International Transactions of the United States":

"With the passage of the Lend-Lease Act on March 11, 1941, the United States openly allied the welfare of the United States with that of the United Kingdom and other countries fighting the Axis."

Of this alliance Robert E. Sherwood, in *Roosevelt and Hopkins*, said: "If the isolationists had known the full extent of it, their demands for the impeachment of President Roosevelt would have been much louder." But Mr. Sherwood is among the eulogists.

After lend-lease the United States Navy actively protected the flow of lend-lease goods to England. To convoy the shipments would be so obviously an act of war that the word convoy was taboo and the fact was for a long time denied. All the United States Navy was doing was to patrol the Atlantic.

The trouble was that Hitler would not attack. And what Mr. Roosevelt needed to release him from his antiwar pledges was an attack. Came October 1941, and still no attack. Robert E. Sherwood quotes Harry Hopkins as having said of Mr. Roosevelt's dilemma at that time: "He had said everything 'short of war' that could be said. He had no more tricks left. The hat from which he had pulled so many rabbits was empty."

Then suddenly the problem was solved. The nature of it was defined by Henry L. Stimson in his diary, November 25, 1941, as the problem of how to maneuver the Japanese into the position of firing the first shot.

After Pearl Harbor the people were united. It would seem to have been no longer necessary to bamboozle them. Yet never could they be sure they had the truth. The worst single shock was Yalta. At the Yalta conference, secretly, our ally China was sold out to Stalin. By that act of betrayal the history of the modern world was altered, and we may be dealing with the consequences for a hundred years.

When Mr. Roosevelt returned from Yalta he addressed a joint session of Congress and said: "Quite naturally, this conference concerned itself with the political problems of Europe—and not the Pacific war." For military reasons it may have been unwise at that time to tell how Stalin had been bribed to enter the war against Japan; but would not silence have served? Why the positive denial of a truth about the Pacific war that was bound to come out when Stalin claimed his loot? The stupidity of it leaves but one plausible answer. Manipulation of the truth had become a habit of Government.

In the recent great debate on foreign policy, involving the power of the President to dispatch troops to Europe, the painful theme was distrust of the Executive.

When in 1949 the Senate ratified the North Atlantic Treaty, it did so upon positive assurances from both the State Department and the President, first, that nothing would be done to implement the treaty without the approval of Congress; and second, that the treaty in no way obligated this country to contribute troops. The State Department, speaking for the President, said "Any future military-assistance programs involving Atlantic Pact countries will be prepared and submitted to the Congress." And about troops, when the Secretary of State appeared before the Foreign Relations Committee of the Senate, the following exchange occurred:

"Senator HICKENLOOPER. Are we going to be expected to send substantial numbers of troops over there as a more or less permanent contribution to the development of these countries' capacity to resist?"

"Mr. ACHESON. The answer to that question, Senator, is a clear and absolute 'No.'"

Then suddenly the President announced that he was going to send a substantial number of troops to become a part of Europe's defense army and that he had the power to do so without the approval of Congress. That is what set off the great debate. There are two matters here. One is the broken word; the other is the question of troops at all. When Mr. Acheson was confronted by the Senate with his own statement about sending troops to Europe under the North Atlantic Treaty—"The answer to that question, Senator, is a clear and absolute 'No.'"—his defense was to say that he must have misunderstood the question.

Where there is no trust, secrecy is a gnawing worm. The worm in this instance was the Brussels secret. In December 1950, Mr. Acheson sat with the North Atlantic Treaty Council in Brussels. On returning he reported that the structure of the international army, how it should be composed, of what troops, and where the troops should come from, had all been determined. This was called the Brussels agreement. The Senate wanted to know what was in it. Did it call for four American divisions only—the number the President was going to send immediately? But the State Department refused to divulge the agreement.

The Senate then asked General Eisenhower about it. He said, "I am not dodging the question. I know nothing about it." Why not? It was his army.

So the great debate closed with a resolution saying it was the sense of the Senate that although it approved of sending four divisions, already on their way, no more should be sent without the approval of Congress—and the Brussels agreement was still a secret. Neither the people nor the Senate could be trusted to know our commitments.

It seems to have become psychopathologically impossible for the State Department to make a simple, unequivocal statement about foreign policy. What it says today will be reinterpreted and explained tomorrow. A few weeks ago Dean Rusk, its chief publicity officer, made a formal speech which was understood both here and abroad to mean that American policy in the Far East had hardened toward Red China and changed oppositely toward Formosa and the Nationalists. At a press conference the next day the Secretary of State said there had been no change of policy and that he was unable to find in the Rusk speech anything to suggest that idea. Simply, the world was wrong.

A few days later Mr. Acheson, appearing as a witness before the Senate committee sitting in the MacArthur case, protested against making public a top-secret policy information paper issued by the State Department in 1949 about Formosa, on the ground that it purposely misrepresented American policy, and he was led from there to admit calmly that the Voice of America was used, when necessary, to disseminate false propaganda.

In the course of that same hearing he offered a second and entirely new apology for the Yalta agreement that sold our Chinese ally out to Stalin. The first official apology was that Stalin had to be bribed to enter the war against Japan. Now Mr. Acheson says that was not the reason at all. The Yalta agreement was simply a matter of yielding to the inevitable, because Stalin had already made up his mind to move in and take what he wanted, and there was no way to stop him. Which version is true? And why was it necessary to reprocess the first one?

At the last annual meeting of the American Society of Newspaper Editors the committee on freedom of information made the following report:

"We editors have been assuming that no one would dispute this premise: That when

the people rule, they have a right to know all their government does. This committee finds appalling evidence that the guiding credo in Washington is just the opposite; that it is dangerous and unwise to let information about the Government leak out in any unprocessed form."

In the beginning was truth, and at the end will be truth. It is the interim we live in.

The Report on the Maryland Senatorial Election

EXTENSION OF REMARKS

OF

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, August 6, 1951

Mr. WELKER. Mr. President, I ask unanimous consent to have printed in the *RECORD* an article entitled "Is the Report on BUTLER Serious?" written by David Lawrence and published in today's issue of the *Washington Evening Star*.

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

IS THE REPORT ON BUTLER SERIOUS?—ANALYSIS BY SENATORS OF ONLY ONE SIDE IN MARYLAND ISSUE RAISES QUESTION OF DOUBT ON ITS AIM AND PURPOSE

(By David Lawrence)

Is the Senate Subcommittee on Elections in earnest about cleaning up American political campaigns or is its latest report on the Maryland contest just a piece of ephemeral publicity?

The report calls attention to the fact that it is "the inherent right under our system of government of each State to choose its representatives in Congress," and that the Senate "in exercising its constitutional right to be the judge of the qualifications of its Members must guard against usurping such right of each State and must require the strongest and most substantial evidence before unseating a Senator and nullifying the action of the electorate of a State."

Thereupon the subcommittee says flatly that "the facts developed from the evidence before this committee are not sufficient in our judgment to recommend the unseating of Senator BUTLER."

If the committee had stopped there, its work would have been in keeping with tradition. But the committee issued a long analysis of the campaign criticizing the tactics and statements of only one candidate, the Republican, ignoring entirely the famous whitewash report which was sponsored earlier by the opposing Senator, a Democrat, and formed the basis for the bitter campaign itself.

To deal only with one set of unfair attacks and not with an earlier set of unfair accusations which furnished the provocation is not to make an impartial study. There is another committee of the Senate under the chairmanship of Senator McCARRAN, of Nevada, which now is investigating un-American activities and Communist behavior and it is taking up some of the same charges which, due to the Tydings committee whitewash, aroused anti-Communists not only in Maryland but outside of that State who helped to defeat the Democratic candidate, Senator Tydings. Nobody can justly question the loyalty or the patriotism of the former Maryland Senator but there are many who have questioned and will question his judgment in failing to make a thorough in-

vestigation of the charges before his committee as defined in the Senate's resolution which ordered the inquiry.

The Senate subcommittee is right in denouncing the innuendoes that were used in the campaign against Senator Tydings. Likewise, it candidly admits that no specific standards of improper campaign conduct or acts have been set up as guideposts.

It is conceded by the Senate subcommittee that the issue as between fair comment and political defamation in the conduct of a campaign is a novel one. It then proceeds to make some suggestions for legislation which would not only be wholly impracticable to carry out but would result in Federal laws certain to be declared unconstitutional.

The remedy of the aggrieved candidate has been and always is to sue for libel under State laws. The much-discussed and properly denounced tabloid newspaper, especially printed for the campaign, which showed Senator Tydings in a composite photograph sitting alongside of Earl Browder, a Communist witness at the hearings, and which bore a caption that implied the Senator was treating the witness sympathetically or with excessive politeness, is not a violation of Federal or State laws dealing with elections. The picture was labeled composite. It was despicable and utterly indefensible from the standpoint of fairness but so also are many of the political cartoons distributed during campaigns and printed in regular newspapers. This practice is fully protected by the Constitution.

The subcommittee goes too far, therefore, in recommending legislation to cover all types of composites whether they be newspaper pictures, voice recordings, motion pictures, or any other means or medium of conveying a misrepresenting composite impression.

This would certainly rule out many cartoons and one wonders what political majority in the Senate or House is to pass judgment on fairness or unfairness of such cartoons when a defeated candidate makes a squawk.

If any Senate committee really wants to investigate unfair tactics in political campaigns, there are other things worth examining as examples too, such as the innuendoes cast by President Truman himself in 1948 that Governor Dewey was giving aid to the Communists, the dirty-politics charges in the recent Lehman-Dulles senatorial campaign, and the scurrilous literature circulated in 1950 against Senator Taft in Ohio. At an outing given by a CIO union during the campaign a big picture of Senator Taft was displayed under which only his initials—"R. A. T."—were printed in large letters and onlookers were offered a chance at 10 cents to throw a baseball to hit the photo in the face. Also there was circulated in different parts of the State a photo of Senator Taft taken many years ago at a public forum at which Earl Browder had also been invited to speak. The photo showing Taft and Browder was prominently flaunted by opponents of the Senator and was never disavowed by the opposing candidate; in fact, he is accused of flaunting it himself. He lost and what he did would not be subject to Senate rules of conduct or discipline.

Nor should the anti-Semitic and anti-Catholic literature circulated in the mails during and between political campaigns be overlooked or the activities of national labor unions which invade various States with crews of campaign smearers who continue to receive salaries from unions, in violation of Federal law. Corporation employees also give their time to campaigns and keep on receiving their regular salaries. This needs no Senate investigation—just some prosecutions by the Department of Justice.

The answer to much of this type of thing, to be sure, is "pitiless publicity." Extreme tactics usually boomerang and make votes for the candidate who is attacked. But it will disappoint many observers to read that this Senate subcommittee seems to have lost faith in the capacity of the people to deal with these matters themselves at the polls. For the subcommittee says:

"It is not a sufficient defense to say 'let the people themselves judge the charges.' The fact is that the people themselves are not in possession of sufficient reliable information upon which to judge irresponsible accusations of disloyalty."

And who in this case kept the people from making that very judgment when the charges of disloyalty against various persons involved in making Government policy were being examined last year by the Tydings committee? It was a group of loyal, patriotic, but mistaken Senators who voted for secret sessions and then by a partisan vote adopted a staff-written report which was drafted in such a manner that the real evidence could not be appraised by the press and impartial observers.

Breakdown of Foreign Aid

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. HOEVEN. Mr. Speaker, since 1940 the United States taxpayers have sent \$81,950,000,000 to foreign countries. Of this, \$32,682,000,000 has been spent since the end of World War II. Here is the breakdown of expenditures:

*United States foreign aid, July 1, 1940—
Mar. 31, 1951*

Lend-lease.....	\$49,092,000,000
European recovery.....	9,585,000,000
Civilian supplies.....	5,623,000,000
UNRRA, post-UNRRA, and interim aid.....	3,526,000,000
Philippine rehabilitation.....	623,000,000
Korean and far eastern (Chinese area) aid.....	290,000,000
Mutual defense assistance.....	837,000,000
Greek-Turkish aid.....	654,000,000
Chinese stabilization and military aid.....	625,000,000
Technical assistance and inter-American aid.....	196,000,000
Special British loan.....	3,750,000,000
Export-Import Bank.....	3,141,000,000
Direct loans.....	2,883,000,000
Loans through agent banks.....	258,000,000
Credit agreement offsets to grants.....	1,256,000,000
Surplus property (including merchant ships).....	1,334,000,000
Other.....	1,374,000,000
Total.....	81,905,000,000

Here is the breakdown by countries:

Austria.....	\$785,000,000
Belgium-Luxemburg.....	818,000,000
British Commonwealth.....	35,857,000,000
Denmark.....	236,000,000
France.....	6,847,000,000
Germany.....	3,304,000,000
Greece.....	1,350,000,000
Ireland.....	131,000,000
Italy.....	2,530,000,000
Netherlands.....	1,223,000,000

*United States foreign aid, July 1, 1940—
Mar. 31, 1951—Continued*

Norway.....	\$300,000,000
Sweden.....	99,000,000
Trieste.....	41,000,000
Turkey.....	366,000,000
Czechoslovakia.....	222,000,000
Finland.....	145,000,000
Poland.....	465,000,000
U. S. S. R.....	11,241,000,000
Yugoslavia.....	386,000,000
American Republics.....	1,356,000,000
Israel.....	56,000,000
Australia.....	925,000,000
Canada.....	175,000,000
China.....	3,102,000,000
India.....	790,000,000
Indonesia.....	155,000,000
Iran.....	32,000,000
Japan and Ryukyu Islands.....	2,101,000,000
Korea.....	441,000,000
New Zealand.....	256,000,000
Philippines.....	826,000,000
Saudi Arabia.....	36,000,000
Union of South Africa.....	95,000,000
Other.....	16,456,000,000

Transfer of District Office of the Veterans' Administration at Boston to Philadelphia

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under the leave to extend my remarks in the Record, I include the following brief relative to proposed consolidation of Boston district office of the Veterans' Administration with Philadelphia, Pa., district office:

BRIEF RELATIVE OF PROPOSED CONSOLIDATION OF BOSTON DISTRICT OFFICE OF THE VETERANS' ADMINISTRATION WITH PHILADELPHIA, PA., DISTRICT OFFICE

This brief has been prepared and submitted by the employees of the VA district office, Boston, Mass., for the purpose of presenting from a labor and economic standpoint the effect upon interested personnel and their dependents of the proposed consolidation of the Boston, New York, and Richmond district offices with the Philadelphia district office.

On July 26, 1951, the personnel employed in the VA district office, Boston, Mass., were informed that it was proposed to abolish the Boston district office. It was stated that this was to be done without affecting service to the veterans and their dependents by the transfer of records and of interested personnel to the district office at Philadelphia, Pa., where the records and personnel of the district offices at New York and Richmond, Va., were also to be housed.

Personnel of the Boston branch and district office, which has been in existence since 1946, had no intimation that such a move was contemplated. The disastrous economic effect on 837 employees and their families was not immediately realized. However, after short consideration, when the awareness of the abrupt change in the domestic economy and the educational transition became apparent, it was thought that if these factors could, in their over-all effect, be brought to the attention of proper authority, consideration might be given to further study of this situation to prevent its summation.

ANALYSIS OF CONDITIONS AFFECTING EMPLOYEES
OF BOSTON DISTRICT OFFICE

This compilation made as a result of 453 questionnaires answered voluntarily from a total of 837 employees affected by this transfer.

1. Average age—34:	
Age by groups:	Percent
20-29—88.....	21
30-39—235.....	56
40-49—44.....	10.5
50-59—45.....	10.5
60-69—5.....	2
2. Average years in VA—5 years:	
Less than 5—146.....	37.04
5 to 9—239.....	60.69
10 to 19—3.....	.78
20 to 29—4.....	1.01
30 to 39—2.....	.50
3. Average years in Government—8 years:	
Less than 5—72.....	18.20
5 to 9—202.....	51.26
10 to 19—106.....	27.00
20 to 29—9.....	2.28
30 to 39—5.....	1.26

This figure does not include any military service.

4. Number of GI mortgages—65.....	\$500,715.00
5. Other mortgages—38.....	\$209,900.00
6. Average rent paid by persons not owning property.....	47.40
7. Average number of rooms rented.....	5
8. Total monthly rent paid by 205 persons answering questionnaire.....	9,716.95
9. World War I veterans affected by transfer.....	44
10. World War II veterans affected by transfer.....	309
11. Disabled veterans included in items 9 and 10 affected by transfer (65 percent).....	229
12. Widows of World War I veterans affected by transfer.....	14
13. Widows of World War II veterans affected by transfer.....	5

ORGANIZATION AND FUNCTIONS OF THE BOSTON
DISTRICT OFFICE, INSURANCE SERVICE

Organization

1. Office of the Director.
2. Administrative Section.
3. Operations Review and Audit Section.
4. Premium Accounting Division.
5. Disability Insurance Claims Division.
6. Underwriting Division.

Function

Responsible for the administration of the laws of national service life insurance as they pertain to veterans separated from active service and those veterans in active service remitting premium payments direct to the Boston district office.

Guided by the provisions of national service life insurance laws also processes applications for reinstatement, conversion to permanent plan insurance, renewal of expiring term insurance. Responsible also for granting loans and cash surrender of insurance and makes all changes affecting national service life insurance such as: Reductions in the amount of insurance, change in plan of insurance and beneficiary and optional settlement authorization.

Receives, accounts for, and disposes of insurance remittances and payments received in the district office; maintains premium records on national service life insurance accounts.

Makes determinations and awards benefits in national service life insurance disability insurance claims.

In addition to the preparation of correspondence pertinent to the accomplishment of the major functions above outlined, it is also necessary to prepare Seventy-third Congress, and all amendments thereto, as well

as Public Law 141, Seventy-third Congress, Public Law 484, Seventy-third Congress, Public Law 144, Seventy-eighth Congress, Public Law 483, Seventy-eighth Congress, the National Service Life Insurance Act of 1940, with all its amendments, including Public Law 589, Seventy-ninth Congress, as well as the Servicemen's Indemnity Act of 1951, Public Law 23, Eighty-second Congress.

To establish one's entitlement or non-entitlement to the benefits outlined above, requires not only the exercise of professional skill in the application and interpretation, orally or in writing, of the pertinent VA laws, regulations and procedures, but also, among other things, the following:

1. Development, assembling and evaluating of evidence.
2. Determinations as to the validity of claims, dependency, continuous cohabitation, income, validity of legal documents, relationship, marital status, character of discharge, line of duty, sufficiency of service, jurisdiction, findings of fact of death, processing of appeals, including hearings, waivers and forfeitures, need for field examinations, need for fiduciaries to receive payment for minors and incompetents, and ratings as to service connection for both disability and cause of death.

In addition, appropriate records and a ready reference file are maintained currently.

ORGANIZATION AND FUNCTIONS OF THE CLAIMS
SERVICE OF THE VETERANS' ADMINISTRATION
BOSTON DISTRICT OFFICE

Organization

1. Office of the Director.
2. Dependents and Beneficiaries Claims Division.
3. Dependents Pension Board.
4. Adjudicating Section.
5. Reimbursement Section.
6. Claims Records Section.
7. Computing Section.
8. Stenographic Unit.
9. Typists Unit.

Function

Responsible for the adjudication of claims and authorization of payments for death benefits filed by the survivors of deceased servicemen, including widows, children, parents, brothers, and sisters, arising under all laws pertaining to World I and World War II veterans, as well as to veterans who served in peacetime subsequent to July 15, 1903, including the Korean cases.

The particular claims include those for compensation, pension, national service life insurance, servicemen's indemnity, burial allowance, as well as accrued disability compensation, pension, retirement pay, readjustment and subsistence allowances.

The pertinent laws relating to these benefits, among many others, include Public Law 242, Sixty-eighth Congress (World War Veterans Act of 1924), Public Law 2, replies to correspondence presenting all types of inquiries related to national service life insurance. At present with insurance records readily available urgent questions on insurance problems are being settled as a result of telephone calls received not only from the Boston area but from all parts of the New England area. An almost equal number of veterans make personal contact with this office and with insurance records readily available the action requested by the insured is completed while the veteran is present.

Comments

Presently the Boston district office, insurance service engages 746 employees servicing approximately 320,000 active national service life insurance accounts. The vast majority of these employees are young veterans accomplished in insurance matters after nearly 6 years of insurance work with this office. For the many who are married it

will be impossible to transfer and failure to obtain a job in the insurance field will cause them to take jobs in other fields where without experience in the selected new field will naturally cause lower salaries to be offered and resultant hardship in these times of higher prices for everything.

PERSONAL FACTORS INVOLVED

In March 1946 the Veterans' Administration sought adequate help for its Boston branch office, now district office, to service the claims of the next of kin of deceased veterans, a great majority of whom resided in metropolitan Boston and other parts of New England. The need for qualified legal and clerical personnel was urgent. In response many attorneys and others who had been recently separated from military service, accepted appointment as adjudicators, attorney reviewers, and many other positions. These appointments were filled mostly by lifetime residents of Boston and vicinity. The record discloses that during the period of accelerated decentralization, even amidst the great confusion that accompanied the transition which inaugurated the 13 separate branch offices, excellent service was rendered to the deceased veterans' next of kin in processing their claims for death pension, compensation, statutory burial allowance, and national service life insurance.

This group experienced the transition from branch office to district office with its resultant reduction in force and succeeding reductions in force brought about through various factors. During all of this time, however, the same high standard of service continued to be given the widows, children, and dependent parents of deceased veterans, to which they were entitled.

Most of the professional personnel in the claims service and insurance service are married, have two or more children, are over 40 years of age, attorneys, lifetime residents of Massachusetts, and have been with the Veterans' Administration over 5 years. By accepting the appointment with the Veterans' Administration, they have removed themselves from other opportunities in the professional, industrial, or commercial field. Due to their age or the nature of a service-connected disability, there is little opportunity for them to obtain commensurate employment in private enterprise. Under the present civil service regulations other Government agencies in the locality can only offer them temporary indefinite positions at lower classifications. They are now faced with a dilemma with no horns to grasp.

If they move to Philadelphia, as most of the professional personnel will be required to do if they desire to retain their status in the Veterans' Administration, they are faced with many problems, including adequate housing within their means, schooling, temporary separation from their wives and children, permanent separation from their parents, friends, relatives, and business contacts, and future insecurity. The latter problem will inevitably arise when reduction in personnel appears warranted as a result of consolidation. Many of this group have purchased homes in Massachusetts through the aid of a GI loan, and face loss of their equity by reason of forced sale.

Among the stenographic, typists, and clerical personnel of the Claims Service are widows of veterans, wives of disabled veterans, disabled veterans, and others, some with 15 to 25 years of service in the Veterans' Administration. In general, this group is the sole support of their families. Due to the pay grade of a large proportion of this group, it would not be economically feasible for them to move to Philadelphia. Consequently, they are left in a very precarious position with respect to employment after giving many years of service to the Veterans' Administration.

The Claims personnel have been trained at great expense to the Government. The group contains key personnel in the operation of death claims activities. If it became necessary to replace them, the Government would have to undergo further expense for a considerable period of time in training such replacements, particularly with respect to adjudicators and attorney reviewers, and in the interim service to the next of kin of deceased veterans would deteriorate.

It is apparent that the moving of the Boston district office to Philadelphia will create undue personal hardship, sacrifice, and confusion among the personnel, which would seem to be out of all proportion to any saving to the Government which might appear obtainable through that process. It would seem that the above-mentioned personal factors should rightfully be taken into consideration in making a decision of such magnitude.

EFFECT ON VETERANS' ADMINISTRATION

It is a basic policy of the Veterans' Administration to render service and assistance, personal, whenever possible, to veterans and their dependents.

It appears that such personal assistance cannot and will not be administered if the functions of the four district offices in question are centralized at Philadelphia.

Outlined herewith are some of the reasons in support of the foregoing contention:

(a) Centralization will eliminate for all practical purposes possibility of personal contact by claimants outside the immediate area of Philadelphia for the purpose of processing their claims. However, personal contact is essential in many cases involving a variety of situations which arise in the processing of death claims. Often contact must be made not only with the claimant but with relatives or neighbors of a deceased veteran or of the claimant for the purpose of clarification or establishment of questions of marital status, dependency, loco parentis, and cases in which the industrial and medical history of a deceased veteran must be established from the date of discharge from service to the date of death.

(b) Personal hearings on appeal before the professional personnel who have adjudicated and disallowed a particular claim will in practice be eliminated inasmuch as the great majority of claimants will not be financially able to journey from their homes in New England to Philadelphia.

(c) The proper performance of duties by professional personnel who make determinations as to entitlement to death benefits will be complicated and rendered more difficult in many cases by inability to make personal contact with claimants. In such cases centralization will require clarification of the issues by means of field examinations which are cumbersome, expensive, and, in general, not to satisfactory, a method of obtaining such necessary information.

In addition to the lack of personal contact ensuing from the centralization of the case folders consideration must also be given to delays in adjudication of claims and consequent hardship to claimants in necessitous circumstances due to the transmission of the claims folders between regional offices and the centralized office in Philadelphia.

The transmission of folders will be required in cases involving the appointments of fiduciaries for minors and incompetents, in cases where hearings must be held upon claims for reimbursement for unauthorized medical expenses, hearings on appeals and determinations by chief attorneys on submissions of questions of law involving marital status or other domestic relations. The desirability of minimizing rather than the increasing of the constant shipping of claims folders between offices is apparent.

In the event of centralization, during the veteran's lifetime his insurance records will

be maintained at Philadelphia, while his claims folder is maintained at the regional office in the State where he resides. Upon his death these files must be combined. Accordingly, action by the district office at Philadelphia with respect to any claim for compensation or pension would have to await receipt of the claims folder from the regional office. At present such action may be taken without appreciable delay in most instances, since the claims folder will be readily available within a short time. Indeed those located in the Boston regional office require only the transfer from one floor to the next in the same building. Also, documents necessary to the immediate adjudication of claims, such as death certificates, autopsy protocols or other vital statistics are locally available.

When death strikes the veteran, his family are often in dire need of advice and assistance, which can only be given by personal contact. Many times they are also in great financial stress. It is in situations of this type that the Veterans' Administration should be able to afford the maximum in quick, efficient, and sympathetic consideration of the dependents' claims and be able to render decisions thereon with the minimum of delay.

HOME OWNERSHIP

The proposed transfer of the Boston district office of the Veterans' Administration to Philadelphia, Pa., would directly affect the ownership of homes owned by 113 employees in the Greater Boston area, as shown by replies from 452 questionnaires returned (from a total of 831 employees).

This survey revealed that 65 employees answering the questionnaire had GI mortgages totaling \$500,715. Other types of mortgage totaled \$209,900.

The Federal Government has a vital stake in the ownership of these homes, especially those which were acquired through a GI mortgage.

Now, these employees, if the district office is moved to Philadelphia, would, in most instances, have to sacrifice their property and receive whatever a quick sale would realize.

It is a well-recognized fact that residential property when forced on the real-estate market for a quick sale results in the property being sold for less than its real worth, and the loss, of course, would be suffered by the employee veterans.

The employee veteran, having exhausted his eligibility to loan-guaranty benefits in the purchase of his Boston home under the GI bill, would find it almost impossible to buy a home in the Philadelphia area, since he would not have such benefit available in applying to the mortgage-lending institutions in Philadelphia.

With banks becoming more reluctant to loan their funds for periods of time long enough for the mortgagor to pay off his mortgage in full, the transferred employee would find ownership of a home in Philadelphia, of necessity, must be deferred for a long time.

From a contented Veterans' Administration employee working toward the day when his Boston home would be free and clear of all obligations, he would find that this vision, which is one of the cornerstones of the American way of life, would not be his to enjoy in working for the Veterans' Administration in Philadelphia.

ECONOMIC EFFECT ON METROPOLITAN BOSTON

A business leader in Boston recently referred to the "denuding of Boston and its environments of its talented and specialized employables." This, of course, specifically refers to the class commonly called the white-collar workers. The removal of approximately 800 workers and their families from the Veterans' Administration in Boston to Philadelphia would really amount to the Government adding to the confusion in displacing specialized help. These people who constitute the stable element, the mid-

dle class, are the backbone of any community, the people who are a leveling influence, and much needed where they are.

The loss of these Veterans' Administration employees to the Boston area would result in a serious and noticeable decline in purchasing power in the area, since the workers are steady and constant and are of a level income group with continuous operating expenses.

EFFECT ON EDUCATION

A survey based on 452 questionnaires returned (from a total of 831 employees) discloses that the children of school age among such employees displaced by the centralization to Philadelphia totals 453 of which 28 are attending college; 44 are attending high school and 106 are attending grammar school and 275 are under school age. It is conservatively estimated that this total will be three times greater when the children of the employees of the New York and Richmond district office are considered.

The school facilities of the Germantown area of Philadelphia, if similar to other United States communities, would be unable to accommodate so large a number of new pupils without the construction of new school buildings—a program which could not be completed in less than 2 years.

Between 1949 and 1950, the normal decrease in elementary school attendance in the city of Boston was 2,000 pupils. The withdrawal of such a large body of additional pupils brought about by the contemplated merger would further adversely affect the Boston school system.

Of paramount importance to the Veterans' Administration employee parents of children of school age is the detrimental effect such a move would have on the educational progress and the emotional development of such children.

Being unable to finish the school year 1951-52 at his present school, the entire school year would be lost to the child. Adjustment to the different methods of instruction would very likely result in the child being compelled to commence school in the Philadelphia area one grade lower, thus causing his education to be retarded by two full years.

The withdrawal of a child of elementary school age from his school associates necessitating a start in a new school and development of new friends is universally recognized by authorities on child behavior as having a definite impact on the child's emotional structure.

THE EFFECT OF INFLATION ON A FEDERAL EMPLOYEE

The impact of inflation in the United States since 1939 has been felt by every community and by every family within the community. It has been even more of a burden on the employee of the Federal Government, since salary increases received have not been commensurate with the rise in the cost of living, and where added to a basic wage already low by comparison with that received in private industry.

Inflation is considered by both major political parties as an insidious force in this country. Should it not be adequately controlled, it may well be said that it could cause a condition equivalent to that of any dangerous influence to the American way of life. As a result of this increase in the cost of living, a Federal employee has not only made no progress in implementing his savings over the last decade, but has had to dip into those accumulated, if any, to meet the needs of his family.

A sudden dislocation of the employee who owns his own home, purchased in many instances through the GI bill of rights, almost invariably means a loss of the meager equity built up in the property. This is axiomatic where a quick sale of real estate is necessary.

On the other hand, in a city where several hundred families are immigrating a seller's market immediately prevails and those persons who do purchase a home will be forced to make financial commitments in most cases beyond current means. Leases and rents will rise to the maximum, wherever possible.

GI Education and Training Program has Proved of Untold Benefit to Many Thousands of Veterans

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. EVINS. Mr. Speaker, the House Select Committee To Investigate Veterans Education and Training has not as yet made a final report of its investigations, studies and findings over a period of several months. However, the National Commander of the American Legion, Erle Cocke, Jr., has set down his own observations and views concerning the Veterans Education and Training Program in a very excellent article in the August 1951 issue of the American Legion magazine. In his very fine article, Commander Cocke makes an appraisal of the affirmative side of the program and makes known the great benefits and advantages which have been possible through this program—observations and appraisal with which I am in agreement, believing as I do that while there have been regrettable and, in some instances, outrageous abuses of this great program, the over-all and final result has been highly creditable and in line with the intent of Congress in enacting legislation in this regard.

Under unanimous consent, Mr. Speaker, I include with my remarks in the Appendix of the RECORD, the article which Commander Cocke has written in this connection and which is entitled "Those Incredible GI Students." The article is as follows:

THOSE INCREDIBLE GI STUDENTS—HOW 8,000,000 WAR II VETS MORE THAN JUSTIFIED OUR FAITH IN THEM

(By Erle Cocke, Jr.)

I heard a wonderfully inspiring story the other day from Cecil Munson, the American Legion's chief of vocational training and education. While in Texas recently, Cecil visited the farm of a veteran who had learned modern farming methods under the education-training program of the GI bill of rights. Although the farm was located in one of the poorer sections of the State, the GI's land was fertile and prosperous, and the farmhouse was equipped for good living. The veteran expressed thanks for the GI bill. He said that it had raised him from a tenant with a bleak future to the level of an independent farmer with a promising future.

"The GI bill training has changed the world for me," exclaimed the sun-bronzed ex-GI. "Believe me, mister, if I learned nothing else from my schooling, I learned this: I'm going to see to it that my children also get an education."

In this little story is the boiled-down wisdom and foresight and faith of the Amer-

ican Legion's leadership which fought to establish the GI bill of rights in a battle which at one period had to be fought against the bitter opposition of the other major veterans' organizations. In this little story is summed upon the long-range benefits of the GI bill's education and training program. For the GI bill has not only plowed up new opportunities for hundreds of thousands of veterans of World War II, but it has also planted the seeds to provide new and brighter horizons for future generations of America.

After 7 years, the education-training program of the GI bill—along with the vocational rehabilitation program of the Disabled Veterans Act—has outstandingly withstood the test of time. The program has proved to be one of the finest things America has ever done for the men and women who served in uniform. But even more important, it has proved to be one of the finest things done for the prosperity and security of the entire Nation.

Today, virtually everyone joins in a song of praise for the GI bill's educational provisions. Yet, only a few years back there were many doubts, outside of the Legion, that the program would succeed.

The critics and the cynics had a field day. Education and training require time, effort, and perseverance, they cried out, whereas the veterans are impatient, and lazy, and want their benefits handed to them on a platter. The veterans won't go to school, hooted the detractors of education for GI's.

Even in high places, in Government and in education, fears were voiced that the program would attract relatively few ex-servicemen. When the GI bill was first being discussed, in the summer of 1943, a special committee appointed by President Roosevelt estimated that only one out of 12 World War II veterans would care for postwar education or training. About 18 months later—shortly after the passage of the GI bill—the War Department took a sampling of its officers and enlisted men, and came up with the conclusion that only 3 out of 10 servicemen had any plans, definite or tentative, to enter training or schooling after their discharge from the Armed Forces. As late as August 1945 the Saturday Evening Post featured an article which announced that The GI's Reject Education on the fragmentary evidence that only 1.5 percent of the first 12,844 veterans of World War II had decided to take advantage of their educational opportunity.

The estimates, the surveys, and direful predictions proved to be wrong, incredibly wrong.

By 1946, the amazing rush of the ex-GI's into school and college, into job and farm training, convinced even the most obstinate skeptics that the veterans were eager to make use of their GI bill educational rights. The rush, too, fulfilled the average American's faith in the purposes and goals of our ex-servicemen. The average American had supported the GI bill with bales of letters and telegrams to Congress in the days when passage of the bill hung by a thread.

In 7 years of the GI bill of rights—Public Law 346—more than 7,350,000 veterans of World War II have received training in the school, on the job, and on the farm.

In 7 years of the Disabled Veterans Act—Public Law 16—some 572,000 ex-GI's went after vocational rehabilitation.

Latecomers this spring bring the over-all total close to an even 8,000,000.

That means that more than half of the men and women who saw service in the Second World War availed themselves of the opportunity to improve themselves, to make themselves better earners, better providers, better producers, better-informed American citizens.

What a deafening reply these silent statistics give to the mockery of those who sneered

that the veterans want "hand-outs on the half shell," who crowed that the veterans would ignore any solid benefit which required work and study on their part.

Nearly \$12,000,000,000 has already been spent by Uncle Sam to provide training and schooling, with tuition, books, equipment, and subsistence, for the veterans who responded to the GI bill. Even in these inflated times, \$12,000,000,000 is a pile of money. Was this tremendous expenditure worth it?

A careful answer to this question was recently reported to Congress by the House Select Committee to Investigate the Education and Training Program under the GI bill (the Teague committee).

"The good that has been accomplished and which will show itself more clearly in each succeeding year and in succeeding generations is incalculable," reported the committee.

If we take a close look-see, and analyze the response of the veterans to the educational provisions of the GI bill, here is what we find:

More than 2,480,000 veterans continued their education and training at some 3,000 college-level schools, including colleges, universities, professional and technical schools, junior colleges, teachers colleges, law review colleges, music schools, and hospitals offering residence training to physicians. At least 400,000 of the veteran-students have completed their courses.

More than 3,360,000 veterans sought to improve their education and training in below-college-level schools, attending approximately 17,500 technical institutions, business schools, secondary and elementary schools, vocational and trade schools, flight schools, and farm training schools. Over half a million of these veteran-trainees completed the full training period.

More than 1,600,000 veterans took on-the-job training courses. More than 625,000 veterans went into on-the-farm training. And the programs are still going on.

We've all seen the newspaper headlines and heard the talk about the racket veterans schools, about the veterans who went to school for the free ride and subsistence, and other examples of abuse. Though all too true, these reports are misleading.

For example, the facts and figures show that a bare few veterans sought to use their training rights to prepare for such doubtful careers as the rumba, samba, or waltz.

In its detailed report to Congress last year, the Veterans' Administration showed that most veterans in training chose courses in fields which demanded considerable professional or technical skill—occupations which in general offer greater prestige, greater family security, and higher earning power. This observation underlines the serious intent and purpose of the GI students.

Nor did the veterans go scrambling after their education and training simply to get a degree or diploma, any degree or diploma. More than 800,000 of the veterans took the intensive VA guidance tests before choosing their career courses. More would have taken advantage of the scientific guidance to help select a career had VA been able to make available more facilities and trained personnel to run the vocational guidance clinics.

A breakdown of the ambitions of the veterans in training, according to the latest available figures (October 1949), shows that one out of every three ex-GI's aimed to be a professional man. The meaning of this figure becomes clear when we learn that a survey of the Armed Forces personnel for June of 1945 shows that only 2 out of every 100 men in uniform (2.2 percent) had been in a professional job before going into the military service. Only 4 out of 100 (4 percent) of the male working population were in professional occupations, according to the latest available census figures.

The statistics also show that the same push to improve their knowledge and skills characterized those veterans who sought, and are seeking, to improve themselves with courses aimed at bringing them into the semiprofessional occupations, the managerial occupations, and the skilled crafts.

The present ticklish world situation and our own partial mobilization makes it necessary for us to measure the value of the GI bill training from another point of view—that of its contribution to the national defense.

Again we glance at the statistics and we find the veterans in college flocking to the courses in engineering, physical and natural sciences, medicine and dentistry, and scientific agriculture. Other popular studies on the college level are the humanities, law, and the social sciences, such as economics and history, all of which provide the necessary background for future leadership of our country.

Below the college level, the veterans have pursued courses mainly in agriculture, business, engineering, mechanical crafts, refrigeration and air conditioning, commercial art and design, radio and other communications. On-the-job training has produced accountants, journalists, engineers, lawyers, decorators, commercial artists, draftsmen, laboratory technicians, photographers, surveyors, craftsmen, as well as diversified trained men in the managerial and clerical career fields.

In stressing the drive for the professions, I don't want to overlook the importance of the GI bill in encouraging the basic three R's—reading, 'riting, and 'rithmetic. An incident illustrating this point occurred at Urbana, Ill., where 40 veterans were enrolled in a carpentry course in the public-school system. The ex-GI's were asked what they would like to learn most of all in addition to their carpentry. To the surprise of the school officials, the veterans unanimously replied: "We'd rather learn how to read and write better, than study anything else."

Veterans' education and training hit its all-time peak in December of 1947—3½ years after the passage of the GI bill—when 2,516,000 ex-servicemen crammed into the Nation's classrooms and job-training programs at one time. There's been a decline since, but as late as March 1, 1951, there were 1,670,000 veterans undergoing training.

First to attain its high point was job training, in January of 1947. The following December, college training marked its all-time high. It was not until 2 years later, however, that the below-college-level education program rose to its crest. Institutional on-the-farm training did not reach its peak until the summer of 1950, and this program has grown right up to this summer's deadline.

There are those, of course, who warned that no good could come of the rush to school. They said that the great mass movement of ex-servicemen into the Nation's schools lowered training standards and afforded the veterans cheap degrees or diplomas. Foremost, and most widely publicized, among those who sold short the aims of the GI bill and underrated the aspirations of the homecoming veterans was Dr. Robert M. Hutchins, then chancellor of the University of Chicago, an educator with an international reputation.

Only a few months after the passage of the GI bill, Dr. Hutchins made a few colorful comments about the GI educational program in a popular weekly, comments which were widely quoted in the press. Said Dr. Hutchins:

"Educational institutions, as the big time football racket shows, cannot resist money. The GI bills of rights gives them a chance to get more money than they have ever dreamed of and to do it in the name of patriotism.

"They will not want to keep out unqualified veterans; they will not be allowed to, for the public and the veterans' organizations will not stand for it.

"Colleges and universities will find themselves converted into educational hobo jungles. And veterans, unable to get work and equally unable to resist putting pressure on colleges and universities, will find themselves educational hoboes * * *

"The result will be that both the educational system and veterans will be demoralized."

What a sad prophecy! The National Education Association's Department of Higher Education informed the House Veterans' Committee recently that "the education of veterans in regular public and nonprofit educational institutions has been one of the brightest pages in the history of American education. * * *

"From their intimate experience in the education of veterans * * * the college and university faculties of the United States have become convinced that a tremendous value has accrued to the Nation as a result of the enactment by Congress of this (GI bill) far-sighted legislation," the NEA told Congress.

The fact is that the veterans made a terrific impact, for good, on the American system of education. The colleges alone received more than \$2,000,000,000 in tuition and fees, which provided 65 percent of the colleges' income. This \$2,000,000,000 was "enough to make a vast difference in the financial status of these colleges and universities," according to Benjamin Fine, the education editor of the New York Times. The tuition, along with the billions more in subsistence, permitted tens of thousands of veterans to go to school who otherwise couldn't afford to do so.

Not only did the GI bill revive and strengthen long-established schools; it created new ones. A congressional committee recently reported that public and independent schools in existence prior to 1944—when the GI bill was adopted—were too few to meet the demands of the veterans desiring training, and that there was a serious shortage of schools, especially in the southern states. VA figures now show that 7,600 new institutions for education and training were stimulated into being by the GI bill. Many public schools added vocational departments and other special divisions to meet the needs of the school-bound veterans. And in some States, such as New York and Massachusetts, junior colleges were established to catch up with the rush to the classroom. Many of these are now making higher education available to townsmen who could not afford to go away to college.

The veterans streaming onto the campus challenged their teachers to take another look at their teaching methods and philosophy. Reviewing the seven years of the GI bill, a recent article in *School and Society* commented: "The veterans have brought stability, maturity, higher standards of work, and a broadened adult viewpoint to the classrooms and the campus." Under the barrage of questions shot at them by the knowledge-questioning ex-GI's, many professors were forced to junk their 20-year-old classroom lecture notes, and to start thinking in terms of today and tomorrow, instead of yesterday. The veterans placed a high value on their limited time and funds. They refused to accept shallow, shoddy answers. They demanded answers which were practical and realistic in keeping with their serious outlook. The veteran students—half of whom had one or more dependents—were willing to study hard, and, as a rule, took on more class work and tougher courses than the nonveteran students.

Yet, in spite of his heavier school work load and responsibilities at home, the GI student proved, in many cases, to be a better student than the nonveteran. A year after the GI bill program got going, Williams College was able to report that it had had the highest scholastic average in its history "entirely due to the presence of serious-minded veterans." A similar checkup at Ohio State University disclosed that more than 14,000 ex-GI's in a student body of 24,000 were doing "significantly" better than the non-veterans. There were similar reports from other schools.

A most thorough study of GI schooling has been made at Brooklyn College, which made a detailed investigation of its scholastic records for the period between February 1946 and June 1949.

The study showed that the veterans held a "slight but consistent superiority" in school work over comparable nonveterans.

The results of the study, said Dr. Harry Gideonse, president of this college with a tradition of serious, bright students, "dispel the initial fear expressed in some quarters that the money spent in the education of the veterans might be substantially wasted, or that the college campus would be flooded with poor students."

The fine job of the veterans on the college campuses has been repeated in the other phases of GI bill education and training.

In on-the-job training, for example, the Sales Executive Club of New York reported that the mature attitude of the veterans gave them a "slight but definite edge" over nonveterans in the field of salesmanship.

Encyclopedia Britannica, Inc., replying to a survey by the Sales Executive Club, said:

"The average age of our sales force has been lowered 10 years since the war because the veterans have come out with a mature attitude toward life and are ready to assume responsibility more quickly. They are easier to train and average more pay than other salesmen of equal background and age who were not in the Armed Forces."

In the same survey, General Foods, one of the first major corporations to be approved for on-the-job training, stated that it had not been disappointed in any of the ex-servicemen trained and hired under the GI bill program.

More recently, the National Association of State Ap-praisal Agencies sent out a questionnaire to some 19,000 employers participating in the on-the-job training program. Employers replying to the query said they wanted to continue their job training program, by a vote of 3 to 1. When asked, "In the light of your own experience, do you consider that the on-the-job training program has been... worthwhile?" the employers overwhelmingly O. K'd the program by a vote of 6 to 1.

A high light of this survey was that more than one-third of the veteran trainees had been hired by the firms which had trained them; and that half as many trainees again, according to the certain knowledge of the employer-trainer, were employed elsewhere in the kind of work for which they had been trained. From the survey, it was estimated by the Teague committee that 65 percent of the veterans in the on-the-job training program had reached their employment objectives. "This figure," comments the Teague committee, "is considered highly satisfactory in the light of the normal results of established educational programs."

Much publicity has been given the curious sidelights of on-the-job training, such as learning how to operate a mink farm, raise rainbow trout, blow glass, or climb steeples—all of which, incidentally, are honorable occupations. Little publicity has been given, however, to one of the truly fine achievements of the on-the-job training program—apprenticeship training. Today, three out of every four apprentices training under the high standards of the United

States Bureau of Apprenticeship are veterans. Already 63,000 veterans have achieved the respected status of journeyman-craftsman. This number will rise to between 150,000 and 200,000 within the next 2 years. As many more ex-GI's who began but did not finish the apprenticeship-training program, nonetheless have improved their skills, knowledge, and earning power.

Institutional on-the-farm training was the last of the GI bill training programs to get going in a big way, but even so, it has already had a splendid effect on the Nation's agricultural methods, practices, and operations.

"I was opposed to the program," a western Congressman told me, "because I felt that the Government was already meddling enough into our farms without the on-the-farm training."

"My son, however, insisted on taking the farm training, and soon, I discovered, he knew more about efficient, productive farming than I did. That made me change my mind about the farm-training program."

The farm-training program gave the veterans a push to buy, rent, or lease their own farms. In many areas the program boosted farm incomes. It has led to more farm production and to widespread soil conservation activities, and it encouraged farm improvements for better living.

A check by Veterans' Administration last year showed that 94 out of 100 veteran farm trainees either owned or operated their own farms, a strong testimonial to the value of the program in helping make independent farmers out of veterans.

Here are some other encouraging reports from around the country:

In Texas, veteran farm trainees have invested \$100,000,000 in land, homes, stock, and farm equipment. In Pennsylvania the average net income of GI farm trainees has risen from \$400, before starting their courses, to \$1,400. In a Minnesota county, the average net worth of 31 veterans who completed their training was 5,220 as against \$1,960 when they started. In three West Virginia counties, veteran trainees have been averaging more than 100 bushels of shelled corn per acre where the area-wide yield is only 43 bushels per acre. In North Carolina veterans built 15,000,000 feet of terraces to conserve soil, replanted 6,000 acres of land in trees, and limed 105,000 acres of farmland, all in a single year; in Georgia, 21,000 farm trainees developed 150,000 acres of pasture from eroded red clay land that at one time was considered virtually worthless.

In such ways have schooling and training below the college level enriched not just the veterans, but the Nation as a whole.

A sampling of veterans' reaction to their training in less-than-college institutions discloses that the ex-GI's, almost to a man, spoke out in their belief that the good their courses had done was worth the money expended by the Government. A large number of replies expressed thanks to the Nation for giving them a chance to learn useful skills. Those veterans contacted in the survey voted three to one that they had found a job as a direct result of their training. The results of this survey are most significant, in the opinion of the Teague committee—an opinion shared by the American Legion.

Each year, over the 7 years of the GI bill education and training program, there has been a hue and cry raised about the abuses and rackets in the program. These abuses showed up in on-the-job training, flight training, farm training, in proprietary schools, and sometimes even in nonprofit institutions.

All too often, veterans have been blamed for the abuses which have cropped up in fly-by-night schools. Not one veteran has ever been in a position to abuse his privileges under the GI educational program without the deliberate connivance or the

incompetence of elected or appointed public officials.

The Teague committee—recognizing that the vast GI bill program included as many veteran students as the entire population of the continent of Australia—found unmistakably that the abuses were relatively few.

Nevertheless the crooks and the bunglers have gotten the headlines. So, on the shoulders of those who have corrupted or mismanaged their little corners of the GI bill rests a far worse crime than their own petty thievery or incompetence. Their abuses, seen out of perspective by the public, have endangered confidence in GI training.

In this article I hope I have helped to restore the perspective. GI education has cost twelve billions. The United States will easily profit more than \$500,000,000,000 from GI education. That sum is not hard for a nation to come by during the lifetime of 8,000,000 men and women who earn more, pay more taxes, produce more, buy more, spend more, farm better, and build better—and do it all more wisely—than they would have without GI education. It is very likely that far more of the postwar prosperity of this Nation than anyone might imagine is due directly to the GI bill. We must not ever let the bloodsuckers on the fringes, or the phony prophets, persuade us to go back to the days of veteran apple-peddlers, bonus marchers and bread lines. The GI bill way is the right way and the wise way—and in the long run the profitable way—to absorb wartime veterans into a bigger and better national economy.

The GI education and training program expires for most World War II veterans this summer. Its incredible record since World War II proves without question that the program must be continued for the veterans of Korea—and for the benefit of the Nation.

The Constitution of Illinois

EXTENSION OF REMARKS OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. GORDON. Mr. Speaker, under unanimous consent, I include in the RECORD an essay written by Miss Gloria Andrews, of 1238 North Artesian Avenue, Chicago, Ill., a student at the Tuley High School, which is located in the Eighth Congressional District. I have the honor to represent, entitled "The Constitution of Illinois."

She won first place in the annual essay contest conducted by the American Legion, Department of Illinois, 150,000 participating throughout the State. It truly demonstrates the progress of better education in the public-school system, and I am happy that this honor has been bestowed upon a student in my district.

The essay follows:

THE CONSTITUTION OF ILLINOIS

(By Gloria Andrews)

In 1818, the State of Illinois was admitted to the Union. A brief document, whose main provisions had been taken from the Constitutions of Kentucky, Ohio, New York, and Indiana, became the first Constitution of Illinois. This document provided for three departments of government furnishing the important check and balance needed for a successful governing body. Because the

memory of tyrannical Governors like Berkley, Stuyvesant, and Andros was vivid in the minds of the people, the executive power was very weak and the Governor lacked a sole veto while the legislative branch was given extensive appointing privileges. Although the inhabitants were given no chance to ratify it, the constitution contained a suffrage clause giving the right to vote to all white male inhabitants, who had resided in Illinois for a period of 6 months. These votes were to be given viva voce.

Then, in 1848, the State adopted a new constitution. This was similar to the first but extended the executive and curbed the legislative power by giving the sole veto to the Governor. As the people, recognizing the voting aloud was detrimental to a proper election, had cried out against voting viva voce, the new constitution provided that all white male inhabitants, living in the State for 1 year, were qualified to cast their vote by secret ballot.

The year 1870 brought another constitution to the people of this State. This one had a preamble stating the purpose of the document as had the Federal Constitution. Article 11 of the constitution of 1870 provides freedom of speech, of the press, rights to trial by jury, to assemble, to petition, et cetera, in a bill of rights.

This constitution has been brought up to date by the gateway amendment after five defeated proposals since 1891. November 7, 1950, Illinoisans, remembering the slogan "Open the gate to a better State," went to the polls and finally passed it. The gateway amendment allows three articles to be submitted before the general assembly, our legislative body, instead of only one. Now a majority of all electors voting at the election or two-thirds of those voting on the proposition is required to pass the proposal. Future amendments may presently be submitted either on separate ballots or in a separate column on the ballot. Previously the form of this ballot was determined by action of the general assembly.

An unusual aspect of our State constitution is that it provides for minority representation. Joseph Medill, of Chicago, is responsible for this. He sponsored the idea to destroy the strong sectional feeling, a remnant of the bloody Civil War, which divided northern and southern Illinois.

According to this plan, which is used for electing State representatives from senatorial districts, a voter casts three votes. He may cast one for each of the three representatives or he may split his three votes between two candidates. The third method is referred to as "plumping."

This is a good plan, because it allows unpopular, yet sometimes better qualified men, the opportunity to win. Very often people are against a new plan, method, and man simply because they are new. Knowledge or dislike may not be a factor. True, everyone likes familiar things, but familiar things do not always make an efficient government. In Illinois, advocates of an unpopular representative may influence their friends to plump the vote, thereby often benefiting the State.

Like all good things, our State constitution has been criticized. It has been called the constitution of horse-and-buggy days. It is true that the constitution was originally drawn up for an agricultural State and now Illinois is an industrial State, but despite all this, it is still considered one of the best models of State constitutions. As for the argument that an old constitution is ineffective and behind the times, it cannot be condemned because of age. Consider our Federal Constitution. It is 163 years old and has stood the test of time.

With the foresight of our statesmen, in the future the Constitution of Illinois will be not only one of the best models, but the best.

Congressman Dempsey Gets Action**EXTENSION OF REMARKS
OF****HON. SAMUEL W. YORTY**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. YORTY. Mr. Speaker, during his singularly successful career, our distinguished colleague from New Mexico, the Honorable JOHN J. DEMPSEY, has learned a great deal about how to get things done, and done quickly. His skill and ability are now paying dividends, not only to the citizens of New Mexico but also to the citizens in all of our districts who find it necessary to purchase new automobiles.

Due to the efforts of Congressman DEMPSEY, each new automobile is now sold equipped with a spare tire, the cost of which is included in the sale price of the car. The National Production Authority order which forced a new-car purchaser to buy a spare tire separately has been revoked. Before revocation of the needless order, automobile dealers were compelled to deliver new cars without spare tires, but the retail prices of the cars were not reduced by an amount equivalent to the retail cost of an extra tire purchased separately. Since there was no restriction on the sale of tires, the new-car buyer desiring a spare tire found himself able to get one by buying it separately and paying for it considerably more than he would have paid had the tire been included as standard equipment in the usual manner. All of this did not make sense to our colleague, Congressman DEMPSEY. He decided to do something about it, and he did.

When the explanations of the National Production Authority proved wholly unsatisfactory, our distinguished colleague prepared an amendment to the Defense Production Act nullifying the useless order, and serving notice on the National Production Authority that he would air the whole matter on the floor of the House if the situation were not immediately remedied. A few days later, the order was revoked, and the spare tire is back in its proper place, and, what is more important, it is included in the sale price of the car. This means a saving to every automobile purchaser.

Every Congressman sees many wrongs which he would like to see righted, but time, red tape, and other factors often prevent him from having the satisfaction of decisively finishing that which he starts out to do. Here is a case where an exceptionally able Representative not only started out but finished the job. I am sure you will all wish to join me in thanking Congressman DEMPSEY for eliminating at least one needless and unjust Government order. During his four terms in this Congress, his two terms as Governor of the great State of New Mexico, and his tenure in other important offices, our colleague, JOHN J. DEMPSEY, has acquired a know-how that makes him an exceptionally valuable Member of this Congress.

XCVII—App.—311

**World Government Repudiated by
Legislature, State of Delaware****EXTENSION OF REMARKS
OF****HON. LAWRENCE H. SMITH**

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including a resolution approved by the Legislature of the State of Delaware on the subject of world government. This resolution is in opposition to any form of world government. The resolution verbatim is included as part of my remarks:

Senate Concurrent Resolution 4

Concurrent resolution in opposition to any form of world government

Whereas the Sovereignty Preservation Council of Delaware, composed of the Veterans of Foreign Wars, the American Legion, the National Sojourner's, Council of Polish Societies and Clubs in the State of Delaware are interested in the resolution presented below; and

Whereas in 1943 a resolution was introduced into the general assembly asking it to petition the Congress of the United States to call a conference of nations to create a limited world government, and said resolution failed to pass; and

Whereas, again in 1949, a similar resolution was introduced into the general assembly and it also failed to pass; and

Whereas a world government would deprive the citizens of the United States of inalienable rights, privileges, and immunities now guaranteed by the Constitution of the United States; and

Whereas in the present crisis it is highly important that the citizens of the United States present a united front against any and all forces that tend to destroy our American heritage; and

Whereas Delaware was the first State to ratify the Constitution of the United States and therefore should be the last to take any action which would weaken or destroy it; and

Whereas the general assembly is composed of senators and representatives, elected by the people of Delaware, who are sworn to uphold, protect, and defend the Constitution of the United States and the constitution of the State of Delaware. Therefore, be it

Resolved by the Senate of the State of Delaware (the House of Representatives concurring therein), That the General Assembly of Delaware is unalterably opposed to any and all plans, programs, and proposals which tend toward the development of any form of world government.

Behind the Front Page**EXTENSION OF REMARKS
OF****HON. CLINTON D. McKINNON**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. McKINNON. Mr. Speaker, at the request of my good friend, George J. Burger, vice president of the National Federation of Independent Business, I

am pleased to submit the following newspaper article from the Akron Beacon Journal of July 29, 1951:

LET DEALERS SELL FIFTH TIRE

EDITOR, BEACON JOURNAL:

I am not a member of the National Association of Independent Tire Dealers. However, I did have a hand in its formation as secretary-manager, 1935 to 1940.

Prior to that, from 1923 to 1925, I was president of the National Tire Dealers Association. I was an active independent tire retailer from 1909 until 1935. I believe due to this experience in the rubber tire industry I should be in a position to evaluate the over-all on the spare tire on new automobiles, and what it meant to efficient independent tire dealers throughout the Nation.

I am referring to the editorial which appeared in the Beacon Journal on July 20, Fifth Tire Again. It is a strange coincidence that similar types of editorials appeared in many leading publications throughout the United States.

It is true, and rightfully so, that the tire dealers of this Nation, through their national association, as early as 1928 opposed any and all action that would prohibit them from having equal opportunity in supplying consumer requirements on the fifth or spare tire.

It probably will be found that during the 20-year period some 50,000,000 units of spare tires and tubes have gone exclusively through the car manufacturers, denying the right to 300,000 independent tire dealers to participate in that business. You must bear in mind that major tire manufacturers expect their dealers throughout the Nation to give service both on original equipment and spare tires when called upon by the user.

Shortly after the Korean outbreak, purely as a conservation measure to help the Government, the writer, through his own private services, as recommended by subscribers, urged that the spare tire be eliminated during the emergency. That was the proposition.

We know from experience that good usable used tires could have been used during the emergency, with no great hardship on the automobile owner.

It can be said without a question of doubt that any ruling coming out of NPA was largely influenced by other than tire dealers throughout the Nation.

It is true that during the life of the ban the order was meaningless and that the new-car owner could get the spare tire through independent dealers or automobile dealers, and in this respect it may be found that major tire manufacturers might have been shipping the spare tire direct to automobile dealers, bypassing the independent tire dealer. I said "it may be found."

The inference in most editorials is that in the allowance made to the car purchaser minus the spare tire, the tire dealer was making the difference in what the user had to pay. That is erroneous. No tire dealer bought new tires at the price that was allowed by the automobile manufacturer to be deducted from the list price of the car.

It is true that with the allowance that the automobile purchaser received from the car manufacturer for the tire which was not delivered, the tire dealer not buying the tire in the first instance from the tire manufacturer couldn't hope to furnish the new tire at the allowed price.

If there has been any annoyance or needless additional expense to the car purchaser, the responsibility rests with the suppliers of original equipment tires and the car manufacturers themselves and not with the independent dealers.

The dealers have a justifiable right in demanding of our Government relief from this

monopoly existing these past 20 years between the four major tire manufacturers and the car manufacturers, denying the right to independent dealers to participate in a free competitive market for consumer requirements. All pressure is being used through Government agencies and congressional committees to have this issue explored for the first time in 20 years.

GEORGE J. BURGER,
Vice President, National Federation
of Independent Business.

BEHIND THE FRONT PAGE

(By Robert H. Stophar and James S. Jackson)

FIFTH TIRE

In the controversy over whether automobile manufacturers should be allowed to supply a fifth tire with a new car, the Big Four of the rubber industry have been used as whipping boys for both sides.

Publicly, the rubber companies have said nothing, because they don't want to alienate either group of good customers—the automobile makers or the independent tire dealers.

Actually, the rubber people probably have been pretty well satisfied with the course of events. When the Government's ban on the fifth tire went on last April, rubber was short. The ban may have made it possible to supply a few more tires to dealers during the spring season.

Now that rubber is more plentiful, the companies are undoubtedly content to have the tires flowing again through normal channels. They may make a little less profit per tire on the huge orders from the auto firms but they consider this a backbone of their business.

Conflict

Spokesmen for different labor groups have popped up on both sides of the fence in commenting on the Government's ban on fifth tires, which was recently rescinded.

The Railway Brotherhood's newspaper, Labor, favors having the fifth tire on new cars. In a recent editorial it blasted George J. Burger, writer of a letter in today's Sunday Forum, and the Big Four tire companies as being responsible for the ban.

The editorial said, in part: "It appears that the fifth tire ban was wanted by a combination of big business—the Big Four tire manufacturers—and small business—Burger's organization. Their demand was gladly granted by businessmen who came from the tire industry to act as Government officials in the NPA."

In direct contrast, Frank Edwards, radio broadcaster for the American Federation of Labor, blamed the big rubber companies for prying off the ban on the fifth tire.

In a broadcast on July 6 he said:

"The four big rubber companies which dominate the tire market have won another victory over their competitors and the consumers. Beginning next week, the Government will permit manufacturers of new automobiles to sell spare tires with the new cars."

"The story behind the deal is this: Four big tire companies furnish those tires. Representatives of those same companies are in key positions of the Government agency that issued the order banning the sale of spare tires. It was expected that a panic market would develop, enabling the tire companies who supply the car makers to unload at fancy prices. Nothing of the sort occurred. Customers bought that extra tire at lower prices from independent dealers. So the National Production Authority reversed itself and, starting next Monday, the dominant tire makers will once again supply all five tires on each new car at a nice profit to the car manufacturers and the four big rubber companies—Goodrich, Goodyear, United States, and Firestone."

Note 1: The most common complaint heard during the period when the fifth tire was

banned was that customers had to pay more for a spare than it would have cost them if it had been included in the price of the car.

Note 2: The United Rubber Workers of America, whose members make the tires, has not taken a stand on either side of the fifth-tire controversy.

The Gossett-Lodge Amendment

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. HAYS of Arkansas. Mr. Speaker, among the legislative contributions of our former colleague, Hon. Ed Gossett, during his outstanding service in the House is the proposal to amend the electoral college procedures, known as the Gossett-Lodge amendment.

The Arkansas Gazette recently referred favorably to Mr. Gossett's efforts to secure a more acceptable and democratic method of choosing the President and Vice President, and, under leave to extend my remarks, I include the Gazette editorial, as follows:

Once again the constitutional amendment to give the people a more influential voice in electing Presidents has been started through Congress. For the third time the House Judiciary Committee has approved the Gossett amendment, which provides for dividing the electoral votes of the States in direct proportion to their popular votes. At present all of the electoral votes of any one State go to the presidential candidate with a majority of the popular votes in that State. Under this system, a candidate with a minority of the popular votes in the Nation as a whole can be elected Chief Executive. Presidents Adams, Hayes, and Harrison were elected by minorities.

Last year the Senate approved a measure which would have prevented this from happening in the future. But the House killed the companion bill in the lower Chamber by a 76-vote majority. Most of the opponents of the amendment, sponsored by Representative Ed Gossett, of Texas, were Fair Deal Democrats and Old Guard Republicans. The opposition of the Fair Dealers evidently stemmed from a feeling that the proposed change would lessen the influence of the big cities from which most of them come. This may be true, but the change is still needed; many of the big population centers now wield disproportionate power. The opposition of the conservative Republicans apparently grew out of a feeling that the greater efforts they would have to exert in the South as a result of the amendment would not yield correspondingly greater support for the GOP. The South, however, ought to be included in the strategic planning of the Republicans; otherwise it will never shake off its slavish adherence to Democratic symbols.

Regardless of what the special interests of some Congressmen may dictate, the Gossett amendment is for the good of the country as a whole. It is a measure to make the method of electing Presidents more democratic. Congressmen pay lip service to democracy every day. Here is a chance for them to demonstrate that they mean what they say. Proposals to reform the present electoral system have come before Congress from time to time ever since the disputed election of 1824, in which John Quincy Adams and John C. Calhoun were chosen President and Vice President only after the contest had been

carried to the House of Representatives. Congress should not let another presidential election go by without acting to revise the system.

Controlled Materials Plan Is the Wrong Road in a Free Economy

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, governmental interference in the matter of controlled materials will soon disrupt our economy if the plan is not ended very soon. The power to allocate critical materials wherever and whenever the Government wishes amounts to a considerable power and puts American business in the hands of Government agencies which can thereby exercise the power of life and death over every business firm in the United States. Already we have seen that certain preferred industrial organizations have received the profits of this plan. On the other hand, we have seen well established business organizations suffer from this abuse of governmental policies. As part of my remarks I am including an editorial that appears in Barron's for August 6 entitled "The Wrong Road," and surely the controlled-materials plan is the wrong road in a free economy.

THE WRONG ROAD—CMP SHOULD BE ELIMINATED, NOT EXTENDED

Ten days ago Chairman Eugene Grace, of Bethlehem Steel, came out flatly for limiting steel allocations to direct military orders which are at best taking 10 percent of the steel output of this country.

Last week Mr. Manly Fleischmann, head of the Defense Production Administration, took Mr. Grace's advice in reverse. He announced that his pet controlled-materials plan, under which steel, aluminum, and copper are currently being allocated to many types of nonmilitary production, will be further extended to cover every sector of the American economy.

We believe that Mr. Grace is eminently right in his position and Mr. Fleischmann is eminently wrong, and this for reasons that go far beyond the usual arguments adduced against CMP. Mr. Grace pointed out that even the present plan creates confusion, inefficiency, and black markets. All this is true. Yet, even if Mr. Fleischmann can make his scheme work smoothly, it is still wholly suspect. Indeed, it is precisely when controls do work smoothly and are actually enforceable that a free society should be most on guard.

If the country were at total war, then no doubt total allocations would be necessary. Under present circumstances, with military orders actually falling (\$1,000,000,000 in July against a previous monthly rate of over \$3,000,000,000), extension of CMP is both dangerous and unnecessary. The automobile industry, which so far has been exempt from the plan, but which now would go under it, offers the clearest evidence that Mr. Fleischmann is proposing nothing that the law of supply and demand wouldn't do better. It is a well-known fact that cuts so far effected in automobile production through general limitation orders on raw materials (rather than by outright alloca-

tions) have just about equaled declining demand for cars. All that the National Production Authority has so far achieved in Detroit has been to institute a kind of quota system which penalizes the most efficient producers and helps the least efficient. General Motors, to take a single example, has probably absorbed less of the market for cars than it might have captured. Kaiser-Frazer, which recently had to borrow from the RFC to float its inventory, has been by the same token helped.

Application of the controlled materials plan to automobiles will perpetuate this unsavory situation which is all too reminiscent of the days of the NRA. Its dangers, however, do not end with fostering a kind of Government-sponsored cartel scheme. The basic danger of the controlled materials plan is that it puts into the hands of Government life and death powers over what every firm in the country and every industry may or may not produce. Up to now the Government has sought to draw a distinction between industries that are defense supporting and those that are not. It has included in the defense-supporting category such items as storm windows, freight cars, farm equipment, and oil-drilling equipment to mention but a few. Its attempt to manage the output of these industries has scarcely been successful. The super-freight-car program was first initiated to overcome shortage. Now it is continued to create a reserve. Tomorrow the industry may well be restricted to prevent glut. A generalized CMP means simply that the mismanagement of freight cars will be applied everywhere.

But it is not only in terms of current production that the controlled materials plan and other devices come close to having the effect of socialization. The heart of capitalism is after all the free flow of capital into those enterprises which can prove to investors that they need it and can reward it. The CMP, combined with certificates of necessity, which allow rapid amortization of new facilities, substitutes in this vital investment sphere centralized government decisions for decentralized private decisions. Under CMP rules, the firm with a certificate of necessity can get all the steel, copper, and aluminum it needs for its new plant. The firm without a certificate is apt to be left in the cold.

This power to channel and to stimulate investment wherever government wishes is a fundamental power. It is the essence of all Russia's 5-year plans or of the late Hermann Goering's 4-year plan for Germany. And to a peculiar degree and unnoticed by Congress or the public, Mr. Fleischmann is running just such a plan. To the degree that this plan stimulates total investment, as it has done, it is just as inflationary as its German and Russian predecessors. It has intensified and prolonged the American boom, and has laid the ground for trouble when the so-called war plants are finished. It is also completely arbitrary. It involves not only steel and aluminum capacity as sometimes supposed. For no particular reason the Government has given aid to a \$600,000,000 expansion of the pulp and paper industry and similar aid to the producers of nylon, acrilan, and dacron whose connection with defense is, to put it mildly, tenuous. At the same time the vital machine tool industry has gone begging until recently.

Mr. Fleischmann may, of course, be right that if war comes it will be won by the Fourdrinier roll—the Voice of America needs lots of paper. Or, he might be wrong. The point is that the administration's use of allocation and other powers already goes far beyond what the present situation requires or what a free society, short of war, should tolerate. Continued for years—and no real termination date has ever been set for Washington's defense effort—the present process

can erode away the very essence of capitalism—the free market. That is why in advocating that allocation of steel be limited to direct defense needs Mr. Grace of Bethlehem put forward a proposition that deserves support. And that is why Mr. Fleischmann in extending the controlled materials plan to everything is driving hell-bent down the wrong road.

The Cotton Outlook

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. BROOKS Mr. Speaker, in sharp contrast to the situation existing a year ago, this country has every prospect of having an abundant supply of cotton available during the next 12 months. Twelve months ago we were on the ropes, so to speak, in the sense that we were short of cotton badly needed for munitions and equipment for defense. European nations experiencing the first budding desire of wanting to rearm themselves for defensive purposes against Russia likewise needed cotton for munitions and equipment. Our supply was short and, to conserve the limited amount available, an embargo against the export of cotton was brought into being. At one time there was a grave threat that, even with the embargo, this country would not have enough cotton to get through the 12 months' period before the present crop came on the market.

The Agriculture Department sent out the word of distress to our cotton farmers, and now the reports which I get from Louisiana are to the effect that an abundant crop is forecast. It is just beginning to be picked and within the next few weeks will be in full flow toward the cotton gins throughout the Southland and to the domestic and world markets. Our people are talking about a bale and a half to two bales to the acre of cotton.

The Agriculture Department gave acreage figures which indicated a crop in excess of 16,000,000 bales, and there is talk of a 18,000,000-bale crop. Eleven million more acres were planted in cotton this year than previously. I do not know what the amount of the harvest will be, whether it will be much in excess of 16,000,000 bales or under this amount.

In Louisiana the Farm Bureau Federation has recommended that this country begin to stockpile cotton. I believe this is an excellent idea. In time of emergencies such as this, we should not again be caught short of cotton needed for defense purposes. If, as now appears reasonably certain, we will have a large surplus of cotton and the price goes down to parity, this should be a good time for our Government to stockpile a reasonable amount of cotton. Several million bales might be purchased this year and a stockpile of 5,000,000 or 6,000,000 bales might be in order. This would carry out the recommendation of the Louisiana Farm Bureau Federation and at the same

time would protect our country from another severe shortage of cotton as we had last year. The time to act on this subject is now before the cotton crop reaches the market.

Kaesong and Peace

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. JAVITS. Mr. Speaker, we should not forget that the cease-fire talks at Kaesong originated with the Soviet's Malik, and that the course of these negotiations is becoming strangely reminiscent of the efforts of the Foreign Ministers Deputies to agree on an agenda at Paris. These efforts dragged through 74 sessions from March 5 to June 21, came to nothing and were used throughout as a propaganda springboard by Stalin and others.

General Ridgway should know from as many of us as possible that the American people fervently want peace but a peace that can be relied upon. General Ridgway should carry on the negotiations so long as he is convinced they are sincere and that there is a reasonable chance for honorable agreement consonant with the mission to repel armed aggression so vital to the United Nations and the United States. General Ridgway should know that there is no need for dragging on hopeless negotiations giving the Communists broad propaganda advantages and perhaps military advantages as well, out of concern lest there be a public opinion at home which is so desperate for a cease fire as to wish to grasp at straws.

General Ridgway should not worry about the home folks right now. They know the score a lot better than the Communists think they do.

[From the New York Times]

MISTAKE AT KAESONG

The United Nations has now had the assurance that the presence of an armed marching column of Communists in the middle of a supposedly disarmed and neutral negotiating area was all a mistake and that it won't happen again. This incident, which led quite properly to an interruption of the cease-fire talks, is illustrative of the difficulties that the United Nations faces in negotiation. There has been evidence, from the beginning, that there was no real meeting of minds, no sound identity of purpose, as between the opposing parties. What is being attempted by the United Nations is, at best, the effort to make something good out of a bad situation.

There are two major obstacles to any really fruitful discussion, and both have become increasingly stubborn. The first is the manifest intention of the Communists to use the whole matter of cease-fire discussion as a propaganda instrument. Thus, in the beginning, it was apparent that the first meeting was framed to give the illusion of a United Nations surrender and a plea for peace terms. It was necessary to suspend the talks until the physical aspects of that frame-up were rectified. Its propaganda

aspects have not yet been corrected by the Communists and we have no reason to expect that they will be.

Subsequently the talks had to be broken off when the United Nations negotiators could not have unimpeded access to the negotiation area. This also was remedied, after a fashion, when the United Nations delegation showed its intention of standing firm.

The ensuing deadlock over the agenda was the result of the Communist attempt to get a political commitment from the United Nations after the discussion of political questions at this time had been specifically eschewed in the earlier agreement. This appears also to have been a matter chiefly of seeking an exploitable propaganda advantage. In the later stages, however, when the real division on a demarcation line stalled the negotiation, it took on the aspects of a genuine political maneuver.

At this point the second obstacle becomes apparent. The United Nations has agreed to this negotiation simply because it wants to stop the shooting in Korea. There is, and there can be, no assurance that this desire is reciprocated. The United Nations has no way of knowing whether Mr. Malik put out his peace feeler because the Communists wanted to make a peace or merely because they wanted a breathing spell to regroup defeated forces for a new assault. A further possibility, of course, is that the Communists supposed that they could gain through negotiation major political ends they had failed to gain by resort to arms. This last supposition gains credibility by virtue of the Communist insistence on the thirty-eighth parallel as a truce line. The implication that the partition of Korea would thus have a cloak of agreed legality is inescapable.

This all comes down to a situation that is little short of preposterous. We are trying to negotiate in good faith. At the same time we have no confidence whatever that there is any good faith on the other side. We have deliberately put on boxing gloves to get into a ring with an opponent equipped with brass knuckles. We know in advance that every single thing we do or say will be subject to the most systematic campaign of misrepresentation. We know that our actions and our desires and our motives will be lied about, and that the lies will have as much circulation as the Communists can possibly give them. More than that, we know that if we make a single slip, yield at a single point, our own good faith will be exploited against us. We can try as hard as we will not to make mistakes on our side. We can confidently expect them from the other.

This is not normal negotiation by any definition. It is a phase of cold war in which we have had little experience. We want to stop bloodshed if we can. The choice, in honor, does not lie with us—that is, with the U. N.—and has not so lain from the beginning.

Jesus, Prince of Peace

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. REECE of Tennessee. Mr. Speaker, the sermon, Jesus, Prince of Peace, by Dr. James W. Fifield, Jr., of Los Angeles, has so impressed me that I have obtained permission to insert it in the RECORD.

The patriotic devotion of the average American causes him to tend to put a halo around our high officials and their offices, and, as Dr. Fifield says, the people do not want to believe there has been betrayal in high places and that our leaders sold us out to Stalin at Yalta and Potsdam and thereby set the stage for the tragedy which is consuming the lives of American boys, threatening our security, and endangering civilization itself.

Nor do they want to believe that the moral and spiritual concept of our Nation and its leaders has dropped to the lowest level in our history.

Nevertheless, I am sure the reading of Dr. Fifield's sermon will cause us to stop and think—if not pray.

JESUS, PRINCE OF PEACE

(By James W. Fifield, Jr., D. D., minister of the First Congregational Church of Los Angeles, December 3, 1950)

This sermon has been rankling within me for a long time. Last Friday a widow whose 19-year-old son has presumably been killed in Korea, telephoned me expressing shock, sadness, and also bitterness. When she said, "There is nothing much that I can do but bear my sorrow, for no one will listen to anything I say," I resolved to be her spokesman. I think her bitterness is justified. Our casualties in Korea already are the third largest of any war in our history.

The day in which Jesus walked the earth as the Prince of Peace was not unlike our own. He indicated people must live together in order to live at all. Palestine had actually been fertilized by its best blood. The Assyrians and Babylonians had recurrently come from the north, the Egyptians from the south, and finally the Romans had made their conquest of Palestine. For generations there had been armistice after armistice but no peace.

Americans have been stunned by the developments within our country and the world during these past years. A friend of mine said two wrestlers banged their heads together so hard that they fell down senseless. The first one to come to and get up, jumped on the other and won the bout. Our people, like those wrestlers, have been stunned. We hope that they will wake up before our mortal enemy pounces upon them.

We have not wanted to believe that there was betrayal in high places for we have always kept a halo around certain offices in our country. Even when we disliked things that were happening and were suspicious of things we saw, we were unwilling to throw mud because of patriotic devotion.

Here's a letter from a man who has just gone back into the Army after 3 years of civilian life. He comments that it is an "unrecognizable Army." He says that they have nothing to fight a war with and no will to fight one, anyway. In my contacts with personnel at Army installations, I have heard young lads inquire, "What are we going to fight for?" They feel it is unfair to send them out to fight without adequate preparation to win another victory when the splendid victory so heroically won in World War II has been literally thrown away. Their question, "What would we fight for?" is not easy to answer. If there were clear and righteous issues and honorable, competent leadership, all would be ready to make whatever sacrifices were required and eagerly.

There is deepening anxiety everywhere and especially among more thoughtful people. War budgets are expanding. Matériel and personnel are being drafted. New appropriations are being rushed. The use of atom bombs is being considered. The crisis comes nearer each passing day and our Nation, having been unprincipled in its policies, must

now reap as it sowed, according to the teachings of Jesus and the laws of God.

We encouraged Russia's dream of world domination. At Yalta and other conferences our leaders betrayed us, sold us out, insisted that Stalin take even more than he had dared request, incredulous as that seems. We do not yet know the extent of our commitments because our State Department has resorted to secret diplomacy. We implemented Russia's visions with money and matériel, as well as by the betrayal of our allies in her behalf. Our betrayal of China and of European nations now behind the iron curtain is one of the blackest pages in American history. In South America, Europe, and the Orient, we have tried to purchase power, friendship, and good will with money, ignoring the Christian precept that spiritual values cannot be bought with money. Tasting power, we have made commitments which we cannot possibly keep. "The chickens are just beginning to come home to roost." Korea is only the first of our pledges calling for redemption. Other commitments made by our officials represent betrayals of a rank and desperate sort.

We have used the United Nations as a screen, just as England and France used the old League of Nations. The League was conceived by idealists with the finest of motives but, alas, it was doomed through misuse. No doubt, the originators of the United Nations included many noble idealists. But Alger Hiss and others, who are at least suspect, implemented the vision in ways which caused the United Nations to hamstring the free world. It is not right for those guilty of treason or suspect to be out on bail when our boys are being killed in Korea.

Some of you still believe in the United Nations. I respect the sincerity of your belief but do not share it. Use your own judgment concerning the United Nations. We dare not be unrealistic or impractically idealistic in such matters when our boys are dying in Korea.

There are only two real powers in the world today—the United States and Russia. The other allies do not really count in determination of major issues. The United Nations is what America wills it to be. It is certainly true that the United Nations would not move contrary to America's will, because America's withdrawal would mean its total collapse. In practical effect, it is the United States and Russia that are fighting in Korea.

While we have been engaged in this international debacle, the moral and spiritual altitude in our Nation has dropped to a new low, in part because of the example of the Federal Government. The mass corruption of the population is the fault of pressure groups, unscrupulous politicians and boss-rule. Many in this congregation, today, stoop to things they would not have done a year or 2 years ago. Business ethics, social ethics, personal ethics are often gutter level, as reflected by comic sheets, gangster movies, radio programs, magazine articles, and so forth. It is probable that American morals are at the lowest level in our Nation's history including the carpetbagger era at the close of the Civil War.

Many of the things which I am saying, you have been thinking but have not said because, stunned, like the wrestlers, you hoped they were not true or because you did not wish to offend. Perhaps you trusted our leaders because you or your relatives are on Government payrolls or receiving subsidies. Many have become unspeakably beholden to our Government.

This situation is so serious that there is no easy solution. However, the situation is not hopeless, and with courageous action and God's help, our Nation and our civilization can yet be redeemed. The pattern for redemption and for effective, practical action is as follows:

1. First, repentance for past sins and errors. The starting point to forgiveness and redemption is repentance. There is no other starting point. This is no time for arrogance in high places or low. We need to admit the folly of our ways, and to repudiate leaders who have betrayed us and our allies, whether knowingly or in ignorance. We cannot have too much sentiment about leaders in Washington when our youth are being killed in Korea.

2. We must clean out our own fifth column. In Government this means that every person, either guilty or even suspect, should be summarily and immediately eliminated. This includes those who profess a so-called socialism which is veiled communism. But we must also eliminate those guilty and suspect of communism in our trade unions, our schools, our colleges, our newspapers, our magazines, our business organizations, and even our church officials. We must ready ourselves for a finish fight—the stake being survival.

3. We must aid every responsible nation that fights communism regardless of whether there is any other point of agreement in culture or religion or politics. We need every ally on which we can count in this great moral struggle.

4. We must find ways and means to enlist anti-Communists behind the iron curtain and make them effective as rebels, arming them, and directing them. This may be one of the most important steps which can be taken.

5. We must break relations with Russia. We should never have recognized her present regime. We must also break relations with her satellites and drive out all Russian agents and agents of all satellite nations from our country. We must stop shipping matériel to Russia or to any satellite nation or to any other nation which will not give solemn assurance that it will not reach Russia or a satellite of Russia.

6. We must eliminate Russia from the United Nations. If that cannot be done, then the United States must withdraw from the United Nations, and promptly. We must stop the daily insults and intrigues which emerge from hostile, plotting, scheming, dangerous delegates, and hangers-on at the United Nations.

7. We must require all our allies to take the same steps, terminating their associations with those whom we plainly label as our enemies. The resources of the United States cannot continue to support enemies or even neutrals. They must be used only for ourselves or for our allies in this great conflict.

It is not easy to speak thus of the United Nations. Sufficient to say that if those who set up this organization conspired to make it a handicap for world peace, they have succeeded too well.

Our so-called bipartisan foreign policy has been no foreign policy at all. Stalin is the foulest dictator and antichrist of all recorded history. He has been responsible for the murder of more than 15,000,000 persons. It is asserted on presumably responsible authority, that the Communists, who are now mopping up in China, are murdering 10,000 a day, so that Mao Tse-tung, although second to Stalin as a murderer, is daily increasing his score. Until recently our Government's official position was that the Communists in China were not Communists at all; that they had no relationship to the Kremlin in Russia, and that they were only agrarian reformers. During the last 18 months, the policy of our State Department has been to let the dust settle, and it has settled all over us. It is the Chinese Communists, directed by Moscow, that are killing American soldiers in Korea.

If, as Gen. Omar Bradley states, all our Armed Forces are presently engaged in Ko-

rea where we are suffering serious reverses, then it is fair to say that the victory of World War II, achieved by the devotion of our fighting men, has been utterly thrown away. The billions spent for armament, et cetera, have been wasted and our huge debt has bought only destruction of American honor and ideals plus concentration of power in unworthy bureaus and persons. This is betrayal. Critical and extreme as the words sound, it is fair to say that this Nation which, under God, had a special place of privilege and responsibility in the sun, has sold its glorious birthright for a mess of pottage and the pottage smells.

This crisis has been as much, or more, our making as Russia's. Indeed, Russia could not have done what she has to develop it without our active cooperation and even our leaders' prodding. There have not only been international blunders, but immoral sins against God which call for penitence and contrition. We must entreat God to forgive us for failing to meet our great responsibilities and opportunities as a nation and must remember that we, individually, constitute our Nation. All the blame for its mistakes cannot be put on its leaders. The process of redemption, therefore, must start in us with positive and affirmative action. Each of us must vow to do and think and say only that which is wholly true and honorable without any compromise or any exception. We need to listen again to the voice of conscience illuminated by the teachings of Jesus concerning the laws of God. The time for wishful thinking is past. There must be an end to all shades of gray. Things must be black and white—not right or left, but right or wrong.

We must respiritualize our family life and our home relationships. After that we must realine our relationships with individuals and organizations, revitalizing our devotion to the good and severing all other relations. What I am proposing is a Herculean task, but it might save civilization. Nothing less will. Unless courageous, moral, and spiritual action of a sort which will secure the help of God is taken, we shall drift on and on along the road to Communist world domination in which life will become mere existence, in which God will be banished, or damned, and in which dark ages will again be the lot of humanity. By next May a billion two hundred million souls, more than half the people on this planet, will probably be within the orbit of Communist control. This need not be. We should not be defeatist. We cannot give up the future of our children and grandchildren to such a despicable outlook. God forbid—no; not God forbid: we must not put the responsibility for this upon God. Rather, let us, with God's help, forbid and prevent this terrible tragedy.

It is time for the American people, who, like the wrestlers, have been stunned beyond expression, who have felt the very things they were seeing couldn't be true, who have been betrayed, to wake up, get right with God, and realistically face the situation. However well we have been doing, it has not been well enough, for the forces of good and of God are losing ground daily in the world. Each of you must do better, and at once. I shall endeavor to do better, too. This sermon is an earnest effort to help sound the alarm. I think it is the kind of realistic, frank, plain-spoken sermon which would be preached today, in the interest of peace, by Jesus as the Prince of Peace. I hope you will quote it widely but accurately.

"If this be treason, then make the most of it." Let us pray.

The Future of Carson-Newman

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. REECE of Tennessee. Mr. Speaker, Dr. Herbert Acuff, Knoxville, Tenn., who is president of the International College of Surgeons, delivered the alumni address at the centennial celebration of Carson-Newman College, Jefferson City, Tenn. It impressed me so much I have obtained permission to insert it in the Record:

The address follows:

THE FUTURE OF CARSON-NEWMAN

It is indeed a very great honor for me to represent the alumni of Carson-Newman College on the significant occasion of its one hundredth anniversary. I shall attempt to evaluate some of its many achievements in the past, to survey its potentialities for the future and discuss some of the conditions which materially concern the alumni of this college.

During the recent campaign for expansion of Carson-Newman College, a rather careful survey disclosed that we have more than 2,000 alumni scattered throughout many States in the Union. In the very beginning, may I say that I have an abiding faith, and at the same time a complete assurance, that the destiny of Carson-Newman College lies safely in (1) its past record of noble service, (2) in the support of the Baptist cooperative program, and (3) in its loyal, growing, and supporting alumni.

To the graduating class of 1951—the centennial class—I have the signal honor of bidding you welcome to the alumni association of your great alma mater. You are to be congratulated on having arrived thus far on your road of life. It is now that your hour of decision is at hand. Many opportunities suggest themselves for your life's vocation. Your decision should be made only after weighing carefully every detail, every eventuality and every potentiality germane to a life's vocation, not only in the immediate period but in future years as well.

Life's span of active years is all too short for a bountiful fruition in whatever field you may choose, and therefore your decision should be sound and firm, your pursuit unswerving and your ambition determined if you would achieve the success you have set for your goal. Lack of decisions means delay. Delay means sacrifice of time, and time is the precious gift of life.

Decision for a life's program today must take into consideration the political and social pattern under which one shall live, one's own academic and/or technical preparation and one's flexibility of personality to meet the changing trends of the time.

Personality is indefinable. Some of its treasured physical attributes take origin in genetics, such as the black hair, the blue eyes, the fair skin, and other tangible features of one's physiognomy. One's personality from early childhood and adolescence is directly dependent upon the parental guidance, upon the types and character of associated interests, upon the groups of people, higher than one's own level in age and mental development, where emulation is unknowingly practiced, in the pupil and teacher associations. These are decisive factors in the passive molding of character and personality in the formative years. When entering upon the road to business,

however, you have passed the tender indulgence of parents in childhood; your teachers are no longer present to solve your problems; you face a cold, calculating, business world where excuses, however plausible, will not suffice—only performance counts. Here it is that ability, personality, and attitudes reflect their true value and are largely in one's own hands. Fortunate indeed is that person who arrives at the threshold of his career, armed with adequate preparation, which may well be an asset common to many, a convincing personality with a dominant regard for integrity, an ambition and physical stamina to enable him to attain his objective.

The time will inevitably come when the business and professional world will call upon each of us for an accounting of the manner in which we have utilized our talents. Upon such an evaluation may depend promotion in business, position in society, the choice of yielding to malfeasance in positions of trust or a courageous integrity against political intrigue.

Let us not be deceived. The character we develop, the personality we maintain in later years of life, are molded by our associates, the books we read, the friends we make, the habits we form, the desires we create—all are woven into the pattern of our lives.

My admonition to you, the graduates of the centennial class of 1951, is to further pursue your preparation. Problems and complexities of life will confront you in the most insidious ways. You must have the preparation and the fortitude for decision which comes only from a well-founded, basic education supplemented by experience.

Today and in every phase of our times, the yardstick must be science. It paves the better way when applied to basic agriculture, manufacturing, commerce, art, law, medicine, astronomy. It has harnessed electricity and more recently the atom and made them subservient to the work and will of man. What a challenge and what far-reaching potentialities are yet lying dormant in the mysteries of chemistry. Truly, science knows no confines, no country of preference; it is the patrimony of all humanity, the torch which lights the civilized world. In the wake of its revelations, civilization must move and progress. Its laws are immutable. Its secrets are locked in the cryptic vaults of the cell, the ion, the atom.

In the evolution of science, however, with its startling revelations for man's convenience, we must keep an alert vigilance on the government in which we live; we must participate in its activities; we must in every instance exercise the sovereign right of the ballot; we must fight, if need be to death, to preserve our free way of life. Regrettably, there are those living in America today who would renounce our present system of government as being obsolete and not adapted to the problems of modern times. In my humble opinion there have never been more flexible documents by which to pattern our changing economy than the Constitution of the United States and the Bill of Rights.

It is the prerogative and duty of every American to regard with suspicion those who would constantly change by statute the basic structure of our Government, who would curtail the inherent rights of State government and the priceless heritage and freedom of the people themselves.

We must beware of those who would point to an utopian way of life, who would capitulate the pride of individual independence for a State or Federal dole. Such a practice connotes perpetuity in office, dictatorship, and ultimate socialistic tendencies, the results of which have lowered the level of the social and political economy of those once proud nations across the sea.

We owe an obligation to those of our population who are in the extremes of life. The youth we nurture with care and in them confidently place our trust and hope for the future; to those hallowed lives of advanced age, we bow in respect, and freely accept our responsibility for their care and protection. I would remind those individuals who seek patronization from Government and State agencies that self-reliance begets independence, and that collectively or as individuals they must never permit the bureaucracies to pauperize and wrest from them the priceless heritage of inherent freedom. Let us subscribe to the inalienable principle that all men are created for usefulness and postulate the question, "Who does not desire to fulfill the design of his creation?"

If we in America maintain steadfastly our individual independence, we shall hold no fear of maintaining collective solidarity. It has been my privilege recently to travel in Europe and observe the decadent states and ruins of those once resplendent empires. We in the blessed United States have a heritage of freedom in speech and action which is not now enjoyed by the people in other lands. We have but to remember that these fine people across the sea and our forefathers have a common ancestry. They have sacrificed their freedom, that once proud leadership in many of the arts and sciences, to the causeless, vicious, designing ravages of war. The teachers, the preachers, the scientists, the agriculturists, the businessmen of Europe could not prevent such a catastrophe and calamity perpetrated by the ruthless, designing dictators; but so far in our country, with humility and gratitude to an all-wise and far-seeing providence, we still hold these priceless liberties intact.

Do not many of those fine people cling steadfastly to the same ideals we enjoy? Do they not deserve our assistance now as they have helped us in the past? Students of our country in every branch of art and science have long journeyed across the sea to the many temples of erudition and have learned much from the great masters of yesteryear. May we in America never forget that kindness nor discount those opportunities.

If it is orthodox for us to assist in the economic recovery of commercial Europe through the Marshall plan, it is not only orthodox but our fraternal obligation to aid, encourage and assist in every possible way the rapid return of the schools, colleges, arts and sciences of those countries to the high level of predicator days. In many of these countries, the march of the dictator, with his promises of vast material possessions and global prestige, was paid for in national bankruptcy, destruction of cities, schools, churches, and homes. Such naive acceptance of bombastic prating by people of culture and pride has been both mystifying and perplexing beyond hope of comprehension.

Our American conception of life and living has never sought territorial expansion by conquest. We have no plans for aggression. We have no objectives which need clash with the peaceful aims of any nation. We believe in the return of sovereign rights and self-government to all the peoples who have been deprived of them by force. In our Christian schools of America, so beautifully typified by Carson-Newman College, we shall strive to promote freedom of expression, freedom of religion, and the honest, unbridled practice of the democratic way of living in all of the peace-loving countries of the world.

In the hearts of living men throughout the world must come a transformation of thought and purpose. There must be an abrogation of selfishness, lust for power, territorial conquest, and leadership. Before

such a movement can become collective it must be individualistic. I would not abandon, I would increase, the appeal to men's sense of justice, that arbitration, and not war, is the humane way to settle disputes and adjust differences. I would emphasize the truth—that two or more philosophies of living may exist in our world as friends and mutual benefactors instead of death-threatening enemies. Still living in this world are millions of people who are animated by such a spirit and desire. They live in the ranks of controversial sides. It may yet come to pass that in their dogged persistence such a hope for the world may lie.

The aggressor forces of the world today threaten our noble professions in every walk of life. They would usurp the high levels of attainment realized only after a century of assiduous effort and turn backward the progress we have achieved by diligent labor and which we cherish second only to our religion and our homes. Chaos, unrest, suspicion, and greed face us as we grope our way in the most momentous epoch of world history.

Religious liberty and education must never capitulate. We must unite our thinking, our activities, on a universal level, ever keeping sacred the fact that men with such a philosophy shall move onward and upward toward a destiny which aspires to no ulterior objective, but would, in humility and prayer, seek to penetrate ever deeper into the hearts of men with an unswerving faith in the destiny which guides our way and a yearning altruism for humanity.

Today this country needs a revival of the philosophy of sound and safe American Government. From this we have been and are drifting far afield and peril lies ahead. Never has our country needed a leadership without ulterior purpose and political design as at this very moment. We need a state of government which is neither autocratic nor despotic.

We have grown powerful and prosperous in the democratic way of life where government is our servant and not our master. The continued strength of our Nation lies, as it has in the past, in the strength of a virile, unshaken, and abiding faith in the Constitution of the land, and in its adaptability to changing conditions in a changing world.

The alumni of Carson-Newman College and allied institutions throughout our land are now and shall continue to be the citizens of the hour into whose hands the care of culture, religion, and government must rest. There is a God-given privilege. It is a serious responsibility. It deserves militant prosecution.

As we stand at the close of the century and realize that our school has withstood the ravages of five wars and two great depressions, and has grown stronger and better through them all, we must then contemplate the future of the second century. Carson-Newman must expand its services to meet the demand of its community. Every student cannot or will not go to a State university. We must bring agriculture and engineering facilities to the boys in the rural communities, perhaps not on the advanced scale as in universities, but including soil analysis, hydroelectric energy, mechanics, chemistry, physics, et cetera.

How long shall we as a great community college deny those fine young men and women the scientific training they must have if we preserve our precious land and its soil? East Tennessee country is especially adapted to livestock raising, which demands more permanent pastures, more animal husbandry, a program in veterinary science by a veterinarian who might well teach and practice in the community.

We must supply the training to the programs which furnish our subsistence. We may shrink from such an expanded program, but the patronage of the landowners of east Tennessee will finance the inauguration of such departments, and grants-in-aid assistance will further develop such a program.

Lastly, I would invite your consideration of a concrete plan by which the alumni of Carson-Newman College shall become more interested, more closely related and more articulate in the physical expansion, the student growth, the increased perimeter of service, a greater diversity of departments, an increased number of teachers and preachers giving to our schools and our churches better trained men and women. I would commend the work and influence of the Bulletin. It might well be expanded to even greater proportions.

I would indulge the hope that within 2 decades Carson-Newman College would be able to consolidate and supply leadership for a vast majority of those remaining schools and churches related to its geographical realm of service. I am happy to note the establishment of a public relations department with an able director. This is a department long past due but most welcome now.

What a continuity of interest.

What a wholesome, balanced support for Carson-Newman.

What a victory for Christian education, and therefore, what a bulwark against those forces which subscribe to no form of religion but seek to destroy, with an overbearing arrogance, the stoical fortitude with which we would defend to death the ramparts of a Christian America.

The Christian schools of our country, without tax patronage, depend upon their natural flow of students, contributions, endowments from friends and alumni, and denominational support. I would strongly urge a more closely related program by the college with its alumni. Every class which leaves our college should be organized into its alumni family.

We shall never compromise our religious teaching—rather we shall seek to enlarge and expand it in every way possible—but we cannot and we must not become or remain a Bible school only, when less than 25 percent of our student enrollment is in the ministerial category. Every student who enters Carson-Newman may not desire to enter the ministry, therefore, provisions must be made for a diversity of departments.

A rotating advisory board from the alumni would be of inestimable value to the president, faculty, and board of trustees. I hold in the highest esteem the present management and faculty of the college. They are capable, ambitious, and progressive. It is our privilege and duty as alumni to assist them further in the growth and expansion of this great temple of preparation for the reason that among the alumni are numbered men and women of all levels of life—businessmen, manufacturers, executives, lawyers, jurists, doctors, teachers, and preachers. The degree of managerial success in their respective endeavors has been comparable to that of any similar group in our land. With renewed and additional interest by the alumni in their beloved alma mater, it is little short of an extravagant speculation as to the attainment of this fine school.

To my fellow members of the alumni of Carson-Newman College, I would venture the suggestion that no investment of funds—in cash, in stocks in land, in insurance—could ever pay greater dividends than an investment in human values—in the youth of our day and the citizens of tomorrow.

As we train and inculcate the young people of our age, so will be the thought and

action of the generations of the future. Ours is a responsibility; it is an opportunity. May we, individually and collectively, assume our responsibility and grasp the opportunity to work for, contribute to and promote by word and deed our great tried and trusted college. It has behind it a century of laudable achievement in the perpetuation of free enterprise in our economy, democracy in government and the unbridled, unrestricted teaching of Christian education.

To such a program for Carson-Newman today, for posterity tomorrow, let each of us dedicate our effort, our substance, our prayers. The mechanics and implementation of such a program is the joint responsibility of management, faculty, public relations, and the board of trustees. To Carson-Newman, from such contemporary correlation of effort, will come support, both physical and spiritual, endowments, scholarships and an expanded base of experience and achievement, from which we shall enter, with confidence, the uncharted corridors of the second century.

What About Bill Oatis?

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. ROONEY. Mr. Speaker, under permission heretofore granted me by unanimous consent of the House I include the following timely editorial from the present issue of the weekly Brooklyn (N. Y.) Record-Bay Ridge Record. It is particularly timely in view of the vote expected to take place here in the House tomorrow on the pending Oatis resolution reported out by the House Committee on Foreign Affairs.

The editorial reads as follows:

WHAT ABOUT BILL OATIS?

The iron-curtain countries have totally destroyed anything even remotely resembling a free press within their own borders. Now they are trying to make certain no news concerning them, save for official government handouts, reaches the rest of the world.

That is about the only logical deduction that can be drawn from Czechoslovakia's conviction of William N. Oatis, an American and an Associated Press correspondent, on charges of spying out state secrets and reporting slanders and lies, and his sentencing to 10 years in prison.

So far as can be ascertained, Mr. Oatis' crime consisted of trying to do his job properly. He did what every good reporter in every free country does every day—that is, he sought and reported the news. As is customary with every press service, his superiors in the AP organization gave him assignments and he did his best to carry them out. These assignments were in no way unusual, and none of them could be considered spying as that word is understood in the Western World, but in the Communist world, "spying" means anything which displeases the heads of state. The laws are so drawn that anyone, citizen or foreigner, can be severely punished for saying and writing things which wouldn't cause an eyebrow to be lifted elsewhere.

Mr. Oatis' ordeal followed the usual pattern. He was held incommunicado for 70 days. He was not allowed to contact his friends or American officials. The State De-

partment has formally charged that his so-called confession was prepared by the Czech secret police, and that he rehearsed it under police direction. This confession, the State Department added, was only the admission of an American reporter that in the high tradition of his profession he was attempting, under the most unfavorable conditions, to report a true picture of conditions and events in Czechoslovakia as he saw them. It said further that Oatis' conviction shows that the present regime in Czechoslovakia fears truth, hates liberty, and knows no justice.

The Western world has learned something about how confessions of this character are obtained. The victim is subjected to merciless questioning. He is given little food. He is kept awake for days and nights on end. He is alternately threatened and cajoled. He is beaten. The whole idea is to break down the will—to bring the man to a point of mental and physical exhaustion and despair where nothing matters except to escape his tormentors. He will sign and agree to anything. This happened to Robert Vogeler and others. It undoubtedly happened to Oatis.

What can the Government do to protect our newsmen in the Communist nations? Alexander Jones, president of the American Society of Newspaper Editors, has suggested that, in reprisal for the treatment of Oatis, the trade privileges now given Czechoslovakia in the American zone of Germany be withdrawn. Others think we should go much further. As an example, the Portland Oregonian said editorially, "If the United States does not get its back up soon, these kidnappings, pseudo trials, extorted confessions, and imprisonment of Americans will become chronic. Our Government should give immediate study, with a view to action, of the possible effects of making the iron curtain a two-way barrier; that is, the withdrawal from outlaw nations of all American nationals and the complete severance of diplomatic relations, plus an airtight ban on all commercial transactions between these countries and the United States."

Madison's Fair Name

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. DAVIS of Wisconsin. Mr. Speaker, the people of Madison, Wis., the capital of the Badger State and metropolis of the Second Congressional District, need no defense in this Chamber. A week ago Saturday, however, President Truman, in a scattershot attack upon his political enemies, cast aspirations upon the people of our capital and State university city. He branded Madisonians as a scared, timid, and confused populace for failing to sign a fake petition circulated by a reporter from a newspaper noted for the efforts of its editors to suit the news or make the news to fit a peculiar preconceived pattern. Many substantial Madison citizens have written to express their resentment.

The text of one such letter, typical and explanatory, follows:

DEAR GLENN: In President Truman's Detroit speech he made something of a point

that 112 persons in Madison refused to sign a declaration containing excerpts from the Bill of Rights and the Declaration of Independence. His tone was rather clear that his intent was to cast aspersions upon either the forthrightness or the valor of Madison residents. Either we failed to believe in those precepts or we did not have the guts to stand up and be counted. He did not accuse this seat of learning as containing people too dumb to understand the quotations contained in the paper.

But here comes the explanation: The paper was circulated by the Capital Times and I, for one, would not sign my name to the Ten Commandments or the Lord's Prayer when submitted by that source, knowing there would certainly be an ulterior or adroit purpose.

In justice to the people of Madison, I think that a proper statement of this fact should be inserted into the CONGRESSIONAL RECORD.

Anyway, the signing of a paper or petition does not necessarily mean too much. I remember years ago in Rhinelander that a petition to hang a very popular citizen by the name of Baldwin drew some 800 signatures and none of the signees recognized the hoax.

With best regards.

Further explanation of the ridiculous nature of the petition is contained in the following editorial from the Wisconsin State Journal, Madison's leading newspaper:

TRUMAN JITTERS INTO A RUSTY TRAP

President Truman must be in a sorry state of nervous jitters.

Either that, or he failed to clear his most recent speech with the stylists and researchers who ordinarily read copy on Presidential pronouncements.

In Detroit Saturday the President fell for one of the hoariest gags in a city editor's repertoire—the phony petition.

Because the gag was staged in Madison, the city received some dubious notoriety in the President's address.

He cited a feature article in the Capital Times which told of the failure of a reporter to get signatures to a petition which was nothing but sections from the Declaration of Independence and the Bill of Rights.

Now any city editor worth his salt knows a smart reporter can get many worthy people to sign the most damaging of petitions. By staging the act properly, the same reporter can get blanket refusals to sign the most correct or innocuous ones.

Having seen the Cap Times city editor and this particular reporter in action on the liberal front and amidst the peace crusades over the years, the State Journal hasn't the slightest doubt the July Fourth act was carefully staged.

Consider the background. Many Madison people of good will were badly burned by signing the harmless-sounding Stockholm peace petition, a Commie propaganda device.

On the same day the Times worked its feature stunt, the Madison chapter of the American Peace Crusade circulated a pamphlet calling for the withdrawal of troops from Korea and asking for no more laws taxing the workingman to pay for the rich man's war.

Put these facts against the setting of a family picnic day.

Then take a look at the reporter asking signatures for a long and rhetorical document.

What sensible person would sign?

We wouldn't! Not even today, and knowing and approving the content of the petition.

Years ago, on a dull news day, we sent a cub reporter out to try to sell a bright, new silver dollar for 65 cents. He tried 40 or 50 people on Capital Square before finding a buyer. President Truman would have thought that a reflection on our monetary values.

If it happened today, he'd probably be right.

We have no quarrel with the Times for working its gag down its particular party line. The July Fourth stunt was quite in character.

But for the President of the United States to fall into the trap and use the incident in a major address is an unhappy commentary on the state of his nervous and emotional balance.

Career Versus Conscience

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Career Versus Conscience" that appeared in the July 1951 issue of the American Foreign Service Journal:

CAREER VERSUS CONSCIENCE

The Foreign Service officer today is searching his conscience and examining his job in a way previously unknown to his experience. He sees questioned the duties of a profession in which he had taken pride from the day of his entry into the service. He finds that a calling which has claimed his abiding loyalty and his unexpressed but deep sense of devotion to country, is being assailed and degraded by irresponsible demagogues. He discovers that what he may report objectively, sincerely, and confidentially can at some time be distorted and publicly held against him. He learns that his associations can be suspect and that, instead of performing his duty by acquiring the widest possible acquaintance in the country of his assignment—as he was ever taught by his superiors and by formal instruction of the Department—he is condemned for his initiative in attempting to meet individuals of unorthodox beliefs in order to understand and assess their motives and opinions.

The choice is before him. Shall he remain in the Service, resolved to report only what will harmonize with the temper of the times and what cannot possibly be publicly held against him 5 or 10 years from now? Shall he report honestly and fearlessly and "as he sees it," knowing the dangers of honesty and the risk to his career and his reputation? Or shall he resign from the Service to seek fields where his talents will be less circumscribed and his future less in peril?

For an editorial such as this to appear would have been incredible a few years ago. Yet such has been the effect of happenings of the last years that, at the very moment in history when the Foreign Service should be at the peak of its capabilities, when it should be best prepared to meet the terrible responsibilities of a period of decision between war and peace, it should itself become besmirched before the eyes of the American people, its confidence, courage, and very belief in its own principles and precepts, seriously if not irreparably damaged.

If truly the traditions and behavior of the Foreign Service officer are to be changed, then new instructions to that effect should be issued. If it is to be crime to meet a known Communist, a known Fascist, or a member of the Black Dragon Society, Foreign Service officers should be forewarned. Up to now they have thought it important to obtain first hand the opinions of a great variety of individuals, particularly those of differing ideologies. Many thought there was some sense in the axiom "know your enemy," and that political reports, to be valuable, should not be confined to mutual admiration conversations among friendly and agreeable allies.

Furthermore, if the reporting officer is to refrain from criticism of the policies of foreign governments, he should be so informed. Up to now, he has not considered how his words would look neatly arranged on the front page of the New York Times. He has thought that he might speak in confidence to the interested people in the Department and that he might expect them to read, consider, and then to disregard or accept his analysis as they saw fit. He was not writing for a wider public and his rhetoric was chosen not for reader appeal, but for conciseness and clarity.

The new hazards to political reporters in the Foreign Service are particularly grave for specialists. The officers who, for a combination of peculiar reasons hard for the nonspecialists to understand, have studied exotic languages and lived in atmospheres far removed from our own cultural inheritance, seem to have become particular targets of attack. The consequence is that these specialists apparently cannot be assigned to posts of their specialty and must be scattered far and wide to be safely removed from any contact with the leprosy attached to their former careers.

Thus a new pattern seems to have developed, as yet not formally communicated to the field. One apparently should not only write for the record, and pleasantly, but once slandered irresponsibly in public—and without recourse to self-defense—one becomes disqualified thereafter for service in the area of one's specialty. So we have the posts of Ruritania staffed with people who have never before been to Ruritania and know no syllable of Ruritanian. Meanwhile language officers, trained at great expense in Ruritanian and with experience and accomplishments rated high (if you count the opinions of their fellow officers, their efficiency ratings, their promotions, and the number of commendations they have received), are basking in the pleasant climes of places where Ruritanians are unheard of and unknown, and security from association with ticklish problems is assured.

Courage is needed, on the part of the Department and of the Government. If there are disloyal members among us, no one will resist their removal forthwith. But if the rest of us are loyal, let the Department have the courage to defend our loyalty and to reaffirm a creed of the Foreign Service—to serve to the best of ability, to observe keenly, to report what is seen and heard and felt, without inhibition, fear, or mental reservation—to know our enemies as well as to cultivate our friends, and to pursue as best we can the honorable profession we have chosen, in the constant and undeterred conviction that ours is the first line of defense of our country.

The people of the United States will understand these ideals and respect our determination if they see it clearly demonstrated before them. Without our determination and their understanding, the future of the Foreign Service is black indeed.

A Stable To Be Cleaned**EXTENSION OF REMARKS**

OF

HON. ERNEST K. BRAMBLETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. BRAMBLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Monterey Peninsula Herald of August 1, 1951:

A STABLE TO BE CLEANED

(By E. K.)

Within the past week or two the following items have been included in the news:

Sam Mason, described by Senators as "a highly successful con man," testified that he had found that the easiest way to extort money was to tell his clients that he needed cash to bribe Government officials to obtain from them what his clients wanted. His victims included some church people who apparently regarded this procedure as necessary and normal.

A brigadier general, relieved of his command of the Detroit Tank Arsenal for accepting gifts and favors from contractors dealing with his Army installation, said: "I did nothing that anyone else wouldn't have done—only someone caught me at it."

The St. Louis Post-Dispatch, a reliable newspaper, reported that William M. Boyle, Jr., Democratic National Committee chairman and close friend of President Truman, was paid \$8,000 by the American Lithofold Co. shortly after the firm had obtained a \$565,000 loan from the Reconstruction Finance Corporation. The company's application for the loan had previously been three times denied. Boyle says this was a "legal fee" for services not connected with the RFC loan, but the Post-Dispatch reports that the company listed the payment as a "commission."

Another close friend of President Truman, James P. Finnegan, resigned as internal-revenue collector for eastern Missouri as a Federal grand jury was investigating charges that he had used his office to promote personal business. Finnegan happens to be vice president of the American Lithofold.

And—as if to top these items—came word from Washington that Secretary of Commerce Charles Sawyer had granted a diploma of honor and a wage increase to a Government employee, Mrs. Helen Mathelson, for honesty in refusing a bribe, offered by a New York export firm to facilitate license appropriation handling.

These disclosures followed many others concerning 5-percenters, patronage peddlers, tie-ups between officials, and the underworld and assorted evidences of laxity and corruption under the Truman administration.

The worst feature of these cases is the indication of a very wide acceptance of the idea that corruption, favoritism, and dishonesty abound in our Federal Government—and of a resignation to it. Apparently many people generally considered as honest have come to the conclusion that the only effective way to do business with the Government is join in the corruption.

High administration officials themselves seem to share this acceptance. Otherwise, we don't see why they should confer special honors on a Government employee for not taking a bribe. In their eyes there would appear to be something quite exceptional about such common honesty.

We will say parenthetically that we do not share this feeling. We believe that most Federal employees are honest and do not expect special awards for ordinary integrity.

But it is plain that there is widespread corruption in the Truman administration, especially in near-high quarters. We have no accurate scale for measuring such corruption, but it is our considered opinion that there has been more of it under Harry Truman than under any previous President, that the standards of his administration in this respect are shoddier than those of the Grant or Harding administrations.

One reason for this, of course, is that the scope of the Federal Government has greatly expanded since the days of Grant and Harding, that it now exercises such controls over all of us that there is a vastly greater field for corruption.

But this increased power is all the more reason for honesty in government.

Lack of official integrity—and especially general resignation to the lack—has wrecked many a government, has undermined many a civilization. One of the most recent to fall of its own rottenness was the regime of Chiang Kai-shek.

With our democratic system on trial before the world and with its survival threatened by our enemies, we cannot afford the luxury of a Federal Aegean stable.

There must be a clean-up and it must come swiftly. In coming columns we shall discuss what people can do at a local level to try to bring it about.

The American Story**EXTENSION OF REMARKS**

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, I insert in today's RECORD an editorial from the Sundance Times, published at Sundance, Wyo.

I believe this editorial, which tells the story of another Wyoming community, may keynote much of this Nation's trouble today. Entirely too many people are afflicted with the mistaken belief that "my vote doesn't count." Too many people stay away from the polls and then express dissatisfaction with the public officials other voters have elected.

Voting is more than a privilege, Mr. Speaker. It is a duty delegated to every qualified citizen, and this duty should be performed by every qualified person at every election, be it a local school, municipal, State, or national election in character.

It seems to me that the Sundance editorial strikes the real sore spot of our Nation with the suggestion that the last chapter to the American story could be written "if someday enough people do not vote."

I quote the editorial:

HULETT—THE AMERICAN

Another chapter in the American story has been written in Hulett. It was completed Friday in the municipal election of that new town.

The story, which has told of the life of this Nation since the first chapter was writ-

ten in 1776, shows the strength and the weakness, the desires and the complacency of the American people.

The Hulett chapter is no different from the many other chapters of the story, except in geography. It tells of the basic tendency of the American people to fight hard for something and then lapse into the dreamlike security of complacency.

The people of Hulett voted hard for the incorporation of their community and won that incorporation and the status that goes with it by an overwhelming vote.

They fought hard and won and fell back to rest. Hulett voted 97 to 26 for incorporation with a total vote of 123.

Friday, in the election to name the town's first mayor and city councilmen, only 70 people considered it important to go to the polls. There were 139 persons eligible to vote.

The percentage of complacency is clear. And it has been the same in every chapter of the American story—a story of wanting, fighting for the right to vote, and then not exercising that right.

The American story is endless with a new chapter written with every election.

But it could end if someday enough people do not vote.

Industry's Efforts To Tell Its Side of Any Controversy Drowned Out by Wave of Government Propaganda

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. CRAWFORD. Mr. Speaker, the discovery that man's mind can be molded by government is one of the tragedies of this age. Most people believe anything the Government says, forgetting that government is directed by human beings with the same selfish impulses as the common citizen, and that many statements issued by Government sources are propaganda, pushing a point of view or creating more jobs.

Statements put out by industry are almost invariably jumped on by left-wingers as half-truths, propaganda, and the utterances of greedy interests. It is difficult for these writers to see that the profit-making of the free enterprise system can also be in the public interest. These left-wing writers, who promote big government along leftist lines, believe that there is a contradiction in profit making and the public interest. If industrial statements are not discredited they are at least distorted, picked apart, or thrown in the wastebasket.

A clash of viewpoints between Government and industry always occurs when industry attempts to take its case to the public through the press and the radio. At that moment Government springs into action and, of course, always gets the lion's share of the space. This is possible because too many Members of Congress, with too little respect for the burdens of the taxpayers and the sacrifice made by the bond buyers, appropriate such fantastic sums of money to Federal agencies that they are financed

sufficiently to overwhelm the reading and listening public with Government propaganda.

During the past two decades it is conservative to observe that more money has been spent by Government, for Government propaganda and for the purpose of promoting Government views, than during all of the previous history of the United States.

The net result of this Government propaganda causes millions of people to believe that Government has all of the facts at hand and that Government is telling the truth while industry is merely trying to rook the public and grab off more profits. Many people actually believe this. Government propagandists are smart enough to know that if a slanted or even untruthful statement is repeated often enough the public will eventually accept it as the truth.

The recent statement by Mr. John M. Otter, president of the National Foundation for Consumer Credit, illustrates private industry's difficulty in getting the facts before the public when those facts are contrary to the Government's position. In this case the Government was forced to admit, painfully and tardily, that the National Foundation for Consumer Credit had been telling the truth all along.

Seldom does industry have the opportunity to have its statements confirmed by the Government itself, particularly when there is such a difference of opinion between Government and industry as there is over the question of regulating installment credit sales. In this case there is documentary proof of the confirmation, and I doubt that the proof would have ever come to light had the President's economic report not been made public.

The National Foundation for Consumer Credit is a nonprofit organization of manufacturers, retailers, and distributors all over the country who have banded together to tell the story of installment credit. The economic contribution of installment credit is a dramatic chapter in our history, and the story should be told to the American people. There are left-wing groups in this country who would like to see installment credit outlawed altogether. These same people forget that mass production depends upon mass sales and that mass sales, in turn, depend upon installment credit. We could never have had mass production in this country without installment credit, and the left-wingers can shout all they want, but they cannot disprove this statement.

The full statement of Mr. Otter, who is also vice president and general sales manager of the Philco Corp., Philadelphia, reads as follows:

The report confirms in detail exactly what this organization has been telling the public for months.

On page 194 the report states: "Durable-goods inventories of retailers rose about 41 percent" in the last year. If the report included only items covered by regulation W, the figure would be closer to 55 percent.

In other words, furniture, rugs, carpet, linoleum, refrigerators, washing machines, radios, television, and household appliances are jam-packed on the shelves of retailers

who have been forced to buy these articles but can't because of the present Federal law which says they must make heavy down payments and pay off the balance more quickly than is possible for the working family.

If the retailer could sell this stuff he would not be forced to run to the bank for additional credit, which is the clearest type of inflation.

A responsible branch of the Government, with millions of dollars at its disposal for economic research, now supports in detail what the economists of the National Foundation for Consumer Credit have been saying for months.

The President's economic report is the best argument I have yet heard for the outright scrapping of regulation W.

Regulation W has received great attention by reason of what the President and others have had to say about inflation. This is one of the indirect controls, but it is one of the minor elements in this field of credit. The real place to restrict credit for the purpose of preventing inflation is first in the field of the Federal Reserve banks and, second, in the commercial credit field. The President can use regulation W to the limit and leave free to operate the Federal Reserve banks and the commercial banks, and inflation will be little influenced. The President can use regulation W and the commercial banks and the credit issued by the Federal Reserve banks can still create more inflation than the direct controls of price control or the regulation W program or the restriction of credit by the commercial banks can adequately deal with. If the President really wants to prevent inflation he can effectuate this by controlling the credit extended by the commercial banks, the insurance companies, and the Federal Reserve banks.

Price- and Wage-Control Legislation

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial published in the Sheridan (Wyo.) Press, which points out that the Congress was not lax in recognizing the dangers of inflation but rather extended to the administration the power to cope with them at a time when controls—as the lesser of evils—might have done some good.

I do not favor controls, believing them to be a rather superficial means of combatting inflation without striking at the real cause. But I do think that President Truman has completely reversed his course in recent months, and in a too-little-too-late move hopped on the controls bandwagon.

The editorial follows:

CONGRESS MOVED FIRST

Compromise price and wage control legislation will go to the White House after both

Houses have approved a conference committee report.

The President almost certainly is going to show his displeasure with the measure which does not provide for all of the roll-backs which price control authorities instituted. It does not go as far as an absolute sort of way as those now in charge of price control had urged. Prices are permitted certain adjustments in line with cost increases and agricultural prices are protected from less than parity ceilings.

Because of this disparity with Presidential and price official views, President Truman will seek to blame Congress for failure to halt a trend toward more inflation. The chief purpose of this attempt, of course, will be to pass the buck for the responsibility of any rising costs which may reach the consumer.

But when the President takes steps to shift the blame for any new inflation, it will be recalled by many that a year ago it was Congress which sought to freeze prices and wages before their upward spiral was begun in the early weeks of the Korean war. At that time Congress worked out legislation authorizing the President to freeze prices and wages, but restricted any price freeze which was not also accompanied by a wage freeze.

Right here, Mr. Speaker, let me point out that while the administration forces in Congress were howling for a strong controls program they let slip through their fingers the only real opportunity to exercise complete controls.

On a tentative nonrecord vote, the House approved the Davis amendment, which would have rolled back everything, prices and wages alike, to the July 7 level for a temporary period of 120 days. This would have afforded an opportunity to survey the situation and regroup our forces against inflation, while, at the same time, all prices and wages would have been held to the July 7 level.

But when it came to a final roll-call vote, what happened? Despite the nonrecord vote of 180 to 151 approving the Davis amendment, when it came time to be counted by name, the same administration forces which had been clamoring for controls voted this amendment down, 243 to 172.

I want to note it here, Mr. Speaker, that I voted for the Davis amendment. I repeat that I do not believe in controls; but if we must have them, I believe such a program should be fair to everyone—we should not put ourselves in the position of restricting prices but letting wages spiral unchecked, nor should we clamp down on wages and permit prices to continue to skyrocket. Under the Davis amendment, everything would have been treated equally—the roll-back to July 7 would have been definite and specific; there would have been no room for political maneuvering.

The editorial continues:

The President hesitated to exercise the authority which Congress had placed in his lap, and as a result soaring prices followed. In this instance Congress was taking the lead in an anti-inflation program. The President hesitated to make it effective.

That would seem to make the President and Congress about even when blame is placed for failure to halt soaring prices. If anything, congressional action taken a year ago stood a better chance to hold the line against inflation than anything done now.

The West Point Affair**EXTENSION OF REMARKS**

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. AUCHINCLOSS. Mr. Speaker, like every other American citizen, in or out of Congress, I have been terribly shocked at the news which has come from West Point. It has always been taken for granted by people the world over that honor was held sacred by the undergraduates and graduates of West Point; therefore, a violation of the code of honor, established at the Military Academy since its foundation, indicates a deterioration of character and of the appreciation of the truth. Whether the undergraduates at West Point are the victims of laxity on the part of those who manage the institution or whether it is the result of their own moral turpitude, the fact remains that the high standard of morality and honesty and truthfulness, cherished by West Pointers all over the world, has been desecrated, and those guilty of such desecration should be punished.

In all the reports I have read in the newspapers, I have yet to note a statement from any of those who have admitted their guilt expressing regret for what has happened. There is no repentance shown for the damage done to others and to the good name of West Point and little thought seems to have been given to what the founders of our Republic termed "their sacred honor." Can it be that due to the scandals and lax morals apparent in our public life today honor is no longer considered sacred?

In December 1950 I wrote Maj. Gen. Bryant E. Moore, then Superintendent of the Military Academy, as follows:

It has come to my attention that First Lt. John F. Green, who signs himself as assistant football coach on Army Athletic Association letterhead, is advising young men in my district how to secure appointment to the Military Academy.

From what I have heard, Lieutenant Green is selecting young men on the basis of their athletic ability and I am writing to inquire just what Lieutenant Green's duties are at West Point.

My appointments are made solely on the basis of the civil service competitive qualifying examination, and I know that a great many other Members of Congress adopt the same procedure. I do not believe it is in the interest of amateur athletics or in the interest of the Academy to campaign in an effort to secure exceptional athletes as members of the Cadet Corps.

In due time I received his reply dated December 28, 1950:

Your letter of December 21, with reference to Lt. John F. Green's giving advice about West Point to men in your district, has been received.

Lt. John Green is temporarily on duty at West Point in the athletic office as assistant football coach. He is a very able young officer. If he has given information to athletically inclined young men in your district, it is possibly because they asked for

it, though not necessarily. A great many young men, hundreds of them with what they consider to be athletic backgrounds, apply to us for this kind of information, the same as they do to Annapolis, Yale, Princeton, and other institutions. Frequently such letters are written by the boys' coaches or members of their families.

Young athletes are inclined to be leaders, and a cadetship at West Point is of interest to them. Many of our cadet athletes subsequently become fine leaders in the service. I could give you many examples.

From the third paragraph of your letter it would appear that you object to our interesting young athletes in cadetships at West Point. I would agree with your views if participating on varsity athletic teams were not incidental to their primary purpose of coming to West Point. The only thing we can suggest to them, if they can succeed in getting in here, is the implied obligation of a lifetime of service to the country. There are no other inducements of any kind, no extra privileges, no "jobs," no let-up of the hard requirements put on a cadet. If they are willing to go to all the trouble of securing cadetships, it would appear that they really want to come to West Point.

In reply to his letter, I wrote on January 2, 1951, as follows:

Thank you for your letter of December 28, and I am glad to have your explanation of the activities of Lt. John Green, who, I have no doubt, is a very able young officer.

I have no quarrel with your statement that "young athletes are inclined to be leaders," but as far as I can see, it has nothing to do with the point I raised. Whether you know it or not, West Point has been carrying on a campaign of proselytizing for good athletes, and I am not in favor of that kind of policy, especially when some of your outstanding athletes leave the service shortly after graduation to continue their career as professionals. I can assure you the country does not approve of that.

Mr. Speaker, there can be no question, in my mind, that the intense desire to produce winning football teams has warped the moral thinking of those who have been administering the affairs at the Military Academy.

In completing my remarks, I am glad to include an editorial which appeared in the Asbury Park Press of Sunday, August 5, entitled "West Point Scandal." This editorial in a concise, clear, and straightforward American fashion has looked this question of sacred honor straight in the eye and has clearly set forth the need for a return to the standards of the founders of our country, who did not compromise with honor but treated it as something to be revered and held sacred. The editorial follows:

WEST POINT SCANDAL

There has been considerable comment in these columns emphasizing the apparent decline in the moral standards of this country and suggesting that too many men in high places were leading the parade toward lower concepts of personal and public conduct.

Now comes the report that 90 cadets have been discharged from West Point for having violated the established honor system and cheated in tests and other classroom work. A competent board investigated the situation and its findings appear conclusive.

There is something shocking in the West Point case. It was disgusting enough that basketball players from other colleges admitted taking bribes to hold down the score of games for the benefit of gamblers. The

Military Academy, however, was considered in a position by itself. Its codes of conduct have been in effect for more than a century. And so rich was its tradition of honor that the corps of cadets was considered above approach. Under such circumstances the Nation is not only stunned but doubly ashamed that scandal should have run wild in its Military Academy.

It has already been observed that the West Point case points further to an alarming deterioration in the Nation's moral fiber. There is no question of the need for a reformation that will revive and popularize the traditional rules of honor and integrity. And once again we contend that there is no better way to begin this reform than to start at the top and demand a higher level of conduct in the top layers of Government.

Most of the young people who are today deviating from the path of decency and honor come from families who have impressed upon them a high moral code. But all citizens, and especially young people, look beyond their own families and their friends and take their moral leadership from the prominent personalities and the celebrated names who hold positions of trust and glory in Government. And when those in this position betray their trust and disregard the rules of honor they provide a cogent lesson in dishonesty and loose conduct for millions of young people.

We urge upon the American people a crusade in the name of the decency and high moral standards that made this country great, strong and respected throughout the world. And we recommend that this crusade begin by restoring decency to the top level of Government. For it is there that the standard is set. Today that standard is disgustingly low. And such scandals as that which has rocked West Point and stunned the Nation are but a symptom of national leadership that has failed itself to adhere to the traditional codes of decency and thereby has depressed the moral level of the entire Nation.

Waterway Issue**EXTENSION OF REMARKS**

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. WIER. Mr. Speaker, under unanimous consent to extend and revise my remarks in the Appendix, I include an article by Alfred D. Stedman, a member of the editorial staff of the St. Paul Pioneer Press, St. Paul, Minn.

The article is as follows:

WATERWAY ISSUE

In the harnessing of waters, the Midwest is the Nation's forgotten child. Why? Why is the Great Lakes-St. Lawrence seaway endlessly blockaded? Why are the Missouri's uses buried repeatedly under the muck and wreck of floods? How does this happen when our Nation with its TVA tames the Tennessee, builds vast water systems for other regions, and votes billions to help foreign countries harness their rivers for prosperity and defense?

As to this region's waterways, our Government seems to have abdicated its powers. Who have been the real rulers on the seaway issue? Not the two political parties—both are its pledged supporters. Not all the United States Presidents in a quarter century—these have been unanimously for it.

Not the Nation's responsible defense authorities—these have affirmed the urgent defense needs of seaway navigation and electric power. Not the House of Congress—its Members have just been denied even the democratic right of a vote on the issue. So the seaway is now reduced to a slim chance as a Senate foreign-aid bill rider.

No; on this issue special interests have ruled. They have blocked waterway projects competing with them. All these special interests in the past have been heavily endowed, not to rule the Nation but to serve it as, indeed, in their economic fields, they have done well. They are the railroads, given huge grants of public land and money; eastern and Gulf ports, improved with vast Treasury funds; and power companies, given river rights and franchises.

For their special benefit, the public use of public waters is now being barred. The Great Lakes system can't fully serve the national safety, just when Russia is augmenting her military power with a shipway linking Black Sea, Baltic, and ocean. Harboring the Missouri is being botched by the Pick-Sloan plan that the Hoover Commission condemned as being no plan. And now Congress is even refusing this region water power from the Missouri's publicly built dams, unless it is filtered through power company hands and lines.

Of course the railroads, ports, and power companies have every right to uphold their economic interests in Congress or anywhere. But does this mean that the Government should abdicate its democratic powers to them?

Here may be a coming issue. It may appeal to Midwest industry and agriculture that are paying severely for floods and lack of deep outlets to the sea. It may strike home with those who believe that public rule should not abdicate to private rule of public resources. Or else the special interests can go right ahead denying full use of those water resources to the Midwest.

United Fund Campaign for Charities

EXTENSION OF REMARKS OF

HON. THURMOND CHATHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. CHATHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WINSTON-SALEM, N C, August 1, 1951.

DEAR CONGRESSMAN CHATHAM: I assume you have not been too ill to read the newspapers and you have perhaps noted the suggested investigation by one of your fellow Congressmen of the American Red Cross due to its rather bigoted and arbitrary stand as regards fund raising. We have just run squarely into it here, having established a United Fund which is to be all inclusive, resulting in one annual campaign for all charities, and although we do not have the final answer, it is understood that the local chapter of the Red Cross will have to decline our invitation to cooperate due to the stand and hard and fast rules of the national organization.

Of course the Red Cross stands to lose more than we do, but certainly they are butting their heads against a stone wall because the United Fund movement is going all over the country, and most industries where this plan is adopted in their cities refuse allow Red Cross to come into their plants for any additional campaigns.

You may gather that I am heartily in favor of the investigation suggested, and I think it might go even further because I understand that the National Red Cross has never published nor made known any figure revealing its sinking fund or surplus. It is reported to be in the millions, and in spite of such emergency or sinking fund or surplus, there is never a disaster that the Red Cross does not go out and try to raise more millions as they are now doing for flood relief in Kansas.

I understand that the National Red Cross threatens the local chapter here with all sorts of dire results if they join in our United Fund campaign, including the loss of their charter locally. In Bristol, Tenn., where the local chapter joined in such a United Fund campaign the money collected for Red Cross was ordered by national headquarters returned and the local chapter ordered to conduct its own individual campaign, otherwise, it would lose its charter and perhaps suffer the elimination of all local services.

I trust that this does not leave you completely cold in spite of your condition, and that you are sufficiently recovered to add your voice in protest against any such high-handed arbitrary procedure. I think it is time that this American-supported institution act American, and I think if the investigation included Basil O'Connor, a worse scandal might result than some of the ice box and fur coat scandals in Washington.

Sincerely yours,

RALPH P. HANES.

The Growth of Communism

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, in 1939 the total world population was 2,170,000,000. At that time 7.9 percent of the world population was under Communist control. In 1950 the world population was 2,264,563,771. At that time 34.4 percent of the world population was under Communist control.

In 1939 the so-called iron-curtain countries were limited to the U. S. S. R., with a population of 170,467,186. In 1950, however, iron-curtain countries expanded at a terrific rate and as follows:

Country:	Population
Albania.....	1,121,000
Austria (Soviet zone).....	2,277,000
Bulgaria.....	7,021,000
China (excluding Tibet and Formosa).....	454,867,000
Tibet.....	3,000,000
Czechoslovakia.....	18,490,000
Germany (Soviet zone).....	18,490,000
Hungary.....	8,833,000
North Korea.....	9,000,000
Outer Mongolia.....	900,000
Poland.....	24,775,000
Rumania.....	15,873,999
Yugoslavia.....	15,751,953
U S S R.....	211,384,985

The total population in the iron-curtain countries shown in the above table included Yugoslavia and the U. S. S. R. for a grand total of 770,458,938.

World communism is still on the march, and in 1950 over one-fifth of the land area of the world was under Communist control. In addition over one-

third of the world population was also under Communist control.

In a 33-year span of communistic activity we find that the growth of world communism at the present-day strength is 312.5 times greater than when the movement got under way. In April of 1917 there were 80,000 party members. In 1950, there are 25,000,000 world Communist Party members.

The question arises how effective are our American foreign policies in preventing the growth of world communism. It would seem by the above figure that they are having but little effect. In view of this fact our spending abroad should be drastically reduced.

Small Business Representation in Washington

EXTENSION OF REMARKS OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. CRAWFORD. Mr. Speaker, the segment of our economy often referred to as small business constitutes a very important element in our enterprise system.

Small businesses often develop into large business and, of course, large industry feeds on the support extended to it by small business.

It is very important that small business always has in Washington a representative of character and integrity and who knows official Washington so as to better understand the flow sheet of legislation as it affects all industry.

Don O'Brien in his July 7 column had some kind words to say about George J. Burger, who is well known on Capitol Hill and who is one of those connected with small business. Mr. O'Brien's column is herewith submitted for the RECORD:

VERMONT VIGNETTES

(By Don O'Brien)

INTERESTING PEOPLE FROM A WRITER'S LOG

Somehow, history has a way of repeating itself for this reporter—and it's a pleasant experience.

Here's one echo from the days when I was trying to a big city feller.

I interviewed Thomas J. Watson, chairman of the board of IBM Corp., when he was here for the golden wedding reception of Ambassador and Mrs. Austin.

The last time I interviewed Mr. Watson was in 1940, when I was with the World's Fair press department. IBM had a big exhibit there and I remember Mr. Watson, then president, as a man with a great desire to emphasize the cultural things—as he did at the fair.

I also wrote a couple of articles for Think, the magazine he established for the IBM personnel—exclusively a cultural and informative periodical.

One of the first things that was impressed upon me when I got the writing commission was that the company was not to be mentioned.

That rule still holds, Mr. Watson assured me. Think is not a "house organ," it has no business "angle"—just an interesting and

educational publication. Because folks wanted it, its circulation spread beyond IBM. Mr. Watson told me when he was here it now sends out some 75,000 copies all over the world—over and above the organization people for whom he started it.

I also remember that Mr. Hackett, the editor then and now, schooled me in the style requirements—which were strict.

A fighter

Another old friend cropped up recently—in the news, this time, and I'd sure like to have a visit with him in person.

His name is George J. Burger. He and his family were neighbors of ours for 25 years in New Rochelle.

When I say George Burger is a fighter, I don't mean with gloves in the ring. He's a two-fisted scrapper for other folks—and for an idea and an ideal—and he doesn't bother with gloves.

George Burger is executive vice president in Washington for the Association of Small Businesses. I may not have the name technically correct, but it's a Nation-wide organization devoted to the interests of the small, independent businessman.

When I first knew George he had a large tire and supply business. He began to fight the battles of the independent tire dealers whom he served.

Next I knew, he was executive secretary of the Independent Tire Dealers' Association, scrapping with both fists, publishing a bulletin in their interests—and making frequent trips to Washington. Now he's the champion of all small-business men.

George Burger knows Senators and Congressmen and a lot of other higher-ups in Government and business. Quite a few have run up against his determination. Some have seen the justice of his ideas and gone to bat for him.

But for or against him, those who get to meet him in one way or another come away with a wholesome respect for him. You can't help it.

George Burger is that kind of man. You'd like him, neighbors, any Vermonter would.

In Justice to the People of American Samoa

EXTENSION OF REMARKS OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Honolulu Star-Bulletin of August 3, 1951:

IN JUSTICE TO THE PEOPLE OF AMERICAN SAMOA

In justice to the people of Samoa—who are virtually wards of the United States Government—Congress should immediately investigate the charges by Samoan chiefs which have been placed before that body.

On request of a large group of American Samoans, including many chiefs and other traditionally important and responsible persons, Delegate FARRINGTON has placed in the CONGRESSIONAL RECORD the demand for an investigation.

This is a critical time not only for American Samoans but for the entire policy of United States civil administration in Pacific Islands of the trust territory.

Mismanagement in any one area will inevitably reflect upon the entire program of transferring Guam, American Samoa, and

the trust territory from Navy to civilian control and administration.

American Samoa has been under American protection and under naval administration for more than half a century.

Appreciative as they were of the many benefits, including peace, public education, and health measures, brought through the naval administration, the Samoans have for years sought a larger voice in their government. Not getting this under Navy rule, they began years ago to agitate for civil rule.

After World War II this came to fruition. Civil rule was authorized and the date of transfer set up by Executive order of the President of the United States.

The decision to transfer American Samoa from naval to civilian administration was followed by more than 2 years of preparation.

The responsibility for the new civil administration fell on the Pacific Division of the Office of Territories, Department of the Interior.

As the date, June 30, 1951, for transfer from the Navy to the Department of Interior approached the natives of American Samoa quite naturally felt uneasy about the future.

They had been long under the carefully patterned procedure of the Navy. The Navy had been at once their "guide, philosopher, and friend." They had looked for half a century to the Navy not only as their final authority in all kinds of local and island problems, but as the chief source of their livelihood.

With all this uneasiness these trusting Samoans had high hopes that the new life under civilian rule would bring them the happiness and satisfactions which an increasing measure of self-government should bring them.

For the people of American Samoa are not primitive barbarians. They are not homeless savages. They are not untutored cave-men.

On the contrary, they are highly intelligent, proud of their ancient traditions of prowess, sensitive alike to slights or to considerate treatment by the "palagis" (foreigners).

The United States Congress cannot allow this request for an investigation to go unheeded.

It is at once an indignant demand for justice from a Polynesian group taken under America's wing, and a cry for help from a bewildered, disappointed people who rely utterly on the power and good will of America.

An impartial committee of Congress should be sent to American Samoa without delay. This committee should be made up of men who understand the sensitiveness of the Polynesian people and the background of ancient island history which is theirs.

Unless this is done there will be two results.

1 Increasing unrest and protest from American Samoa.

2 A question as to the competence of the civilian administration of all the areas lately taken over from the Navy.

Agricultural Production in North Carolina

EXTENSION OF REMARKS OF

HON. JOHN H. KERR

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. KERR. Mr. Speaker, under unanimous consent to extend my re-

marks in the RECORD, I include a press release of the Bureau of the Census with reference to the agricultural production in North Carolina.

I am very proud of the record made by the Second Congressional District of North Carolina in this report of dollar production per acre of the 25 leading agricultural counties in the State of North Carolina. There are 8 counties in the Second Congressional District and 6 of those counties are listed among the 25 mentioned, Wilson, Greene, Edgecombe, Lenoir, Halifax, and Bertie. Wilson County ranks No. 1 and Greene County ranks No. 2. The farmers of North Carolina are employing the best methods in farming, and these methods are paying fine dividends.

NORTH CAROLINA'S RANKING COUNTIES ON DOLLAR PRODUCTION PER ACRE

WASHINGTON, D. C.—The 25 counties of North Carolina whose farmers were most efficient in achieving high dollar production per acre, had revenues ranging from \$84.20 to \$32.93 per acre from their 1949 operations, according to the 1950 census.

No. 1 county in value of production per acre was Wilson, which had 4,303 farms averaging 48 acres in size, and producing \$17,412,800 worth of products. It produced 28,659,386 pounds of tobacco from 22,001 acres. It harvested 17,557 pounds of lespedeza seed, 102,962 bushels of sweetpotatoes, and 47,772 bushels of Irish potatoes. It also had more than 150,000 pounds of peanuts.

Second county was Greene with production of \$76.53 per acre. It sold more than \$11,000,000 worth of products, including 19,981,619 pounds of tobacco from 15,918 acres, and 75,692 pounds of peanuts. It also had large production of sweet potatoes.

Third county in production per acre—with \$71.37—was Pitt County, largest producer of tobacco in the State. It raised 38,057,376 pounds of tobacco in 32,096 acres, 181,314 bushels of sweetpotatoes; 126,734 bushels of Irish potatoes; 31,564 pounds of lespedeza seed; and over 7,000,000 pounds of peanuts. Total production of this county exceeded \$22,000,000.

Nash County was next with \$59.65, with nearly 30,000,000 pounds of tobacco and 3,500,000 pounds of peanuts.

Fifth county was Edgecombe with \$55.20 per acre and 19,000,000 pounds of tobacco, 256,000 pounds of lespedeza seed and 19,000,000 pounds of peanuts.

Sixth was New Hanover County with \$53.67 per acre and with only 401 farms averaging 70.7 acres. It had a substantial production of vegetables, whole milk and small production of peanuts and tobacco.

Lenoir County was seventh with \$51.85 on 3,781 farms averaging 60.9 acres in size. It had 21,566,867 pounds of tobacco from 18,200 acres, large production of potatoes, lespedeza seed, and small production of peanuts.

Johnston County was eighth with 8,097 farms averaging 51.6 acres and earning \$51.78 per acre. Its total sales exceeded \$21,000,000, including 34,188,564 pounds of tobacco.

Wayne County was tenth with 4,915 farms averaging 59.2 acres and earning \$50.40 per acre. It has 22,500,000 pounds of tobacco from 18,815 acres.

The other counties, with revenue per acre, follow in order: Martin, \$49.59; Robeson, \$48.55; Harnett, \$46.28; Columbus, \$45.62; Wake, \$41.53; Hartford, \$41.30; Vance, \$40.04; Pasquotank, \$39.02; Franklin, \$37.09; Beaufort, \$36.59; Craven, \$34.40; Chowan, \$33.91; Duplin, \$33.88; Halifax, \$33.66; Cleveland, \$33.57, and Bertie, \$32.93.

Bertie grew nearly 30,000,000 pounds of peanuts. Halifax had approximately 36,500,000 pounds of peanuts and Chowan had almost 10,000,000 pounds.

Why Should the Federal Government Break Faith With Its Employees?

EXTENSION OF REMARKS OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. RAMSAY. Mr. Speaker, under unanimous consent, I insert in the Appendix of the Record an article appearing in the Government Standard, official newspaper of the American Federation of Government Employees, which outlines the obligation of the Federal Government to grant adequate sick and annual leave to its employees.

This article is from the pen of James A. Campbell, national president of AFGE, a veteran of 36 years in the Federal service.

His organization contends that efforts now under way to cut Federal leave will have disastrous consequences through the loss of key personnel, whose main inducement to stay in government has been the more generous leave provided.

Mr. Campbell's article is worthy of consideration by every Member of the House and Senate.

The article follows:

For these many years an important consideration in Federal job recruiting has been that Uncle Sam was able to offer more liberal leave, although it was not always possible to offer as much pay as private employers.

The more generous vacation time was an inducement to many employees to enter the Federal service.

That this has been beneficial to the Nation as a whole goes without saying, because our Government has attained a high degree of efficiency, exemplified in the pre-eminent place of the United States among world nations.

This inducement in recruiting has no doubt been an important factor in bringing into the service—and keeping them there—some of our most able public servants. And able public workers are legion, despite anything you may read or hear to the contrary.

The offer of longer leave rights is tantamount to an implied contract on Federal working conditions. Any departure from the present 28 days annual and 15 days sick leave is a violation of this agreement by our Federal Government to provide this amount of leave as a basic and fundamental feature of their employment.

All employees on this leave schedule were hired on the expectation that they would have it as long as they served. Now so-called economy advocates arbitrarily decide that they will take away from employees some of their leave rights.

This is a breach of faith. Quite apart from the fact that real economy has not been demonstrated, such a move will have a disastrous effect on Federal recruitment and will be a severe blow to United States employee morale generally. It represents a violation of a promise or undertaking to grant that amount of leave for the duration of Federal employment.

This great Nation was built on a foundation of trust and confidence; trust in our friends, our coworkers, and fellow citizens.

Without respect for an oath or an agreement, no individual can long enjoy the confidence of his fellows.

The same is true of nations in their obligations to their citizens and to one another.

We believe that it is a breach of faith to reduce employee leave when it was one of the prime inducements in bringing people into Government service.

Our great Nation is not a country that welves on its obligations. Why, then, should this implied contract to grant full leave to its employees be thrown overboard at this time?

It is a step backward in labor-management relations. With technological advances, the trend everywhere is toward more leisure or living time for all workers.

As a Nation we have led the world in improving living and working standards for all of our people. Why go backward?

Our Nation has too proud a reputation for living up to its word to be placed in the position of taking away from one large and important segment of our citizens, that, which by long-standing agreement, is morally and lawfully theirs.

We admire Senator DOUGLAS, of Illinois, for his great abilities. We differ with him completely on his effort to cut down Federal employee leave.

Some headway has been made through our friends in Congress to retain the present leave schedule. We believe postal leave should be brought up to the same level as classified leave.

We will continue to strive, in the face of heavy odds, to prevent a leave cut.

But most important, we ask the Congress to forestall a reduction in leave because it will be nothing more than a violation of a promise of long standing of the people who serve in the Government of the United States.

JAMES A. CAMPBELL,
National President, AFGE.

Voice of Council of Free Czechoslovakia

EXTENSION OF REMARKS OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the Record, I include two statements, one by the Council of Free Czechoslovakia and the other by the Conference of the Representatives of Central and Eastern Europe, which condemn the action of Red-dominated Czechoslovakia in the trial and imprisonment of William Oatis. I believe that the more is made known how we in this Nation feel—and especially those whose origins are in that part of Europe—the more the Communists will be served notice that they are bucking against a tide of fierce indignation from those who hold dearly right and justice.

STATEMENT OF THE COUNCIL OF FREE CZECHOSLOVAKIA

The mock trial of William Oatis by the Communist regime in Prague has been rightly repudiated as a travesty of justice defying all dictates of humaneness and violating the freedom of press and expression. It remains for a Czechoslovak voice to brand it as a provocation of the United States, the traditional friend and wartime ally of the Czechoslovak people. This unpunished intention of the alien satellite regime to humiliate the leading democratic power is designed to awe and discourage the Czechs and Slovaks into abandoning the hopes for liberation they pin on the people and Government of the United States. Thus, the sentence imposed on an

innocent American citizen and newspaperman amidst vain protests of the free world is as much an assault on the morale of the Czechoslovak people as it is a calculated insult of its friends and allies in the struggle for freedom and democracy. On both heads the Council of Free Czechoslovakia condemns it and calls for justice and reparation.

Until these are done, Mr. Oatis will share the heroic fate of so many Czechoslovak democrats. His personal tragedy high lights the price in lives and freedom paid by innumerable, known and anonymous, Czechs and Slovaks put to death or imprisoned on charges all too similar to those brought against Mr. Oatis: Espionage activity against the Communist regime in favor of the West. Now, in a very real sense, William Oatis has become an ambassador of the American people to the imprisoned people of Czechoslovakia. His credentials are shared suffering and common hope for an early deliverance. There can be no moral truce in the struggle against forces bent on crushing innocent men and freedom-loving peoples as long as men like Oatis and his fellow sufferers all over the world are being deprived of life and liberty by the agents of a universal evil.

WASHINGTON, D. C., July 11, 1951.

COMMUNIQUE ON THE TRIAL OF THE ASSOCIATED PRESS CORRESPONDENT WILLIAM N. OATIS

The conference of the representatives of Central and Eastern European countries attended by democratic representatives of Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, Rumania, and Yugoslavia, dealt at its July meeting held on July 24, 1951, in Washington, D. C., among other things with the case of William N. Oatis. The conference based its discussion on the report submitted to that end by the Council of Free Czechoslovakia.

The Central and Eastern European Conference condemned unanimously the arrest and sentencing of the American journalist. It recalled that in countries under Communist rule even courts are but executory organs of the political will of the Communist dictatorship and that Communist laws are deliberately contrived so as to render possible the representation of each and every act of political arbitrariness and violence as the implementation of right and justice. The conference expressed the conviction that the arrest, sentencing, and continued imprisonment of William N. Oatis in Czechoslovakia despite numerous diplomatic representations, together with similar cases in other countries behind the iron curtain, are motivated by the desire of the present rulers to undermine the authority and the prestige of Western Powers in those countries. The Communists propose to demonstrate on incidents of this kind before the oppressed peoples the alleged weakness of the Western Powers. They do so in the awareness that the resistance in the iron curtain countries is primarily nourished by the hope and trust the imprisoned peoples pin on the Western Powers and particularly the United States. Hence, the Communists seek with all available means to impair this hope and this trust in order to undermine the spirit of resistance and thus to facilitate and finally to accomplish the process of consolidation whose completion is so ruthlessly sought by the Soviet Union.

The conference voiced unqualified sympathy with all endeavors and measures which, without additional prejudice to the prestige of the United States, may result in an early release of William Oatis.

In conclusion, the Central and Eastern European Conference expressed its confidence that a timely exposure of the ultimate background and far-reaching objectives of incidents like the Oatis trial will contribute to the proper evaluation of the major political issues involved.

WASHINGTON, D. C., July 25, 1951.

Congressional Investigations**EXTENSION OF REMARKS
OF****HON. M. G. BURNSIDE**

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. BURNSIDE. Mr. Speaker, I have just returned from a week-end visit in my district. The citizens felt that Congress was placing more emphasis upon investigation than upon passing the proper legislation and then investigating if there are any shortcomings of the departments in carrying out this legislation. Otherwise, the Congress enables the executive branch to carry out which is the true function of Congress. If the executive branch does not properly function Congress steps in.

One of my colleagues in the House of Representatives, apropos of exposures at West Point, has suggested a congressional investigation. Another has said that if any member of the faculty is guilty he should be prosecuted. I in no way feel that any student should be protected in a violation of the rules of the Academy. However, since it is the honor system itself that made the exposures and their report is accepted by authorities and justified disciplinary action is being taken, it remains the function of the Department of the Army to carry out the house cleaning and it is not a proper matter for Congress.

I realized that my colleague said if a faculty member is involved. This, in my opinion, is an oblique method of at least undermining confidence in the faculty. It is very easy to throw out an insinuation accepted by a great number of people not based on facts. I could very easily say if a minister, teacher, or a member of his family were guilty of subversive actions, he should be prosecuted.

I cannot help remembering that during debate on the war manpower bill a great number of the minority were very concerned about placing the welfare of our young people in the hands of the military. Strong attacks were made upon the officers of our armed services in spite of the fact that they had done a magnificent job in winning World War II and many had won the awards set up by Congress for meritorious and brave actions. Yet these same people did not hesitate to attack the President when he removed a general for overstepping his authority on matters that would affect not only armed services but the entire Nation.

In my opinion the action taken by the Department of the Army and the authorities at West Point, without any investigation from Congress, demonstrates again the high type of personnel in our armed services. While this is a matter of great importance, the Army has demonstrated its willingness and ability to handle the matter, and it seems to me there are matters concerning legislation demanding the attention of Congress which supersedes the job being well done by the proper agency.

I might state that no appointee of mine is involved in this important matter at West Point.

Welfare of Alaska Natives**EXTENSION OF REMARKS
OF****HON. E. L. BARTLETT**

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial from the Anchorage (Alaska) Daily Times of July 30, which I believe will be of great interest to the friends of the Alaska Indians, Eskimos, and Aleuts. The welfare of these good American citizens is of utmost importance. Their progress is Alaska's progress.

A NEW DAY FOR NATIVES

Without fanfare in the form of an official announcement, the Alaska Native Service has adopted a new policy that is one of the greatest steps forward in the administration of native affairs.

The policy is based on an elementary decision as to the fundamental objective of the Federal agency. The Alaska Native Service has finally decided what they are trying to do.

Instead of aimlessly endeavoring to meet the Federal responsibilities toward natives, the agency has decided that the objective is to bring the natives into the white man's way of living. First result of the decision is the initiation of a program that is tantamount to a new colonization effort.

The natives are being moved out of their primitive habitats in remote areas of Alaska. They are being brought to the areas where there are opportunities for employment. They are being placed in positions where they have incomes and can live and work and play on the same basis as whites.

This new life replaces the subsistence problem they have had for many generations. Instead of devoting full time to the task of finding food and providing clothing and shelter for themselves, they will be given the opportunity to earn money to purchase the necessities and, if they are frugal, the luxuries and pleasures that mark the white man's way of life.

This is a fundamental decision that has been long overdue. Until very recently the Alaska Native Service did not know whether its object was to perpetuate the native as a curious race separate and apart from the white man, or whether it was seeking to teach the natives how to become a part of the American way of life.

The colonization feature resulting from the decision has already brought the relocation of many hundreds of natives.

The Alaska Railroad has furnished employment for 200 Eskimos brought to the rail belt from isolated camps in the Arctic. As railroad workers they have been found to be excellent. It is entirely likely that more will be employed in the future.

The Civil Aeronautics Administration has found Indians and Eskimos capable and dependable workers on the widely scattered building projects throughout the interior. Contractors have likewise found the native labor pool adept in building airfields and other installations in Alaska.

The fisheries have discovered that the natives are excellent workers in canneries. The annual migration to Bristol Bay from many interior communities has been increasing in the last few years.

Eskimos have made their appearance in Anchorage for the first time. Local establishments are finding them capable and dependable workers.

Carried to the ultimate, the integration of natives into the white economy could add

as many as 30,000 persons to the white economy.

The natives will be permanent additions because they are in Alaska to stay. They will never be boomers trying to make a quick stake and get out. Their presence should go far in overcoming the problem of turnover in employment. They won't take off for California when the first snow appears on the mountain tops.

This great decision had to go through the highest channels for clearance in Washington. It supersedes the fancy theories that the Federal Government should seek to improve the native economy and preserve it for antiquity. It also makes it possible for natives to help themselves instead of applying for doles under the Territorial welfare program.

Sincerity of the Interior Department in administering the new policy is indicated in a recent order by Secretary Chapman revoking the edict by his predecessor which authorized the creation of reservations. The order applied to the Barrow and Shungnak Reservations, pointing out that the Eskimos in those areas voted against reservations.

The order is significant in that it backs up with action Secretary Chapman's declaration that there would be no more Indian reservations established in Alaska. It also precludes the possibility that another election would be held with the hope that the Eskimos might change their minds.

Further action resulting from the new policy is that of turning over the Territory more and more responsibility for educating natives. The Alaska Native Service is rapidly abandoning its school system so that the natives can be integrated with others. Federal funds will be turned over to the Territorial school authorities instead of being administered separately.

Health services conducted by the Federal agency are also being turned over to the Territory, supported by Federal funds.

In short, the Alaska Native Service has finally decided that the welfare of the natives should come first. Instead of using the people to perpetuate a bureaucracy, the agency is going to put itself out of business by building up the natives to a point of self-sufficiency and independence in the white economy.

There will be many new problems as the natives take to the white ways, but the unlimited opportunities open to them are well worth the effort.

The administrative officers who figured in making this great decision are to be congratulated for their courage and foresight.

Los Angeles Housing**EXTENSION OF REMARKS
OF****HON. F. D. ROOSEVELT, JR.**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. ROOSEVELT. Mr. Speaker, I am sure that my colleagues will be interested in the following letter written to the Wall Street Journal by Mr. Nathan Straus, of New York City, who was formerly a member of the New York City Housing Authority and later Administrator of the United States Housing Authority:

LOS ANGELES HOUSING**EDITOR, THE WALL STREET JOURNAL:**

When a Wall Street Journal economic report is grossly inaccurate, it's news. Yet a recent article on the public-housing program in Los Angeles seems to deserve that characterization.

1. The allegation: The new Government-backed public-housing project will add 45,000 more people to the 48,000 who live in public-housing units. When the project is completed, one in every 20 Los Angelenos will be a public-housing tenant.

The truth: Of the 48,000 persons now occupying public housing, approximately 21,000 occupy temporary war housing, which it is the very purpose of the new program to replace. Instead of 93,000 public-housing tenants there will be, when the present program is completed, approximately 72,000. This amounts, not to 1 person in every 20, but about 1 person in every 30 in the city.

2. The allegation: A recent survey shows that 2,000 dwellings renting for less than \$40 a month are vacant. This survey is said to have covered only one-third of the city's 425,000 rental units.

The truth: According to a report of the Residential Research Committee of Los Angeles, a nonprofit private organization devoted to housing research, vacancies in single family dwellings renting for \$40 a month or less have dropped to eight-tenths of 1 percent. Vacancies in all unfurnished multiple dwellings are only 1 and nine-tenths percent. Since there were, according to the United States housing census of 1950, 67,445 substandard dwellings within the Los Angeles City limits, it is certain that the few dwelling units available at less than \$40 a month are "slums."

The Housing Authority of the City of Los Angeles is attempting to relocate approximately 1,700 families living on slum sites chosen for the new housing program. The Los Angeles Apartment House Owners Association has not been able to find even one livable dwelling unit within the means of the displaced families.

3. The allegation: A big-mass-housing builder has just completed some two-bedroom apartments at a cost of \$5,000 each, contrasted with a cost of \$11,000 each for local housing-authority units.

The truth: The \$11,000 estimated cost of public housing is an all-over figure, which includes the cost of slum elimination, land acquisition, site improvement, utilities, and the building of sidewalks and streets. The \$5,000 cost quoted for the private builder covers only the cost of the building.

The apartments to which the builder makes reference have not two bedrooms as alleged but only one. The total area of each dwelling is 480 square feet, as compared with the Los Angeles Housing Authority minimum standard of 575 square feet. The houses are jerry-built with rough pine outside stairways similar to emergency war-housing construction. The FHA refused to insure a loan for this housing. Such construction spells future slums. The fact that it is permitted is evidence of an inadequate local building code.

The builder claims that the rent is \$45 per month. This, however, does not include a gas range or refrigerator for which he charges an additional \$3.50 per month. Utilities, amounting to \$6, are also extra. So the real rent for these tiny one-bedroom apartments amounts to at least \$54.50 per month, compared to \$32.50 for a two-bedroom unit including range, refrigerator, and also utilities in public-housing projects.

4. The allegation: There has been a roar of protest against the public-housing program in Los Angeles.

The truth: The city council recently approved the public-housing program by a vote of 10 to 5. Such approval was due to the overwhelming support of practically every organization of disinterested citizens, including all the local veteran organizations, all the local labor organizations, and more than 70 other civic groups.

A little squeak of protest came from the Los Angeles Apartment House Owners' Association, the National Association of Home Builders, and the Los Angeles Real Estate Board.

5. The allegation: More housing is not needed because the Housing Act of 1949 was passed when housing was admittedly scarce and these conditions no longer exist.

The truth: There are just about as many occupied slum dwellings in 1951 as there were in 1949 when Surg. Gen. Leonard A. Scheele stated: "Los Angeles' slums breed tuberculosis; rates nearly 8 times higher than the better districts, and venereal-disease rates 13 times higher."

According to a carefully documented article which appeared in the Atlantic Monthly: "Slum housing, which comprises about 20 percent of this country's residential areas and contains at least a third of its population, yields only 6 percent of the real-estate tax revenue that is the mainstay of municipal governments. In return for that 6 percent, slums require, on a national average, more than half of the available medical and institutional care, half the time of the police, more than a third of the time of the fire departments, and most of the welfare benefits." Thus, even the annual contribution from the Federal Government to make up the difference between the economic rent of public housing projects and the rent that low-income families can afford to pay amounts to less than the concealed subsidies paid for the most highly subsidized housing in America—the slums.

The only people opposed to an expansion of the public housing and slum-clearance program are (a) those who are misinformed and (b) those who have a selfish interest in maintaining existing slums and housing shortages. The, latter group is engaged, through a powerful and sinister lobby in Washington, in adding to the numbers of the former. During the single year 1949, according to a congressional committee, this lobby engineered the mailing of 1,000,000 pieces of anti-public-housing propaganda under the congressional free mailing privilege—which means at the expense of the taxpayers.

NATHAN STRAUS.

Letter From Hon. Carl Vinson, of Georgia

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

MR. GAVIN. Mr. Speaker, I am in receipt of a letter from Hon. CARL VINSON, chairman of the House Armed Services Committee, of which I am a member, which reads as follows:

DEAR MR. GAVIN: The statement you made to the committee in executive session on July 20 in regard to the release of information respecting the B-36 bomber impressed me a great deal.

Insofar as I am concerned I want you to know that in my opinion you are not responsible for this unauthorized release of highly classified military information. I want to make this statement to you since your name has been mentioned in connection with this matter by press and radio commentators.

I have the greatest confidence in you. You have rendered outstanding service to the committee. On two different occasions I have requested you to go abroad to study highly classified military matters for the committee, and after these trips you have

submitted to the committee and to the House of Representatives comprehensive and very worth-while reports. It is to be deeply regretted that your name was ever mentioned in connection with this unauthorized release of classified material.

Insofar as I am concerned you have a clean bill of health. You are at full liberty to publish this letter or make any disposition of it that you wish.

Sincerely,

CARL VINSON,
Chairman.

Mr. Speaker, it is most satisfying to me to receive such a letter from the very distinguished and able chairman of the Armed Services Committee, whose work in behalf of national defense has won for him the hearty commendations of the Members on both sides of the aisle.

The Fair Deal in Hells Canyon

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

MR. WOOD of Idaho. Mr. Speaker, my attention has been directed to the appended article by Raymond Moley, nationally known news columnist, which appeared in the August 6 issue of Newsweek.

Never before in the history of the development of the Federal power bureaucracy has there been such a bare-faced steal of the people's natural resources, for the sole benefit of the power kingdom, as is evidenced in this projected costly "fetus" of the Department of the Interior.

This brain child of Truman, Chapman, Raver, and others, happens to be located in my district in Idaho; and this bid to grab off the electric power of my district to sell down the river to the coast cities and California without any remuneration whatever to my home folks certainly shall receive my earnest and unrelenting opposition.

The "weasel words" of the Department of the Interior, purporting to grant benefits to Idaho in lieu of their stolen power, completely fail to convince me this project is not basically federally organized banditry.

The article follows:

FAIR DEAL IN HELL'S CANYON

(By Raymond Moley)

CALDWELL, IDAHO.—The Snake River, despite its sinister name, is the best-behaved domestic servant in the Nation. It is also one of the most useful. It rises in Yellowstone Park and enters Idaho at an altitude of more than 6,000 feet and winds through that State for 700 miles. Then it reaches the border of Oregon and finally leaves Idaho at an altitude of 600 feet. That decline of more than a mile provides a source of vast water power and irrigation. The Snake's volume of water is copious, steady, and continuous. The river stays at all times in its narrow, sometimes deep channel and hence manifests none of the capricious,

destructive habits of the Mississippi, the Missouri, and the Columbia. It provides fertility, power, and glory for its master, Idaho. The Snake and its tributaries are dammed and tapped again and again. Without it, southern Idaho would be a barren series of brown hills and valleys. With it, southern Idaho is a rich, prosperous home for a sturdy, industrious, conservative population.

Up on the border of Oregon, the Snake rushes through Hells Canyon at tremendous force. This opportunity for Federal spending has been under the greedy eyes of the busy bureaucrats of the Bureau of Reclamation for a long time. They have drawn up plans for a great dam, the highest in the Nation, exceeding the Hoover Dam by many feet. To build it would be the summit of the Bureau's ambition. Truman has included it in his grandiose Fair Deal and incorporated in his budget a large sum for its initiation. This proposed dam would be almost exclusively for the generation of electric power. None of the land of Idaho would be fertilized by it. Moreover, the State would get little or none of the electricity. That would be carried to Oregon and Washington in the Bonneville pool.

IDAHO PEOPLE OPPOSE DAM

As far as I can determine, the people and the public officials of Idaho are overwhelmingly against this Federal project. Their concern is not merely because they would get no benefit from it, but because it would prevent the development of power and irrigation which is greatly needed and which would not require the expenditure of Government money. For the State of Idaho is thrifty. It views a State deficit as a shame and a disgrace. It is also conscious of the cost to the Nation of the Hells Canyon project, which will probably run to much more than a billion dollars. The initial estimate is \$476,000,000, but judging from other Federal projects, it would cost three times that to the Nation's taxpayers.

Instead of this great Federal expenditure, an alternative is proposed by the Idaho Power Co., which serves the State and, according to everything I hear, serves it well. The company wants to build five low-head dams upstream from the Hells Canyon site to serve the needs of Idaho. Its application to build the first of these has been before the Federal Government since 1947. The Hells Canyon project has held it up and if constructed would flood the available sites for these privately financed dams.

NEW BURDEN ON TAXPAYERS

Thus, the issue is joined between a great new burden on the taxpayers of the Nation and a development which would cost the taxpayers of the Nation and the State nothing, but instead would provide new tax sources. To this traveling taxpayer from another, far-distant State, it would seem that, since the people of Idaho prefer the privately financed development and since they have a moral claim on the waters of this great river, Congress should never authorize the Federal dam. As far as western Oregon and Washington are concerned, their needs can more than adequately be supplied by projected dams on the Snake within the borders of Washington. There are also several projected sites on the Columbia River.

But in the Federal bureaucracy ambitions are illimitable; concern for taxpayers negligible; the drive for a public-power monopoly intense; and Interior Department propaganda copious and costly. As has been the case in other such projects, discriminations in favor of public power and against private power are all to be legally incorporated. Thus, hang the expense and hang the free economy

Do Reds Want Cease Fire?—Why Not; They've Nothing To Lose

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

REDS NEGOTIATING IN GOOD FAITH?—WHY NOT; THEY'VE NOTHING TO LOSE

(By Edgar Ansel Mowrer)

People who have been wondering whether the Communists in Korea are negotiating "in good faith" have an answer in their swift acceptance of General Ridgway's ultimatum on conditions.

Of course they are—as far as Communists can be in good faith when dealing with non-Communists.

The Red generals at Kaesong are trying to get out of the gigantic error they made in June 1950, when they attacked the Republic of Korea under the impression that the United Nations and the United States would not defend their protegee.

Instead of completing a rapid conquest of South Korea, the Communist bloc now finds itself saving North Korea only through the unexpected reluctance of its adversaries to extend the conflict. It cannot be sure how long that reluctance would last.

Instead of successfully shooting their way into the United Nations and taking over Formosa by bluster, the Chinese Communists seem barred from either, perhaps for keeps.

Instead of confronting a world public-opinion prepared, as in the case of Czechoslovakia, to condone their aggression, the Kremlin crowd finds the non-Communist world—or much of it—committed to collective rearmament. Such a rearmament, furthermore, includes three things which the Kremlin has reason to fear—United States industrial power (including predominant super-bomb production), a rearmament West Germany, and a rearmament Japan.

Compared with these three threats, the conquest of little Korea—even if it could be achieved by further fighting, which it cannot—must look to Joe Stalin like peanuts.

PEACE CAMPAIGN NOTHING NEW

The obvious thing to do is therefore to call off the Korean campaign on the best possible terms as part of a peace campaign aimed at dividing the non-Communist countries and preventing their further rearmament.

This peace campaign is not new. It has been gradually developed over the last 2 years as an alternative to military aggression. A first move was the collection of millions of signatures "for peace."

Now that armed aggression has proved locally disastrous, the Kremlin has ordered the peace campaign stepped up.

For some months now, Communist radio transmitters have been hinting at Moscow's desire for a five-power pact to take up where the wartime alliance left off. This desire became clearer during the recent four-power talks in Paris. The desired pact would embrace the five veto-wielding countries at the UN Security Council—with one difference. Red China would take the place of National China, thus giving Stalin two of the five voices.

Then—Moscow hopes—these five powers would take up one after another outstanding

causes of tension and get rid of them. One such would be the North Atlantic Treaty Organization (NATO). Another would be the rearmament of West Germany, a third the rearmament of Japan, etc. Since the U. S. S. R. and China could count upon the support of neutral India, of some discontented Arab States, and of pacifists and pro-Russians elsewhere, they might well hope to accomplish at least some of their purposes. To any still unconvinced westerners, the Polish Communist radio recently gave away the game:

"All over the world," a Polish commentator explained, "people are looking beyond the Korean cease-fire talks to the No. 1 essential for easing international tension, the conclusion of a five-power peace pact." (Warsaw in English to the United Kingdom, July 11, 1951.)

Forewarned is—or should be—forearmed.

DOORS TO FURTHER CONQUEST

Moreover, even if ending the fighting in Korea does not succeed in lulling the democracies back to sleep, it is still to the advantage of the Communists. It will enable them—if they choose—to transfer their military effort from a country like Korea, whose conquest leads nowhere, to other places—Indochina, Burma, India, Iran—each of which is a door to further conquest.

As matters now stand, ending the fighting in Korea will leave the Asian mainland almost as defenseless as in June 1950. It will find the Middle East in even greater disorder. It will find Europe still imperfectly rearmament, its defense efforts constantly being mined by political termites.

In view of the let-down already visible in Washington, London, and Paris, Moscow may conclude that a new act of Communist liberation will find the western peoples disinclined to oppose it by arms—particularly so if it is limited to an area where western leaders have indicated a merely secondary interest.

With such pleasant prospects ahead—at best, a new period of phony peace which Moscow can use further to increase its lead in armaments; at worst, the seizure of more promising pastures—why should not the Communists at Kaesong be negotiating in good faith? They have everything to gain and—at the thirty-eighth parallel in Korea—literally nothing to lose.

Don't Delay Longer on Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. BARTLETT. Mr. Speaker, early statehood for Alaska and Hawaii has the unequalled support of Kiwanis International. At the thirty-sixth annual convention, held in St. Louis June 20, 1951, this resolution for statehood for our two incorporated Territories was adopted:

Be it resolved by Kiwanis International, That the admission to statehood of Alaska and Hawaii is in the national interest, and we urge the Congress of the United States to give immediate and favorable action on their petitions for statehood; be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the President of the Senate, the

Speaker of the House, and each Member of the Congress of the United States.

Mr. Speaker, public sentiment throughout the Nation in favor of statehood for both Hawaii and Alaska is just about as unanimous as it can be on a proposition of this kind. The statehood bills should be passed this year so that State governments can be organized without further delay.

Troops for Europe

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times for August 7, 1951:

TROOPS FOR EUROPE

The United States is as clearly committed as a country could be to the proposition that our own defense against the forces of aggression is bound up with the defense of our allies against those forces. Through the harsh experience of two world wars we have learned that collective security is the only principle on which man's hopes for peace and freedom can be safely based. We have supported it in the Charter of the United Nations; we have spelled out our position with unmistakable clarity in the North Atlantic Treaty; we have suited action to words in Korea; we have restated these beliefs in the great debate held last winter and spring on the issue of sending American troops to join the international defense forces under General Eisenhower on the Continent of Europe.

The declared policy of the American people is to support, build up and participate in the creation of an adequate defensive structure in Western Europe. That is why several divisions of our Army are already there. It is why important units of our Air Force are already there. It is why significant elements of our Navy are there. It is why we are helping to man the outposts of Berlin and the long line separating the free from the slave world in Europe.

The policy was set by the President and it was reaffirmed by the Senate in its resolution of April 4. In the debate that preceded adoption of this resolution it was made clear by the administration that a total of four American divisions was all that was contemplated for dispatch to Europe, in addition to the two already there at that time. In our view, the number of troops to be sent neither was nor is a matter for congressional determination. While it was advisable from the viewpoint of public policy that the Senate endorse the administration's intention to send troops to Europe, it was quite another thing for the Senate to set itself up as a military board passing judgment on the number of soldiers to be sent overseas in furtherance of an approved policy. And yet that is what it proceeded to do, expressing its "sense" that not more than the four additional divisions should be sent abroad without express congressional approval. It was generally understood that not over 200,000 American troops would be involved.

Now it turns out that the total actually contemplated was 400,000, according to Secretary Marshall—or 344,000, according to General Collins. In any case, it is far above the 200,000 mentioned a few months ago,

even though the number of overseas divisions has not been changed. The conclusion is inescapable that the administration spokesmen either were not entirely frank in their discussions of numbers last winter or did not take full account of the auxiliary troops that would inevitably have to be sent in support of six divisions. This is not a satisfactory way of dealing with Congress, and it is unfortunate that the misunderstanding should have occurred.

But in our view it would be exceedingly unwise for Congress, in pique, to adopt any of the newly revived proposals to establish a legislative limitation—for example, in the form of an amendment to the pending military appropriations bill—on the number of American troops to be sent abroad. Apart from its destructive influence on American prestige, such a measure would have the moral effect of writing off as expendable those units already overseas. It would cast doubt upon the seriousness of American intentions to carry out our part of the North Atlantic Treaty obligations. It would inject both Houses of Congress into a field of technical military judgment that, even with the best will in the world, they are not competent to enter. The United States is committed to full support of the defense of Western Europe and, in our own interests, we ought not to hamstring ourselves in carrying out that policy.

VA District Office Must Remain in New York

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HELLER. Mr. Speaker, it has come to my attention that plans were recently announced by the Veterans' Administration to remove the VA district office from New York to Philadelphia, where it is to be merged with similar offices from other cities. In the release issued on July 26, 1951, announcing this transfer, Carl H. Gray, Jr., Administrator of Veterans' Affairs, states as follows:

The savings resulting from the abolishment of the New York district office alone have been estimated at \$1,000,000 a year. The figures include about \$478,000 in salaries, \$488,000 in rent and maintenance, and the remainder in other items such as communications and tabulating activities."

Further in the same release Mr. Gray adds:

Those now employed in the three district offices—Boston, New York, and Richmond—will be given the opportunity to move to Philadelphia to work in the new office. Any vacancies created by VA employees not desiring to transfer will be filled locally.

Mr. Speaker, I submit that this is not only a case of false economy but the figures as listed by Mr. Gray are misleading and present an erroneous picture of the situation. The proposed plan will not result in any appreciable saving, but it will bring about a good deal of confusion, dislocation, hardship, and various other difficulties involving hundreds of thousands of veterans, their dependents and beneficiaries.

How Mr. Gray hopes to save \$478,000 in salaries in New York by his willingness to retain these employees on the payroll if they move to Philadelphia, or by replacing them with others if they refuse to move with the office, is something which I have not yet been able to figure out. If he can perform such wonders, then we are wasting Mr. Gray's talents as a financier; we should put him to work on our national budget.

His rental figure, it seems, is also highly exaggerated. The VA office occupies only part of a building located at 346 Broadway, where it rents 180,000 square feet, at a cost of \$1.25 per square foot, which, according to my way of reckoning, comes to \$230,000. This is less than half of the figure quoted by Gray. By removing the office to Philadelphia, additional space will have to be acquired there. Presumably, it will be obtained at a reduced rate, but it will still amount to a sizable sum. Where does the saving come in here?

If Mr. Gray is seriously interested in saving taxpayers' money, he will not find it by running off to Philadelphia. There is a better way. The VA New York regional office occupies a building at 252 Seventh Avenue, where some 150,000 square feet of space is available. Why not move the district office into this unoccupied space and thereby institute a real saving?

I am, of course, very much upset by the fact that some 2,000 VA employees, many of whom are disabled veterans themselves, are in danger of losing their jobs. That would mean dislocation and hardship for 2,000 families. For some unexplained reason, the Veterans' Administration is willing to dispense with the services of so many trained, experienced, and loyal employees, and to take on others whom it will have to train all over again. Does that make for efficiency and economy?

Most of all, however, I am very much disturbed by the fact that removal of this office from New York will cause great hardship to hundreds of thousands of veterans and their beneficiaries. New York has more than a million war veterans. They have used and continue to use the facilities of the VA office for the manifold services it offers them in helping them with their problems. While some of these are routine matters, many require personal contact and follow-up. By removing this office to Philadelphia it will incur additional expense and discomfort for veterans or dependents in attempting personal contact which they now have in New York. Instead of improving the service to veterans and their families, that service will now deteriorate and will result in great dissatisfaction and constant complaints.

For all these reasons stated, I feel that we must act promptly in forestalling such action on the part of the Veterans' Administration. I am, therefore, introducing a bill which provides that a VA district office shall be maintained in New York, notwithstanding the recent announcement of the Veterans' Administration. In view of the urgency of the matter, I request that the committee to which this bill will be referred give its immediate consideration to it.

The West Point Story

EXTENSION OF REMARKS

OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. MUMMA. Mr. Speaker, once again the question of morals and ethics in our Government has been brought to the foreground by the current West Point story. There is an almost unanimous wave of pity for these youth of our Nation. At the same time there is a question in the minds of nearly everyone as to whether their actions have not been condoned in certain quarters for one reason or another.

My own personal reaction is that by precept and example their elders in Government service, from the highest level down, have failed to give them an ideal for which to strive. We read constantly of similar cases where the code is being strained, if not actually broken, by those in the highest offices of our Government.

What the public wants is for each and every public officer to uphold the trust placed in them. We will then pull ourselves above the present level, whether it be in questionable business deals with governmental agencies or slanted testimony by public officials and the like.

It seems to me there is a lot of good sense in an editorial on this West Point situation appearing in the Harrisburg (Pa.) Patriot of August 6. Pursuant to the permission granted me, I include this editorial in my remarks. It is as follows:

THEY WOULD NOT LIE

Happily, our Army is somewhat better at fighting wars than at handling public relations. Otherwise, this would hardly be the land of the free, even though it might be the home of the late brave.

A news announcement of major interest to all the country rarely has been so fozzled as the story of West Point honor code violations.

At first, it appeared that 90 cadets had been caught cheating their way through school and had been dropped from the Academy. But now it may or may not be 90, and they are either in or out or awaiting further investigation, and they may not have been cheating in their own behalf but merely helping out a friend or just pretending they did not see what was going on.

In contrast to the confused but coy Army administration, the accused cadets themselves are doing a better job of public relations just by saying frankly what they feel and suspect and know.

Two highly important facts have been brought out by the accused cadets:

1. Cribbing has been going on for years under the honor system and there has been widespread knowledge of it.

2. Any of the accused could have escaped punishment merely by swearing falsely that he had not violated the honor code.

This last certainly puts a rich premium on perjury. A young man has only to put his name to a lie to save his career from ruin and his family from disgrace. And there is almost no chance that the lie would ever be exposed.

How many people in daily life could withstand such a temptation?

How many among the cadets' superiors in the Army? In Government?

How many who cannot resist a deep freeze or a fur coat or a favor from a Government contractor could face loss of a life's work and still refuse that inner voice teasing, "Oh, go ahead and sign—it's only a formality—who'll ever know?"

Yet, 90 cadets faced with expulsion did resist that temptation to lie their way to safety.

Some of them were honor students guilty of giving a lift to a roommate at a school where every minute is used to train men to give everything—even life—for the cause in which they serve.

Some were bright football players, guilty of helping a duller man who might be a teammate in a game where every move is dedicated to sacrificing the individual for the advancement of the team.

Of course, others of the 90 were poor students who might have passed their classes handily if they had not been burdened with the additional job of practicing and playing big-time, two-platoon football. But theirs was not to quarrel with that box-office policy set for them by the Army, they merely had to produce the touchdowns.

Perhaps still others of the 90 did nothing more than ignore what everyone for years seemed to know was happening . . . but they admitted it.

The 90 who refused to perjure themselves have admitted violating the West Point code of honor. But, in the eyes of their fellow Americans, they have abided by a still finer code of honor. They will be forever rated above those who lied their way to safety—and the accused cadets say perhaps as many as 200 did that.

The whole business is a mess. A system exists which puts a rich reward upon lying and which punishes only those caught. The rule is that every graduate starts with a clean slate. If he cheats his way through school without admitting it or being caught, he is in the clear. The accused cadets believe that many of the last few graduating classes got through in just that way and are now serving in the Army without reproach.

Thus the premium is not so much upon honorable conduct—whatever the system's founders may have hoped—as it is on not being caught.

The Army's administration, however, is responsible for thoroughly botching the whole business. Apparently a situation of wide extent and long standing was uncovered. Instead of evaluating it and stopping it quietly but effectively with reasonable punishment and immediate de-emphasis of big-time football, somebody decided to do it the hard-headed way.

As a result, our principal ground officer school will be sorely disrupted.

One of our proud institutions is unnecessarily besmirched before the whole world, including the Red world.

Flood Relief Fund

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. BOLLING. Mr. Speaker, I include herewith the text of a letter from Milton C. Tainter, executive director of the Kansas City and Jackson County Chapter of the American Red Cross to the executive secretary of the Missouri State Council of Brewery Workers.

The Missouri State Council of Brewery Workers meeting in a 2-day convention at Kansas City, Mo., July 27 and 28, unanimously voted that the first order of business on convening of the convention would be to take positive action in making financial contribution to the flood relief funds in that area. Affiliated locals of the Missouri State Council of Brewery Workers are as follows: Local Union 46, Kansas City, Roy Fulton, secretary; Local Union 93, St. Joseph, Jos. Serocki, secretary; Local Union 187, St. Louis, Nicholas Ludwig, secretary; Local Union 246, St. Louis, Vincent Stiebel, secretary; Local Union 279, St. Louis, Kenneth Beerhalter, secretary.

Besides this contribution of \$2,500, other brewery workers local unions have also contributed to the Joint Labor Committee for Flood Relief. This contribution is just one of the many that are made throughout the year for worthy causes. Other organizations receiving financial help from the brewery workers are, to mention a few, the National Society for Crippled Children, the Easter Seal Agency, the veterans at Walter Reed Hospital, Percy Jones Hospital, Wood Memorial Hospital, Riley Memorial Hospital, Indianapolis, etc. The brewery workers are to be congratulated for their public spirited generosity.

AMERICAN RED CROSS.

Kansas City, Mo., July 27, 1951.

Mr. LOU A. GRIESEDECK,
Executive Secretary, Missouri State
Council of Brewery Workers, Kansas
City, Mo.

DEAR MR. GRIESEDECK: Please express to your convention assembled, our sincere appreciation for your check of \$2,500 given by the Missouri State Council of Brewery Workers to the American Red Cross flood-relief fund. In behalf of the thousands of individuals in the flood area, we accept your generous contribution for their relief.

Mrs. Alice B. Hons, one of our volunteers who worked with us at the disaster control headquarters through the entire emergency period, has told me of your offer to use her on the broadcast of the Cardinal's game of Sunday afternoon. We feel that this, too, is a generous contribution, for it will bring to thousands of Cardinal fans the opportunity of hearing a volunteer worker who was at the scene during this emergency and thus many more dollars will undoubtedly be contributed to the American Red Cross flood-relief fund. Mrs. Hons will be available to you for the trip to St. Louis Sunday.

Again thanking you for your generous contribution to the flood sufferers through the American Red Cross.

Sincerely yours,

MILTON C. TAINTER,
Executive Director.

Our Failure, Senate's Opportunity

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. MASON. Mr. Speaker, the failure of the Ways and Means Committee to include in the Revenue Act of 1951 the taxable income of some 35,000 tax-exempt profit-making corporations,

such as cooperatives, building and loan associations, mutual savings banks, and so forth, is a travesty upon justice and a cruel joke upon every taxpayer in America. The Senate Finance Committee has the tax bill under consideration at the present time. I hope the Senate Finance Committee will do the job that the Ways and Means Committee failed to do. In that connection, and for the benefit of the Members of the other body, I include the following excellent editorial from the Richmond Times-Dispatch of August 1, 1951:

A DEVICE TO PROFIT BY TAX EVASION

One of those Alice in Wonderland tax stories came over the wire the other day. It said that Assistant Treasury Secretary E. H. Foley had written a letter to House Speaker SAM RAYBURN, calling attention to a loophole in the Internal Revenue Code.

Mr. RAYBURN, in all seriousness, said that a tax now levied on the sale of sawed-off shotguns, "a favorite offense weapon of gangsters," was being evaded. The gangsters, it seems, buy shotguns with a regular-size barrel, and then use a hacksaw to shorten them for lethal effectiveness at close range.

Mr. Foley suggested to Mr. RAYBURN that this loophole be plugged by amending the Revenue Code to require payment of the tax before the shotgun barrel is truncated.

If it has taken you 22 seconds to read this far, the interest on the national debt accumulated in those 22 seconds amounted to approximately \$3,480. We doubt very much that the amount of revenue realized by plugging the "sawed-off-shotgun tax loophole" will suffice to pay even that tiny fraction of this fixed burden in the Federal budget.

However, there is little doubt that Congress will so amend the code, if for no other reason than to escape the stigma of favoring gun-toting gangsters.

But there is grave doubt that Congress will refuse to plug the biggest tax loophole of all—the special-privilege exemption under which the profits of cooperative corporations have remained untaxed.

Failure of Congress to plug this big-as-a-barn-door loophole will cost you (the taxpayers) anywhere from a third to a half-billion dollars a year.

You will have to go far afield to find a better illustration of the proverb about "swallowing a camel but straining at a gnat."

The viewpoint of ethics and economics the proposal to tax co-op profits (including those camouflaged as "patronage dividends") is sound and just. But with a presidential election looming on the horizon, politicians in Congress are scared stiff of the farm bloc, which has looked upon tax exemption of its co-ops as a sort of God-given right, very much as the "butter bloc" for 50 years arrogantly maintained its right to tax oleo-margarine.

Professor O. Glenn Saxon, in testifying before the Senate Finance Committee recently contended that the Government (meaning the taxpayers) loses "more than \$1,000,000,000 a year" in taxes that could be collected from all now privileged tax-exempt groups, including the co-ops, mutual companies, and Government corporations.

"There is not the slightest chance Congress will tax patronage dividends," snapped Senator TAFT, the self-constituted conscience of the Republican Party.

"That's because Congress doesn't understand they're really profits," retorted Saxon.

TAFT's reply was beamed right to the farm bloc:

"Congress does understand," he said, "what these farm co-ops are for—to enable

farmers to buy things cheaper and sell their products for more."

A century ago farmers formed co-ops to find more efficient methods of selling their crops to distant markets. There was a real need for these organizations; the individual farmer could not have solved the problem single-handed. But today these agencies and their urban counterparts have degenerated into tax-dodging devices whose profits (under whatever alias) are not so much the result of more efficient management and purchasing as of their exemption from taxation.

It is safe to say that if these corporations' profits were taxed, the game would no longer be worth the candle, and most of them would collapse. As of now, they are in effect tax-supported.

The taxes evaded are paid by citizens who enjoy no tax-evasive privileges. Thus we have one class of citizens deriving a profit from taxes paid by their less-privileged fellow citizens.

This inequitable and economically indefensible state of affairs might never have been emphasized in Congress, were it not for the fact that all-time high corporate and excise taxes are now in prospect. What was a nominal difference, negligently condoned, has now become a grave injustice and a heavy load, measurable in billions of dollars over the long years of defense spending that confront the Nation.

This inequity must be wiped out. The selfish interests of a farm bloc (already guaranteed security by parity payments) should not be maintained at the cost of the vast majority of citizens.

As for Senator TAFT, who has championed this injustice, it would be well for him to remember that the free-enterprise system which he so valiantly defends will be increasingly vitiated if socialized, tax-exempt business groups, by reason of the privilege he condones, continue to shift the tax burden that is rightly theirs onto the shoulders of tax paying, free-enterprise competitors.

"How I Became a Dope Addict Before I Was 18"—Lucy Turns Peddler To Pay for Her "Fixes"

EXTENSION OF REMARKS OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. CLEMENTE. Mr. Speaker, under permission previously granted me, I ask that there be printed in the Appendix of the RECORD the third of a series of articles on teen-age drug addiction published recently by the Long Island Daily Press:

"HOW I BECAME A DOPE ADDICT BEFORE I WAS 18"—LUCY TURNS PEDDLER TO PAY FOR HER "FIXES"

(This is the third in a series of articles about 19-year-old Lucy D., who managed to shake off the vicious habit of taking dope, into which she had slipped when she was first out of high school. There are undoubtedly hundreds of boys and girls like Lucy on Long Island, although most of them never come to the attention of authorities because their parents step in just in time. In the first two installments Lucy, only daughter of a nice suburban family, told

how she accepted her first marihuana cigarette on a date and kept smoking reefers until she could not do without them. She told how she graduated to heroin when she fell in love with Ralph, 20-year-old addict. She left her family to live with Ralph, married him and then, when he was picked up by narcotics agents in their shabby flat, she decided she would not contact him in jail. Lucy took her own furnished room in another part of the city and being completely out of money, decided to peddle dope so she could keep herself supplied with the stuff.)

(By Geraldine Scott)

The first thing Lucy did when she decided to try to make money by peddling dope was to contact some of the people she had seen Ralph buy H (heroin) from. One of them, the proprietor of a fairly nice restaurant, liked the idea of having a young girl work for him. He even offered to advance her enough money to take a nice apartment if she would be a regular peddler for him.

"The thought occurred to me that it might be easier for my parents to find me nearer home," Lucy said. "But by that time I was gone. I couldn't wait to get my next fix of H, and I had no money to buy it. I accepted Mr. B's offer."

With the help of "friends" of Mr. B., Lucy was set up in an apartment.

"They thought of everything. It was an expensive place in a new development, about \$125 a month, I think, although Mr. B paid the rent all along. It had a rear exit so customers could contact me without attracting attention. It even had a brand new garbage disposal so I could get rid of the stuff if I thought police were getting too close."

Lucy leaned back on the sofa in her parents' living room, closed her brown eyes, and answered my question about the technique of using H.

"Users never bother with hypodermic syringe and needles any more. This is because it's a violation of the narcotics law to have them in your possession. Now they buy needles used by diabetics, which do not come under the narcotics law. You can get them in any drug store two for 18 cents.

"The fix liquid is drawn into an eye-dropper, and the needle is attached to the dropper with a strong piece of paper, like a strip cut off a dollar bill. I tried using Scotch tape, but that slips when wet. The money paper is strong even when wet, and it stays in place."

Soon Lucy's customers began to contact her. As a plain user of dope she had met many fellow hypos at parties. Most of them, she soon realized, were hoodlums and thugs like Hank, who had given her her first marihuana reefer, and Ralph, her husband, whom she never cared to see again. But her customers were different types, from wealthy socialites to slum-area juveniles.

"The rich ones apparently got the habit because they were bored and didn't have anything to keep them interested. They were secret users who never mingled with other hypos. They had plenty of money, so they didn't have any worries about getting the stuff. Many of them were young—some in their teens and early twenties."

One of Lucy's customers was a young girl later sent to prison for using children to peddle dope.

"Her story was typical, I guess. Her mother died when she was 1 month old, her father remarried soon afterward and had other children. He never wanted her. She was shifted from relative to relative and finally, when she was 16 she went out on her own. She was a bitter kid, and it didn't take much to turn her into a hypo. But when she came to me I never dreamed she was using kids to unload the stuff."

Some of Lucy's customers followed the oldest profession to get money to buy dope. Others were shady characters who were not dope addicts.

"Their bosses explained it would be much easier for them to peddle dope than to pursue their usual activities. But they wouldn't touch the stuff themselves. They used to look at me in contempt when they came to buy H."

Lucy was making good money as a dope peddler. But she knew she had changed from a pretty girl into an unattractive, dissipated one. She had bleached her red hair blond, hoping to avoid recognition by police whom she knew were searching for her as a missing person. The weight on her once nicely-rounded 5 feet five figure had gone from 125 to about 103. Her skin was pimply from the sweets that all hypos crave along with H. She was a worried young lady when she was between shots, but a "contented" one when she was "fixed."

"Most people don't know how physically dangerous the actual use of H gets. After you start taking a fix in the main line (that means the artery) you're in trouble because you run out of arteries. When you're taking a fix seven or eight times a day, mostly in your arms, they get sensitive and it hurts a great deal to push that needle in. One arm wears out and then the other and you get desperate. But you stand the pain because it would be worse without the heroin."

"I nearly lost my foot once because I tried a fix in my leg and got an infection. Girls have it tougher than boys because their arteries and veins are smaller and not so strong."

Since her recovery, Lucy has had plastic operations on her arms to eliminate the needle scars she incurred while taking her shots so many times a day. But she still has a couple of scars to remind her of her kick-off misery.

"One thing I'd like to say," Lucy stated thoughtfully. "A normal average kid can't be seduced by an ogre with a dope needle. He or she has got to be willing or eager to try Marihuana, though, is a different story. That's how I started. But I admit I was a crazy kid. I just didn't know what I wanted."

Lucy added that she thought druggists could help narcotics officers by being suspicious of anyone coming in to buy a spike—the addict's name for a diabetic needle.

"You can hardly do without a needle. A few users sniff cocaine and heroin, but that isn't very satisfactory and it's extravagant, takes too much to get any effect. I never could. It tickled my nose so much it got red and inflamed."

Hypos have various hiding places for their spikes and eyedroppers. A few teen-aged boys who were still in high school used to tell Lucy they would tape them to trees and poles near the school.

"Girls can pin it to their brassieres. They're comparatively safe because they can be searched only by women cops. By the time a matron gets on the job the girls have had a chance to go to the bathroom and ditch the stuff."

"In the poorer sections people hide their stuff in vacant lots."

Lucy's job as a dope peddler had other disadvantages. She could never stay too long in one apartment, for fear one of her customers would get picked up and squeal.

"With Mr. B's help, I was a very careful worker. Once he took me to a party at the home of one of his biggest peddlers. When I walked in there was a sort of buffet of narcotics and stimulants on fancy plates on the table. On one plate there was a fine grade of heroin, on another morphine, another cocaine, and plenty of pot sticks of

good grade. They had opium, too; you could smoke, chew, or shoot. Opium's a luxury dope. You can only get it through the high racket circles."

Don't Stray From the Fundamentals

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. TEAGUE. Mr. Speaker, the Congress has given a great deal of consideration during the past few months to the question of price control and particularly controls on beef. There has been a great deal of debate on both sides of the issue. This issue has been analyzed by A. L. Smith, extension animal husbandman, and Dr. Tyrus R. Timm, extension economist and professor of agricultural economics, Texas Agricultural and Mechanical College System, and their views are thought provoking for those of us interested in this vital issue.

Their article in July 1951 issue of the *Cattleman* follows:

DON'T STRAY FROM THE FUNDAMENTALS

(By A. L. Smith, extension animal husbandman, and Dr. Tyrus R. Timm, extension economist and professor of agricultural economics, Texas Agricultural and Mechanical College System)

Recognize, appreciate, and work with—not against—the fundamental forces which through the years and under free competition have set cattle and beef prices.

This is our advice to folks generally and particularly to those public servants who have the responsibility of administering the Government's price control program and to those citizens who believe Federal intervention in the cattle and beef market place is necessary.

Here are some of these fundamentals, as we see them, worthy of everybody's consideration:

1. Seasonal and annual price changes play a dominant role in guiding the production and distribution of cattle and beef.

2. Sharp and often unexpected changes in the weather, in feed supplies, and in the meat purchase patterns of consumers call for numerous seasonal and annual readjustments by stockmen and middlemen.

3. Changes in the production and distribution of cattle and beef, occasioned by unforeseen developments, usually costs the stockman some more money—particularly if resulting losses in beef supplies are to be cut in a minimum. Producers will not spend additional money unless there's a good prospect of a reasonable profit from it.

4. Setting a price at the beginning of the production season and then trying to get the production which will sell at that price, doesn't work very well in the cattle business. Probably, production depends about as much on the weather, parasite infestations, diseases, and other variables as upon the producer's and even the Government's planning.

5. The livestock market historically has been wide open and highly competitive. Free competition, the bulwark of our economic system, has been its very core. No individual stockman has been big enough to influence the market significantly. It is in this "economic climate" that the cattle business and

its cost and income patterns have been forged.

6. Substitution of one meat for another as relative price advantages occur has been the rule—not the exception—in the free market. For example, Dr. E. J. Working of the University of Illinois found in his studies on beef and pork that with the exception of the years in which World War II price controls and rationing were in effect, there existed "a close inverse relation between the price ratio and the consumption ratio" of pork and beef.

"In almost every year," Dr. Working continued, "when the price of beef rose relatively to that of pork, there was a corresponding decline in the consumption of beef relative to the consumption of pork. Similarly, a decline in the price of beef relative to pork results in a rise in the beef-pork consumption ratio."

These considerations should govern us in deciding the answers to our two big really important questions about inflation.

1. Can Uncle Sam harness the attendant economic forces well enough to control cattle and beef prices by direct controls—ceilings, subsidies, etc.? And if he can—

2. What will be the long run effect of these controls upon the world's most efficient production and distribution system of cattle and beef?

The answers—which no one knows for sure—are of vital concern to each of us—producers, middlemen, consumers, and Government representatives alike. We must come out with the right ones and soon.

Acheson's Power

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the *Jackson (Mich.) Citizen-Patriot* of August 4, 1951:

ACHESON'S POWER

The investigation of the State Department proposed by Representative MEADER appears to be in order.

At this moment the State Department seems to be running the Government.

Maybe the investigation suggested by Mr. MEADER would show how the State Department does it.

At the very least, Secretary of State Acheson apparently runs the Defense Department, the White House, and is calling the turn on foreign-aid programs, such as ECA.

The day-to-day news verifies this belief.

The negotiations at Kaesong are looking toward a military cease-fire and do not constitute a peace conference.

Yet Secretary of State Acheson was the one who announced that a buffer zone at the thirty-eighth parallel would be rejected by the United Nations. Apparently the views of the U. N. military commanders did not become official until they were approved by the State Department.

The State Department engineered the neat trick grabbing at the peace straw offered in a routine speech by Russia's Malik. General Ridgway—and General MacArthur before him—had proposed battlefield negotiations, but nothing happened until the State Department moved in.

President Truman, in press conferences and in official action, faithfully echoes the Acheson line of the moment. He handed ECA over to the State Department, although this move is unpopular in Congress.

A new tip-off on the power of Secretary Acheson came when newsmen revealed that Air Secretary Finletter and other civilian brass in the Defense Department learned of the late Admiral Sherman's mission to Spain only when they read about it in the newspapers.

Acheson and Secretary of Defense Marshall, himself a former Secretary of State, made the decision and sent Admiral Sherman on behalf of the Joint Chiefs of Staff without bothering to notify the civilian heads of the Armed Forces.

State Department approval of the mission appeared to be enough to set it in motion.

There are many other signs of the strength of the Secretary of State, who does not have the confidence of Congress nor of the people, but is very solid at the White House.

An investigation such as Representative MEADER proposes could be very interesting.

What Goes on Here Department

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fairmont (Minn.) Daily Sentinel, issue of Tuesday, July 31, 1951, entitled "What Goes on Here Department":

WHAT GOES ON HERE DEPARTMENT

As of June 30, 1950, the total United States debt was \$255,222,000,000.

That, most of us will admit, is a figure beyond our poor comprehension.

But, on a per capita basis, it means for every man, woman and child in the United States, the debt is \$1,693.67.

That begins to mean something.

We have another figure, based on the \$255,222,000,000 national debt, that may mean something to our people.

On the basis of our 1950 population, which was 25,543, it means that Martin County's share of the national debt is \$43,261,412.81.

Reduced to a per township basis, that means \$2,163,070.64 each for every one of our twenty townships.

Martin County's \$43,261,412.81 share of the national debt is \$23,826,604.81 more than the total 1950 assessed valuation of all real estate and personal property of record.

On the \$43,261,412.81 debt Martin County's share of the national debt, the interest, figured at 2 percent per annum (low enough, it seems) our bill for interest amounts to \$865,228.24 a year.

And Washington talks about another \$8,500,000,000 to be used for arming Europe, with enough more in the next 3 years to make the total for this purpose hit \$25,000,000,000. That would add another \$7,210,235 to Martin County's debt, with no provision for interest.

Take it from there. Our adding machine and electric calculator just blew a fuse.

Small Defense Plants Administration— Financial Assistance To Be Rendered Small Business Under the Defense Production Act

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. MANSFIELD. Mr. Speaker, I wish to call the attention of the Members of this House to the far-reaching provisions in the Defense Production Act for rendering financial assistance to small business. This may well prove to be one of the most effective vehicles Congress has yet created for bringing the smaller plants of this country into the defense effort.

The Defense Production Act Amendments of 1951 establish a revolving fund of \$100,000,000 to enable the Reconstruction Finance Corporation to make loans to small-business firms. The Small Defense Plants Administration is to recommend these loans, although final authority rests with the Reconstruction Finance Corporation.

Loans may be made for various purposes, including the financing of plant conversion and expansion, the acquisition of equipment and supplies, the conducting of research and development work, and the provision of working capital. Loans may be made directly or in cooperation with banks and other lending agencies through agreements to participate in insurance of loans, or by the purchase of participation or otherwise.

This lending power is thus concentrated in the Reconstruction Finance Corporation. The Small Defense Plants Administration has no power to make loans and no money to lend. Its function is that of determining need and of making a recommendation. Congress wisely decided not to set up another lending agency.

In exercising this lending function the Small Defense Plants Administration and the Reconstruction Finance Corporation will not encroach on the operations of private banks. The latter have the first opportunity to make the loan. If local banks are prepared to supply the capital, there will be no necessity for action by either the Small Defense Plants Administration or Reconstruction Finance Corporation. Existing sources of capital must be exhausted before either agency can act.

There can be no question as to the reality and seriousness of the difficulties confronting small-business concerns in obtaining credit. The story that was told to the House Small Business Committee at its recent Nation-wide hearings was very impressive. There is no doubt that many small firms have found it impossible to engage in defense production because of the lack of capital.

The small-business unit is generally much weaker than the large enterprise in respect to his financial resources. Frequently he is utterly unable to meet the normal requirements of a sound bank loan. He is launching on a new venture. He has few assets to pledge. His future is uncertain. He is discouraged by the complicated red tape and delay. We were told that many small-business men, after weeks and even months of seeking financial assistance, have given up all hopes of engaging in defense production.

Frequently the small plant needs only a modest loan—sometimes only a few thousand dollars—to be able to make a real contribution to the defense effort. A small addition to the plant must be built. Some special machines must be acquired. Working capital needs to be increased. Without these facilities no procurement officer will place the contract. Without the contract the loan will not be made.

In World War II the Smaller War Plants Corporation received over 9,000 applications for loans, nearly 6,000 of which were granted. The value of these loans exceeded \$500,000,000. Nearly two-thirds of the number of these loans were for amounts less than \$25,000 and about 95 percent were made to firms employing fewer than 250 workers. It is interesting to note that losses amounted to less than 1 percent of the total amount loaned in spite of the fact that the borrowers could seldom meet standard credit tests.

We may confidently expect that the financial difficulties confronting small business will be removed once the Small Defense Plants Administration begins to function. Under courageous and imaginative leadership, the Administration, with the cooperation of the Reconstruction Finance Corporation with its \$100,000,000 of new money, should break this log jam of red tape and indifference and proceed vigorously to make full utilization of the productive resources of small plants.

Facts Forum

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. BECKWORTH. Mr. Speaker, I include in the CONGRESSIONAL RECORD some information concerning the Facts Forum:

FACTS FORUM AWARDS (OPEN TO THE PUBLIC)

MONTHLY MOTTO AWARD

Sixty-four dollars will be paid each month for a motto for Facts Forum to use. Mottos should be brief—that is, The Truth Shall Keep You Free. The first monthly award will be made August 5, the next August 20, and thereafter on the 20th of each month. Each person may submit only one motto at

a time, but it will be entered in all judgments unless it wins or is withdrawn.

LETTERS TO THE EDITOR

Those writing letters to editors dealing with subjects of any questions in Facts Forum polls will be awarded each biweekly polling period: \$50 for best letter, \$40 second, \$30 third, \$20 fourth. Send a clipping of published letter showing date and name of publication in which your letter appeared.

MEETING PROGRAMS

The closing date of this contest has been moved to August 22, 1951, and the awards increased.

Fourteen awards are offered for the best papers on plans for meetings. First, \$200; second, \$150; third, \$100; fourth, \$75; next 10, \$30 each. Each paper must describe a complete plan for a meeting of one or more forums. A plan should be for an audience of a stated size and for some certain age group. Each paper should provide for certain procedures such as panels, debates, speeches, book reviews, contests, games, acts, skits, movie shorts, playing wire or tape recordings, etc.

Papers will be judged on the merit of the plans. Those of equal merit will be further judged for clarity and neatness.

All of above contests are open to those who do not belong to Facts Forum as well as those who do. Participants are requested to explain the contest to their friends.

Decision of the Facts Forum awards committee will be final.

Material submitted will not be returned but will become the property of Facts Forum for its use.

Mail entries for all contests to Facts Forum Awards Committee, 720 Mercantile Securities Building, Dallas, Tex.

Call your friends to watch for Facts Forum television teen-age panel, Should More Stringent Federal Narcotic Laws Be Passed? WFAA, channel 8, Thursday, August 2, 7 p. m.

Consult your television schedule each Thursday for Facts Forum programs. Watch for and tell your friends of copies of Facts Forum polls appearing in newspaper ads.

If you wish to participate, call or write Facts Forum, 720 Mercantile Securities Building.

John Kee

EXTENSION OF REMARKS
OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. RAMSAY. Mr. Speaker, under leave to extend my remarks, I include the following letter received by me from our former colleague, the Honorable Pete Jarman, now American Ambassador at Canberra:

AMERICAN EMBASSY,
Canberra, July 27, 1951.

HON. ROBERT L. RAMSAY,
House Office Building,
Washington, D. C.

DEAR FRIEND RAMSAY: I have just read with keen interest and appreciation your very appropriate remarks about the passing of our dear friend Judge Kee in the CONGRESSIONAL RECORD of May 8. May I take the liberty of commending you heartily on these appropriate remarks and saying something that I

think you already know; that is, that had I been present it would have afforded me pleasure, although with tears in my eyes, to have indulged in similar references of appreciation of the life and service of this great man, the passing of whom, as was so appropriately indicated by all of you gentlemen, was such a great loss to his State and Nation.

I am delighted to learn from my secretary as I commenced dictating this letter that Mrs. Kee has very appropriately been elected to succeed him in the House.

With kind personal regards to you and yours, I am,

Yours sincerely,

PETE JARMAN,
American Ambassador.

Moscow's Red-Letter Day in American
History

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, to keep the record straight and to refresh our memories as we attempt to repair the damage that was done in November 1933 by the signing of a treaty with Soviet Russia, I call attention to the timely warning issued by Mr. Edward A. Hayes, then national commander of the American Legion, in an address he gave at the Tomb of the Unknown Soldier on November 11, 1933, just 5 days before President Roosevelt recognized Soviet Russia. As part of my remarks I am including a portion of Commander Hayes' remarks which appear in the current issue of the American Legion magazine:

THE AMERICAN LEGION OFFICIALLY OPPOSED
THE SIGNING OF A TREATY WITH THE
SOVIET

Speaking at the Tomb of the Unknown Soldier in Washington on November 11, 1933, just 5 days before President Roosevelt signed the treaty recognizing Soviet Russia, National Commander Edward A. Hayes said: "He [the unknown soldier] would understand the Legion's attitude that opposes the official recognition by the United States of strange tenets, admittedly and avowedly intended to destroy through violence and revolution the structure of our Government and the family relationship that is the keystone of that structure. He would tell you to beware of questionable commitments that would tend to tie the hands of those of us who would keep our Americanism; to beware of bizarre associations just because they might benefit someone financially."

Mr. Speaker, Edward A. Hayes, now a prominent citizen of Chicago, Ill., was wise enough to understand the full meaning of the treaty which was then pending before President Roosevelt. He said that we should beware of questionable commitments, and we know today that the treaty which he has referred to has caused the American people and the free world untold suffering and the end is not in sight.

On November 16, 1933, when the treaty was signed it was indeed a red-letter day for Moscow and a black day for the United States and the free world.

Psychological Warfare

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, it is necessary that I give you a parable.

Legend has it that, in ancient Rome, a ragged pagan priest appeared before the Roman Senate and announced that he had in his possession the nine lost books of mysteries. These he offered to Rome at a great price.

Legend has it that the Roman Senate refused his offer. Then, in full sight of the legislators, the priest burned three of the nine precious books. He turned to his audience and asked them to buy the remaining six books at twice the original price of the entire nine. He was again refused. The priest burned half of the remaining books, leaving only three. The Roman Senate hurriedly met his terms. They bought, for Rome, those books spared from the flames.

But they paid three times the price for three books which they would have had to pay for the original nine.

This, Mr. Speaker, is my parable.

In 1949, many months before the beginning of the Korean war, I said on the floor of this House:

This Congress has a great stake in psychological warfare. By means of a special committee on psychological warfare, this House could go on record as seeking the necessary legislative groundwork for securing a psychological warfare agency in the event of a war emergency, with the least possible waste of money and with the least possible waste of time.

To this end I introduced House Resolution 374 in the Eighty-first Congress.

In August 1950 the establishment of a National Psychological Strategy Board was announced. The Department of Defense, the Joint Chief of Staffs, the Department of State, and the Central Intelligence Agency were requested to designate representatives to sit on the Board. The National Security Resources Board and the Economic Cooperation Administration were invited to provide liaison representatives.

Today, in August 1951, the Psychological Strategy Board, under the chairmanship of former Secretary of the Army Gordon Gray, has only begun to function.

Mr. Speaker, this House has only recently concluded a heated debate on the appropriations for the Voice of America. Single scripts, isolated productions of this agency, have, in my opinion, been overemphasized during the course of this

debate. One Member has said, in effect: "This is a good script. Therefore, the Voice should have more money." Another Member has said, in effect: "This is a bad script. Therefore, the Voice should be given less money."

I contend that both approaches are at fault.

Our domestic commercial radio programs do not get high or low Hooper ratings on the basis of a single script. These ratings are given as the result of careful examination of total production efforts which cover weeks and months of continuing broadcast.

The hearings held and the reports made by a special committee on psychological warfare could accomplish the viewing of psychological warfare as a broad, total effort.

Such a committee would not conflict or encroach upon the field of appropriations. The Appropriations Committee could utilize or ignore the findings of such a committee as it saw fit to do so. Nevertheless, those findings would be available at hand—for use.

Such a committee would not conflict or encroach upon the field of foreign affairs. The Committee on Foreign Affairs could utilize or ignore the findings of such a committee as it saw fit to do so. Nevertheless, those findings would be available at hand—for use.

I do not think of such a committee now—nor have I ever thought of it—as a "watchdog committee." That name is justifiably odious to many Members.

Rather, I still think of it—and I have always thought of it—as a burglar-alarm committee. Its findings could ring a bell in the minds of members of permanent committees, and these members could act on their own initiative.

I have in my hand an instance—a real, not a hypothetical, instance—of what this proposed committee might do to set off such a burglar alarm in the minds of members of the properly authorized permanent committees.

In the examination of all psychological warfare material from all agencies participating in this activity, it would have been certain that this document would have reached the attention of the staff of the proposed committee.

This document, *America Today*, in its special July 4, 1951, edition, as produced by the State Department, was a formidable publication. For the most part, it is printed in the Chinese language. It contains informative material about Patrick Henry, Thomas Jefferson, Alexander Hamilton, John Adams, Tom Paine, James Madison, Abraham Lincoln, and others. It contains the Star-Spangled Banner, the Bill of Rights, and the Declaration of Independence.

My colleagues of the House Committee on Un-American Activities have all too often witnessed Reds scurrying to hide behind the protection of the Constitution.

The special Fourth of July issue of *America Today* was circulated in the British Crown Colonies in Asia, Hong Kong and Singapore, as well as other danger points in southeast Asia.

This part of the Declaration of Independence—undated—would sponsor revolt in Hong Kong against the British:

The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these States.

An undated Declaration of Independence would not distinguish George III from the "present King," George VI.

Patrick Henry pulled no punches against the England of his time. But does *America Today* of July 4, 1951, emphasize that Patrick Henry of 1775 is the speaker, not someone named Patrick Henry in 1951? Do the people of Singapore know that?

Here is what Tom Paine, firebrand of the American Revolution, has to say in *America Today*, July 4, 1951, issue, in Chinese and English: "Britain, with an army to enforce her tyranny, has a right, not only to tax, but 'to bind us in all cases whatsoever,' and if being bound in that manner is not slavery, then there is not such a thing as slavery upon the earth. Even the expression is impious, for so unlimited a power can belong only to God."

Mr. Speaker, I sincerely believe that Thomas Paine was right in every word quoted 165 years ago. I do not concur in all that he said then at this precise moment.

I believe, heart and soul, in the Declaration of Independence.

I have sworn to uphold the Constitution.

Yet, the writers of *America Today*—issue of July 4, 1951—have reversed the old process, instead of forging swords into plowshares, they have forged our plowshares of liberty into swords to be used against our current ally, Great Britain.

I hold no brief for the present Socialist Government of that country.

Yet, we have fought a common foe in World War I, World War II, and in the Korean war.

I would not have a publication of the psychological warfare branch of the Department of State foment a revolt in British crown provinces.

Mr. Speaker, this instance which I have brought forward here does not prove the Voice of America to be either good or bad. It does show that a House burglar alarm committee should be on the alert, so that the proper permanent committees of the House might act.

This House needs a special committee to study psychological warfare.

UNCLASSIFIED FOREIGN SERVICE OPERATIONS
MEMORANDUM

JUNE 21, 1951.

To: The Department of State.
From: American consul, Hong Kong.
Subject: I. e.: Press: *America Today*, special July 4 issue.

Transmitted herewith are six copies of the special July 4 issue of *America Today*. The contents are as follows:

Cover: George Washington.

Inside front cover: Declaration of Independence.

1. The Bill of Rights: Locally produced illustrations on the meaning of the Bill of Rights.

2. Speech by Patrick Henry: The famous "Give me liberty or give me death" speech of Patrick Henry.

3. The Liberty Bell: A picture and a commentary on the Liberty Bell.

4. Executive order by President Truman: An order by President Truman establishing a commission for the commemoration of the one hundred and seventy-fifth anniversary of the signing of the Declaration of Independence. One picture.

5. Picture of Alexander Hamilton.

6. Abraham Lincoln: Locally produced illustration of Lincoln's visit to the Civil War front.

7. Lincoln documents: The Emancipation Proclamation and a letter to Mrs. Bixby, the latter a bilingual.

8. Tom Paine: A quotation from *Common Sense*, and a locally produced sketch of Tom Paine. The quotation is bilingual.

9. America and Modern World Revolution: A locally produced article on the permanent aspects of the American Revolution.

10. Jefferson's inaugural speech.

11. Picture of Jefferson.

12. Picture of John Adams.

13. Speeches by Woodrow Wilson: Excerpts from two speeches—his war message to Congress and his final address as President.

14. American inventions: Locally produced illustrations showing how the United States has contributed to scientific progress.

15. Completion of the transcontinental railway: Locally produced illustration showing the final linking of the Nation by rail.

16. The Fourth of July: An article by Ralph Bunche on the meaning of the American Revolution.

17. Betsy Ross and the American Flag: Picture and locally produced item on the making of the American flag.

18. Benjamin Franklin as an inventor: Picture and locally produced item on the scientific contributions of Ben Franklin.

19. Picture of James Madison.

20. Address by Franklin D. Roosevelt: A speech made by President Roosevelt on Armistice Day 1940. One picture.

21. Picture of the Statue of Liberty.

22. The Alamo: Article on the heroic stand of the defenders of the Alamo.

23. The Star-Spangled Banner: Illustrations locally produced.

24. Lincoln's Gettysburg Address.

Back cover: The Lincoln Memorial.

Distribution is as follows: Hong Kong, 27,100; Manila, 10,000; Taipei, 15,000; Singapore, 3,800; Kuala Lumpur, 3,000; Djakarta, 2,000; Surabaya, 2,000; Medan, 2,000; Saigon, 5,000; Bangkok, 5,000; Rangoon, 4,500; Hanoi, 3,600; Pusan, 8,500; Tokyo, 8,500.

Citizen Gossett

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

MR. TEAGUE. Mr. Speaker, I have known Ed Gossett and his family since I have been in Washington and have found Ed Gossett to be a true friend and a highly capable Congressman. A simple statement which appeared in Lynn Landrum's column in the *Dallas Morning News* effectively sums up my sentiments and the sentiments of many of Ed Gossett's colleagues. We all wish

well for Ed in his new undertaking and know that his place here in Congress will not be easily filled.

The statement follows:

THINKING OUT LOUD
(By Lynn Landrum)

CITIZEN GOSSETT

Texas loses and Dallas gains today. Ed Gossett is leaving Congress as the Representative of the Thirteenth Texas Congressional District to practice law in Dallas.

It is unfortunate that the expenses of being a Congressman exceed the income of that position. The demands of the job are so great that a Member of Congress has to neglect either his sworn duty or his family's interests—unless he has an independent source of support for his old age.

Mr. Gossett leaves public service at a critical hour. His resignation will be a loss, no matter who succeeds him in his district. This will be true because he has made so many friends on both sides of the partisan line in the House that his influence runs far beyond the seniority privileges which normally come to a man with 12½ years of service.

These friendships have been made by a frank and obliging personality; it is true; but they have been cemented by a firm and independent loyalty to inward convictions. Gossett has been a fighter—with a smile.

The Fight for Tax Equalization

EXTENSION OF REMARKS OF

HON. SIDNEY A. FINE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. FINE. Mr. Speaker, on June 20, during the debate on the closed rule under which the tax bill was to be considered in the Committee of the Whole, I urged the Ways and Means Committee to amend the tax bill to provide the same tax exemption for governmental pensioners now provided for social-security pensioners and railroad pensioners. I suggested a separate vote on the question by the Members of the House for an immediate determination of whether or not retired public employees are to be treated differently taxwise. My remarks appear on page 6835 of the CONGRESSIONAL RECORD of June 20.

Although the Ways and Means Committee did not respond favorably to my proposal, I was furnished with an unofficial compilation of the reasons advanced against exempting pensions, annuities, and retirement pay. These reasons have now been fully analyzed and answered by Ralph L. Van Name, secretary of the New York City retirement system, one of the country's experts in the field of pension and retirement administration.

Under leave to extend my remarks, I include herewith my correspondence with Mr. Van Name, which includes the arguments pro and con on the question of equalization of tax exemption. I do so for the express purpose of making available to the members of the Senate Finance Committee, now considering the tax bill, as well as all Members of the

Senate, all facets of the problem to the end that the long fight waged by Congressman KROGH, myself, Mr. Van Name, and the many civil-service and public employee organizations listed in my statement of June 20, may be won.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 22, 1951.

Mr. RALPH L. VAN NAME,
City of New York Board of Estimate,
New York City Employees Retirement System, New York, N. Y.

DEAR MR. VAN NAME: You have received by this time a copy of the CONGRESSIONAL RECORD of June 20 containing my statement on the equalization of tax exemption to governmental pensioners. I am enclosing a copy of a memorandum which has been prepared at my request embodying the arguments utilized by those who voted against Congressman KROGH's proposal in the committee. This is merely a compilation of the argument advanced.

Since we have met with unsurmountable difficulty in the House by reason of the closed-rule procedure I have this day written to both Senator LEHMAN and Senator IVES, enclosing both my statement as well as copy of the enclosed memorandum. It was my request of each of them that they see their way clear to do what they can with the Finance Committee of the Senate. I think it would be well for you to prepare and submit to them a reply to said memorandum so that they may have before them all of the pros and cons on the subject. Please be good enough to forward a like copy to me.

I think you should know that it would have been most difficult in the light of the procedure laid down by the Rules Committee to have obtained a clear and decisive vote on the specific question. All negative votes on either the rule or the tax bill would not indicate a positive vote in favor of your proposal. There would have been no guaranty that if the bill were referred back to the committee and reconsidered that Congressman KROGH's proposal would have then been favorably received.

Under the circumstances I think you should direct your attention now to the action to be taken in the Senate.

Sincerely yours,

SIDNEY A. FINE,
Member of Congress

JUNE 22, 1951.

MEMORANDUM

Subject: Reasons against exempting pensions, annuities, and retirement pay by a specified amount such as \$1,400 for retired public and private employees.

An exemption of the retirement pay of retired persons in a flat amount would be discriminatory against those persons who have retired on income from their savings. Such an exemption would also be discriminatory against wage earners who could rightly contend that their ability to pay income tax on a given amount of income is no greater than that of a retired person receiving the same income. As a matter of fact, their ability to pay tax might be less than that of a retired person since a retired person has an assured income and is thus in a better position to reduce living costs by residing in a less expensive community which, as is well known, they often do. Also, retired persons are generally relieved of personal expenses normally incident to earning a living.

A more equitable and nondiscriminatory method of relief is that which is granted by exemptions and credits since it applies to earned income as well as to annuities and retirement income. Present law already takes care of retired persons by providing persons who are age 65 or over with an addi-

tional exemption of \$600 a year. This additional exemption for aged persons means that a man and his wife who are over age 65 may now receive an adjusted gross income up to \$2,675 without paying an income tax. Each of them receives a personal exemption of \$600 and also the additional exemption of \$600. This adds up to \$2,400. When the 10-percent standard deduction is taken into account this amounts to giving such married couples an exemption of \$2,675.

The argument is often made that at the present time, a discrimination exists because railroad retirement benefits are exempt from tax by law and social-security benefits are exempt by Treasury regulations. When this is analyzed, it can be seen that discrimination does not exist to the extent often claimed since for the month of April 1951, the average railroad retirement annuity was \$82.65. This amounts to a yearly annuity of \$991.80. In the case of social-security benefits the average benefit is now \$43 a month or \$516 a year. The additional exemption of \$600 which is granted to persons age 65 or over amounts to a total exemption of \$1,333 a year when the standard deduction is taken into account. This means that in the average case persons drawing railroad retirement and social-security benefits are not benefited by an exemption of these benefits from tax since all aged persons are exempted up to \$1,333 per year.

CITY OF NEW YORK
BOARD OF ESTIMATE, NEW YORK CITY
EMPLOYEES' RETIREMENT SYSTEM,
New York, N. Y., August 7, 1951.
Hon. SIDNEY A. FINE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN FINE: In your recent letter you were good enough to send me a summation of the arguments which are said to move Members of Congress against extending to pensioners from 6,000,000 governmental positions—Federal, State, city, court, and teaching—the exemption up to \$1,800 extended by Federal law and Internal Revenue ruling to 45,000,000 employees covered by social security as they retire.

I enclose herewith memorandum replying to arguments opposing greater income-tax exemption for pensioners.

Governmental pensioners seek no exemption which Government does not see fit to extend to industrial pensioners. Less than that, governmental pensioners will not willingly accept.

Very truly yours,

RALPH L. VAN NAME,
Secretary.

MEMORANDUM REPLYING TO ARGUMENTS OPPOSING GREATER INCOME TAX EXEMPTION FOR PENSIONERS

Argument 1: Discrimination against persons who live on their own savings would be shown by exempting pensioners and not individuals.

Answer 1: The discrimination is not theoretical; the discrimination is now practiced wholesale by the United States Government. The Federal Government now exempts up to \$1,800 social-security income of 45,000,000 of the low-paid and high-paid in industry, a majority of the country's workers, as they attain age 65, whether their other income is \$5 or \$50,000. The Federal Government also discriminates to exempt the pension of millions of military personnel, railroad workers, printers, and so forth, to a greater or lesser degree, while the few self-supporting aged individuals and 6,000,000 governmental employees, as they retire, are income taxed.

The practice is no longer based on size or need, since the new social-security untaxed pensions will average as high as taxed governmental pensions, Federal, State, city, court, and teaching.

As to total, report of the Senate Committee on Finance accompanying submission of the present new social-security law, indicates the prospect of addition of another tax-exempt \$1,000,000,000 a year to the social-security rolls in the next year or two.

Many high-bracket taxpayers are being professionally advised to pay their \$54 a year (1½ percent of \$3,600) not only because of the possible \$1,800 social-security pension itself, but for the \$1,800 tax exemption which is worth an additional \$1,800 a year to a taxpayer in the 50-percent bracket.

Only fear of loss of present right to retire before age 65 with taxpayer assistance prevents huge groups of local governmental employees in many States from electing entrance upon tax-exempt social security at \$54 a year or less. Meanwhile, the Federal Government taxes not only the below-age-65 pensions of governmental pensioners, but the over-65 pensions comparable in amount and average to social-security pensions to be granted under the recently adopted social security tax-exempt scale.

No sound reason can be given for exempting from income tax social-security pensions of the high-paid and low-paid, while taxing governmental pensions, Federal, State, city, court, and teaching, up to \$400 as proposed in the tax bill now under consideration in the Senate Committee on Finance.

Argument 2 Young wage earners are entitled to exemption equal to that granted to the aged retired.

Answer 2: The Federal Government conspicuously neglects that precept. It assists States in granting relief up to \$900 a person out of taxes paid by the young. It exempts up to \$1,800 pension payable to most pensioners (Federal, State, and city pensioners excepted), then it limits millions of single, young wage earners to less than \$700 exemption.

(a) Their income may be less certain.

Answer (a): Wage earners are not taxed on the wages they may earn; only on wages actually received. They meet inflation with increased wages.

Governmental pensioners on fixed income and increasing income taxation have no recourse but again and again to reduce their standard of living as Government, again and again, taxes and taxes, spends and spends.

In millions of cases, measured by reasonable and widely accepted standards, Government is now forcing these fixed-income, taxable governmental pensioners beneath the subsistence level. With its own retired civil-service workers, for example, it goes through the business of increasing somewhat their inadequate pensions, on the one hand and, on the other, taxing at 20 percent pensions in the \$700 to \$1,800 range from which nongovernmental social-security pensioners—the retired from 45,000,000 in industry—would be totally exempt.

The \$700 to \$1,800 wage earner may look for increased income as inflation proceeds; the \$700 to \$1,800 taxed governmental pensioner not only does not rise with inflation, it is further reduced by increased taxation as well as by decreasing purchasing power.

(b) They may have to live in more costly neighborhoods.

(c) They may have greater day-to-day expense.

Answer (b-c): The heavy sickness and disability special requirements of the aged so far exceed those of young and vigorous workers that Government and private groups vie to provide partial assistance for the peak need.

Congress, in 1950, lifted social security from the pauper assistance stage for far fewer to the \$1,800 maximum self-help basis for industrial workers, 45,000,000 of them. Congress rightly regards aged income in the lowest \$1,800 area as appropriate for exemption regardless of exact lesser exemption limits of young workers.

Notwithstanding tax-free assistance up to \$900 regardless of age and tax-free social-security pension up to \$1,800, Congress has continued to tax aged governmental pensioners in the lowest \$1,800 area. Much of the cheerfulness with which industry's workers, 45,000,000 of them, pay their annual social-security contribution \$54 or less springs from the knowledge that not only pension income to \$1,800 but tax exemption to \$400 and more is being purchased.

Actually, young wage earners need not be exempted in the same degree that the pensioned aged should be exempted, because, generally, they like the practice of paying during their productive years for prospective tax-free existence on a lower (usually half-pay) standard of living in old age.

Unfinished business dictates that the remainder of the aged, those retired and retiring from 6,000,000 governmental positions be given tax privileges identical with the majority of the other aged.

Argument 3: Married persons over 65 are said to have \$2,675 tax exemption—four \$600's adjusted upward on the return to \$2,675.

Answer 3: 45,000,000 industrial employees, as they attain age 65, may have up to \$4,475 exemption—\$2,675 as above, plus up to \$1,800 tax-free social-security pension. Governmental pensioners receiving \$1,800 Governmental pension, would have \$1,800 less exemption Congress may properly determine the tax exemption ceiling. It is inexcusable that, year after year, Congress compels its own employees and the employees of local government to pay up to \$400 more income tax than the pensioners of private industry.

Example: A married 65-year-old bus driver on the privately owned Third Avenue Railroad in New York retires on \$1,800 social-security pension with \$2,675 other income, all totally exempt from income tax. A married 65-year-old bus driver on the parallel municipal bus route in New York retires on \$1,800 municipal pension with \$2,675 other income. The latter will pay, depending on exactly the new scale of taxation, \$350 to \$400 income tax from which his privately employed fellow-union member is tax free. Thanks to Federal discrimination, one takes home \$1,800 pension; the other, \$1,400.

That \$400 governmental tax discrimination on \$1,800 pension income of two men of identical title and wage in the same union, is a matter of serious economic and political importance to more than 30,000 members of the Transport Workers Union and to the over-all CIO organization.

If Federal discrimination of this sort is not ended, pivotal States and districts will be won and lost in protest against congressional neglect, year after year, to equalize pension-income taxation.

Argument 4: It has been argued that since social security, until recently, averaged only about \$516 a year and railroad pensions less than \$1,000, whereas all over 65 are exempt to \$1,333 and married couples to twice that sum, the average social-security and railroad pensioners are not benefited by their additional special exemptions, running up to \$1,440 and \$1,800.

Answer 4: Averages are what they are because of the lesser and greater than average figures commingled to make the average. That some railroad and social-security pensioners receive less than \$1,000 and less than \$516 as they do, does not, of itself justify exemption of railroad and social-security pensioners whose pensions of \$1,440, more or less, keep the low average from falling lower.

In the next year or two, with the addition of \$1,000,000,000 a year to the social-security rolls, as expected by Senate and House taxing bodies, the present averages will become inconsequential and obsolete. Congress need not apologize for deliberately passing the present social-security law to

greatly increase the social-security average. Taxation of the \$1,400 pension which combines with the \$400 to make the average, should not stand or fall because of \$400 treatment. Each level should be determined on its merits.

POSITIVE REASONS FOR GREATER TAX EXEMPTION OF AGED GOVERNMENTAL PENSIONERS

Limited exemption from income taxation of the aged governmental pensioners is to be justified for the following reasons:

1. Income taxation of the aged is uneconomic. Never before has income-tax law condoned \$1,800 tax exemption of most pensioners and withheld it from other (governmental) pensioners.

It is as sound economics to untax people during their unproductive years as to tax them during their earlier productive years. Thus is provided fair and equal treatment to each citizen at successive stages of each citizen's life.

2. Anticipatory taxation of the aged before old age is preferable and is preferred by young and old.

3. Government revenues would not suffer by anticipatory taxation (taxation during productive years). The Government itself has argued at times that social-security-tax exemption is inconsequential. Exemption of fewer (one-seventh as many) governmental pensioners would be of less consequence. The small amounts involved have been noted in official reports to the tax-making committees of the Senate and the House.

4. Taxation of long-lived aged pensioners substitutes high income taxation for lesser inheritance taxation. The income of the long-lived aged pensioner is possible through forfeitures of the short-lived which the long-lived inherit. Other heirs share \$60,000 estate exemption; here, too, governmental pensioners are the forgotten "stepchildren."

5. Pensioners commonly retire on about half pay, that is, pensioners are commonly persons who have been accustomed to a standard of living double that possible for the remainder of life. Considerations of decency should prompt lighter taxation for their few remaining years.

6. If it is social security for private industry, Congress makes \$1,440 tax-free available after as little as 1½ years and after contribution by the worker of as little as \$81.

If it is governmental pension, Congress taxes \$1,440 pension income, \$288 annually, more or less, after a lifetime of service. Why?

7. Tax exemption of social-security pensioners was begun when the pension was small and the recipient poor. Under 1950 social-security law, taxpayers in the 50-percent bracket have the equivalent of \$3,600 additional other income, since they would pay \$1,800 tax were it not social security.

With this Government bounty to the rich, there is no sound basis for withholding tax exemption in the \$1,800 area to underpaid, underpensioned Government workers one-seventh as numerous, and with one-seventh the income of 45,000,000 industrials.

8. In both Government and industry, employer contributions for employee pensions are generally tax-exempt on the way in. In industry they are also exempt on the way out via social security. Government employer money, on the other hand, is not exempt on the way out to the pensioner. It is taxed at 20 percent, more or less, compared to industry's zero. Why?

The overtaxation of governmental pension cuts two ways. It reduces the governmental pensioner's take-home pay and his standard of living. It compels taxpayers to raise additional millions of tax money to be siphoned from the local treasury to the Federal Treasury via governmental pensioner taxation—money that would not reach the Federal Treasury from private industry. Why the discrimination? Why?

9. Congress does not seek a profit from social-security operation. It would be

pleased if the Government were to break even.

Besides huge sums for the needy poor, New York City raises \$100,000,000 a year for staff pensioners—persons retiring from its employ. New York City's staff-pension appropriation must be as large as \$100,000,000 annually because the Federal Government, which seeks no profit from industry's contribution for pensions, collects an income tax, beginning at 20 percent, from those whose pension income is derived from New York City taxpayers' local tax payment.

What have the States and cities done that their taxpayers and their employees retired should be worse treated taxwise than industry and industry's 45,000,000? Local taxpayers and State and city pensioners are also people—and voters.

10. Finally, unquestionably, present congressional treatment of the governmental pensioner is unplanned, inadvertent, accidental. Present congressional treatment cannot be condoned or justified. Congress need not apologize for or explain its past neglect. It must begin now equal tax treatment of industry's pensioners and Government's pensioners.

Income of Aged Persons, 1948

EXTENSION OF REMARKS OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. ANGELL. Mr. Speaker, the deplorable fact that many of the aged citizens of our country are bypassed and are left without sufficient income to meet the bare necessities of life is shown by a late report entitled "Income of Aged Persons, 1948" by Jacob Fisher, of the Division of Research and Statistics in the Office of the Commissioner of Social Security, which appears in the July issue of Social Security Bulletin.

I call attention particularly to the following statement in Mr. Fisher's report:

The Bureau of the Census estimates that, among the 11,000,000 aged 65 years and over in 1948, about 3,500,000 had no money income (as defined) that year and that, of the 7,500,000 with money income, about 2,300,000 had incomes of less than \$500 and about the same number fell in the class \$500 to \$1,000. There were about 1,400,000 persons in the class \$1,000 to \$2,000, about half that number with incomes from \$2,000 to \$3,000, and close to half a million in the class \$3,000 to \$5,000. Perhaps 170,000 had incomes between \$5,000 and \$10,000, and a possible 60,000 had incomes of \$10,000 or more.

The full report is as follows:

INCOME OF AGED PERSONS, 1948 (By Jacob Fisher)

Data from the income-tax returns for 1948, recently furnished the Social Security Administration by the Bureau of Internal Revenue, fill an important gap in available information on the income of aged persons in that year. Under the Revenue Act of 1948, special exemptions of \$600 for age or blindness may be claimed by the taxpayer for himself or for a dependent spouse. The number of returns with special exemptions, arrayed by size of income, are of particular interest because of the clues they offer to the number of aged persons with incomes in the middle- and upper-income brackets. For

reasons noted below, the tax returns are not a reliable guide to the number of aged in the lower-income groups and tell us nothing about the total number of income recipients among the aged.

The major source of information on the income of the aged in 1948 remains the Bureau of the Census survey of April 1949.¹ The results of this survey, based on interviews conducted in a representative sample of approximately 25,000 households, are summarized in table 1. The income being discussed, incidentally, is money income only. In the census estimates, the income excludes not only income in kind (value of farm produce consumed by the family, contributions received in the form of food, clothing, and the like, and free shelter), but money receipts as well from the following sources: withdrawals from bank deposits, loans, tax refunds, gifts, lump-sum inheritances or insurance payments, and income derived from the sale of assets.

The Bureau of the Census estimates that, among the 11,000,000 persons aged 65 years and over in 1948, about 3,500,000 had no money income (as defined) that year and that, of the 7,500,000 with money income about 2,300,000 had incomes of less than \$500 and about the same number fell in the class \$500 to \$1,000. There were about 1,400,000 persons in the class \$1,000 to \$2,000, about half that number with incomes from \$2,000 to \$3,000, and close to half a million in the class \$3,000 to \$5,000. Perhaps 170,000 had incomes between \$5,000 and \$10,000, and a possible 60,000 had incomes of \$10,000 or more (table 1).

How does an income distribution based on the tax returns with a special exemption compare with the distribution developed by the Bureau of the Census? Before an answer is attempted, the limitations of the income-tax return as a source of information on the income of the aged should be looked at.

To begin with, not all income is reported to the Bureau of Internal Revenue. Fewer than half the income recipients among the aged in 1948 filed income-tax returns for that year, to judge from the fact that special exemptions for age or blindness were claimed in about 3,400,000 returns only (table 2). The half or more of the aged income recipients who did not file an income-tax return were all or nearly all in the low-income brackets. They included persons all or most of whose income was derived from the following tax-exempt sources, which bulk large in the income pattern of the aged:

(1) Gross income from taxable sources (earnings, dividends, interest, rents, etc.) of less than \$600; (2) old-age assistance and other forms of public assistance; (3) benefit payments under old-age and survivors insurance, the railroad retirement program, and the program for veterans; (4) annuities and pensions (for that portion representing a return of premiums paid in by the taxpayer); and (5) gifts, bequests, inheritances, and contributions by relatives.

Income derived from these sources is not only exempt from income tax but, except for wage and salary income in item 1, is not reported as income, and hence is not reflected in table 2, among whose 52,000,000 returns are some 16,000,000 with reportable but not taxable income.

A second possible limitation relates to the fact that the special exemption may be

¹ Bureau of the Census, *Income of Families and Persons in the United States, 1948* (Current Population Reports, Consumer Income, series P-60, No. 6). Additional data from the same survey may be found in the report of the Joint Committee on the Economic Report, *Low-Income Families and Economic Stability* (81st Cong., 1st sess.), 1949. Similar estimates for 1949 appear in the Bureau of the Census report, series P-60, No. 7.

claimed for either age or blindness.² The income-tax form contains separate entries for exemptions for age and for blindness, but information is not available on the number falling into each of these groups. The limitation is not serious, however. On the basis of earlier experience with the special deduction of \$500 for blindness of the taxpayer, available in 1947 and earlier years, the Bureau of Internal Revenue is inclined to believe that the number of exemptions for blindness included in the total number of special exemptions is not large. Persons 65 years of age and over outnumber the blind of all ages about 40 to 1. It would be reasonable to assume that not more than 2 or 3 percent of the special exemptions were for blindness, although the proportion may have been higher in some income classes.

TABLE 1.—Persons aged 20 and over and persons aged 65 and over, by money income, 1948

[In thousands]

Money income	Number of persons aged 20 and over	Persons aged 65 and over	
		Number	As percent of persons aged 20 and over
Total number in population ¹	95,910	10,980	11.4
Number of persons without income	30,570	3,190	11.4
Number of persons with income	65,340	7,490	11.5
Less:—			
\$1 to \$499	8,550	2,320	27.1
\$500 to \$999	8,530	2,260	26.5
\$1,000 to \$1,499	7,450	960	12.5
\$1,500 to \$1,999	7,170	510	7.1
\$2,000 to \$2,499	8,730	400	5.3
\$2,500 to \$2,999	6,590	280	4.2
\$3,000 to \$3,999	9,990	350	3.5
\$4,000 to \$4,999	3,950	130	3.3
\$5,000 to \$5,999	1,780	80	4.5
\$6,000 to \$9,999	1,510	90	5.8
\$10,000 and over	800	60	7.5

¹ Represents estimated civilian noninstitutional population of the United States in April 1949 and includes approximately 393,000 members of the Armed Forces living off post or with families on post.

Source: Estimated from Bureau of the Census, "Income of Families and Persons in the United States, 1948" (Current Population Reports, Consumer Income, Series P-60, No. 6), table 12.

A third possible limitation concerns the inclusion of joint returns of husband and wife in the count of both the total number of returns and returns with special exemptions. Of the gross total of 52,000,000 returns, 29,700,000, or 57 percent, were joint

² Two exemptions may be claimed by an individual who is both aged and blind. Some idea of the number of such individuals may be obtained by comparing the total number of extra exemptions with the number of extra exemptions in the joint returns of husband and wife. The difference in table 2 between the number of returns with special exemptions and the number of such exemptions is 907,375. This is presumably the number of returns with two exemptions. (Four exemptions could be claimed on one return filed by an aged and blind person who has an aged and blind spouse, but the number of such cases is probably quite small.) The extra exemptions in the 1,988-, 208 joint returns of husband and wife with special exemptions (table 3) numbered 897,842, nearly all of which may be presumed to represent special exemptions for an aged or blind spouse. The difference between 907,375 and 897,842—about 10,000—may be taken as a rough indication of the number of individuals claiming exemptions for both age and blindness.

returns. Joint returns with special exemptions numbered 1,988,208, or 58 percent, of all returns with special exemptions (table 3). The close correspondence in these two proportions suggests that the presence of joint returns in the data introduces no special problem affecting the over-all proportion of returns filed by aged persons.

Most joint returns represent one income split between husband and wife for tax purposes; about 1 in 4, however, to judge by data from the returns for 1943 and 1944 (similar data are not available for later years), cover the incomes of two income recipients. The relevant consideration is the extent to which the individual incomes in the returns with two incomes, when distributed within the appropriate income classes, would affect the number and proportion of returns with special exemptions—those filed by aged persons—in each income class. It would be reasonable to assume that the effect in general would be to redistribute in lower income classes the individual incomes now merged with those of the spouse and scattered all over the income scale but relatively more frequent in the middle- and upper-income brackets. If the 1-in-4 ratio for double incomes in joint returns can be assumed for joint returns with special exemptions in 1948, then it is likely that there were about 3,900,000 aged income recipients represented in the tax returns rather than 3,400,000; and that the 1,000,000 income recipients in the 500,000 returns with two incomes were located at lower levels on the income ladder than the places the 500,000 individuals now occupy in tables 2 and 3 by virtue of the additional income of the spouse. In sum, the presence of joint returns in the income-tax data probably results in some overstatement of the income of the aged, but how many are affected and by how much their income is overstated is not known.

TABLE 2.—Federal income-tax returns by individuals, taxable and nontaxable, by adjusted gross income classes and by number of special exemptions for age or blindness, 1948

Adjusted gross income	Number of returns	Returns with special exemptions for age or blindness		Number of special exemptions claimed for age or blindness

Source: Preliminary data, Bureau of Internal Revenue, Statistics of Income for 1948.

Of the three limitations, the first, relating to the nonpresence in the income-tax returns of several million aged persons with low incomes, is the most consequential. Useful

comparisons between census estimates and estimates based on Bureau of Internal Revenue data on the number of aged in specified income classes can be made only for incomes large enough to be reflected in the tax returns. Ordinarily the minimum income for this purpose would be \$600, but because a considerable number of aged persons in the income group \$600 to \$1,000 have income from tax-exempt sources, enumerated earlier, it is advisable perhaps not to compare the estimates for incomes of less than \$1,000. Even in the \$1,000 to \$2,000 class, enough exempt income is probably received to make the tax returns an unreliable indicator of the incomes of aged persons in this bracket.

The data in tables 1 and 2 indicate that in the income classes between \$1,000 and \$2,500, the Bureau of the Census estimate is consistently larger than an estimate derived from income-tax returns, the difference narrowing as \$2,500 is approached. Beyond this figure the income-tax source yields the larger estimate, the spread between the two estimates increasing with size of income. In the class \$10,000 and more, the estimate to be derived from the tax returns is more than twice as high as the census estimate.

How are these differences to be interpreted? Bureau of the Census estimates are based essentially upon the memory of the person interviewed. There is some evidence that persons reporting their income to an interviewer tend to understate income. Occasional earnings, gifts, small dividends, and public assistance payments received for a brief period are likely to be forgotten a year later. The household member usually interviewed, furthermore, is the housewife, who may confuse take-home pay with total earnings and who sometimes may not be aware of the full amount of her husband's earnings or of other sources of income of which he may be the recipient.

It would be reasonable to conclude that many of the persons in the census estimate

shown in table 1 belong in a higher-income bracket than the one in which they have been placed as a result of the survey. A redistribution of the individuals involved, on the basis of more complete information, could conceivably yield larger totals in all the classes beginning with \$1,000 with perhaps no reduction in the size of the group with incomes less than \$1,000, since some of the persons classified by the Bureau of the Census as not in receipt of any money income in 1948 probably had some income in that year, as will be noted later, and belong in the \$1 to \$499 group.

Still another problem is presented by the fact that the census income distributions are based on a sample of the population and not on a complete census. No matter how carefully a sample is selected, inflation of the results to yield estimates for the total population inevitably entails some degree of error. The sampling error is particularly large where small numbers are involved. One reason for the increasing disparity at the upper end of the income distribution between census estimates and income-tax returns is the growth in sampling variability as the number of persons affected declines.

Considerations of a different character are involved in the income-tax data. Aged persons reporting incomes of less than \$1,000 to the Bureau of Internal Revenue represent only a small part of the total number in this class, for reasons cited earlier; the same thing, to a somewhat lesser extent, is true of the group with incomes between \$1,000 and \$2,000. Since the exempt-income sources need not be reported, many individuals are lower in the income scale shown in table 2 than they would be if all income were reportable. As in the case of the census estimates, therefore, adjustment of the data to reflect income distribution more accurately would necessitate an upward redistribution of the individuals affected. The upward adjustment is appropriate, however, for the lower end of the income scale only.

TABLE 3.—Federal income-tax returns by individuals, taxable and nontaxable, by adjusted gross income classes, joint returns of husband and wife, and number with special exemptions for age or blindness, 1948

Adjusted gross income	All returns			Returns with special exemptions for age or blindness		
	Total	Joint returns of husband and wife		Total	Joint returns of husband and wife

Source: Preliminary data, Bureau of Internal Revenue, Statistics of Income for 1948.

At the \$2,750 level the number of joint returns of husband and wife (among the group with special exemptions for age or blindness) becomes larger than the number of one-person returns, a situation which calls for a downward adjustment to take account of the double incomes in some of the joint returns. The two adjustments may

cancel each other out in the \$2,500 to \$3,500 class, but beyond this interval the net effect of the adjustments is probably in the direction of a lower income classification for the individuals concerned.

If the modifications that seem indicated in the census estimates and the income-tax data are given effect, a rough picture of the

income distribution of aged persons would look somewhat as follows:

Among the 11,000,000 persons aged 65 years and over in 1948, about 3,000,000* had no money income, about 2,500,000 had money income of less than \$500, and about 2,300,000 had money income between \$500 and \$1,000. Income recipients in the class \$1,000 to \$2,000 numbered perhaps 1,600,000. About three-quarters of a million were in the income class \$2,000 to \$3,000; about half a million in the income class \$3,000 to \$5,000; about two hundred thousand in the class \$5,000 to \$10,000; and about one hundred thousand had incomes of \$10,000 or more.

Examination of the relative frequency of aged persons in the different income classes indicates that there were somewhat more aged persons in the low-income groups than would be expected from their proportion in the population or among income recipients, and that they constituted a smaller-than-proportionate share of the persons in the middle-income groups. These findings correspond with our general impressions concerning the place of the aged in the country's income structure. What is not generally known, however, is the relatively large place that they occupy in the high-income group.

In 1948 approximately 1 income recipient in 10 was 65 years of age or over. Among persons with incomes of less than \$1,000, however, about 1 in 4 was aged. The ratio dropped to 3 or 4 per 100 in the income classes from \$3,000 to \$4,000 and then rose again. At the \$10,000 level, perhaps 10 in every 100 income receivers were 65 years of age or over; at the \$50,000 level, perhaps 16 in every 100, at the \$100,000 level, perhaps 23 in every 100. Though the high-income aged persons were few in absolute numbers, they comprised an increasing proportion of the total group of recipients in the higher-income brackets.

Census data on living arrangements and studies made by the Social Security Administration of the circumstances of old-age and survivors insurance beneficiaries and old-age assistance recipients provide a basis for some observations concerning the major

sources of income in the different income classes.⁴

The 3,000,000 in the no-income group included some persons living on withdrawals from savings and sale of assets. More than 9 in 10 were living with related persons and presumably were being supported by them in whole or part. More than 8 in 10 were women, almost half of whom were living with a husband who was probably an income recipient.

Almost half the 2,500,000 persons with money incomes less than \$500 were old-age assistance recipients; about one-quarter were old-age and survivors insurance beneficiaries. Probably fewer than 10 percent had any income from employment. More than three-fourths were living with related persons and may have been supported in part by them.

Old-age assistance recipients and old-age and survivors insurance beneficiaries comprised the bulk also of the 2,300,000 persons in the income class \$500 to \$1,000. More than 6 in 10 may have been supported in part by the relatives with whom they were living.

Earners probably outnumbered assistance recipients and old-age and survivors insurance beneficiaries among the 1,600,000 persons with incomes between \$1,000 and \$2,000. There were more beneficiaries of social insurance and related programs than there were assistance recipients, the reverse of the situation in the income classes below \$1,000. The number living with relatives was proportionately larger than among persons in the \$500 to \$1,000 class, but probably more of such related persons were dependents rather than sources of support.

At income levels above \$2,000 the relative number of persons with income from employment increased. There was a sharp decline in the number of old-age and survivors insurance beneficiaries, and there were no public-assistance recipients.

The pattern that may be traced shows, in brief, a shift from complete or almost complete dependence on relatives in the no-income group to support of relatives as income rises; considerable dependence on public-assistance income in the very low income brackets and some dependence on this source in the moderately low brackets. Social-insurance-benefit income bulks large in the moderately low income group and becomes less prominent as one leaves the low-income group. At the \$1,000 to \$2,000 level earnings from employment tend to replace relatives, public-assistance, and social-insurance benefits as a major income source. Considerably further up the income scale—at the \$100,000 level, to judge from the income-tax returns, for persons of all ages, but probably at a lower level for aged persons—income from accumulated assets (dividends, interest, and so on) becomes more important than earnings.

Additional information on the relative importance of these sources of income at various income levels may be available shortly as a result of special tabulations planned by the Social Security Administration from schedules taken by the Bureau of the Census in the course of its postenumeration survey.

⁴The estimates are based in part on estimates of the incomes of aged old-age and survivors insurance beneficiaries and of old-age assistance recipients, prepared by the Social Security Administration for the House-Senate Joint Committee on the Economic Report and published in the committee's report on low-income families (pp. 11, 12).

What Is the United Nations?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including the following article which appeared in the August 1 issue of the *Christian Century*:

WHAT IS THE U N ?

As negotiations in Korea drag along toward a cease fire, debate has already started over who won. Partisan politics being what it is, this debate can be expected to continue, and perhaps intensely, up to the day of next year's Presidential election. The Truman administration naturally is claiming a victory. We fought, say its spokesmen, only to stop the Communist aggression and to prove that such aggression does not pay. Haven't we done this? This claim conveniently forgets the U N resolution of last October 7, which called for creation of a united and democratic Korea—a directive which, under the circumstances, could only mean winning a military victory up to the Yalu.

While the Truman administration is claiming victory, the Republican opposition just as vigorously will be claiming surrender. It won't use that word, it will charge that an armistice which leaves the Communists in control of North Korea and unpunished for their attack on the south is appeasement. When the administration calls on its opponents to tell what they would have done rather than accept the truce which now seems available at the thirty-eighth parallel, they will evade that question as far as possible and concentrate on the appeasement accusation.

I

It is not our present purpose to assess these partisan claims. Yet there is one claim now being put forward which seems to us unwarranted and freighted with trouble for the future. This is the claim that Korea has proved that the U N can put military forces into action capable of defeating aggression. With this goes the implication that, in view of the Korean outcome, the U N should—and will—go ahead to build its international police force to a point where it can hold in check or mow down any transgressor.

To us, this seems a dangerous misreading of what has happened in Korea. True, the Communists have been stopped at the thirty-eighth parallel. True, a U N force, in which 16 nations participated (though not all with fighting units), did it. Nevertheless, the whole Korean affair has been surrounded by "buts." But for Russia's absence from the Security Council, no U N resolution calling for military action could have been adopted in the first place. (The Kremlin won't make that mistake again.) But for what seemed the requirements of United States prestige in the Far East, shattered by what had happened in China, there would have been far less pressure for American intervention. Our military leaders were afraid of it; the MacArthur hearings showed that the swift decision to go in came from the State Department and the White House. As Louis Johnson, at that time Secretary of Defense, testified, the Joint Chiefs of Staff just kept still and accepted orders, little as they liked them. But for the reasons which they had for needing to stay on good terms with the United States, it is

* The number of persons in the no-income group in the census estimate is 3,500,000. That the size of this group is overstated becomes evident from an examination of the number of aged persons with income from known sources. According to the Bureau of the Census report, "Work Experience of the Population in 1948" (Current Population Reports, Labor Force, series P-50, No. 15), 3,460,000 persons aged 65 years and over in December 1948 had some paid employment during the year. In the same month, 1,581,000 aged persons were receiving old-age and survivors insurance, 682,000 were on the benefit rolls of other social insurance and related programs, and 2,495,000 were receiving old-age assistance. After allowances are made for an overlap between old-age and survivors insurance and old-age assistance equivalent to 10 percent of the insurance beneficiaries and an overlap between all forms of social insurance and employment equal to 10 percent of the insurance beneficiaries, the total number with income from these sources is 7,800,000, or 300,000 more than the census estimate of aged persons with income. Since several hundred thousand aged persons must have had money income from other sources only (commercial insurance annuities, industrial pensions, dividends, interest, contributions from friends or relatives) the number with no money income could not have been larger than 3,000,000 and was probably below that figure.

doubtful whether even the minority of U. N. members who joined in the Korean police action would have done so.

In pointing out these "but's," we are not aspersing the course followed by the U. N. We are glad there was as much support for this policy as there was; otherwise the U. N. would have disintegrated right there. In view of the record, however, we believe that the "meaning" of the military action in Korea has been simply that nations—inside the U. N. and out; working with the U. N. and against it—when it comes to going to war continue to follow what they consider their immediate interests. That was true for the nations which sent forces to fight for the U. N. It was true on the other side. Russia and China were not moved by U. N. condemnatory resolutions, but when their interests told them to extricate themselves they did so, regardless of where that left the Korean Communists.

In other words, despite all theories of collective security and international action against aggressors, going to war is something which still has to be justified to the people who do the paying, the fighting, and the dying as a sacrifice demanded by national interest. Otherwise, the war sacrifices cannot be maintained. The reason why the United States Government was so ready to respond to Mr. Malik's first hint of the possibility of a cease-fire was that this justification of national necessity for the Korean intervention had begun to lose its power to convince the masses of the American people.

II

Now, if such have been the realities of the military action in Korea, what meaning have they for the future of the United Nations? For one thing, surely the flimsy nature of U. N. military guaranties must be clear. A time may come—we trust it will—when the U. N. will evolve into a world government, and as such will have available a U. N. force capable of policing the world. But when that time comes the policing problem will not be one of coercing or holding in leash the whole of the geopoliticians' vast "Heartland." It will be the relatively simple one of suppressing pirates, contraband runners, and similar minor offenders. At the present stage of history, the concept of a standing U. N. force to control major aggression is an illusion. The provisions for such a force in the U. N. Charter are window dressing and no more.

This was the position taken by the Christian Century when the U. N. was formed at San Francisco. We are more convinced of its correctness today than we were then. Since the Korean outbreak the U. N. has adopted the so-called Acheson amendments. One of these affects to put teeth in the military clauses of the Charter by requiring each member state to tell what forces it will earmark for immediate use at any time by the U. N. The United States itself showed what this particular Acheson provision amounts to by telling the U. N. that it would not earmark any specific forces but might be expected to respond to any future U. N. call on its merits. Other nations, which has fought beside us in Korea, are following the same course.

What is really involved here is the present nature of the U. N. What purpose does it exist to fulfill? Is it an organization to raise and employ military forces on a scale sufficient to be a terror to all evildoers? Or is it something else? On this basic question, we believe that the Quakers who drew up the recent report on foreign policy, Steps to Peace (see Quakers Never Give Up, May 30), were right and that Mr. Acheson's move to transform the U. N. into an armed alliance was wrong. A U. N. attempting to maintain and use an international army in a world divided between great power blocs is a U. N. headed toward disaster.

No U. N. army can cope with major aggression. The terrific time the U. N. has had with the Communist aggression in Korea should be a sufficient warning on that score. At the start, Korea looked like nothing more than a fairly simple police action. What would have happened had China officially come in? The U. N. army would probably have fallen apart. If not, there would certainly have been recriminations between the peoples of the participating nations on a scale to have undercut any campaign against China proper. And if Russia had come in? At that point, of course, any pretense of U. N. police action would have vanished; that would have been world war III—and the disintegration of the U. N.

III

What is the U. N.? At present the U. N.'s role is to provide a meeting place and a forum in which a continuous process of discussion and negotiation can be carried on among the nations as an alternative to war. What the limitations are on what the U. N. can accomplish through the discharge of that role, we do not know. The Quakers (to refer once more to their report) think that the nations in the U. N. have not gone very far yet in developing the possibilities of negotiation, and the remarkable Quaker record in securing a common mind out of all sorts of combative situations makes their judgment regarding this important.

We admit that it is not and will not be easy to get far in the U. N. along the path of discussion and negotiation with the Russians and their Communist satellites. There will be many times when the infuriating tactics to which the Red delegates resort in the Assembly, in the Security Council, in the commissions and committees will tempt our frustrated representatives to feel that if they could only pull a gun on their Communist tormentors, sweet reasonableness would ensue. But for the U. N., pulling a gun is the way to disillusionment and shipwreck.

A cease fire in Korea, if it is attained, will give another chance to recall the U. N. to its true purpose. Those who hope to see the U. N. develop into an effective agency for world understanding will do well now to forget the illusory Acheson army. Fighting is not the U. N.'s role. Negotiation is. Now is the time to get that fact thoroughly planted in U. N. thinking. And as an incentive for so doing, we wish that every delegate and employed officer of the U. N., every foreign office official and every legislator in U. N. member nations, could be required to read and reread that portion of the Quaker report (pp. 31 through 47) which deals with the possibilities and means for developing the U. N. as a world center for constant and undespairing negotiation.

Some Fancy Accounting in Arizona Water Plan

EXTENSION OF REMARKS OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. YORTY. Mr. Speaker, I should like to call the attention of the House to an interesting article by Mr. Raymond Moley which discusses the central Arizona project. This fantastic project is of such dubious economic feasibility that the attempt to foist it upon the Nation constitutes a threat to the whole reclamation program so vital to western de-

velopment. In order to authorize this project, it would be necessary to cast aside and ignore all previous standards by which economic feasibility has been determined. Here is a project which would cost the taxpayers of the United States at least \$2,000,000,000 in interest losses alone, while it would at the same time directly benefit large landowners in Arizona who would be required to pay absolutely nothing for having their underground water supplies replenished for use on their lands.

Even the sponsors of the project admit that their economic feasibility claims are predicated in large part upon construction of a dam at Glen Canyon, although the bill authorizing the project specifically prohibits the building of the Glen Canyon Dam. There are so many glaring fallacies in the reports and evidence reportedly justifying the project from an economic standpoint that one is amazed to see the project seriously considered in spite of the unquestioned political influence of its sponsors. It is a monstrous example of economic insanity wedded to political pressure.

The article follows:

SOME FANCY ACCOUNTING IN ARIZONA WATER PLAN

(By Raymond Moley)

BOISE, IDAHO.—As I have traveled westward, through Yellowstone Park and into this productive and prosperous basin of the Snake River, my major reactions have been to the natural treasures and beauties of the region and to what strong and energetic people have done with and for these advantages.

We seem to be far from the perplexities and strife of international affairs, higher taxes, and economic controls. Certainly, it would seem that the devious ways of Government bookkeeping would have little to do with all this natural wealth.

But the connection is real and important and very serious. Two illustrations will suffice for this point. The first is almost humorous. The second involves the entire future of the development of areas such as this. Both have to do with the fact that, as years pass, it is becoming more and more expensive to reclaim waste land in the West and to make it fit for human habitation and individual enterprise.

The original principle followed by government in reclaiming land by irrigation and other improvements was that the farmers who were benefited should repay the costs over a period of years.

This principle was willingly accepted by the hardy people who settled on such land. It is the principle that should be followed for all time.

But it is to the interest of some bureaucrats and politicians to undermine this principle and at the same time to create a state of dependence by some on others and to reap political advantage from such dependence.

The method followed by such bureaucrats and politicians is to rig Government bookkeeping to make it seem that great reclamation and power projects are paying for themselves, while in reality a generous subsidy is being paid by Federal taxpayers.

In the Senate debate last month on the great central Arizona project, it was pointed out that the Bureau of Reclamation had assigned as part payment for that project the so-called recreation benefits.

This means that it is estimated that a certain number of people will come in the course of a vacation to see the dam. Their expenses all the way from home and back will be estimated, expenses for railroad fare or gasoline, lodgings, and food. These will

be totaled and set off against the cost of the project to the Government.

This sounds almost too fantastic to be true. For the money these curious people spend does not come back to the Government at all. It is not a legitimate item to set off against cost. It goes to innkeepers, gas stations, and railroads. The taxpayer makes it up when the cost of the project is met.

Another trick is more complicated and more serious. It has to do with what is called the interest component in a reclamation project.

In the beginning and for half a century, the farmer was supposed to pay over a period of 40 years the original cost of the irrigation project and the maintenance expenses.

Now, since many of these projects produce not only irrigation but electric power, the idea has been developed that the interest component in the proceeds of the sale of power should not be returned to the Treasury, but to a fund under the control of the Bureau of Reclamation which can be used to finance other new projects, thus loading the taxpayer with the cost of subsidizing power users.

This idea is cropping up in new projects. Thus, what started as a self-sustaining enterprise of Government will, unless stopped by Congress, end in a gigantic paternalism. This is just another example of the decay of morality in a socialistic government.

The Method of Selection of Candidates for Admission to the Military and Naval Academies Should Be Reviewed

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. KEATING. Mr. Speaker, the greatest contribution Congress can make to the situation created by the West Point scandals is to seek out the root causes of the dishonesty which has been revealed and try to prevent a repetition.

No doubt a general lowering in moral standards with a bad example set in high Government circles has been a contributing factor. Without question the young men involved can point to more serious examples of betrayal of trust and disloyalty to country which have either gone unpunished or with a slap on the wrist. Yet it seems to me a more basic cause may be the reason why widespread cheating exists at the Military Academy. Perhaps the fault lies, at least in part, with Congress. Before we search elsewhere for reasons we should be sure our own house is in order.

It has long appeared to me highly questionable whether the candidates for nomination to the service academies should be named primarily by Members of Congress. What peculiar qualifications does a Senator or Representative have which enables him to select young men who are likely to make the best Army, Navy, or Air Force officers?

I appreciate the importance of a wide geographical distribution of the candidates, since they should be representative of American youth and will be called upon in later life to command troops

drawn from all parts of our country. I am not at all sure, however, that a higher caliber of youth in both character and ability would not result from selection through a process of competitive examination or screening by an independent board or otherwise. I confess that I have no positive alternative to suggest. It may well be that careful study would reveal that the traditional method of selection by those chosen to represent the people in their respective States is the best method which can be devised to insure that top men are chosen for the service academies.

The recent tragic disclosures, however, have reinforced my impression that this entire matter of selection should be thoroughly canvassed. With that end in view, I am introducing a resolution authorizing and directing the Committee on Armed Services to conduct an inquiry and make recommendations with regard to any changes which should be made in the public interest in the manner of selecting and nominating candidates for admission to the Military and Naval Academies.

Military Appropriation Bill, 1952

EXTENSION OF REMARKS OF

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. MAHON. Mr. Speaker, at the conclusion of the hearings on the 1952 military appropriation bill, which lasted some 11 weeks, the Appropriations Subcommittee on Military Appropriations called a special session to hear General Marshall, the Secretary of Defense, and General Bradley, Chairman of the Joint Chiefs of Staff. That was on July 18, only 3 weeks ago. We were anxious to review with them the latest developments in the uncertain world situation with particular reference to the military-preparedness program which the pending bill is designed to further, and to have the benefit of their latest judgments and opinions because by reason of their positions they are our foremost leaders in the military field. Their testimony is extremely timely, and to the point, and might well be read by every American. It is not too lengthy, and I believe it highly desirable to include it in the RECORD.

The printed transcript follows:

WEDNESDAY, JULY 18, 1951.

CURRENT STATUS OF MILITARY PLANNING
(Witness: Hon. George Catlett Marshall, Secretary of Defense.)

Mr. MAHON. Gentlemen, we have called this special session to hear General Marshall and General Bradley.

General Marshall, of course, we would like to visit with you and have a statement from you, and then we can take General Bradley, and thereby we will not hold both of you here throughout the hearings.

We began hearings on the 1952 military budget shortly after the budget was presented to us. We began hearings early in May. I think we have had about 11 weeks

of hearings—at least, this is the eleventh week. We finish the hearings this afternoon.

You were busily engaged on the Senate side at the time we started; otherwise we would have had the pleasure of having you before us earlier. We did have the privilege of hearing a statement from General Bradley at that time, but we did not complete, and will hear him again.

Of course, this is a tremendous budget, General Marshall, in the neighborhood of \$60,000,000,000. The taxpayers are impatient about the ever-increasing costs to the Government, the high taxes, and yet with the disturbed world conditions they want to be adequately prepared for what might hit us as a nation in a troubled world.

There is much feeling among the people generally and among the Members of Congress that the military people do not conserve manpower and dollars as well as they should; in other words, that some of the appropriation to the military does not buy the maximum of defense. Of course, we are anxious to get a dollar's worth of defense for every dollar spent, and I am sure that represents your views.

EFFECT OF DEVELOPMENTS IN KOREA ON 1952 BUDGET

Now, another thing that has come into the picture has been the developments in Korea. The question will be asked on the floor by Members of Congress and by the American people, of course, as to what impact should the recent turn of events have on this military program? In other words, can we now assume that our build-up could proceed at a slower pace? I do not think any thoughtful American, in view of the prospect which will be facing us because of the world picture, could think that we could let down our guards and disband our military forces. That is not in the picture. We realize that.

But, can we stretch out our efforts over a longer period of time, particularly some of our procurements? For example, the Army has come in and asked for ordnance to the tune of \$8,500,000,000. That is a tremendous figure.

Now, could we proceed on that at a rate, say, instead of \$8,000,000,000, at a rate of \$5,000,000,000 or \$6,000,000,000 or \$4,000,000,000? In other words, phase this procurement out over a longer period of time. Is that practical?

In view of the turn of events in the Korean war, should we restudy the emphasis which is to be placed on the defense program and perhaps reshape this budget to some extent?

We want to have confidence, when we take this budget to the floor, that when we are asked by Members of Congress whether we need such a large budget, that we can tell them it is needed and why.

Another thing, when we take the bill to the floor we want to be in position to assure our colleagues that this money is needed and is needed now and we do not want to be in the position of having the Defense Department come back a little later and say, "We have reoriented ourselves in the light of developments in Korea; we have changed the program; we do not need all of this money which the bill provides."

Of course, we would be happy if that sort of thing could develop with complete safety and security to the Nation, but the point we want to make is that we need a realistic view of this whole thing; and, I would like to say this before I stop these remarks:

If you change the views which you express this afternoon, prior to the time we bring this bill to the floor for consideration, and if you determine upon a reshifting of the program or reduction in the program, will you make known to the committee your decision on that matter in time for us to take advantage of the decision which you might have made?

Against that background of remarks which I think represents generally the thinking of

the members of the committee, we would like for you just to tell us what you think of the present situation.

Secretary MARSHALL. Mr. Chairman, in the first place, I see no reduction. I might say this, that I think it is quite possible that when the final determination is made—the final decision, in October—that we will possibly be involved in approaching the Congress for certain increases, particularly for 1953 and 1954.

I regard this appropriation bill in a very considerable measure as a major capital investment, in contrast with the maintenance items concerning pay, uniforms, and items of that character. I look at it in a sense that it is a capital investment which will not require replacements for quite a period of years, varying for example, with 3 years on pursuit planes, 6 years on the types of larger planes, and 8 years for most of the tanks.

Of course, it does involve continued maintenance charges against the items that are not held in storage.

I think I can best explain my own reaction to this by stating that I have been deeply concerned over what I have read in the press and what I have heard over the radio in regard to the fears expressed as to the Korean armistice being a Communist trap, involving some clever procedure, which will react seriously to our disadvantage. I regard Korea, except for the tragedy of the casualties, I regard the Korean affair—except for those tragedies—as an incident in the world situation, and I am distressed and deeply concerned at this talk about the trap or the clever procedure that may be facing us in Korea; because I think the trap and the cleverness are entirely on the part of the Soviet Government, addressed to the world situation.

It is most distressing that by a single speech, they, the Soviets, could develop an attitude of relaxation, of a let-down in our defense program on the part of the American people. It is tragic that we should be so susceptible to propaganda, that a single speech would create a state of mind that can very seriously react to our disadvantage in the world picture.

That is the trap, that is the cleverness, and the ready response to it in America is tragic. We should not change our whole procedure every time the Kremlin decides on some new front. That, to my mind, is distressingly serious because with so little effort they have accomplished so much to our great disadvantage. The fact that within a few days after Malik's speech we should have calls on the selective-service offices from men inquiring as to whether or not they should now report is indicative. It is more serious to have Reserve officers, who should know better, should be better informed than these younger fellows, write to the War Department asking whether the Department still wants them to report.

SOUNDNESS OF 1952 BUDGET

I think in a sense that answers the questions as to this particular appropriation bill, except as to specific items contained in the estimate, with which you may disagree. We have tried very hard in the preparation of these estimates—particularly Mr. Lovett and his immediate assistants—to go through it with extreme care, to eliminate the unnecessary, and to make certain that the estimates are on a very solid basis; and have also tried to avoid those small things like the question of can openers which are essential but which detract from an understanding of our basic requirements in relation to a \$60,000,000,000 bill.

INTENTIONS OF SOVIETS IN KOREA

Mr. CANNON. When, General Marshall, do you think it will be unquestionably evident as to what the real intention of the Soviets is?

Secretary MARSHALL. That is a very hard question to answer, Mr. CANNON. I think it

will be quite a period of time; it will take time to prove good faith, which involves a rather lengthy procedure. Just how soon we can reach a correct conclusion with respect to the Soviet, in view of our past experiences, is something that each of us has to decide for himself, having in mind the previous record of frustration, disruption, and complete ignoring at times of even the minor relationships in international procedure.

FUTURE COURSE ADVISED

To my mind the important thing now is that we appear before the world as determined, implacably determined, to get ourselves in such a strong position that the Kremlin will not dare to upset the peace of the world.

There are deterrents at the present time, particularly atomic, and it is a debatable question as to how long that will act as a deterrent, but I think that a determination to go ahead is most imperative and will be an impressive factor. We should not suspend our efforts merely at the call of the Soviet Government.

Such a program takes a long time. Much lead time is involved, and as I said, a large part of this budget represents materials that really are a capital investment.

If you will recall, when I came up even in November and December, on the 1951 appropriation bill, I found considerable disagreement with many among the Members of Congress, and I think members of the committee, who thought I was asking for far too little. I was completely opposed to going all out at that time. I thought such recommendations were more of an emotional reaction because of our difficulties in Korea. I am now satisfied that I was right.

Mr. MAHON. I might say you probably have reference to another committee rather than this committee, with respect to the method of build-up, but I know there was a lot of impatience and uncertainty on the Hill with your unwillingness to call for unrealistic forces.

Secretary MARSHALL. My thought on that, Mr. Chairman, was that we must do this tremendous business in an orderly manner, and that if we overextended ourselves we would get ourselves in a very weak position. I feel that we did hit a pretty good pace at that time. I feel that attitude has been confirmed today.

There are things we can still do within the appropriation to a large extent which are administrative procedures, in order to increase the number of divisions without calling up additional men, and build up the naval arm in certain specialized lines with no increase, or a minimum increase, in men.

We have larger considerations in connection with the air, but we will lose nothing, I believe, by waiting until October to reach a firm conclusion in that matter. The issue to my mind is that we must be able and determined to build up the strength and not be wobbling back and forth at every dictation of the Kremlin.

EFFECT OF CESSATION OF HOSTILITIES IN KOREA

Now, specifically as to the termination of hostilities in Korea: That would have certain immediate effects on the pipeline; we would have to maintain certain efforts, but they would be somewhat reduced. While the reduction in the number of men sent out would immediately build up the availability for creating divisions which we want, from that point of view, it just helps us to go ahead with the program a little more rapidly.

The cessation of hostilities and of the demand on replacement armament, particularly of material involved in campaigns, would enable us to go forward more rapidly with our commitments for European rearmament. We have had to cut back on some of them in the face of Korea. In other words, cessation of hostilities in Korea would enable us to do more rapidly some of the things that we are scheduled to do and have

been forced to slow up because of conditions in the Korean area.

Now, as to troops, a great deal is still to be desired. Assuming we get the armistice, and assuming that within reason we get a political agreement, as to the future relations in Korea, and matters in the Far East, we have yet the decision to make as to when we might reduce, for instance, the Japanese garrison, or how the deployment of troops to the Far East might be adjusted.

In other words, the main effect of the cessation of hostilities aside from the terrific casualty lists, would be to make it possible for us to proceed in a more orderly manner toward building up our over-all program.

I think that just about covers my discussion of most of the points that you mentioned, Mr. Chairman.

Mr. MAHON. We have devoted many hours and days to the consideration of the budget, and we do not need to talk about that now, because we have been going over those matters in great detail.

NO REDUCTION IN MILITARY PERSONNEL RECOMMENDED

Do I understand you to say that, in your judgment, regardless of developments in Korea, a minimum force of about 3,500,000 should still be firm, and that we should not reduce the military matériel?

Secretary MARSHALL. That is it exactly.

Mr. MAHON. With respect to about 45 percent of this budget, which is for procurement—I spoke of Army Ordnance, and we can speak of many other types of military hardware—with respect to those things should we taper off or should we proceed along the basis which has been presented to us?

Secretary MARSHALL. I am firm in my conviction you should proceed along the basis which has been presented to you.

You made one comment, Mr. Chairman, which I did not speak about, that is, the taxpayers—which naturally concerns me and all of us a great deal. I was particularly interested in an inquiry this morning from, I think, Mr. McNeill.

(Off-the-record discussion.)

POSSIBLE REDUCTION IN 1952 BILL

Mr. MAHON. In view of the temper of Congress and the desire for reducing appropriations, if some reduction is to be made in the military budget, in your opinion which one of the services is best prepared to accept a reduction—which is now in best position to perform in the event of an all-out war within the near future, say within the next 2 years?

In other words, in what area, regardless of the service—and I do not wish to put you on the spot with respect to any of them—in what area, perhaps, could we slow down, reduce the cost? And you say we do not want to reduce the number of men in the Army, Navy, and Air Force. Of course, we have got to pay them, we have got to feed them, and we have got to clothe them; so where do we get to some place where a reduction might be made with the least injury to the national defense needs?

Secretary MARSHALL. I would not want to try to answer that question off the cuff without conferring with the Chiefs of Staff.

You will recall that the budget has had considerable screening. For example, you know it started off with \$104,000,000,000, and then got to \$48,000,000,000, and then moved back up to \$60,000,000,000.

Mr. MAHON. I realize that.

NUMBER OF CIVILIAN EMPLOYEES

Mr. MAHON. Here is something that concerns us; there is a popular view in and out of Congress that military people use too many civilian employees, that we have the proposition in this budget to have 1,500,000 civilian employees in fiscal 1952. In this budget there is a request for approximately

260,000 additional civilian employees, bringing the total to 1,500,000.

Now it is true that some of them will be the so-called blue-collar workers, working in ordnance plants and places of that kind, but it would be almost like throwing a dash of cold water in the face of Members of the House to say, gentlemen, we have got a bill which provides for an additional 263,000 civilian employees for the military department. You get what I mean?

Secretary MARSHALL. Yes.

Mr. MAHON. What is the answer to the feeling that you are overdoing this business of civilian employees? I realize you are not definitely in that picture.

Secretary MARSHALL. Well, I am.

Mr. MAHON. What is your reaction to it?

Secretary MARSHALL. My first reaction is the question whether we let the soldiers or the civilians do some of the work. We have tried at every point to see how we could get a proper balance between the two. I checked up and I found that we had scheduled, I think, 50,000 less civilians than the budget provides for.

Mr. TABER. On the other hand, you were 142,000 below the figures that were given to us as the budget estimate of what the figures would be on June 30.

Secretary MARSHALL. The only point I can give was this reduction of 50,000 in the planned build-up.

Mr. TABER. On June 30, according to Mrs. Rosenberg, the figure was 142,000 below the figures that the budget has estimated, when they came up here.

Secretary MARSHALL. Well, she has the actual figures. That is her field.

USE OF MILITARY MEN FOR SEMISKILLED WORK

Mr. MAHON. If the war in Korea should end, is there any reason why some of these trained men doing semiskilled work, when they return to this country, cannot they, in some cases, do some of the things these civilians are doing? There seem to be two sides to the picture.

Secretary MARSHALL. In regard to that, I would say that the veterans that come back have been highly useful in connection with the developments in recent combat.

So far as the question of soldiers in place of civilians, I think that is a question that the Congress would want to consider—to what extent we utilize the physically capable among the soldiers in certain grades for certain of the jobs. One very serious question is that of who you want to do the job that has to be done.

As to the combatant and career men, there are all sorts of jobs for them to do in order to improve their service. There is another factor, which I am not sufficiently well based on at the present time to go into, but there are certainly a number of these people that we have used as soldiers on certain jobs which are being taken over within the Department.

On one side, of course, it cuts down on the number of civilians. So you have the two factors to consider.

The men with the battle experience coming out of Korea have an important place. The more of them we get back here, the more effective is our training tempo. And we have to consider that in connection with the long time that it takes us to get these National Guard divisions ready for combat.

After the hostilities started in June, the National Guard divisions were brought in—in September—and, of course, selective service did not really begin to produce until November. Those latter men have not finished their training yet. That is the tragedy of time that we cannot continue to accept in the present international situation.

We are trying now to build up all of our man factions in this country, particularly with the introduction of universal military

training, with the most skillful instruction personnel that we can get, and that must come from the veteran. With these new divisions, it makes a great difference in the time of their availability, having these key-men conducting the training. I think you have to consider what it means to take, we will say, almost a year in order to get a division ready for combat. That is a very costly delay.

I should like to give you this example off the record.

(Statement off the record.)

We are up against the same thing when it takes so long to get these divisions ready. And we reduce the cost materially if we can make very rapid development. These veterans who are coming back from Korea as instructors are very much involved in that.

LIKELIHOOD OF ALL-OUT WAR

Mr. MAHON. Let me go to a much broader picture and then bring my interrogation to a conclusion. What is your considered judgment, General, as to the likelihood of a major war now as compared to 2 or 3 months ago?

Secretary MARSHALL. I would say that it is just about the same as 2 or 3 months ago. There has been a constant build-up in the Soviets and their satellites, of their military strength. Unfortunately we do not know a great deal about it.

Mr. MAHON. The likelihood of an all-out war is still an ever-present consideration?

Secretary MARSHALL. I think it is continuing and, from the viewpoint of the enemy's build-up, it is increasing.

(Statement off the record.)

CESSATION OF HOSTILITIES IN KOREA

Mr. MAHON. General, when may we reasonably expect to know whether or not there will be a cessation, over a period of months, of the actual shooting war in Korea?

Secretary MARSHALL. I do not know. I have been continually involved in these conferences, and they are some of the most frustrating things that you can imagine. It would appear that the Communists very much want this armistice. On the other hand, they will act under instructions and might be implacable along certain lines, just as the recent prolonged effort that was made in Paris resulted in nothing. And there they were merely discussing the agenda. Here we are getting around to a decision for the agenda. The most critical factors have all to be decided thereafter. After that there is the execution of the armistice. Then follow the diplomatic decisions which would involve the United Nations on the one side and the Communist group on the other.

Mr. MAHON. Would it be fair to say, then, that if we pass this bill through the House and the Senate during the next 6 weeks we will not know during that period of time just what may result in Korea?

Secretary MARSHALL. I do not think you will know, sir.

Mr. MAHON. We hope to take this bill to the House by the 15th of August and pass it.

Secretary MARSHALL. I should think it would be very helpful if you did act before any armistice comes to a final decision, because I think it will help us very much in getting the decision that we want. In other words, this bill is a declaration of determined intent, and that is the most helpful factor we can emphasize at the present time.

Mr. MAHON. Mr. SHEPPARD, have you any questions?

Mr. SHEPPARD. In other words, General Marshall, it is your feeling that if this particular overture of peace was deliberately planned for strategic purposes, to lull us into a state of apathy, as it were, that the speedy enactment of this appropriation bill as a preparedness measure would have a salutary effect?

Secretary MARSHALL. Exactly that, sir.

Mr. SHEPPARD. As against taking the reverse position?

Secretary MARSHALL. Exactly that, sir.

Mr. SHEPPARD. Personally, I am very well pleased with your statement. I think it would be one of the most tragic things in the world for this Nation to permit itself to get into the state of thinking that it was in at the cessation of World War II. If we had not been so fast in our disarmament then, perhaps we would not have so much of a bill to pay today.

Secretary MARSHALL. I think, to repeat a little of what I have already said, the most tragic fact is that in the way of public reaction we are so easily led by the nose. I do not think we ought to admit any such docile and dangerous tendency as that.

Mr. SIKES. I have no questions at this time, Mr. Chairman.

Mr. RILEY. Mr. Chairman, I agree with Mr. SHEPPARD. I think it would be a very dangerous thing for us to be lulled into a sense of security, especially at this stage of the game.

I should like to ask Secretary Marshall one question which I think he will want to answer off the record.

(Discussion off the record.)

Mr. MAHON. Have you any questions, Chairman CANNON?

Mr. CANNON. I have no questions at this time.

Mr. TABER. I do not think I have any questions at this time.

ADEQUACY OF 1952 PROGRAM

Mr. WIGGLESWORTH. I have two questions, Mr. Chairman, the first of which is for the record. Do I understand correctly, General, that the committee is to understand from what you have said that under all the existing circumstances you feel that the program represented by the appropriation request now before us is the maximum program which it is advisable for us to undertake at this time?

Secretary MARSHALL. Not the maximum necessarily, sir. But I think it is the essential program at this time. On the question as to whether this item or that item is well- or ill-advised, so far as cost estimates are concerned, and things of that sort, you have had many witnesses to testify regarding thereto.

Mr. WIGGLESWORTH. So far as your own judgment is concerned the program represented by the request before the committee is what you consider adequate under all the circumstances?

Secretary MARSHALL. At the present time; yes, sir.

(Discussion off the record.)

Mr. TABER. General, is our position with reference to the Soviet getting to a point where the trend is more our way than it is their way?

Secretary MARSHALL. We are still at a great disadvantage, but we are progressing more rapidly to strength than they are. Their further increases in ground strength will be limited.

(Discussion off the record.)

Mr. MAHON. General Marshall, on behalf of the committee, I want to thank you for your appearance and your very helpful exposition of the situation.

Secretary MARSHALL. Thank you very much, Mr. Chairman; and thank you, gentlemen.

WEDNESDAY, JULY 18, 1951.

MILITARY PROGRAM FOR 1952

(Witness: General of the Army Omar N. Bradley, Chairman of the Joint Chiefs of Staff.)

GENERAL STATEMENT

Mr. MAHON. General Bradley, we should be pleased to have from you at this time a general statement on the budget for the

Department of National Defense, for the fiscal year 1952.

General BRADLEY, Mr. Chairman and members of the committee, during the time that the Joint Chiefs of Staff have considered our needs for the fiscal year 1952, we have had the usual consideration of the long-range plans for our country's security; we have seen the crystallization of planning in the North Atlantic Treaty Organization, including the establishment of a Supreme Command in Europe, and there has been the sharp impact of events in the Far East. These three factors have required a very critical strategic analysis by the Joint Chiefs of Staff. The result—the major force requirements set forth in this request—is probably the most studied opinion on our needs in the Armed Forces that the Defense Establishment could provide.

We believe that our long-range defense measures must include. Forces in being to avert disaster and to retaliate in case we are attacked, and a mobilization machinery in the Armed Forces and in industry which can be thrown into high gear if we face an all-out war. Obviously, our long-range program must be within our national means; and it must be consistent with the attitudes of the American people toward their own defense. The American people have never maintained in peacetime and we are not asking now, forces in being large enough to win a major war.

MILITARY OBJECTIVES

In broad outline, the basic military objectives which have guided our strategic analysis are these. To build sufficient force is soon as practicable to act as a deterrent to further aggression, to create sufficient power to prevent disaster in the event war is forced upon us, to provide an immediate capability for quick and strong retaliation in case of an attack upon us; and to produce a firm base upon which to build, as quickly as possible, that power necessary to assure victory should we be forced to engage in all-out conflict. These are our basic objectives—any provisions short of these would invite disaster.

As the leader, and by far the strongest, of the free nations, the urgent requirement of the first objective—that of building sufficient force to deter further aggression—rests largely upon the United States. Our immediate concern in this undertaking is, of course, the support of our forces in Korea. For programing purposes of the services certain assumptions have been made regarding the scale of our Korean support and its duration. The validity of these assumptions is problematical, but it is hoped that the requirements for this operation will fall within the assumed limits.

It has been pointed out by previous witnesses that in this defense budget we have, with certain exceptions, made no specific allowances for combat-consumption rates during fiscal year 1952 for the Korean conflict.

RESULT OF PEACE IN KOREA

Because the cease-fire negotiations are under way at this time in Kaesong, many people believe that the possibility of an armistice will have a considerable effect on the amount of necessary expenditures for defense for fiscal year 1952. Perhaps it would be appropriate to discuss this possibility for a moment.

We Americans believe in a peaceful world, and want peace in Korea as soon as possible. But the cease fire, and armistice that we so earnestly desire, may lead to our undoing, unless we take steps to prevent such undoing.

For if peace in Korea means a let-down in defense, we have lost the time that our valiant soldiers, sailors, airmen, and marines—and our allies—have bought for us and other free nations.

If peace in Korea means a let-down in production, we will be cutting back on weapons just as we have begun to modernize and properly arm our forces.

And if peace in Korea means a let-down in our will and enthusiasm for adequate preparedness, we may be handing our future chances for freedom to those who wish to enslave us.

We must realize that peace in Korea is not a promise of permanent peace throughout the world. The armistice out there in the Far East will mean that the United Nations have met one more challenge, have won another tough engagement over oppression and tyranny. It will mean that we have a chance to be better prepared to meet any future challenge. We must make the most of the good chances that are offered us.

On the other hand, if we cannot reach agreement with the Communists in Korea, it will be obvious to everyone that the load has not been lightened, and the defense preparations must go on.

Armistice or no armistice, then, we must be prepared for the next challenge; and we must continue to pursue that first objective I mentioned before—building sufficient forces to deter further aggression. In addition to our own defenses, we must assist in the provision of those additional forces which, in concert on a global basis with those of other free nations, will foster the containment of communism within its present bounds.

If containment does not work and aggression is not deterred, then we must have the power to prevent disaster in the event of war, and the capability of sharp and aggressive retaliation in case of attack. Included in these objectives is the power to defend the Western Hemisphere, to protect its industrial potential to the greatest practicable degree, and to develop our strategic air offensive to insure, when necessary, the immediate interference with enemy industrial capacity. Though the passage of time will bring increased allied assistance in furtherance of these objectives, their essential minimum cannot be delayed, and its provision, therefore, rests primarily with the United States.

In addition to maintaining sufficient forces in being to stave off national military calamity, we are trying to provide a force that can retaliate immediately—a force that can hurt the enemy, slowing down both the strength and tempo of his attack upon us while our mobilization gets under way. The nature of this retaliation force changes with the conditions of war and the weapons of war. It is almost redundant to point out that the shape and form of our retaliatory forces have changed materially since World War II.

The initial retaliation against an enemy by strategic bombing will be provided if the air power and the necessary Army and Navy support to seize and hold the bases from which to operate, are in our hands the moment an emergency arises. The closer the bases are to the enemy the easier it will be, and the less costly it will be, to provide a sustained retaliatory air attack. Our strategy does not include a retraction of all of our military power to the continental limits of the North American Continent when we are attacked.

As a third requirement, our forces in being must include a sufficient mobilization base so that, if necessary, we can push the throttle of mobilization forward and expand our forces efficiently and quickly to meet the threats, and eventually to take the offensive against the attacking enemy.

This third requirement—a broad base of strength from which we can expand—is probably the most important of them all. Heretofore broad oceans and strong allies have protected us during mobilization. Next time the clouds of war may give little warning and we may have no time for this third important part of our security.

When we discuss the mobilization base, we include the National Guard and the Reserve forces which are traditionally the backbone of the United States defense. The Regular forces must meet the first blows and also contribute to the military training and educational facilities which are necessary for the expansion, and furnish the cadres for those divisions, ships, and air groups that will be called for in all-out mobilization. But we must shorten the time before our Reserve components are ready for combat.

The Joint Chiefs of Staff have recommended to the President and to the Congress that about 3,500,000 men in uniform are necessary to meet the present threat as far as they can foresee. They have said that any time the situation changes for the worse they would have to ask for more men and women on active duty. Throughout the manpower hearings the Defense Department witnesses stressed the need for a better state of readiness for the Reserve components as necessary adjuncts to our security provisions.

But basically the combined mobilization planned for must provide these things: The men and materials to continue the effort in Korea if no armistice is agreed upon; the same to fulfill the present world-wide commitments, including the occupation tasks, and support for the forces of the North Atlantic Treaty; the increase in our Armed Forces now planned, including additional air forces in 1952; and, finally, war reserves of equipment that have been somewhat depleted by the Korean fighting.

Men without equipment cannot meet security needs. So there is first emphasis on industrial mobilization, with a simultaneous development of a manpower program to give us a well-trained Reserve for years and years to come.

I have reviewed the objectives and the considerations on which the Joint Chiefs of Staff have based the force and readiness levels of this appropriation request. Examination of the individual service programs will show that the forces scheduled for overseas deployment are planned to be fully manned and equipped. In the continental United States, however, approximately an 85-percent manning level has been generally accepted. Mobilization reserve levels set forth in the programs average only a 3 to 6 months' supply, and although such levels can be accepted during the period of force build-up, they should be materially increased as soon as production rates are improved.

In determining these force requirements and the general criteria which have guided the services in their program development, the Joint Chiefs of Staff have kept in mind the economic and industrial impact of the over-all program. Therefore, the forces and their support, in their opinion, represent the absolute minimum consistent with our national objectives and the current situation. We, therefore, recommend the appropriation request that is now before you, in the belief that it is essential to meet the urgency of our position. It is not only possible, but probable, that some upward revisions will be required during the coming months. If and when such revisions are deemed essential, the Joint Chiefs of Staff will not hesitate to convey new recommendations to the Secretary of Defense and to the President.

Mr. MAHON. That is a very excellent statement, General, and we thank you for your appearance here.

POSSIBLE CHANGE IN PROGRAM

If the military requirements are resurveyed, so to speak, late this year—say in October or November, as anticipated—do you think the likelihood is that there will be a decrease in our over-all preparedness program, or a steady build-up on the framework which we are now laying, or a precipitous increase? That question is based upon

the technical assumption that we will not be in an all-out shooting major war at that particular time.

General BRADLEY. Mr. Chairman, I believe that we all understand that if this fighting in Korea keeps on for some time we are going to need something additional, which was not included in this budget.

Mr MAHON. That is right.

General BRADLEY. When we prepared these recommendations last fall we had to make some assumptions. For budgetary matters, we assumed that the fighting in Korea would be over as of the end of the last fiscal year, so we did not include Korea in the fiscal year 1952 budget, with certain exceptions. How much we will have to include in a separate supplemental request we do not know and will not know until some time this fall.

Mr MAHON. Could it be probable that you would not have any supplemental request?

General BRADLEY. Well, my understanding of the services is that they will have to have something to replace what they have used up during this year.

Mr MAHON. During fiscal 1951?

General BRADLEY. Fiscal 1952.

Mr MAHON. Yes.

General BRADLEY. Which is not included in here, and which is really coming out of stocks.

As General Marshall pointed out, it is coming out of equipment which we had hoped to furnish countries under the foreign-aid program.

I would say chances are pretty good that we will have to have something to cover the Korea expenditures.

As to the other part of your question, whether or not we will see fit to recommend any increase in forces for 1952, I think that depends very largely on the attitude that develops in these negotiations in Korea and the general world-wide situation which may confront us between now and sometime this fall. The services, I know, feel that in their expansion to date they have developed some weaknesses within their own organizations which probably need to be filled up. Just what they will come in for, and what the Joint Chiefs of Staff will approve I do not know yet because they have not made decisions on any specific program which they would recommend to the Secretary of Defense.

MILITARY STRENGTH

Mr MAHON. Under any circumstances can you foresee a recommendation by the Joint Chiefs of Staff that our Armed Forces of 3,500,000 men and women would be reduced below that figure during the current fiscal year, and a reduction over-all in the military build-up be made?

General BRADLEY. No, sir. I would say if there is any change in it the chances of recommending some slight increase in it are of greater probability than recommending a decrease in it.

I might elaborate a little bit more on what General Marshall said on that. We believe that the Communists were really hurt in Korea. That is why they want to call it off. However, there has been nothing said about changing their announced long-range intention of sometime ruling the world; so that I do not think that we should jump to the conclusion that this is any indication at all that they have changed their over-all attitude that the two, communism and our form of government, cannot live in the world together. I think we must be very careful not to accept this as an end.

As I tried to point out, to me we have met one more challenge, and successfully. When there will be another one or where it will be no one knows.

Some people say, "Then why have a settlement in Korea, so long as you are accomplishing so much?" I do not think that is an answer, either.

PROCUREMENT LEVELS

Mr. MAHON. Would it be safe for us to reduce the level of procurement? Not that the items would not eventually be delivered, but could we reduce the rate of the build-up? Just for illustrative purposes, I have made reference to Army Ordnance requesting more than \$8,000,000,000. We could make reference to similar items in the Navy or to items in the Air Force. My point is this: Could we slow down on this huge procurement program safely?

General BRADLEY. Well, Mr. Chairman, I do not feel qualified to discuss in detail whether or not any of that particular program can be delayed, because that is outside my province.

Mr MAHON. Yes.

General BRADLEY. But I would like to say this in answer to it in general. Most of those items, or a lot of those items, are very long lead-time items, or at least your expensive ones are, and you will not be getting them until possibly late 1952 or 1953 and some of them in 1954. In my opinion, those are the dangerous years.

May I go off the record just a minute?

Mr MAHON. Certainly (Discussion off the record.)

Mr MAHON. Mr. CANNON, the chairman of the Appropriations Committee, is here with us.

(Discussion off the record.)

Mr CANNON. General Bradley, I think you have given us a very informative resumé of the whole situation. It is not a very encouraging one, but there is nothing about the prospect of war which is encouraging.

Thank you, Mr. Chairman.

(Discussion off the record.)

Mr MAHON. Mr. SIKES?

(Discussion off the record.)

POSSIBLE BUDGET REDUCTION IN 1952

Mr SIKES. In the event the committee or the Congress should decide that cuts of some magnitude are essential in the proposed budget, is it your feeling that such cuts as must be absorbed can best be taken in civilian personnel or in major procurement or in military personnel?

General BRADLEY. I am not sufficiently acquainted with the details and effects of such cuts to answer that question, sir. You are getting into things I do not know anything about, sir, as to just what effect each one of these would have on the various services.

Mr SIKES. That is all.

Mr MAHON. Mr. RILEY?

Mr RILEY. I have no questions, Mr. Chairman, except to thank General Bradley for coming before the committee and giving us his statement.

Mr MAHON. Mr. TABER?

TIME RUNNING IN FAVOR OF UNITED STATES

Mr. TABER. General, do you figure that time is running in our favor or in favor of Russia at the moment?

General BRADLEY. I think it is running in our favor at the present time, and that it will continue to run in our favor for a couple of years at least.

NORTH ATLANTIC TREATY ORGANIZATION

Mr. TABER. What do you think about the NATO picture? Is there any real initiative and real support for the operations over there?

General BRADLEY. I think the spirit of the European members of NATO has improved very materially during the last year or year and a half. I was in France and England about a month and a half ago. It was the first time I had been there for about a year or a little over a year. In addition to talking to the military people in those countries, I talked to General Eisenhower and his staff, and I talked to a number of civilians. I talked to a number of Americans who live in those countries who have a pretty wide knowledge of Europe. From all of them I

gained the idea that the spirit and the will to get going on this thing had improved very materially.

You say, "Has it improved enough to make them get this thing done?" I would say it has improved enough to get it done, but whether or not it will be as fast as we would like to see it done is another matter. I do not know.

They have different problems from those we face. They have all increased their defense budgets since Korea started. The smallest one, of course, was Portugal, which has only increased its budget 2 percent. We have increased ours over 200 percent. Canada increased hers over 200 percent. Other countries run from 50 to 60 or up to 90 percent increase, which is very encouraging.

When we agreed to assume some responsibility for the leadership in Europe, by furnishing General Eisenhower as the commander of Europe, we did it with the thought that his presence and his enthusiasm and prestige would have some effect on the raising of the spirit of these various countries. We think it has done that. We think it has had a great deal to do with raising the spirit of these people and increasing their willingness to build the security forces up to the point where they will become a deterrent.

PRODUCTION POTENTIALS

Mr TABER. I am not going to ask you for details, because I do not think we ought to have them at this time, but do you think they are producing anything like what they should in the line of munitions and ammunition?

General BRADLEY. Well, that is in my opinion the most complex question connected with this problem. Let us take France as an example. I think France is the key to the European set-up. France has now improved her industrial capacity until it is about 135 percent of its prewar industrial capacity.

The question immediately arises, "Why can they not convert a lot of that to making equipment and so forth for themselves?" In my opinion they can. In my opinion they can convert more of it than they have converted to date.

However, I realize after going into all of the angles like raw materials, low wages, the difference between wages and the cost of living, and the fact that they have not yet caught up on civilian production since the war, which makes for that differential, and their finance problem, that possibly we should not hurry them too much.

May I go off the record just a minute to illustrate that?

Mr TABER. Whenever you say.

General BRADLEY. Yes, sir. (Discussion off the record.)

ATTITUDE OF EUROPEAN NATIONALS

Mr TABER. From the military standpoint, General, have you noticed any marked improvement in the seriousness and the willingness of the people of Europe to defend themselves?

General BRADLEY. Yes, I think I can answer that positively, and I can illustrate here, that a year and a half ago, when I was in France, I heard remarks by Frenchmen that they did not see any hope and they were going to try to get their investments out of the country.

That attitude changed, or they would not have been able to build up their industrial production to 135 percent of what it was. It changed somewhere between a year and a half ago and now, and you get expressions of hope that can be illustrated in the great mass of the French people of recovery in France and of the ability to defend France.

Mr. TABER, there is one other angle to this which I think would be of interest to the committee. Just before I came over here, I received a report from our observers in France on the July 14 Bastille Day parade,

which I think is indicative of the whole new spirit of France. If you will permit me, I would like to read some extracts from it:

"The traditional 14th of July parade down the Paris Champs Elysées was enthusiastically applauded by large crowds which hung on despite poor weather. In sharp contrast to previous years, the parade was the biggest and most impressive since the liberation. Jets overhead, display of new matériel of French manufacture, and perfect discipline of foot troops in new-type uniforms attracted and captured public attention. The press in general proclaims the parade a great success and devoted space to detailed description of new weapons.

"We were especially impressed by the well-organized demonstrations and feel that the Government achieved its purpose of stirring public interest in the military accomplishments, in their effort to rebuild a strong and modern army. The parade was definite proof to the French people that they have made marked progress in the rearmament program."

ADEQUACY OF 1952 PROGRAM

Mr. WIGGLESWORTH. General, I have just one question on the record which I have asked of others with primary military responsibility: Do I understand correctly that in view of all the circumstances by which we are confronted, it is your opinion that the programs represented by the requests for appropriations now before us, represent the fastest build-up that we should attempt at this time?

General BRADLEY. From what we know at this time, yes.

Mr. SIKES. General Bradley, the committee wishes to express its appreciation for your most helpful presentation. We are always glad to have you with us.

Mr. MAHON. Yes, we appreciate the statement and your customary helpfulness to this committee and the Nation.

Hail to the Coast Guard

EXTENSION OF REMARKS

OF

HON. JOHN A. McGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. McGUIRE. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial from the Meriden (Conn.) Record of August 4 entitled "Hail to the Coast Guard," sending greetings on behalf of the people of Connecticut to the United States Coast Guard upon the occasion of the one hundred and sixty-first anniversary of its establishment.

As a member of the Board of Visitors to the Coast Guard Academy in New London, Conn., I had the pleasure recently of visiting that excellent institution. We in Connecticut are justly proud of the Academy's fine record in preparing young men for their future roll as Coast Guard officers and for upholding the high tradition of that service.

HAIL TO THE COAST GUARD

It was 161 years ago today that the United States Coast Guard came into being. This unique service, which works in peace as well as in war to safeguard the lives and property of Americans, was founded by Alexander Hamilton, the first Secretary of the Treasury.

The Coast Guard enjoys a unique status among the services, in that it is always actively on duty. Its wartime functions, in close cooperation with the Navy, are but an extension of its peacetime duties. The saving of lives at sea, operating lighthouses, manning the iceberg patrol, inspecting civilian craft, and in a multitude of ways serving the needs of the citizens who live by and on the sea constitute the work of the Coast Guard.

The Coast Guard's tradition of service is an honorable tradition, fortified by 160 years of valiant performance above and beyond the call of duty. To the Coast Guard we send greetings on behalf of the people of a State which has long been conscious and appreciative of the work of the men who have made *semper paratus*—always prepared—their practice as well as their motto.

Philosophy of Freedom Has Achieved Miracles

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. HAVENNER. Mr. Speaker, the power of freemen with unfettered minds to overcome all obstacles in the preservation of their freedom was the theme of an eloquent commencement address delivered at Stanford University, my alma mater, on June 17 last by Eugene Meyer, chairman of the board of the Washington Post.

The address follows:

President Sterling, members of the Stanford faculty, members of the class of 1951, and their friends, my presence at this occasion is in a sense an act of self-indulgence. I can never resist a good excuse to return to my native State. I was born in Los Angeles more than three-quarters of a century ago when that great metropolis had some 8,000 inhabitants.

Let me confess at once that I had to overcome a deep prejudice before I found the courage to accept the honor of addressing you today. It is a prejudice against old age. I have always preached—on the basis of experience—that old men are dangerous—dangerous, that is, when they give advice or hold on too long to positions of authority. I agree with what Owen Young said on his seventy-fifth birthday, "that more harm is done by old men who cling to their influence than by young men who anticipate it." I think that is one of the reasons why we are in so much trouble today. There are too many old soldiers still in command of the Western World who haven't faded away.

But I overcame my prejudice and came here today. I did so because I remembered my pessimism as a young man when I realized that the price of an acre of land in what is now the city limits of Los Angeles had risen during my boyhood from \$2 to \$20. What a pity, I thought at that time, that I wasn't born soon enough to grow up with the country.

So when I considered President Sterling's invitation I said to myself perhaps the worries of this generation that they were born too late are just as real and just as unfounded as was my youthful pessimism. As a matter of fact, my whole life experience has been marked by a series of national crises, one seemingly more alarming than the last—crises of all kinds, military, economic, political, social, that appeared to threaten

our very existence as a nation. Yet by intelligent cooperative action, by self-confidence, foresight, and hard work, our people emerged from every one of these well-nigh catastrophic events stronger, wiser, and more conscious of the latent power of freemen.

Today we face what again seems to be the worst of all crises. Once more disaster seems to threaten all that we have built, all that we are and all that we hope to become.

I would not pretend that I am untroubled by the challenges that face us. Only a fool could be unconcerned. But for two reasons I am confident about the outcome:

First, I believe that heaven really does help those who help themselves.

Second, I believe in the proven ability of the American people to "help themselves" in surmounting difficulties. It stems from the vitality of their tradition, the strength of their intelligence, and the decency of their character.

So it may be that in my role of the ancient mariner I can be of some help on the navigational problems that lie ahead for you. Despite the cliché, history does not have a habit of repeating itself. History does, however, have a fundamental continuity, and I would like to offer you some suggestions from the segment of history I have lived through since that June day 56 years ago when I, too, endured a commencement address.

In those years I have had unusual opportunities to witness the economic development of our country. And because that period of economic history is closely involved with the present situation, I want to review it briefly here today.

If one took a quick look at the American economy of 1895 and then at the economy today, it would be easy to conclude that utopia had arrived. For in those 56 years our national income has risen in dollars 15 to 18 times; the purchasing power of an hour's wages of our workers has trebled, average hours of work have been cut one-third; and our people receive nearly 65 percent of the national income in wages and salaries, as compared to about 50 percent in 1895.

Clearly, that is a monumental accomplishment, and, looked at in isolation, it would appear to be a conclusive answer to any competing system or ideology. But that is a picture of the long run. To understand the discontent of the present and the desire for change expressed in proposals, sound and unsound, constructive and destructive, we must look to the short-run behavior of our economic system; nor should we ignore the fact that our economic conditions have a profound effect upon the whole world.

Since 1895 I have had a close view—sometimes uncomfortably close—of four periods of serious panic and depression. (I shall skip over some minor troubles which have been euphemistically described as recessions, disinflations, and the like.) You can see from the long-run trend I have cited that these depressions did not prevent our making the greatest economic progress the world has ever witnessed.

Yet to take too much solace from this is to miss the major point. These depressions put a very heavy price on our progress—a price of social unrest, of individual catastrophe, of human suffering. It is all very well for scholars and statesmen and businessmen to sing psalms of praise about long-run progress, but hunger can get very intense in the short run and can, indeed, transmute a short-run human being into a long-run corpse.

And so I think it has come about in my time that the people of our country and of many other countries have made a resolve. It is not written in constitutions or party platforms, but it is, nevertheless, a real and lasting resolve—that the social cost of major depressions is too great a price to pay. That resolve is a dominating fact of our times—one that will shape much of the history that this graduating class will live through.

Now, let us look for a moment at those four major panics and depressions that I referred to as occurring since 1895. It is essential that we understand something about them in order to gauge where we are going, for if our people have resolved against permitting a recurrence of their social costs we have two broad choices:

On the one hand, it is up to us to make our system a more stable one and at the same time keep it in harmony with traditions of freedom.

If we fail to do so, we may be doomed to the regimentation of socialism or even the familiar terror of tyranny which nowadays operates under the label of Stalinism.

An analysis of those four depressions is relevant to the choice we make. As I look back on them one dominating factor emerges—those depressions were all man-made. They all resulted from human ignorance and human mismanagement. They were created by sins of omission as well as commission. None of them was caused by great forces of nature which man cannot control. That is their dominating characteristic. And it is a heartening fact. For if these crises in our economic record were caused by man's ignorance, then it should be possible for man's intelligence to prevent similar catastrophes, or at least keep them within bearable limits.

Let us review those four depressions briefly.

The first period involves the panics of the 1890's. These panics—and they were really severe—were due to the rapidity with which we built up our capital plant, especially our railroads, on funds borrowed from foreign investors. We were pushing railroad development because our population was rapidly increasing and because we wanted that population in order to develop the country's resources. It was a period of private enterprise at its best and also its worst. It was full of daring of a constructive kind, but it lacked restraints necessary in the public interest.

The boom was followed by the bust. The bubble was burst by the silver interests. Their proposal in Congress in 1890 for free coinage of silver ended in a compromise which compelled Government buying of 4,500,000 ounces a month. Even this compromise not only stopped continued foreign investment but also resulted in wide withdrawal of funds and distrust of our monetary stability. This caused an outflow of the gold reserves behind our greenbacks and the resulting money panics of the 1890's. Bryan's defeat in 1896 and the election of McKinley created renewed confidence in our currency and we came out of the panic. A new era of development and progress followed.

But we did not yet grasp the need for banking and currency reform.

The panic of 1907, the next major disturbance, was a violent one. The panic followed a boom period with great stock market speculation arising out of improved business conditions and a higher level of construction activity than was healthy in view of the limits to the credit expansion possibilities of our financial machinery at the time. The situation was in some ways comparable to the overexpansion of credit we witnessed last year. It called for moderate, intelligently directed credit restraint. But there was little public discussion of the dangers in 1907 and no adequate machinery to meet changing needs of business for credit and currency. The element of elasticity in American finance was largely in the hands of private foreign investors and foreign banking institutions, and ultimately the Bank of England which was then a private institution. And the Bank of England's course of action—not made public at the time or even understood since—was for a short time very drastic. It caused such an extreme currency crisis that on one day funds were completely absent from the call loan market in New York City.

There followed a depression in business volume and prices, and unemployment on a considerable scale.

After these two panics, both a result of our inelastic currency, the Congress passed the Federal Reserve Act in 1913 to provide a currency capable of expanding and contracting in response to business activity and to improve our banking system in other respects.

The next major depression was short but it was very acute. It caused distress to every branch of our national economy. It came in 1920 as a result of the dislocations of World War I. The cause was the first emergence of a situation now very familiar—that is, the so-called dollar shortage of our overseas customers whose economies had been upset by war. Because of the blindness of certain Treasury officials, the export finance powers of the War Finance Corporation were suspended just when they were most needed. As a consequence, our essential foreign markets disappeared and, in addition to causing needless suffering abroad, there resulted an unnecessary disaster here at home.

I made a public attack on the Treasury at that time in these words:

"The cheeks of the children of Europe are gaunt with hunger, but the cottonseed that would furnish them the needed fats is rotting on the fields of Mississippi, they walk in tatters, and the cotton fields are white with cotton it does not pay to pick.

"The sleek, breeding herds of the prairies, whose get is needed for the coming years, are led to slaughter because our financial leadership in the Treasury confesses itself impotent.

"The corn and wheat of our great granary States lie in the bins because the farmer cannot sell, in the present demoralized market, without making himself a bankrupt, yet we are told by the head of the finances of this country that 'nothing can be done.'

"The factories of New England are idle and their labor unemployed, not because their product is not wanted, but because our domestic and international organization for the production and distribution of goods is suffering a breakdown, yet we are solemnly advised that 'nothing can be done.'"

The policy of the Treasury Department was overridden by Congress in 1921. Export credit facilities were reestablished and provision was made for carrying and marketing agricultural products for the necessary longer periods.

These measures revived our economy and made the depression a short one. The revival was rapid, but the cause and cure were very little understood. So great was the ignorance that the Republican Party in later years never corrected the erroneous claims of the Democratic-campaign orators that this had been "another Republican depression." The fact is, of course, that depressions have no party preference—and this one happened to be a Democratic one resulting from the mistakes of the Treasury Department at the end of Wilson's administration.

Let me add here that, in publicly attacking the do-nothing policy of the Treasury in 1920 I was not advocating any system of planned economy. I was opposed to such an economy then, and I am opposed to it now. I was urging rather the adoption of temporary and emergency measures designed to meet an unusual and critical situation, to stimulate and encourage the normal functioning of existing agencies, and to alleviate suffering and hardship.

I have always felt that there was real danger in the overcentralization of power in Washington. Local control of local affairs—a fundamental principle in the thinking of our founding fathers—has always seemed to me to be the right political philosophy, even in situations where Federal cooperation and assistance were needed. And that applies to the financial, social, and economical fields, as well as to the political field.

Early in our history a great battle was fought about the Bank of the United States.

Today we have in the Reconstruction Finance Corporation a credit bank of the United States. In 1931, I participated in the drafting of the bill creating the Corporation and urged its passage before committees of Congress. But, in doing so, I emphasized that it was justified only as a temporary measure to meet an extraordinary, unusual, and critical situation and stressed the vital necessity of competent and conscientious, as well as courageous, administration. The Corporation, however, continued on after the emergency, and, as the revelations of the Fulbright committee have shown, it is now nothing like the institution that it was intended to be and was, in fact, at the beginning. In my judgment, no institution which provides a pipe line from the Treasury to the voter can, in the long run, be administered in a way that will avoid the corrupting influence of political pressures.

The last depression was the great one that began in 1929 and affected the whole world in the thirties. The major causes for this boom-and-bust period were mismanagement of the war debts and reparations, unsound lending of American capital abroad, and excessive and unsound real-estate financing at home. The real-estate boom started as a program to fill a legitimate need—the lack of housing, factories, and office buildings caused by the low rate of construction during and immediately after World War I. It ended in a speculative frenzy with capital funds provided through the public sale of securities and by mismanaged mortgage guarantee companies. The frenzy spread to other markets than real estate. At home the collapse was deepest in heavy industry and construction activity.

The disaster became world-wide largely because of the economic follies committed in the Treaty of Versailles and of our failure to remedy them during the 1920's.

The depression at home was longer than it need have been mainly because the Roosevelt administration, in relying principally on stimulating consumer activity, neglected to take steps to revive heavy industry and construction, which are far more fundamental.

Those, in sketchy forms, are the characteristics of the four major depressions of my time. They were all, as I have said, man-made. They were all—in large part at least—avoidable. That they were not avoided was due in substantial part to a general ignorance of economic affairs, an ignorance which in many quarters took the form of ardent belief in a doctrinaire concept of *laissez faire* in extreme form. Neither radicals nor reactionaries conceived of a middle course.

To the reactionaries, the panics and depressions, the mass unemployment, were regrettable but unavoidable blemishes that were justified by long-run progress. To the radicals, the panics were undeniable proof that a wholly new system was essential. Neither could envision what I believe is the great development of our time. And that is an evolutionary development of a system of economics which is congenial to freedom and which depends in turn on freedom for its strength.

To speak in terms of oversimplification, our system of economics must wrestle with the dilemma that while man cannot live on bread alone he nevertheless cannot live without bread. The stand-pat reactionary adherents of *laissez faire* were unprepared to recognize the urgent claims for bread. The radicals succumbed to the fallacious idea that man's only needs were material.

This is the essential conflict between freedom and security. Some reactionaries were so doctrinaire in their concept of freedom that they even persuaded an errant Supreme Court to hold inviolable what they called the "freedom" of child labor to contract for self-exploitation. And the radicals' position led to another form of reaction—statism, which

in Russia insists that security is so important that it becomes necessary to put 1 person out of every 12 in prison camps to guarantee security.

Both of these opposite positions are presented as logical; at least they pursue their reasoning to "dryly logical extremes." But the nonsense of this was explained by Justice Oliver Wendell Holmes when he told us that, "A page of history is worth a volume of logic." That is to say, man is not a dryly logical animal, but instead the genius of man is to pursue the problems of life practically and experimentally.

And that I take it is just what we have been doing in this country since its founding. We have been working away experimentally and practically toward finding enduring solutions to our problems. Mr. Jefferson, the philosopher, could write the most eloquent and ringing demands for freedom; while Mr. Jefferson, the practical statesman, could advocate some censorship of college textbooks. Mr. Lincoln, the libertarian, could denounce totally the iniquities of slavery; while Mr. Lincoln, the Unionist, could flatly state that if necessary to save the Union he would retain slavery.

Such paradoxes of expression can be blithely denounced as hypocrisy by the authoritarian. They will be recognized by others as acknowledgment of the power of reason and of the wisdom of experience.

And, as I see it, the same approach represents the heart of the matter when it comes to our economic path. The heart of the matter is reason, experience, and a wise adjustment to changing conditions. That is to say—and this, of course, involves an act of faith—an abiding belief in the value of continuous pursuit of knowledge. We must be confident that, if the prior aberrations of our economic system have been man-made, it follows that it is possible for wiser men to avoid much of this in the future.

How do we do this? I can suggest no exact formula—no quick and easy economic panacea. But I think I can suggest that evidence exists that we are acquiring the kind of practical and experimental knowledge I earlier referred to.

Let's go back for a moment to the panic of 1907. It was preceded by an abuse of credit expansion similar to that we witnessed in 1950. The Bank of England—then a private body—dealt with it, and dealt drastically with it rather than taking moderate and sensible measures. And most important of all, the Bank of England acted privately with no public discussion or even announcement of its policy. The bank did not act thus because it was malicious. Private, unannounced action was natural in the setting, and it would have been impossible in fact to have developed any significant public discussion of the matter at the time. Action not talk was customary in such matters.

Contrast the situation involving the over-expansion of credit last year. In the first place, the institution required to make the decisions was one with an explicit public interest—the Federal Reserve Board. Moreover, there was the liveliest sort of discussion about what the Federal Reserve should do and about the conflicting claims of the Treasury. I do not mean to overpaint the picture and claim that this question came before the attention of this graduating class with quite the impact of the difficulties of Ingrid Bergman and Roberto Rossellini, or of the then bliss of Rita Hayworth and Aly Kahn. But in relative terms, the credit expansion issue reached an audience far wider than could have been imagined in 1907 when such subjects were reserved for a corporal's guard interested in the higher mysteries of finance.

It is this broadening area of interest in the significant that gives me definite hope for your future. It is this widening of knowledge that permits me to come to a university feeling as a colleague. For if institutions of

higher learning such as Stanford are the root source of knowledge, it is also true that journalism represents the medium whereby knowledge may be associated with day-to-day existence.

It is true that there is no inevitable connection between either a university or a newspaper and the sincere search for truth. Universities can be debased; can be and have been turned from the light of reason by Hitler, Mussolini, Stalin, Peron—and even by forces in this country. And it is equally true that Hitler debased a once noble Frankfurter Zeitung, that Stalin publishes a perverted Pravda, that Peron suffocated La Prensa, and that megalomaniacs at home can plot a course 180 degrees away from honorable newspapering.

But those evidences of perversion do not condemn the concept of a university or of a newspaper. On the contrary, they are reminders of the eternal earthly struggle of good against evil—a struggle which, it seems to me, often helps to freshen and revive the good and protect it from the atrophy of complacency.

Your future hopes, if I am right, lie in the proper use of the powers of universities and the press and other means of pursuing knowledge. For as I see the main challenge of the twentieth century, it is to maintain the proposition that knowledge and reason offer the true pathway for man: It is a pathway through which your generation can find an acceptable solution to the competing claims of freedom and security if you refuse to be shackled by dogma. There is already emerging in our economy—as a result of the free inquiry of free minds—real progress toward a practical answer for giving man some measure of abundance, and doing this without state controls that take away his liberty.

One hears talk about the need of "perfecting" this progress. While you may at your ages dally for a while with ideas of perfection, I hope before you come to my age you will have realized that perfection had best be reserved for heaven. If, in place of perfecting, you can in our generation render this evolving system somewhat less imperfect, you will have made real progress in this field of economics. And this almost certainly will lead to more important progress in the field of world peace.

I felt in the twenties—and still feel—that world peace was impossible if Germany was to be kept in economic chaos. But in the glitter of the Charleston, bathtub gin, and F. Scott Fitzgerald, there was little serious concern with the problem.

Today—as I dimly perceive it—a similar though different basic problem confronts your generation. The underdeveloped areas of the world, which is to say a majority of the human race, are not willing to linger patiently in poverty. They are looking for an opportunity for progress. They have a choice, even though it is an illusory one, of associating with Communist tyranny if no other choice is offered. We have an opportunity, a difficult one but nevertheless an opportunity, of offering them a workable chance to choose the path of freedom. By hard work, by creative thinking, by perseverance in the task, you can create for them that opportunity. Or by default, as my generation defaulted on the problems that created World War II, you can give to the world the most ghastly holocaust in the history of man.

I have no belief that I—nor any one of another generation—can spell out an answer for you. My only hope is that I can suggest a broad and challenging avenue of approach.

That is the approach of the free and inquiring mind. It encompasses an act of faith in the worth and decency of mankind. It rests upon the democratic belief that thought and action are mutually enriching when both are free. It implies a courage

of the highest order—a courage that totalitarianism's tyranny and dictatorship can be routed by the arsenal of freedom. It recognizes that freedom cannot be splintered into tidy pieces but must be a unitary whole. And so it rejects the idea that political liberty can be retained in an atmosphere of economic regimentation. It rejects the fraud of Stalinism that man is an economic being and can become a robotlike occupant of a slave society. It rejects the anti-intellectualism of all terrorists who are willing to imprison the free mind or indulge in any other depravity that may yield them power.

Freedom, of course, has its true foundation not in rejection but in affirmation. It affirms the cardinal fact that man—every man—has an awesome importance because he is put here in God's image. In this country which has been congenial to freedom from its inception, our greatest man gave homely expression to this fact, when Lincoln stated that God must have loved the common man because he made so many of them.

Freedom affirms this, and implicit in the affirmation is a belief in the immeasurable powers for good of the unfettered mind.

It is this affirmation which has raised this great university and continues to inspire it. It is this affirmation which gives strength and guidance to all of us who value the search for truth in daily living.

In a world of calumny and threat and darkness—foreign and domestic—it is but natural that such vaulting aspirations are under attack from tyrants and from those anxious to impose tyranny.

Your generation may well determine the course of history for centuries in the awful choice that faces you. My generation can offer as our most substantial contribution the value of our experiences including our mistakes—and our faith, as I said at the outset, in the as yet unfathomed power of freemen wholeheartedly committed to the preservation of their freedom.

I know of no better parting thought for you than one expressed some years ago by my friend Louis Brandeis:

"If we would guide by the light of reason, we must let our minds be bold."

Truman's Age

EXTENSION OF REMARKS OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1951

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith the following very interesting editorial, written by Mr. Robert Ingalls, from the Corvallis (Oreg.) Gazette-Times of August 3, 1951:

TRUMAN'S AGE

While the guessing game concerning General Eisenhower's candidacy for President goes merrily along, it might be well to look on the other side of the fence and see what Harry might be thinking about. Among other matters that must be considered, is the problem of his age.

If he should run again and be elected (God forbid) he would be the oldest man ever to be inaugurated President of the United States. He would be 68 $\frac{2}{3}$ years old on January 20, 1953. The record up to the present is held by William Henry Harrison, who was just a few days over 68 when inaugurated in 1841. Buchanan in 1857 and

Jackson in 1833 (second term) were just under 66.

For that matter, no defeated major-party Presidential candidate has ever been as old as 68 on election day. Henry Clay was 67 in 1844, Lewis Cass was 66 in 1848, as was Gen. Winfield Scott in 1852. The elder Senator La Follette was 69 in 1924, but he was running on a third-party ticket.

It is another story on Vice Presidents. ALBEN W. BARKLEY was 71 at his inauguration in 1949, Charles Curtis was 69 in 1929, as was George Clinton away back in 1809. Henry Gassaway Davis, defeated Democratic vice presidential candidate in 1904, had seen no less than 80 summers. The combined ages of Truman and BARKLEY at their inaugurations in 1949 was higher than the combined ages of any other President and Vice President on inauguration day.

Harry might well take a leaf from the book of the great Charles Evans Hughes, defeated Republican Presidential candidate of 1916. At the time of the 1927 election he issued a statement declaring, "I am too old to run for President." He would have been not quite 67 on inauguration day, 1929.

Armed Forces Personnel Freedom to Communicate With Members of Congress

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr JAVITS Mr. Speaker, with millions of Americans serving in the Armed Forces and with the new emphasis upon a civilian army—America's traditional weapon against dictatorship and oppression—the right of Armed Forces personnel to communicate freely with Members of Congress is of the utmost importance. It will be recalled that the Congress endeavored to preserve this right inviolate by a new provision contained in Public Law 51, the Universal Military Training and Service Act, amending section 4 (a) of the Selective Service Act to include the following:

No member of the Armed Forces shall be restricted or prevented from communicating directly or indirectly with any Member or Members of Congress concerning any subject unless such communication is in violation of law, or in violation of regulations necessary to the security and safety of the United States.

I have just had an interchange of correspondence with the Secretary of Defense on the implementation of this section of the law and the intent of the Armed Forces in construing it so as to give the maximum freedom to personnel. This correspondence will also be of interest to Members who may have had similar experience involving their own constituents, and I append it hereto:

JUNE 15, 1951.

HON. GEORGE C. MARSHALL,
Secretary of Defense,
Washington, D. C.

DEAR MR. SECRETARY: I have a number of letters from men in the services who have been considerably shaken by the case of Lt. J. G. Evans, who was relieved of duty by the Navy and deprived of his commission

after making some strong statements about the President and the Secretary of State. The men who have written to me would like to know what they may or may not do in respect of criticism of governmental policies or people in Government at home or abroad outside the military service and therefore not touching on military discipline, military law, and the customs of the service.

In the amendment to section 4 A of the Selective Service Act just passed the question of communicating with Members of Congress is dealt with, but this leaves a wide area of communication untouched. I would very much appreciate an expression of views from you on this timely and important subject.

Sincerely,

J. K. JAVITS,
Member of Congress.

THE SECRETARY OF DEFENSE,
Washington, July 11, 1951.

HON. J. K. JAVITS,
House of Representatives.

DEAR MR. JAVITS In response to your letter of June 15, 1951, I do not believe that there is anything in connection with the Evans case or with the customs and regulations of the three services concerning public derogatory statements about officers and officials of the United States that should cause any conscientious serviceman concern. I am enclosing for your information copies of regulations of the Army and the Air Force, with pertinent sections marked, and extracts of pertinent Navy regulations. These regulations are now being studied with a view to possible revision in light of the Selective Service Act of 1951. I should also point out to you that article 88 of the Uniform Code of Military Justice, which became effective on May 31, 1951, makes it a court-martial offense for military personnel to use contemptuous words against the President, the Vice President, Members of Congress, and other high officials of the National and State Governments.

It must be recognized that, in addition to strict compliance with pertinent regulations, the propriety of public comments of a member of the military service frequently depends upon the position and assignment of that individual. Frequently an individual in the military service may be placed by his superior officers in a position of trust where the international situation or other factors involved may be of such a delicate nature that any public comment contrary to the policies of the service or of the United States would prevent that individual from performing his duty adequately.

The value of an officer in any of the services depends in considerable measure upon his ability to exercise good judgment, and his activities in this field might well be an important indication of that ability. For example, an officer serving as military attaché or as liaison officer with foreign troops would demonstrate folly by issuing public statements of a derogatory nature about the nationals with whom he is connected.

Faithfully yours,

G. C. MARSHALL.

UNITED STATES NAVY REGULATIONS (1948 EDITION)

ART. 1248. Communications to the Congress

All petitions, remonstrances, memorials, and communications from any person or persons in the naval service, whether on the active or retired list, addressed to the Congress, or to either House thereof, or to any committee thereof, on any subject of legislation relating to the Naval Establishment, whether pending, proposed, or suggested, shall be forwarded through, or as authorized by, the Secretary of the Navy.

ART. 1249. Dealings with the Congress

No chief of a bureau, office, or division, or other subordinate in the Navy Department, and no person in the naval service shall apply to either House of Congress, or to any committee thereof, or to any Member of Congress, for legislation, or for appropriations, or for congressional action of any kind, except with the consent and knowledge of the Secretary of the Navy; nor shall any such person respond to any request for information from either House of Congress, any committee of Congress, or any Member of Congress, except through, or as authorized by, the Secretary of the Navy; except as provided in sections 102, 103, 104, and 859 of the Revised Statutes.

JULY 17, 1951.

HON. GEORGE C. MARSHALL,
Secretary of Defense,
Washington, D. C.

DEAR MR. SECRETARY. Thank you for your letter of July 11 with respect to the customs and regulations of the services regarding expressions of opinion by servicemen. I note that you feel that certain revisions in these regulations have to be made in conformity with the amendment to section 4 (a) of the Universal Military Training and Service Act providing that "No member of the Armed Forces shall be restricted or prevented from communicating directly or indirectly with any Member or Members of Congress concerning any subject unless such communication is in violation of law, or in violation of regulations necessary to the security and safety of the United States."

I note that the regulations of the Navy Department, particularly articles 1248 and 1249, would require revision in view of the quoted provision of the law. It seems to me that the important point made in the law is the word "directly" and secondly the interpretation which will be made of the words "regulations necessary to the security and safety of the United States."

The services, of course, have the right to protect classified material but it seems to me that beyond that it was the intention of the Congress to completely preserve the right of direct communication by the men in the services. I do not consider article 88 of the Uniform Code of Military Justice to controvert the quoted provision of the Draft Act but rather to characterize communication which would be in violation of law. The important right to be preserved is that of communication unhindered and not through channels so long as it is neither contemptuous nor deals with classified material. The prohibition on the uttering of contemptuous words would seem to take care of discipline.

I hope very much that this is the way in which the Defense Department intends to construe and administer the law and I would very much appreciate any expression of policy from you on this subject.

With best wishes, believe me.

Sincerely,

J. K. JAVITS,
Member of Congress.

THE SECRETARY OF DEFENSE,
Washington, July 26, 1951.

HON. J. K. JAVITS,
House of Representatives.

DEAR MR. JAVITS This is with regard to your further letter, dated July 17, 1951, on the subject of the customs and regulations of the armed services regarding expressions of opinion by servicemen.

As I indicated in my letter of July 11, 1951, the service regulations on this subject are being studied with a view to possible revision in the light of section 4 (a) of the Universal Military Training and Service Act. I shall see that the suggestions in your letter are

considered in this connection and that copies of the regulations, as revised, are furnished to you.

Faithfully yours,

G. C. MARSHALL.

A Fearless Editor Defends an American Proposal

EXTENSION OF REMARKS OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, when I introduced H. R. 4780, a bill to fix bail of a convicted Communist at \$1,000,000 for each day he stays out of jail, a great hue and cry went up from certain left-wing editors.

Ridicule and abuse were hurled my way from Red sympathizers, and even the voices of some right-thinking Americans were subdued, perhaps in apprehension.

All the more reason why the country should be grateful to the fearlessness and courage of the editor of the San Francisco Examiner who defended the Hall bill in a recent editorial, which I insert herewith:

WHY TREAT TRAITORS BETTER THAN MURDERERS?

It is simple common sense and it is also sound justice to withdraw the privilege of going free on bail from convicted traitors, as Representative HALL of New York has proposed.

By amending the Federal Criminal Code, Mr. HALL would forbid the courts to extend bail, pending the outcome of an appeal, to any defendant convicted of treason, espionage, sedition, or subversive acts.

The need for such a revision has been made clear by the success of 4 of the 11 convicted Communist leaders in evading the prison sentences imposed on them on charges of advocating the violent overthrow of the Government.

These men had been permitted to go free on bail pending the outcome of an appeal to the Supreme Court.

But instead of surrendering when the Supreme Court upheld their sentences, the four simply vanished.

By forfeiting the \$80,000 bail that had been posted for them, they made it plain that the putting up of bail bond money provides no guaranty against the flight of defendants in cases involving disloyalty to the United States.

For the time being, at least, the four powerful Communist leaders have contemptuously evaded the just punishment imposed on them by a jury and a judge.

They have avoided the confinement that would have made them harmless.

They are still at large and free to pursue any course of treachery or sabotage against their country that may be dictated to them by their masters in the Kremlin.

And no doubt \$80,000 seems to those whose sinister cause they serve a very small price to pay for keeping them free and active.

Obviously the only way to make sure that individuals convicted of subversive crimes serve the sentences imposed upon them is to put them in jail and keep them there until any appeals they may make shall have been settled in the higher courts.

They do not deserve the privilege of freedom on bail because, as Representative HALL accurately observes:

"Persons convicted of these crimes against our country are in a special unholy category"

There is, actually, no category of criminal as low as traitors or as little deserving of consideration.

Even murderers, abhorrent as is their crime, are less cruel and unfeeling.

Yet convicted murderers are legally denied the privilege of bail and even persons charged with murder but not yet tried are only rarely admitted to bail.

Should traitors, who with their betrayals, secretly and callously endanger the lives of thousands of their fellow citizens, and who strive relentlessly for the destruction of the Nation itself, be better treated by the law than ordinary murderers?

We must, as Representative HALL recommends, put an end to the "ridiculous codding of these vicious Reds." We must close their every avenue of escape.

Mr. HALL's amendment should be promptly enacted into law.

Government Feeds Inflation While Pretending to Oppose It

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Freeman of July 16, 1951:

C FOR COUNTERFEIT

A decent respect for the symbols of government makes it impossible to characterize properly a message from the President of the United States to the people on the terrors of inflation, in which the cause of inflation is never mentioned. It could ruin us and enable Stalin to take the world, if "it got away from us," he says; yet he treats it as something that just somehow happened, like an act of providence abetted by the National Association of Manufacturers and all "the selfish interests."

The facts about inflation are desperately simple.

Prices rise for only one reason—ever: because there is more money than goods. There may be either a scarcity of goods or a plethora of money. In this case there is no scarcity of goods; the cause of inflation is the fantastic increase in the supply of that irredeemable paper currency which we take to be money. We are obliged to take it to be money because there is no other kind. A New Deal law says there shall be no other kind and that to make bargains or contracts in any substitute for it is unlawful. But it is not money, save only in the sense that a counterfeit bill is money if you spend it without getting caught.

The only way to stop inflation is to stop the printing of irredeemable paper money.

Who prints it? The Government prints it. Who invented it? The Government invented it.

With what intent did the Government invent it? With intent to cause inflation for political ends. It was a device to convert its own debt into money. That gave it free billions to play with.

How does the Government convert its own debt into money? That also is simple. It works so:

The Government sells bonds. A bond is its I O U. How will the bond be paid when it comes due? In irredeemable paper money. How is that irredeemable paper money secured? By Government bonds.

Thus an I O U on one shape of paper is secured by an I O U on another shape of paper—as if, on going to the bank to borrow money on your promissory note, you were asked by the banker, "What security can you give me for the payment of this note when it comes due?" and you should answer, "Another promissory note. Give me the money on this one and put the other in your safe." If the banker said, "O. K.; here's the money," he would be on his way either to bankruptcy or to jail—unless the borrower at his window happens to be the United States Government. That makes it legal.

The Government alone is responsible for inflation. The danger is not, as Mr. Truman says, that inflation will "get away from us," but that it will get away from Government.

One of two things is true: either the President is ignorant of the facts, or he pretends not to know them. To tell us, as he does, that inflation can be stopped by a law forbidding prices to go up, is to tell us a false thing. The utmost we could do with such a law would be to postpone the consequences for a little while, with the certainty that later they would be all the worse for having been temporarily suppressed.

Suppose price controls did work for a time, so well that every housewife came home from market with money in her purse, having been able to satisfy her wants at the lower prices fixed by the Government. What would she do with the money? There it would be, a potential inflationary force, the problem, the cause of inflation, being that the amount of irredeemable paper money in people's hands has been increasing faster than the supply of goods.

So long as this process continues, controlling prices by law—even though it works briefly—is like holding down the safety valve while the pressure goes on rising in the boiler. "I can't do the whole job by myself," says the President. "It is up to all of us," he adds. So let us all swing our weight on the safety-valve rope and all blow up together.

The New Deal financed its revolution by inflation, designedly, and failed to bring about recovery. What saved its recovery program was a defense program, also largely financed by inflation, intentionally; then World War II, heavily financed by inflation, of course, as all wars now are.

Since World War II every grand policy conceived by the Government, domestic or foreign, has been inflationary. And now, coming to a much costlier defense program, and notwithstanding a terrific rise in taxes, we are facing for the next year a deficit of the order of fifteen billions. With that fiscal calamity in view, you might think the Government would be cutting its nonmilitary expenditures to the quick. No so. Its expenditures for nonmilitary purposes are at this moment the highest ever known.

How shall one explain the President's high disregard for statistical demonstrations by Senator BRAN and others that the Government's nondefense spending might be cut eight or nine billions with no crippling effects? The answer must be that it has a secret faith. Ectoplasmic money has never failed it yet. When the billions are needed they can be called out of the void, from utter nothingness. That it believes. That has been its experience. Which means, no matter what the President may say to the contrary, that the Government is counting on inflation still.

Whatever inflation may do to others, it does not impoverish government, for two reasons: First, as Government prints the paper money, so it spends it first, before its

effect on prices has been felt. Secondly, there is a long way to go before the cost of engraving a paper dollar will exceed what it will buy in the market place; and before that may come a regime that will reduce money to the status of a ration card.

Consolidation of Offices in Veterans' Administration

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. MULTER. Mr. Speaker, I have today introduced a bill to prohibit the Administrator of Veterans' Affairs from transferring or consolidating any offices or making extensive reductions in force until 60 days after notice of such proposed action has been given to the appropriate committees of both Houses of Congress. For the second time within a period of a few months the Veterans' Administration has sought to consolidate offices which, in the opinion of many Members of Congress, would be detrimental to the service the veterans are entitled to. We believe that those proposed consolidations would not have brought about additional efficiency nor even saved any money to the taxpayers in the operation of the Veterans' Administration. If anything, less efficiency was likely to result. The undue hardship that would be imposed upon the employees of the Veterans' Administration and their families is alone sufficient reason to oppose those changes. Such proposals are destructive of the morale of the employees in these offices.

Passage of my bill will give assurance to them and to all veterans that the matter will be carefully studied in the future by the appropriate congressional committees before such proposals are effectuated.

Plan To Abolish Football at West Point

EXTENSION OF REMARKS OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I include an editorial from today's Hartford Courant commenting on a proposal made by the junior Senator from Connecticut, Mr. BENTON, and supplement this with the column written by Bill Lee, sports editor, in the Courant on Monday, August 6, under his copyrighted caption "With malice toward none." The editorial mentions Mr. Lee's analysis:

SENATOR BENTON'S PLAN TO ABOLISH FOOTBALL

Senator WILLIAM BENTON is farther off base than usual in his recommendation that

football teams be abolished at West Point and Annapolis. Football, he says, is a cancer at these institutions and should, therefore, be extirpated. On this matter Mr. BENTON's views are completely at variance with those of Bill Lee, the Courant's sports expert. The latter believes that guilt lies less on the heads of the young men involved than on the eager-beaver politicians and brass hats who have been bitten by that bug of victory at any price. To support his position Mr. Lee cites the pleasant example of happy Herman Hickman at Yale, and the similarly healthy atmosphere that prevails at Amherst, Williams, Wesleyan, Trinity, and other small colleges where young men still enjoy the game of football.

Perhaps Senator BENTON went off half-cocked on this one. Anyway, he would profit greatly from reading Mr. Lee's views on the subject. The cancer is not football, as Mr. BENTON so superficially surmises. Basketball has been subject to fixes, but that does not mean that the game itself is inherently evil. The evil lies in the hearts and the minds of the parasites, political and otherwise, who have forgotten that football is just a game.

The evil goes even deeper than building a football machine through manipulation of congressional appointments to West Point and Annapolis. Things like the West Point affair have their counterpart in the atmosphere of amorality that has been developing in Washington under Mr. Truman, which is infecting the whole country. It is the kind of amorality that leaves men unmoved by the spectacle of a Supreme Court justice receiving a deep freeze from a little, cheap-John racketeer, or of a White House secretary getting a mink coat from a successful RFC loan applicant. It is the kind of amorality that causes officialdom to blink stoically at influence peddling, and that accepts without hesitation the philosophy that all life is a racket, so why not get yours while the getting is good?

Even Senator BENTON is not entirely free from onus. During recent investigations he admitted that he had received political cash contributions that he had not listed. These were used to buy and distribute reprints of a speech he made. A small thing, yes, and others do far worse. But it illustrates the manner in which corners have been cut in high and low places in recent years. Indeed, there is something slightly ridiculous in the fact that one Democratic Senator is now seeking to develop a written code of ethics for public officeholders.

If one adds all these matters together, they represent something infinitely more dangerous than the fall from grace of some young men at West Point. If football is a cancer to be extirpated from our service institutions, what can we call the politicians who continually cut corners on accepted standards of morality? Shall we extirpate them?

WITH MALICE TOWARD NONE

(By Bill Lee)

It makes a man a little sick in the stomach to learn that 90 West Point cadets are being kicked out of the Academy for cheating at examinations in violation of an honor code that has existed for more than 100 years.

But it makes this one man even sicker to hear Senator FULBRIGHT, Democrat, Arkansas, raise his hands in righteous anger and propose that Army and Navy abolish intercollegiate athletics.

The Senator from Arkansas is suggesting a cowardly action by the United States Military Academy. He is suggesting that the men responsible for molding the future leaders of the military forces of the United States break ranks and flee in disorganized retreat.

There should be an immediate and thunderous repudiation from West Point of Senator FULBRIGHT's easy way out. Without a

moment's delay it should be made plain that West Point will play out its 1951 schedule even if every game is lost, which is probably what will happen.

Reports indicate almost the entire varsity football squad is involved. This means that Coach Red Blaik will face the most arduous coaching assignment of his life. But it will be an honest squad of unsolicited and inept football players who may have more fun taking their beatings than the high-pressure stars would have had shooting for another typical Blaik season.

INVARIABLY GOOD FOOTBALL TEAMS ARE RECRUITED

Senator FULBRIGHT's outpouring of wrath would have been more acceptable if he had also suggested an investigation of some of his own colleagues, who may have cooperated in dispensing congressional appointments to likely football material.

Most of the appointments to West Point come from Members of Congress, and it is evident that all the great football players who have passed through the portals of West Point in the last 10 years did not win competitive examinations with nonathletic candidates.

West Point is no different from any college or university that has a powerful big-time football team. Such teams are not accidental. Without exception they are recruited. Outstanding prep-school and high-school athletes are induced by one means or another to accept financial aid or such other inducements as the college sees fit to offer them.

Thus the whole structure of football at West Point in recent years has contributed to the breakdown of the moral code and the responsibility rests as much with the high brass as it does with the cadets being kicked out of West Point under shocking and unhappy circumstances.

The condition here is not entirely unrelated to the recent basketball fixes. That was cheating in another form and responsibility for the breakdown belongs, to some extent, with the college presidents and athletic directors, whose flirtation with fame and fortune brought the disgraceful conditions about.

High brass must have decided that West Point should have football teams powerful enough to meet and defeat the best college teams in the country. At least, the higher-ups must have condoned such a program.

SOME DO IT RIGHT AND HAVE FUN, TOO

In order to build great football teams at West Point there had to be collusion in the matter of appointments. All-America football players do not enter West Point or any other college by accident and rarely without particular inducement.

Senator FULBRIGHT has been described as a long-time foe of commercialism in college athletics. If he is that, he has this carping critic's support right down the line. Pre-occupation with the moneyed phase of college athletics is the source of most of the evil, but when Senator FULBRIGHT suggests the way out is to abandon intercollegiate athletics altogether he is unmindful of the fine institutions of our country who conduct their athletics with sanity and good sense and have a lot of fun doing it. What his personal experience may have been as president of the University of Arkansas I have no way of knowing.

Representative PORTER, Republican, of Michigan, made more sense when he said the ousted cadets are the victims of a system and that the responsibility belongs to the Military Academy and not altogether to the comparatively few cadets involved.

There is an unholly amount of pressure on a football player in the "league" Army plays in. With the withdrawal from big time commercial football of NYU, Fordham, and Columbia, New York papers adopted West

Point's team for its own and the pressure generated from the pages of the metropolitan press has been out of all proportion.

West Point played many of its big games at Yankee Stadium and the Navy contest at some such place as Philadelphia's Municipal Stadium, where 100,000 persons paid into a gate of better than a half million dollars. This is big business and no two ways about it.

If you ask me, the finest tradition of Army football stems from the day when its football games were played on the military reservation at West Point. Knute Rockne and George Gipp of Notre Dame played there and the Army-Notre Dame game was a thrilling, glamorous thing long before it was engulfed by the big business of its transfer to Yankee Stadium, where it ultimately grew too big for its boots and had to be discontinued.

What has happened at West Point is a heartbreaking thing, but it is one little spot on the cancerous growth of intercollegiate athletics. Much more is needed than investigations and studies. There had better be some concerted action before it is too late.

The colleges had better put their own houses in order instead of junking things like the NCAA sanity code and rushing to scrap the freshman rule on the flimsy excuse that the present military situation is comparable to World War II.

Critics like Senator FULBRIGHT, however, should be told that football and sanity are not incongruous at Trinity, Wesleyan, Yale, Amherst, Columbia, and other such spots. If Herman Hickman can make the transition from all-winning West Point to Yale, where it is not uncommon to lose two or three games each season, and still keep the happiest grin in America, it must be possible for the football factories to reform and still have fun.

How Would You Reorganize United States?

EXTENSION OF REMARKS OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD for the attention of Members of Congress an article by George Mellen, of Honolulu. The changes he proposes in our methods for selecting public officials are both original and provocative. They are deserving of the thoughtful attention of all students of our Government.

Following a distinguished career in the field of promotion and advertising, Mr. Mellen retired from active business to devote himself to study of government and other problems of human relationship.

His article follows:

How Would You Reorganize United States?
(By George Mellen)

"What Has Happened to You" in Reader's Digest for July 1950 is John T. Flynn's warning that you are being sucked down to ruin in the vortex of national debt. Nothing in the article suggests anything you can do about it but mourn and write to your Representative in Congress.

To test the editorial viewpoint of Reader's Digest I outlined a plan of action and

sent it in on July 17, 1950, as set forth in the following paragraphs. Response, dated July 28:

"Your discussion is interesting and provocative and we have read it with genuine appreciation of your point of view. But, unfortunately, the piece does not fit in with our editorial needs, and we are returning it with regret."

About 3 months later the magazine Life (November 13, 1950) asked editorially: "How bad are United States politics?" Its own guess included the plaint that "the quality of our politics has not kept pace with its increasing importance * * * and too many of our politicians, as currently spawned, are just not good enough to see us through the atomic age." An afterthought was that the independent voter could do something about it but suspected that the only thing wrong with the independent voter is that he doesn't know his own strength. Life offered no suggestions for improvement of political spawning methods, nor use of the independent voter's strength if he did know it.

With the thought that a provocative answer to Life's question might be better than none I sent my outline in on November 27, 1950. Response, dated January 23, 1951:

"It was good of you to forward the outline. We have read it with a great deal of interest but we cannot make use of it [as] most of Life is written by members of our own staff."

Both Reader's Digest and Life are in the multimillion reader class and that is achieved by editorial judgment nicely keyed to the fact that most of us enjoy a gripe but are bored with diagnoses seeking the cause of it. Hence many are the gripes and few the probes for causes in the pages of our press, on the air, and from the platform.

Nevertheless "What is happening to you" and "Bad United States politics" are not your depreciating dollar, your soaring taxes, your fantastically deepening national debt, your bungled foreign relations, and so on, but the cause of them. And the cause, as in any other enterprise, is bad management. Back of bad management must be incompetence, at least, and back of that the system through which incompetents, or worse, are employed. In this case the political machinery of your Nation. What's the matter with it? Obsolete, perhaps, if that is the word for eighteenth-century methods in mid-twentieth

Today no scientist, mechanic, nor roustabout of 1850 could believe the instruments of his calling today, much less manipulate them offhand. But any Member of the Twenty-third Congress, revived à la Fra the Phoenician, could sit in for any Member of the present session without briefing, and nobody note the shift. Any Rip van Winkle who heard the campaign speeches of Millard Fillmore for President and contemporary pleas from candidates for every office down to dogcatcher could walk into any political meeting today and hear nothing new.

How would you go about retooling your Government for "atom age" production?

Some of us think that the place to begin is with you as an essential ingredient for construction of a broad base such as that upon which rests the American corporation, its stockholders. We think that our Government might be set up to combine the best and most appropriate features of the successful American corporation for commerce and industry, especially those with extensive foreign relations, for scientific research, trust administration, insurance, banking, and so on. That American organization of private enterprise is efficient cannot be gainsaid. It has won two frightful wars, and if another comes, American efficiency and American honesty—never forget that—must win it.

American organized private enterprise is no longer in the experimental stage. It is working so well that it is the wonder and envy of every people on earth, including Britain, the mother of organized private enterprise. It is the rational extension of individual enterprise; the right to go in there and try—win, lose, or draw—and may God be with you. And He will, because He invented competitive private enterprise when "the first morning of creation wrote what the last dawn of reckoning shall read." By that law you must hide, fight, or run away. And as you have no armor as the turtle, no speed as the antelope, you must fight, mainly with brains given you in lieu of brawn. That is the measure of freedom and security you must accept.

Private enterprise, individual or organized, must make a profit or quit. There is no reason why the United States of America cannot operate at a profit out of which to pay its way and, in time, perhaps, pay you cash dividends instead of picking your pocket. Imagine what a political movement could do with that promise and plan. Practical, too, because America's natural resources and know-how provide the means.

Government has one legitimate function: to charter and protect righteous private enterprise. It is a service of vital, primary importance and as such is worth a fair price. But the price could as well be paid at the source as collected in myriad bites at fantastic expense to both government and business.

Further, to be fair, the cost of a charter should be fixed and subject to revision not oftener than, say, every 5 years, so that it can be projected into cost of doing business and included in prices. That would mean a universal sales tax which seems the only just and reasonable tax because ability to pay is proved by payment, and because payment is for something the buyer wants, there is no extortion as in arbitrary tax. The system is old, and current, on many luxury items. Use it on all.

That's how it looks to some of us. A working plan could be expected from an able national board of directors. Almost certainly they would not continue the present tax hotchpotch nor the mystic maze of import tariffs if they expected to discharge their obligation to operate the Nation at a profit.

Production of all kinds can be and ought to be by private enterprise, from heavy machinery to light entertainment and from hydroelectric plants to peanut stands.

Before sketching our idea for government set-up as a corporation, let it be said that the faults, failures, and skulduggery of corporations has been a natural manifestation of human behavior and must be expected in any form of association. Certainly our present political system is not blameless on that score and it is doubtful that any corporation or other form of enterprise for profit ever has plunged so many into so much misery as history records for the faults, failures, and skulduggery of governments since "the Assyrian came down like a wolf on the fold" and, finally, down and out.

One good reason why corporations for conduct of private enterprise cannot carry evil intent to crushing ends is that they must show a profit or quit, and profit comes from customer good will and nothing else in the last analysis. Revenue cannot be raised for long by taxing the stockholders.

The only enterprises consistently and continuously in the red are those collectivist activities conducted by your avowedly capitalist government. Dean of them is the Post Office, the chronic deficit of which is made up by taxes levied upon you, whether or not you mail so much as a post card and, worse, upon common carriers that suffer through Post Office competition. Other

communistic services, increasing in number at a rapid rate in recent years, are doing badly at a loss work which could be done well by private enterprise under public utility franchises. In a constant tizzy defending itself against communism, it seems that an effective move for America would be to abolish its collectivist enterprises and go on the offensive with all-out capitalism. To continue half capitalist and half Communist is rather silly. One or the other is right. Both cannot be.

But how, say you, are we going to confine government to governing and keep it out of the hands of incompetent and venal personnel? How frustrate the pressure groups always eager to corrupt them?

The answer is provided by human nature in action. Crooks we have always with us. Also the weak and the venal. There is no 100-percent purity possible, any more than there is in nature any 100-percent security possible. But we know that the weak and those who use them do not last long in private enterprise. A corporation cannot afford continued malfeasance any better than it can nonfeasance.

To achieve workable freedom from those risks Government can do as private enterprise does; pick personnel with character and ability commensurate with the job to be done and pay the top commercial wage for it. Which brings us to the point of how a stock company the size of the United States of America could organize practically for picking that type of employee, from board of directors to doorman.

First, let's admit that you can know very little, often nothing essential, about any candidate beyond the borders of your own bailiwick which, to take a unit well established in this country, is the county. If that is true, as indicated by persistent local interest, pride, and preferment, and the immemorial tribal instinct of mankind confirms, we can begin with a county board of directors. Many States have too many counties, several of which can be merged now that transportation and communication reduce time and distance in doing business with the county seat. To make sure that a board of directors comprise only those men and women big enough for the job, every candidate must have established a reputation for civic sense, honesty, ability to team it with others, and for undivided loyalty to county, State, and Nation. That would mean an offer of pay equal to that offered by private business for equivalent full-time service. It would mean also a tenure of office long enough to render public service worthwhile, and security keyed to qualification and to nothing else. Lastly, positively it would mean divestment of all private interests for profit.

Minimum age for a candidate could be 40, because few men and women get life well in hand before that age. That is based on the average, as boy wonders are as scarce as Winston Churchills and less gratifying, which brings us to retirement age limit, again based on the average at risk of losing the Churchill bonus, of 65. Term of office throughout should be 25 years with retirement pay for honorable service keyed to its length. Maximum age for a candidate could be 60, as less than 5 years in office would not tempt the right type with a rich store of experience and ripe judgment. There would, of course, be resignations, disabilities, deaths, and removals for cause.

Size of a county board would depend somewhat on the number of political subdivisions existing or deemed practical but from each there should be elected one member and one associate, both to serve full time and either to have full power in the absence of the other but the member polling the larger vote to be recognized as leader. This should minimize nonfeasance through

absenteeism and as two heads are better than one, make for good judgment and lighter labor.

Voting power would be the total of votes counted at the latest election (a proxy of every voter) thus automatically taking care of reapportionment annually. Elections should be annual, as the rhythm of existence is annual. Skip a year and interest sags. At the start, terms on all boards could be staggered but age differences, disability, resignations, death, or removal for cause might, within a few years, furnish new candidates enough openings.

Instead of nominations, either by convention or primary, let there be an examining board before which all candidates must appear. Any candidate who passes need only file and pay a nominal fee to have a place on the ballot. No party labels permitted. Affiliate as he or she may wish unofficially, the candidate must go before the people as an individual. Voting machines should be compulsory, to avoid spoiled ballots and to expedite election procedure.

Examinations of candidates must be open, on the air by radio or television, or published in the press. With TV, voters could see and hear a candidate under better conditions than in the hubbub and often rowdy political meeting.

One thing certain, the existing method of getting candidates on a ballot is silly if not vicious. To qualify, any lunkhead or crook needs only to put up a nominal entrance fee and get a few friends, equally worthless or dangerous, to endorse an application, with always the public danger of getting nominated and elected. Public exams for ability and character, the age restrictions, and no party affiliation would give ward heelers and pothouse politicians less than half a chance to function.

With election of a county board of directors, the voter will have made intensive, intelligent, and full use of the franchise. That would be the only election. How that would give every voter representation at the State capital and at Washington is revealed as you read on.

First duty of an elected county board would be selection by secret ballot from its own membership of a member and associate of the State board of directors, ex-legislature. On the State board the voting power of each county would be the total of votes cast at the latest election, thus taking care of reapportionment for the State.

First duty of a State board would be election from its own membership of a member and associate for the national board of directors, ex-Congress. Voting power to be the total of votes counted at the latest election, thus taking care of national reapportionment year by year and giving every voter in every county of the Nation a voice in its affairs.

Terms of office on all boards to be 25 years or to retirement.

First duty of the national board of directors would be appointment of a national general manager, ex-president, who would be free to pick his own subordinates from first assistant manager, ex-vice president, down.

The national board of directors would appoint a Supreme Court of, say, 18 members who would choose their own chief. A court of nine is not, nor has it been for a long time, equal to the load of today. Nine members sitting would, perhaps, constitute a court thus applying the same manpower reserve as for boards of directors by an associate for each member.

Two other appointees of the national board would be the attorney general free to build his own department, and the national auditor with like freedom to choose his subordinates.

As for the military establishment, the feeling grows that it could well be made a public

utility under obligation to maintain internal law and order and to prevent foreign aggression by nipping such political schemes in the bud. Here again there must be incentive and reward and obligation to make good or make room for some one who can. No national board of directors pledged to profitable conduct of the country could tolerate the present unwieldy anachorism. Long past is the day when a nation can depend on patriots leaping from the plow into the battle line or upon teen-age conscripts.

The military establishment of today is for grown men with taste and temperament for it as a career, with man-size pay and proper leadership and organization. We have come nearer to it, perhaps, with our marines than has any other nation unless we count the French Foreign Legion which, by the way, might be a pattern for the international police force which the modern world must have, soon or late, to survive and for which our Marine Corps could well be a neat nidus.

We have our choice of two ways to abolish war. One, keep on killing people (customers) and destroying their property (buying power) until all survivors are poverty stricken, or two, show other nations that good management can make any nation profitable to its people. That means slapping down, before he gets a good start, any demagogue anywhere, and that hasn't been done since 1914. The present and projected armament race can be nothing less than a tragic absurdity.

Coming back to the State board of directors, it would hire a State general manager, ex-governor, who would pick his own subordinates from first assistant ex-lieutenant-governor down. A supreme court and a State auditor would be named by the board.

Each county board would hire a county general manager, free to build his own staff, including city managers, ex-mayors. All appointments to be for life or to retirement at age 65, for satisfactory performance, or for failure to make good, an ouster forthwith.

Discipline is as natural and necessary as incentive and reward, so there must be some provision for ousting any member of any board of directors, as well as for appointees. It would seem that the offender's fellow members in secret ballot might be the best form. Perhaps there should be ratification of their act at the next annual election, yet that seems superfluous. No board is going to deprive itself of a valuable member, nor ought it be forced to drag a liability. None will deny that evils no end arise from causes in the obsolete set-up of our Government, namely, short tenure of office and low pay. A term of 2 years is absurd. Four years isn't much better, as an incumbent is out, or threatened with ouster, just about the time the work is well in hand. If good work has been done, a successor can wipe it out. Personnel are hired and fired right down the line for political reasons, disrupting operations in cities, towns, counties, States, and the Nation.

Having to run for reelection every 2 or 4 years is bound to take time and money. The time is yours. You are paying the incumbent to do the work he was hired to do, not to electioneer. The money too often is raised by mortgaging honor. "A rat race," as one Congressman called it.

If public office offered an assured career with good pay and authority to select able subordinates, it would be a foolish executive indeed who would tolerate even one incompetent, lazy, or dishonest member of a staff. And it would be an equally daft board of directors who would risk an attractive life career, assured by good performance, by foisting upon any appointee subordinates to destroy him and consequently themselves.

One of the most disgusting sights in America is the Chief Executive of this great Nation campaigning, with all that it implies,

for reelection to the high office he holds. And that applies to any public office. How long would a private enterprise last if the directors, executives, and all hands had to campaign for reinstatement every 2 or 4 years, always under the shadow of ouster through no fault of their own?

Granting that politics, as commonly understood, cannot be eradicated without depriving the individual citizen of his freedom of choice, it can be controlled more successfully by examination of candidates, lifetime terms of office, abolishing reelections and ruling out official recognition of parties than in any other practical way.

Doubtless, you are wondering how procedure as suggested above can get started. Who, for instance, would compose the first jury to examine candidates and how created? First, remember that evolution, not revolution, is being considered. Steps are taken from where we are as we are. Creation of the first jury of examiners could be by the county legislative body, the Governor of the State or by a high court as in naming trustees of an estate. Obviously the board should comprise, besides a medical doctor for physical examination of candidates (no sick person can deliver consistently good service in any job) eminent representatives of a county's normal activities. Needless to say that the board must be carefully recruited and amply paid.

To effect some of the reforms suggested, amendments to the Constitution, and to those of all the States, would be necessary. But, fortunately, the Constitutions are subject to amendments and have had many. America is committed to debate for renovation of its Government as better than bloodshed and devastation. And now it seems frightfully apparent that we are faced with facts demanding immediate debate, not between political parties on time-worn petty controversies but between our elected Representatives sitting even now as a national board of directors to determine the best means for survival of the United States of America as a free Nation, able to lead less fortunate nations out of bondage and by American common sense and good will to justify their faith in us.

God helping us, we can do no other.

Aluminum and National Defense

EXTENSION OF REMARKS OF

HON. JOHN L. MCCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. McCLELLAN. Mr. President, on July 20, 1951, two new pot lines were dedicated at Jones Mills, Ark., at the plant of the Reynolds Metals Co. The principal speaker on that occasion was Hon. W. Stuart Symington, Administrator of the Reconstruction Finance Corporation. The subject of his address was Aluminum and National Defense. In my opinion the address was very important, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ALUMINUM AND NATIONAL DEFENSE

(Address by W. Stuart Symington)

It is a pleasure and an honor to be with you all at Jones Mills today. My own home joins your great State. It is good to get back to the Middle West.

Nearly every year, for many years, I have visited Stuttgart, for reasons that have had nothing to do with aluminum.

I am glad to join today with the countless friends of Richard Reynolds, Sr., and his four distinguished sons, Marion Caskie and Keen Johnson and all the rest, in order to pay tribute to an American pioneer and his organization for their work in the aluminum industry, an industry which is so vital to the future of our country.

I am also very glad to pay my respects to Senator FULBRIGHT as I visit here with his friends. Bill underwent a slight operation this week and therefore I am surprised and pleased he is with us. His counsel has been wise and cooperative ever since I took on this RFC work some weeks ago.

We do have with us, however, your senior Senator and neighbor, JOHN MCCLELLAN, one of the constructive statesmen in the Capitol today. I am most honored to be one of his host of friends.

It must be a source of pleasure and pride to every citizen of Arkansas to realize the extraordinary capacity and integrity of its representation in the United States Senate.

I share your pride also in my feelings toward BILL NORRELL, your fine Congressman. He and I have been friends since my very first days in Washington.

Today we have gathered together to celebrate another milestone of progress in the history of Arkansas and the history of aluminum, the metal that looks like silver, but does so much more for so much less.

The Reynolds Metals Co., superlative in aluminum production is a monument to the way in which the Government can sustain our free-enterprise system. It also illustrates how Government can keep the enterprise system competitive as well as free.

No enterprise aided by the RFC has contributed more to national security than Reynolds Metals. The story is worth telling and retelling.

Aluminum was first produced in this country in 1890. Until May 1941 it was made by but one company. Then Reynolds Metals, a fabricator of aluminum, brought in its first virgin aluminum production, at a plant located near Sheffield, Ala., named Listerhill in honor of the distinguished senior Senator from that State.

The officers of Reynolds Metals tell me that in seeking to embark upon the undertaking which created the first competitive source of aluminum in the Western Hemisphere, it ran into many difficulties. Among the most important of these was the company's inability to borrow, from any private financial institution, the relatively small amount then sought to build a small plant in the State of Alabama and a small plant in the State of Washington.

Unable to borrow the needed \$15,800,000 from private sources, Reynolds management turned to the RFC.

This was in the summer of 1940, when Hitler's program for world conquest was well on its way.

Reynolds furnished collateral in the form of first mortgages on its then existing plants and facilities.

In record time Reynolds brought its Alabama plant into production, requiring only 5 months and 28 days from the breaking of ground. The Washington plant's first aluminum also broke all records.

Before either of these plants could be completed, however, the United States called upon Reynolds to further increase its contemplated capacity; in fact the Government twice asked Reynolds to accept additional loans from the RFC.

Reynolds Metals, therefore, with the aid of RFC, brought about the first independent production of aluminum in the Western Hemisphere, at a time when it was vitally needed for our national security.

During the war years, this company produced and delivered to the Government at

the rate of 160,000,000 pounds per annum, which was approximately 50 percent of the country's maximum previous annual production per year prior to 1940.

Reynolds produced this amount of virgin aluminum, and also fabricated many millions of pounds for the aircraft industry, a truly superlative record.

People might wonder how the Government fared moneywise under these RFC loans to Reynolds as it obtained these vital war materials; and especially because of recent criticism of this great agency, despite its contribution to our national welfare.

I am glad therefore to furnish the details of this Reynolds financing a typical illustration of the best in RFC operations.

As of August 1, Reynolds will have repaid to the RFC approximately \$20,000,000 on principal, plus about \$14,000,000 in interest, or a total of \$34,000,000.

This latter figure is within \$12,000,000 of its total aggregate borrowings.

Reynolds still owes RFC \$26,000,000, which it is paying off in annual installments at an interest rate of 4 percent.

In addition, as a result of these borrowings from RFC, since the first loan was made, Reynolds has been able to pay the Government some \$55,000,000 in Federal taxes.

Finally it is estimated that by the time Reynolds repays the \$26,000,000 still due RFC, the company will have then paid to the United States Treasury some \$100,000,000 in excess of its total borrowing from the Government.

Consider also what these operations have meant to the living standard of thousands of people, in Arkansas and other States.

This is good government, good business, and good Americanism. In fact the whole transaction was good, for everybody but Hitler and Stalin.

For some years now my own life has been associated with aluminum.

There was a day not so long ago when only one company produced this metal. That was a dangerous situation for our national defense.

Then too, there once were people, so-called experts, but with little vision, who asserted before World War II that aluminum production of around 150,000 tons annually would be ample for any emergency.

These critics were later forced to take cover from a storm of disapproval, as the United States raced to arm against Hitler; and the capacity of aluminum was thereupon increased many times over, prior to the end of World War II.

After World War II, then what to do? Should we in effect revert back to one company as the producer of aluminum, or should we continue in this industry the doctrine that has made American production supreme, by nailing the word "competitive" into our free competitive enterprise system.

Some of us thought yes—others no. I will never forget a meeting in 1945 in the office of the Attorney General of the United States. At this meeting an elderly gentleman, representative of an old school that has little to do with southern hospitality, asserted, "If I offer the best food in town, why shouldn't I receive all the business?" The answer—and to my way of thinking the answer ended the matter—was, how do you know you would offer the best food in town if somebody else was allowed a kitchen?

From then on we got down to business; and what we view with pride here today is one of the results.

There are those who have been, and are, skeptical about the further growth of aluminum. I do not share that skepticism. I believe that the production of this metal, one of the most plentiful materials on the face of the earth, will expand much further.

There are many reasons for this belief. Today aluminum production in this country is less than three-fourths of 1 percent of steel production. Yet even now we are sam-

pling the building of bridges with the lighter metal.

Today aluminum furnishes much of the future of our Nation's security, in planes, on ships, in missiles, in ammunition, and in countless other uses.

Not the least of these other uses is that it is the logical supplement, and/or substitute, for ever diminishing copper as the conductor of electricity in this electrical age.

Equally important, aluminum is the only major material I know whose price over the years has fallen almost continuously. Higher costs, or the evil of price control through cartels and monopoly, or both, have resulted in exactly the opposite trend in other metals.

Today, therefore, my friends, we may well be at the end of another beginning, in that aluminum plants, including fabricating plants, should continue to grow, over many parts of this country, with hydroelectric power if that is available; with other fuels if such power is not on hand.

More of these additional plants may well be constructed in your great State, near the largest source of American bauxite.

A plant around here is far from bases from which enemy bombers, loaded with atomic weapons, could suddenly dash.

Such a plant would also be far from coasts where enemy submarines might surface to launch guided atomic missiles.

Recently there has been much agitation for the United States to add even more money to the hundreds of millions of dollars already invested in foreign countries for the production of aluminum.

Well, it is nice work if you can get it, and you cannot blame other governments for trying.

No American is more anxious than I to see every pound of goods and equipment necessary to support our position of defense for ourselves and the free world furnished just as promptly as possible. As example, it would be unthinkable not to rush to General Eisenhower anything and everything necessary for him to obtain that military position he considers necessary to carry out the mission for which our Government sent him to Europe.

But why build up foreign industry against the bitter protests of our own industry when, from a strategic standpoint, to do so would be directly contrary to the logic of all our other planning?

When the German saboteurs of World War II were caught after landing from their submarine, it soon became common knowledge that perhaps their primary targets for destruction were the aluminum plants.

That was wise planning on the part of the Nazi warlords because the aluminum industry is a core of all national defense planning.

It is the base of all airplane production. It gives the modern lift.

If, because of power economy, it would be right to build new aluminum plants on northern outskirts, then why is our new and greatest aviation research center located in Tennessee?

Production of atomic bombs requires very great amounts of electric power. Why then has the new center for this production just been placed in South Carolina?

The answer is obvious to any schoolboy—and yet some of us have been ridiculed in the press for not adding further to the outside aluminum empire.

For years it has been world knowledge that the Soviets were moving a vast amount of their industry behind the Urals, presumably in order to place it as far as possible from the strategic bombing of any possible enemy.

No doubt they noticed how relatively easy it was for allied planes to crack the Ruhr, but how very difficult it was for the same planes to knock out such Nazi Eastern European plants as the Skoda munitions works in Czechoslovakia.

It must bewilder these Soviets, as they move their own industry deeper and deeper into their heartland, to read of a program, supported in many quarters, to locate some of our most vital war industry on the perimeter of our northern frontier.

In opposing further financing of foreign aluminum corporations on the, in effect, polar fringe, Jess Larson, one of the ablest men in Government, and I, were in good company. Nobody opposed it more firmly than the entire Reynolds organization.

Most articulate in opposition was their counsel, a great American patriot, the former Secretary of War, Judge Robert P. Patterson.

There have been some who imply that those who favor this policy would also favor writing off our northernmost lands.

What an absurd deduction.

As a result of experience in the Air Force, I know that not only the defense, but the successful defense, of such of our possessions as Alaska, is absolutely essential to the security of the United States.

Based on the concept of any future war, however, would we build an atomic bomb plant in such locations? If not, why an aluminum plant? Because as I said, aluminum gives us our lift—and airlift today is necessary to deliver the one weapon we all know is the chief deterrent to war.

It is time, if there is time, to become realistic in our thinking, because there may be a day, soon now, when the Soviet atomic stockpile becomes large enough for them to think they are able to do the job in one vast devastating surprise attack.

When that day of possibility comes, the time to rearm in relatively leisurely fashion has gone forever.

Our position will then be somewhat similar to that of England in the late thirties, only worse, because we were behind England, but who is behind us?

Our noble allies are in front of us, but who is behind us, with men and money and guns.

So above all, let's be realistic, because in realism lies strength. The biggest fool is the fool who for any reason—fear, desire for profit, desire for political gain—fools himself.

Let us not be like the able but gullible American who stated after leaving Yalta:

"We really believed in our hearts that this was the dawn of the new day we had all been praying for and talking about for so many years. We were absolutely certain that we had won the first great victory of the peace. . . . The Russians had proved that they could be reasonable and farseeing and there wasn't any doubt in the minds of any of us that we could live with them and get along with them peacefully for as far into the future as any of us could imagine. . . . I think we all had in our minds the reservation that we could not foretell what the results would be if anything should happen to Stalin. We felt sure that we could count on him to be reasonable and sensible and understanding."

That was in 1945. Surely by now we should have learned our lesson about such misty thinking, thinking which if not discarded may well cause the downfall of our Nation.

But we haven't. As example, only recently, on a national broadcast the former chairman of the Atomic Energy Commission attempted to give us justification for his opposition to the building of the best atomic weapons the fact he was dissatisfied with administration decisions about the military budget.

If because we believe in the Christian ethic, and therefore would not deliver a sudden surprise atomic attack, who can be sure whether Stalin is glad or sorry about the current vast defense expenditures. He and his totalitarian economists, in a land where the coin of the realm is the order of the dictator, know full well the grave dangers creat-

ed for our capitalistic state by such expenditures over any extended period.

Therefore we must handle all mobilization effort with the same efficiency as displayed in this operation we dedicate today.

Samuel Johnson long ago defined a corporation as "not a mere parcel of boilers and vats, but the potentiality of power well beyond the dreams of avarice."

In dedicating these new facilities of the Reynolds Metals Co., may I borrow from the immortal Dr. Johnson; because we here dedicate not a collection of pot lines and casting plants, rather the potentiality of realizing the dreams of free men for a free world.

Born of the enterprise of free men, these structures represent far more than the hope of a business enterprise for profit. They symbolize the strength and power of America to safeguard its security and the security of its allies—and in more pleasant times they represent the steady upward march of our standard of living.

This great new industrial development is the result of realistic teamwork between industry and Government; and there must be more of such teamwork if we are to survive the growing dangers of this atomic age. There must be realism and frankness and truth in all our dealings.

From under white crosses all over the world come the shades of our beloved youth, who died that you and I might preserve our freedom. They whisper, "Remember us, and face up to the truth, so that you and your children can remain free."

Responsibility in the Press and in Politics

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. LEHMAN. Mr. President, politically inspired attacks on our Secretary of State continue. At the same time the Soviet press names Secretary Acheson as the chief architect of the effort against the Kremlin. Against this background there was delivered in Portland, Oreg., last week a speech by the distinguished junior Senator from Tennessee [Mr. KEFAUVER] on the subject of responsibility in the press and in politics, which is particularly appropriate. I ask unanimous consent that the Senator's remarks before the Press Club of Oregon on August 4, be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

RESPONSIBILITY IN THE PRESS AND IN POLITICS (Address by Senator ESTES KEFAUVER)

The topic that I have given myself tonight has within it the conception of a joint responsibility—responsibility not only in the press, but also in politics. Responsibility on the part of our legislators in Washington is no less important than responsibility in the press and I would be less than frank if I did not say to you tonight that I have been terribly disturbed in the past months by the irresponsibility shown by some men in both Houses of Congress. I am not talking about honest-to-goodness criticism. We need more of that—our system of government is based on the necessity of constructive criticism. We need more constructive ideas. But what I think is regrettable is the lack of responsibility in some of the attacks on men in public life, and in the

attacks on our policies, that are neither constructive nor would it appear delivered with any other purpose than to cause disunity among our people. Now I want to be perfectly clear about what I mean.

I have not always supported the foreign policy of this administration.

At times I have disagreed, and I have said so openly. I have believed, for example, that our administration has not gone far enough in pushing for a real federation of the countries of the North Atlantic area. I have offered what I believe to be sound reasons for asking now for a conference to discuss steps to strengthen this community of nations with a common design to resist Communist aggression and to live in peace. This is criticism of the foreign policy of our Government. But I hope it is, and mean it to be, constructive criticism.

What I am concerned about, for example, are the violent, personal attacks made on men who are honestly devoting themselves to the service of their country. There has been in Congress a so-called get-Acheson drive. This is a case in point. What are the nature of the charges against the Secretary of State? Are they charges that he is incompetent? Are they charges that he is ill-informed or lacks understanding of the problems that face our country? Are they charges that he is dishonest or of low moral character? No. They are none of these. What are they then? Well, the charges are that the Secretary has sold out the American people, or something equally irresponsible. Now as I have said, I have not on every occasion agreed with the Secretary of State. But I think I know an honest, hard-working man when I see one. I can recognize such a man in Dean Acheson.

His policies and programs, for the most part, have been constructive and imaginative. I would not say, on the other hand, that we have not made mistakes, but in the face of the greatest menace that has ever faced this country, I submit the Secretary of State has played a leading part in mobilizing the free world to a recognition of the threats and in getting the nations of the free world together to do something about it. I believe that it is noteworthy that Secretary Acheson was identified with the formulation of the Marshall plan; it was noteworthy that he was instrumental in launching the North Atlantic Pact, and in recommending a workable plan for helping the nations of Europe to strengthen their own defenses. Secretary Acheson took a leading part in urging United Nations collective action in stopping aggression in Korea. Under Secretary Acheson, a start has been made towards a Pacific mutual defense system. It was Secretary Acheson's recommendation that makes it possible for the United Nations General Assembly to bypass the veto-ridden Security Council. The Secretary, then, has a substantial record of accomplishment. While he has erred occasionally, I say that those who launch personal attacks on Mr. Acheson might well oppose his policies as such—in speeches and in votes in the Congress—instead of descending to slanderous attacks that would confuse the issues before the American people. There is also a small group who misinterpret our action in Korea. I would like to talk to you for a moment about this, because I know how important Korea must seem to you on the west coast who see the ships and men coming and going directly to the battle area.

There is a small group today who say that we should not have withdrawn our troops from Korea in the first place. But these same men said nothing when these troops were withdrawn in 1949. There is a small group today who say that we should not have gone into Korea to stop aggression in June, 1950. But when our troops moved in, these same men expressed almost universal approval. My good friend Senator McMahon has called this 20-20 hindsight. I think that very aptly describes their views.

Now just what has Korea meant to the free world? I think that it has meant a number of very important things to the American people, and for that matter, for freedom-loving peoples everywhere. Let us look for a moment at some of the things that the action of the United Nations in stopping aggression in Korea means to the free world.

At the outset it might be well to consider our objectives in Korea. When the North Korea Communists set out to conquer Korea south of the thirty-eighth parallel, this was an attack on the independent Republic of Korea, which the United Nations itself had helped to establish. Our objective, then, in going into Korea, was a military one; it was—and there are the very words used in the U. N. resolution passed June 27, 1950—"to repel the armed attack and to restore international peace and security in the area." That continues to be our objective. If the cease-fire talks now under way are successful, the United Nations will have been successful in obtaining this objective. Now, there has been another objective in Korea—a political objective—to secure a unified, free, and independent Korea. That is still our objective. But neither the United States nor the United Nations has sought to pursue our political objective through military means. That is an important distinction and one that must be borne in mind. The United States must continue to try through peaceful means to assure free elections throughout Korea, so that real unification may be accomplished. But if the United Nations takes upon itself to seek this unification through military means, we, ourselves, will be resorting to the Communists' own tactics and cast doubt throughout the world on our intentions everywhere. Now, it should be made very clear that when the United Nations forces pursued the enemy north of the thirty-eighth parallel last October, this was done only after the Reds rejected a new cease-fire offer and then the pursuit was for military reasons—that is, for the protection and security of our forces. For obvious reasons, we must now be certain that our cease-fire agreement is at a defensible position.

So, in thinking about Korea today, I believe it is important to bear in mind our objective—to stop aggression and restore peace in the area. Now, let us look for a moment at what the United Nations action in Korea has meant to the free world.

Here for the first time in history of man nations banded together to stop aggression. This is a tremendous step in the direction of establishing real peace in this world. Sometimes we forget that only a few years ago the League of Nations fell on this very issue. But in the United Nations action in Korea we see collective action through armed resistance to aggression. Our losses in Korea have been for a noble purpose. Our sacrifices in Korea emphasize sharply that there is no easy short cut to the establishment of a community of nations that can live together peacefully under an enforceable system of law and order.

Second, United Nations resistance to aggression in Korea has brought new hope and courage to free men everywhere. For the farmer in Turkey, or for the shopkeeper in Denmark, knowledge that his country can look with confidence for collective support should aggression threaten his land is inspiring comfort for one across the border from the Soviet stronghold. The citizens of the free world, as a result of United Nations action in Korea, have a new bond and deeper mutual faith. It is true that not all the nations cooperated as fully as we would have liked in Korea, but we must remember that this is our first collective action, and new methods even in our daily life do not always catch hold rapidly. Some of these nations are engaged in fighting communism elsewhere—the British in Malaya, the French in Indochina. These, and others, have commit-

ments to increase their armed strength in Europe to meet the threat of aggression at their very doorsteps. But the aggression in Korea has alerted all the free nations and it has stimulated them to greater efforts to build up their own strength. We have shown the aggressors of today that they can't get by with a Munich, Ethiopia, and Manchuria.

Third, United Nations action in Korea has thrown off Communist plans for the conquest of all southeast Asia. Pressure on Indochina has relaxed, and progress is being made to strengthen Thailand and the Philippines and Indonesia. Certainly, after the U. N.'s prompt action in Korea, Soviet puppets and satellite leaders will think twice before allowing themselves to be pushed into any venture such as that in which the leaders of North Korea have found themselves.

So if the current talks bring peace to the area, the United Nations forces will have recorded a monumental achievement.

Some of the small group who criticize every action of this Nation in the foreign field would minimize this achievement. I say that it will go down in history as a great milestone in man's everlasting search for peace.

We ask what more can our country do to prevent the spread of communism among the earth's peoples, and at the same time avoid the outbreak of a world war that might destroy much of civilization as we know it today. In considering these issues, I believe that we must never forget that our objective is peace. Just as collective action has shown the way in meeting aggression in Korea, I believe that we must continue to move forward in building structures for collective security elsewhere in the world. Above all else we must work for a body of world law, vigorously and intelligently enforced. For centuries man has been searching for ways of establishing peace. In primitive times man fought for food and survival. Later he joined in larger and larger groups for mutual protection. In the same way, nations have moved into loose federations for mutual protection. The League of Nations and the present United Nations are the result of earlier experiments with leagues and ententes—none of which was strong enough to stand the test very long. Today, the free nations of the world must go ahead much further than they have in joining together to be strong in the face of a new threat. I have criticized our own Government for not pushing ahead faster in uniting the free peoples of the world. The countries of Europe have made great strides in breaking down old boundaries, and in overcoming animosities that have plagued the continent for centuries. But they must go further, and I am happy to see that General Eisenhower himself is urging them to go ahead in this direction. The Atlantic Pact is an instrument set up to keep the peace. But if this group of nations is to have real strength, it must have the authority to present a united front and to repel aggression promptly if necessary. Along with a number of my colleagues, I have sponsored a resolution calling for our Government to take the lead in bringing about a conference to study ways of strengthening the North Atlantic alliance of nations. If our country will take this step, I am convinced that such a conference would make such recommendations that would find approval among the American people as well as among the peoples of the other Atlantic nations. What this resolution proposes is only that we call such a conference. Recommendations would be submitted to the peoples of these nations for approval. I am not proposing that the United States give up any degree of sovereignty. What I do propose is that we explore now—while we have the opportunity—means of strengthening the Atlantic community so that it can grow so strong that no aggressor will dare attack any of its members. We have seen the principle of collective secu-

city in action in Korea. We can recall from this experience one great lesson that our forefathers learned in the days when they established this Nation: Together we stand, divided we fall.

The United States must take the lead. We must show vision and courage. Time may be short. It is up to the United States to show the way.

Oxford Presbyterian Church

EXTENSION OF REMARKS OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared about the annual homecoming day of the Oxford Presbyterian Church, in my home county of Rockbridge, Va., celebrated last Sunday. My statement includes a brief historical sketch of the church and the settlement of the Valley of Virginia by the Scotch-Irish Presbyterians.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Last Sunday it was my privilege to attend the annual homecoming day of a historic Presbyterian Church in my home county of Rockbridge called Oxford. The morning devotional hour included a sermon by the scholarly pastor, Dr. George West Diehl, on loyalty to what the church flag represented and loyalty to what the American flag represented as a test of a good Christian and a good citizen. After a bountiful basket picnic on the spacious church lawn the afternoon session included devotional singing, an address by me entitled "The Mission of the Church," and the dedication of the church flag and the American flag.

In the dedication of the church flag the following ceremony was used:

Leader: "We welcome this ensign of the militant church of the living Christ and in its place in the front of the worshipping congregation is symbolic of the church's place in the minds and hearts of the people."

Hymn 294. "Onward, Christian Soldiers" (1, 4)

Leader: "In deep appreciation for all donations of the church of the living Christ through all the ages, given to those who have dared to seek the higher life"—

People: "We dedicate this flag."

Leader: "To the martyrs and reformers whose witness to the truth has given us religious liberty and an open Bible"—

People: "We dedicate this flag"

Leader: "To the memory of our sturdy forefathers who set up this church on the frontier as a testimony of their Christian faith and as a bulwark against religious tyranny"—

People: "We dedicate this flag"

Leader: "In gracious appreciation for the faithful who maintained a high standard of Christian faith through the years, bequeathing to us a glorious heritage"—

People: "We dedicate this flag"

Leader: "As a testimony of our acceptance of the challenge that has been transmitted to us and our earnest purpose to fight the good fight for Christ and the right as He leads us to see it"—

People: "We dedicate this flag."

The dedicatory prayer.

Hymn 253: "O Jesus, I Have Promised" (1).

And this was the ceremony used for the dedication of the American flag:

Leader: "In a day when human rights are wantonly violated, the foundations of our country flouted as errors, and an ideology that would make us a nation of slaves besets us, we do well to place before us, even in the sanctuary, this symbol of our beloved Nation."

Hymn 338: "My Country, 'Tis of Thee" (1, 4).

Leader: "To our forefathers, acting on the principle that all men are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness, who chiseled a new nation from the wilderness"—

People: "We dedicate this flag"

Leader: "To the memory of those who fought in the defense of those principles, giving 'the last full measure of devotion'"——

People: "We dedicate this flag"

Leader: "In honor of those who answered the call of duty and returned to enjoy the victories they had won"—

People: "We dedicate this flag"

Leader: "In honor of those of our congregation who have served as servants of the public, furthering the cause of good and stable government"—

People: "We dedicate this flag"

Leader: "In honor of the honest citizenship of our congregation, humble, serving, and fully determined that, come what may, 'the government of the people, by the people, and for the people shall not perish from the earth'"——

People: "We dedicate this flag"

The prayer of dedication

Hymn 339. "O Beautiful for Spacious Skies" (1, 2).

I desire to stress this statement made in the dedication of the church flag: "To the memory of our sturdy forefathers who set up this church on the frontier as a testimony of their Christian faith and as a bulwark against religious tyranny" Many are familiar with the beauty and fertility of the Shenandoah Valley but many are not aware of the fact that the first settlers came to the Valley of Virginia in search of religious freedom. Germans from the Palatinate of the Lutheran faith first migrated to Pennsylvania in search of religious freedom and from there into the northern counties of the Shenandoah Valley. Their outstanding leader was Gen Peter Muhlenberg, a preacher of the Lutheran faith, who in the Revolutionary War was commissioned a colonel by George Washington and eventually rose to the rank of major general. Incidentally, his brother from Pennsylvania was the first Speaker of the United States House of Representatives. Those Germans who settled in the valley, commonly called "Valley Dutch," loved not only religious but political freedom and constituted some of the finest soldiers who served under General Washington.

The early settlers of the valley were known as Scotch-Irish. They were Scotchmen from the Protestant counties of Ireland who migrated first to Pennsylvania and in 1732 commenced their migration into the Valley of Virginia.

The British King had instructed a Virginia Governor named Alexander Spotswood to explore the area of Virginia lying west of the Blue Ridge Mountains for the purpose of perfecting British defenses against the French and Indians, and in doing so made possible the migration from Pennsylvania into the Valley of Virginia of the splendid group, commonly called Scotch-Irish of the Presbyterian faith.

When Governor Spotswood and the Knights of the Golden Horseshoe returned to Williamsburg they told of the beauty and fertility of the land west of the Blue Ridge and asked for settlers but in that day

and time when the western boundary of Virginia extended to the Mississippi River and its Northwest Territory to the Great Lakes, Virginians living east of the mountains looked upon the entire area west of the Blue Ridge as a wilderness filled with wild Indians and wild beasts.

In 1701 the Virginia House of Burgesses offered settlers free land in the valley, with tax exemption for 20 years but the Virginia low-landers were not interested.

In 1732 a Scotch Presbyterian named Joseph Hite obtained a large grant a few miles south of Winchester and brought in 16 families from Philadelphia. At a meeting of the synod of Philadelphia in May of 1739, John Caldwell, whose grandson was the great John C. Calhoun of South Carolina, offered a resolution, which was adopted, petitioning Governor Gooch, of Virginia, to permit Scotch Presbyterians to settle in the valley. The letter which the synod sent to Governor Gooch said that the settlers were loyal to King George but were of the persuasion of the Church of Scotland and asked "liberty of their consciences and of worshipping God in a way agreeable to the principles of their education."

In his reply, which was dated May 28, 1739, Governor Gooch said that these settlers might be assured "that no interruption shall be given to any minister of your profession who shall come among them, so as they conform themselves to the rules prescribed by the Act of Toleration in England by taking the oaths enjoined thereby, and registering the place of their meeting and behave themselves peacefully toward the Government." And to the people of eastern Virginia Governor Gooch said that these people, whom he knew to be firm, enterprising, hardy, brave, good citizens and soldiers, would form a natural barrier against the hostile Indians.

One of the Indian forts built by those Scotch-Irish Presbyterians was located on Buffalo Creek in Rockbridge County and named Oxford. During weekdays it served as a school, on Sunday as a church and at all times as an Indian fort. The church was built on land donated in 1752 by a large landowner of eastern Virginia named Borden. From that church went a company of soldiers under the leadership of Captain Hall to the relief of General Washington at Point Pleasant.

Other Scotch-Irish Presbyterians who figured in the settlement of the valley and West Augusta and who played a prominent part in the Revolutionary War were the Lewis and Preston families. In 1743 the Virginia Council authorized Thomas and Andrew Lewis, sons of Col. John Lewis, of Augusta, to take up 30,000 acres in the basin of the James above the mouth of the cow pasture. That area, now in Alleghany County, was then a part of Augusta, as in those days, Augusta extended to the Mississippi River on the west and to the Great Lakes on the north. The Lewis family built Fort Lewis and Fort Dinwiddie.

Another fighting name among the colonial settlers was Preston. In 1756 Capt. William Preston, on orders from Maj. Andrew Lewis, built a fort on the bull pasture. In 1769, then a colonel, he acquired lands on Potts Creek. He was a son of the first John Preston to own lands on the cow pasture, the father of James P. Preston, a Governor of Virginia and grandfather of William C. Preston, a United States Senator from California. The Scotch-Irish pioneers of the valley have a right to be proud of the fact that the John Preston family produced 10 United States Senators.

The exercises last Sunday at old Oxford Church carried for me a deep significance. The principles for which those Scotch-Irish settlers had fought, bled and died was never more seriously threatened than it is today by the antigod ideologies of communism.

It was an inspiration to me to see the descendants of those sturdy pioneers assembled to renew their allegiance to the faith of their ancestors. In closing my remarks on that occasion I said:

"If the world is better today than it was 2,000 years ago, and I think that it is, it is due to the teachings of the Prince of Peace and of the little band of disciples who carried on the mission after the Master's death. If the priceless principles of political and economic freedom which were born of the brain and purchased by the blood of our founding fathers are passed on to generations yet unborn it will be because the Christian men and women such as I have the privilege of addressing today revitalize the faith that was Abraham's, the humility and gratitude that were Job's, and the zeal that was Paul's. In a world filled with wars and rumors of wars, of bitterness, distrust, envy and greed that is the mission of the church."

State Department Budget Slash

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. LEHMAN. Mr. President, my very distinguished constituent, Mrs. Eleanor Roosevelt, has recently written a column commenting on the regrettable action of the House Appropriations Committee in cutting United States contributions to the U. N. and other international organizations. I ask unanimous consent that this column, with whose conclusions I heartily agree, be printed in the Appendix of the RECORD.

There also appeared in the Washington Post of July 27 an editorial on the same subject entitled "Trimming the U. N." I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of July 31, 1951]

STATE DEPARTMENT BUDGET SLASH BY HOUSE IS NOT WISE

(By Eleanor Roosevelt)

HYDE PARK, Monday.—The action of the House Appropriations Committee in cutting the budget of the State Department for foreign contributions is something everyone of us should consider carefully. If we feel strongly about it, I think we should let our Representatives know how we feel, since the Senate will shortly take action and there may be some chance to restore some of the cuts.

The budget submitted to the House by the State Department contained a request for \$30,684,476 for the purpose of meeting the legal obligations of the United States to U. N. and other international organizations. Subsequent changes in requirements made it possible for the State Department to make a reduction in its original estimate and it voluntarily asked for \$30,297,861 which was all that was required.

On July 24, the House reduced this amount by \$3,297,861 and authorized \$27,000,000. In addition, the House voted on July 25 to further restrict the U. N. payments to any of these international organizations to 33 1/3 percent of the annual cost thereof. It

should be noted that there are organizations in which our country has borne a new heavier percentage than other nations—in some cases a very much heavier percentage. But an agreement has been reached that in 1952, which is only 1 year, the United States subscription would be reduced to 33 1/3 percent in many instances.

This action of the House will mean that to U. N. itself we will be in default by quite a large sum, and in lesser amounts we will be in default to nine other international organizations, including the Pan American Union, UNESCO, World Health Organizations, and the International Labor Organization.

Of course, the Soviets will say, in effect, that for all the assurances given by the State Department, they can never count on the United States. They will point to our Congress as being at odds with the State Department and try to show that it is evident the United States never did have any interest in the U. N. or in making any international organization work. They will say that they, in the Soviet have been so much more honest.

They will claim they have stayed out of organizations where they felt they were unable to pay their share, but wherever they had an obligation, they have done all they possibly could to fulfill the obligation. It will sound so virtuous on their part and we will be made to appear dishonorable and selfish.

I realize fully what it means in sacrifice to every American family to accept the international obligations which are ours today. But I cannot believe that our people want to put themselves in a position where they do not keep their word for one more year.

The word given has to be given by responsible people on the administrative side of the Government, and, of course, the Congress has to back up that word. It can quite rightly, I think, advise the administrative part of the Government that it should not undertake to contribute more than a certain percentage in a future year. But not to come through with promises made seems to me harmful to our position not only as economic leaders but even as military leaders.

Our Government is one government in the eyes of the world, not two. And the division between legislative and administrative does not mean much to other parts of the world. Other people will think of us as a government that has kept its word or gone back on it. Therefore, I hope the Senate will take a more statesmanlike view than has the House.

TRIMMING THE U. N.

[From the Washington Post of July 27, 1951]

The House cannot have been thinking as a responsible body of the United States Government when it voted on Wednesday to pare American contributions to international organizations by \$2,300,000. The blow was compounded yesterday by adoption of the Williams amendment limiting all such contributions to 33 1/3 percent of the agency budgets. These contributions are moral, if not legal, commitments agreed upon between American representatives and the agencies concerned. This cut from the \$29,300,000 voted by the Appropriations Committee would affect not only the scheduled regular contribution of \$16,400,000 to the United Nations proper, but also the support of specialized agencies such as the World Health and Food and Agriculture Organizations. It also would impair the United States contribution to the Organization of American States, which depends on this country for two-thirds of its budget.

Apparently the House believes that the proportionate share paid by the United States toward the support of these organizations is excessive. The richest Nation in the world must assume responsibility commensurate with its position. In any case, the

way to affect a reduction, if that should be desirable, is through future negotiations. For the United States to let the United Nations down after waging a war in Korea to uphold the principle of collective security embodied in the U. N. would hardly be to invite the kind of support for the U. N. we have been demanding of other countries. We have invested multiple billions in military defense of the peace; \$29,000,000 is a paltry enough sum to be devoting to the securing of peace through international understanding. Surely the Senate can be counted on to reverse this action.

Fourth of July Address by James Montgomery in 1841

EXTENSION OF REMARKS OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD remarks made on the Fourth of July 110 years ago by James Montgomery, the son of a Revolutionary War veteran.

What Mr. Montgomery then said should inspire us to strive to preserve our liberties and the fundamental principles of our Government for which our forefathers made such sacrifices and underwent such hardships.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS MADE ON JULY 4 BY JAMES MONTGOMERY

Fellow citizens, the celebration and commemoration of signal days, and signal events, is no new thing in the world, nay my friends it is almost as old as time itself, for 6 days only were elapsed from the beginning of what we call time when the great Creator of Heaven and earth celebrated, if I may so speak, the seventh day as a day of rest, which was the first day that ensued after He had finished the works of creation, and ever since that time it has been our bounden duty to remember the Sabbath as a day of rest. Remember the Sabbath Day to keep it holy is the announcement of the God of Heaven and earth to us all, but alas how many of us are wanting, yea, I may truly say that we are all wanting in our obedience to this high and reasonable command of Heaven. Here my friends we have the highest authority for celebrating a certain day and event and that celebration is to continue as long as time lasts. Hence, fellow citizens, we may learn that there is nothing immoral in the celebration of certain events so that it is done from a right principle to a right end, that is that we may return gratitude and thanks to God for all His mercies and that we may be instrumental in preserving the blessings we enjoy to ourselves and our posterity.

But as I intend great brevity, and as neither time nor capacity at present will permit me to enter into details respecting the celebration of many memorable events I shall content myself at present by referring you to a few instances when the people celebrated days in remembrance of signal deliverances. The first instance that I shall refer you to is the deliverance of the children of Israel from Egyptian bondage, and you all know that the Passover was instituted on that memorable event and you

also know, or ought to know, as I presume you have all read your Bibles, that the Hebrews celebrated that feast with great solemnity as long as the patriarchal government lasted, and indeed the practice of it was never totally disregarded or lost until after the coming of the Messiah. The next instance of this kind that I refer you to is the deliverance of the Jews from the wicked devices of Haman in Queen Esther's time. You know that that young Jewess ventured her life to save her people from utter destruction by going into the king at a time when she was not called for, it being a law of that government that any person who went into the king's court without being called for was to be put to death.

What a contrast there is between this despotic law and the laws of the King of Heaven and earth which authorizes and even invites the most unworthy to come into his presence to obtain mercy and find grace to help in every time of need. Here, however, we may learn what a great deliverance may be achieved by the heroism of one individual and that too, by the most delicate and beautiful females in all the country. What a blessing women are to men, sometimes.

In consequence of this great deliverance of the Jews from utter destruction by the wicked devices of Haman, the 2 days following the day of the month in which they were delivered were celebrated yearly with joy and gladness throughout all the Provinces of Persia, and that these days should be remembered and kept through every generation, every family, every Province, and every city, and that these days of Purim should not fall from among the Jews nor the memorial of them perish from their seed.

With these precedents before us shall we be told that we have no right or that it is not our bounden duty to celebrate our deliverance, not indeed from Egyptian bondage, nor from the wicked devices of Haman but from the unjust and cruel devices of King George III and his despotic advisers, who wished to deprive us of our natural and inalienable rights, and by imposing burdens on us that were too intolerable to be borne by freemen. And thank God, although nothing appeared more remote than our independence from the design of the king and his barbarous counselors, their intolerances were instrumental in the hand of an all-wise and overruling providence of making us declare our independence and of giving us a name among nations of the earth. And shall we be so ungrateful as not to celebrate with joy and gladness such a glorious event? I say, shall we who have so long enjoyed the glorious privileges achieved by our fathers on that memorable day, the Fourth of July 1776, show ourselves unworthy of such privileges by passing over unheeded and uncelebrated the yearly return of that eventful day? Do I not hear you all say, as it were, with one voice, "No, I shall never show myself so unworthy of these privileges as not to remember with delight and gratitude that glorious day when we by the manly declaration of our fathers burst the shackles of tyranny and oppression and took our name among the nations of the earth.

But someone may be ready to ask, How shall I show myself most worthy of the glorious privileges announced by the Declaration of Independence? I answer by adhering strictly to principles of the Declaration itself. That is that all men are born equally free and independent and have inherent and undefeasible rights among which are those of enjoying and defending life and liberty and of acquiring, possessing, and protecting property and reputation, and of pursuing their own happiness.

Whenever we infringe on any of these undefeasible rights we violate the principles of

the Declaration of Independence. We shall, therefore, show ourselves most worthy of the privileges we would wish others should do to us, that is we must be honest to ourselves and honest to our neighbors, we must lay aside every unreasonable party prejudice, which has been the cause, the great break-neck cause of the downfall of every republic, that I have any knowledge of. The Jews, a highly favored people, by a part of them desiring to have a King sit over them lost in a great measure their liberties by it. And finally by their party prejudices, and rancorous divisions among themselves they lost their city which appeared to be impregnable and with it their liberties and even their name as a nation. The Carthaginians, a brave and generous people, a people who were favored with or produced some of the bravest military captains the sun ever shone on and at one time bid fair to conquer the Romans, that was when Hannibal, their principal general was in Italy and had overrun the country in such a manner that to all human appearance there was nothing to do but to take the city of Rome and country would be conquered but there was in Carthage a party that used every influence in their power to prevent the success of Hannibal, that party chose to see their country and city sink into ruin rather than that Hannibal, their own general, should have the name of conquering the Romans, and in this way they lost their own city and liberties by their unreasonable party prejudices.

The Greeks, the most polished and ingenious people as to science and literary acquirements of any other people then in the world, with some of the greatest orators and military chiefs at their head that the world has ever produced lost their liberties by it. And the Romans who were among the bravest of the brave, by dividing and following different and unprincipled leaders, lost their republic by it and tamely submitted to the despotic rule of kings and emperors.

Let us, fellow citizens, beware lest we dash ourselves to pieces and destruction on the same ruinous rock for party spirit when rushed in on without any regard to virtuous principles is the canker-worm, that in my opinion, is above all other the most likely to eat out and undermine our liberties and that too before many of us are ever aware of it. I say then in conclusion, let us wake up and be honest to ourselves before it is too late, let us elect honest men to office, and particularly let us elect honest William Henry Harrison the true democratic candidate for President, then our civil and religious liberties will be safe, our lives and property will be safe, our Republic will be safe, safe now and safe forever, all of which may God in His mercy grant is the prayer of your fellow citizens, for after all, honesty is the best policy.

Benton Does a Favor for the Republicans

EXTENSION OF REMARKS

OF

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. WELKER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "BENTON Does a Favor for the Republicans," published in the Washington Times-Herald of August 9, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows.

BENTON DOES A FAVOR FOR THE REPUBLICANS

The second biggest windbag in the Senate is BENTON, of Connecticut, first honors in the gaseous diffusion system being held by HUMPHREY, of Minnesota.

BENTON's latest is a motion that the Senate expel Senator JOSEPH MCCARTHY, Republican, of Wisconsin. He offers as exhibit A in his evidence the report on the 1950 Maryland senatorial-election campaign made by a subcommittee of the Senate Committee on Rules.

What does that report actually say, leaving aside for the moment its significantly chosen recommendations?

WHAT DOES THE THING SAY?

It says that the people of Maryland by a 43,000 majority elected JOHN MARSHALL BUTLER, Republican, to the Senate. They also legally fired Millard Tydings, Democrat, out of the Senate. The report concedes that exhaustive efforts have failed to show any ground for further attacks on Senator BUTLER's right to his seat.

That concession leaves the Democrats in a hole, of course, for the whole excuse for the investigation into the Maryland election was that the voters' will was somehow denied by their throwing Tydings out of public office and 'nto lucrative activities on behalf of the Dominican sugar interests.

Either the election was illegal and fraudulent, or the investigation was. It now is clear that the investigation, not the election, was a fraud.

The recommendations in the report are equally as fraudulent as its purpose and everybody who has had a hand in writing, spreading, and flapping hands of horror concerning it, knows that very well.

We will follow with interest and will faithfully inform the reading public on the continuing career of the committee's suggestion that special laws be written to censor campaign literature.

WHAT IS IT FOR?

The very nature of the recommendations signed by Senators MONRONEY, HENNINGSON, HENDRICKSON, and SMITH expose the true purpose of the investigation if the findings had not. The object of the game was to alibi the Democrats' defeat in 1950 and to provide some Democratic campaign literature for 1952. The Democrats well know, if Republicans do not, that the 1950 election showed that the people of Maryland are sick of Democrats.

The Maryland voters not only elected a Republican Senator, but also a Republican governor and other Republicans right on down to the grass-roots county offices even in Prince Georges County, which has been Democratic since the party's origin.

It is hypocritical and fraudulent to suggest that Senator BUTLER was elected by any except the public's majority vote, and the squawks of the losers about the incidental activities involving Senator MCCARTHY and other BUTLER supporters, including this newspaper, are the bunk.

How much of all this blather would be going on if BUTLER had lost? That's the acid test and everybody knows the answer.

Not that we have any kick about the horror-shouting. The more the better, for the more there is now, the plainer the reason shows itself.

The campaign document signed by Senators MONRONEY, HENNINGSON, HENDRICKSON, and SMITH is an attempt to hide the fact that the Democrats have flopped in Maryland and are headed for more of the same.

It is an attempt to intimidate and frighten Republicans everywhere into backing away from a fight, simply because the fight is a hard one and the Democrats are gifted at every gutter and barroom trick.

Thus BENTON has done Republicans everywhere a great favor. His attack on Senator

MCCARTHY makes it irrevocably clear just what the Maryland investigation was for, just what it accomplished and just how it is supposed to be used further.

AND WHY DOES BENTON RUN?

Now is the hour to meet these smear artists head-on, and all that need be asked them is this:

"Where were you when Alger Hiss was on the witness stand?"

For never let it be forgotten. The firing of the Democratic Party in Maryland was the voters' reaction at the first available opportunity to the truth about just one traitor in the State Department.

Senator MCCARTHY has put himself on the front line with those who are trying to get the rest of the truth onto the public record.

Another who is trying to get that same truth onto the public record is Senator PAT MCCARRAN, Democrat, of Nevada. Why doesn't BENTON move MCCARRAN's expulsion from the Senate, too? The same issues are involved, the same problems, and the same smears. MCCARRAN has been called every name that MCCARTHY has been called by the same people. And for the same basic reason.

On the one side is an urgent personal need to hide treason and explain away betrayal. On the other is a solid resolution to drag the truth about the Roosevelt-Truman era out onto the public record, for it is only that truth which can save us.

Once the voters see—as they have seen in Maryland—who has stood for and who has stood against communism in the United States of America, the rescue of this nation from crooks, traitors and Stalin is certain.

Election of Liberal-Minded Members of Congress

EXTENSION OF REMARKS OF

HON. ANDREW F. SCHOEPEL
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. SCHOEPEL. Mr. President, on August 6 the President of the United States released to the press a letter which he had sent to Mr. Philip Murray, president of the CIO. Among other matters discussed, including his approval of the Missouri Valley Authority—MVA—the President saw fit to make reference to three key flood-control dams which had been proposed on the Kansas River and its tributaries to be built right where this flood hit, as he said.

He indicated that two of these Kansas projects had not been authorized by Congress and that the third, while authorized, had not been started, all because of the opposition of officials and congressional representatives of the State of Kansas. Mr. President, at a later date I shall have something to say about this, in order to keep the record straight.

The press reports following the President's release of this message indicated that he, the President, thought that these States in the Missouri Valley Basin, and I presume Kansas, should send more liberal-minded Representatives to the Congress of the United States if they expected to have any relief from flood damage. At any rate,

that is how I read the press report covering the President's letter.

On August 8, 1951, the Washington Post ran an editorial entitled "Who's a Liberal?" I think this editorial sums up in a brief, concise way what should be said about the President's reference to liberal-minded Members of Congress in relation to the present floods in the Missouri Valley, and, Mr. President, I ask unanimous consent that this editorial be published in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO'S A LIBERAL?

President Truman did not help his reputation with his juvenile remark about the need to elect more liberal-minded Members of Congress to prevent floods in the Missouri Valley. This sort of bastardization of the word liberal is in keeping with the debasement of democracy and peace to connote precisely the opposite of their original meanings. Is one to infer that conservative Members of Congress are somehow for floods?

If Mr. Truman meant to say that something a whole lot more comprehensive than the Pick-Sloan plan is needed to cope with the causes of floods in the Missouri Valley, we would agree heartily. Even here, however, the President works both sides of the street. He plumps for a Missouri Valley Authority and at the same time criticizes Congress for cutting flood-control appropriations some at least of which were intended for projects directly antithetical to the valley-wide concept. If there ever is to be a comprehensive approach to the resources of the Missouri Valley, including flood control, the matter will have to be put upon a higher plane than political ideology.

Persons who support such valley-wide development ought to realize that the doctrine plan for a Missouri Valley Authority simply is anathema to many of the residents of the Midwest whose cooperation would be necessary to make it succeed. It is time to drop labels and hew to principles—and the principles which in our opinion ought to govern the development of the Missouri are: (1) Breadth of program sufficient to encompass all resources and agencies; and (2) consultation with the people of the region with a view toward representative participation in management. Playing politics with flood control is no way to obtain it.

Low Estate of Public Morals

EXTENSION OF REMARKS OF

HON. JAMES P. KEM
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Low Estate of Public Morals," published in the St. Louis Globe-Democrat of August 6, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LOW ESTATE OF PUBLIC MORALS

The discharge of 90 West Point cadets for cheating at examinations is only one facet of the many-sided problem of moral disinte-

gration nationally that is causing many persons to wonder whether America is going down the path of decay that caused the Roman Empire to fall. It is a sobering thought. But the facts must be faced.

The West Pointers were dishonest. They cheated. Some did so because they couldn't play football and keep up with their studies. Others who were not athletes cheated because that was the easy way to make passing grades.

The excuse of the athletes accents the abnormality of thinking in many institutions of higher education as to the part sports should play in college life. The necessity of having a good team to assure big revenue to build a bigger stadium to make more money has led many of our colleges into the evil devices of buying players, of competing in the open market for a star halfback. Some colleges have recognized the error and have deemphasized sports, as should be done.

At West Point the incentive was a bit different because Uncle Sam foots the bills there, but there was the incentive for the individual to "make" a team that was tops or near it in the Nation. So, if practice on the field interfered, cheat a little and make the necessary grades.

But fundamentally what happened at West Point reflects a present distorted attitude toward old-fashioned honesty and integrity that pertains not only in our schools but in America's social and political life.

It is seen in the high places in Government, which after World War II practiced plain deception on the people. We were told no secret agreements had been made with anybody. Later, we discovered pacts were signed at Tehran, Yalta, and Potsdam that made the Korean war inevitable.

In the New Deal era was born the idea that an administration can perpetuate itself in power by buying the voters with hand-out money. Remember how Harry Hopkins tapped the WPA till to win an election in Kentucky? During that era was born the fiction that cities and States as well as individuals need not look to their own resources or ingenuity to survive—let Washington do it. Out of the mating of depression and political trickery, came the insidious thinking by millions of Americans that hard work is positively silly, that if one does work, do the least possible, draw the biggest pay possible—and strike for more.

The youths, such as the West Pointers, with whom we are concerned today, were babies then. They have grown into manhood and an environment of take-it-where-I-find-it entirely alien to the American tradition. They are the unpretty fruit of the mistakes of the past two decades.

What do we see in Washington today? Corruption and scandals. The close link between the underworld and politics was revealed by the Keftauver committee. The Fulbright committee turned the spotlight on the RFC and the influence peddlers, some within the shadow of the White House, who sold their contacts for a price.

We hear of doubtful goings-on in the Government department that collects our income taxes.

We hear of patronage bought and sold like so much goods over the counter.

An Army general sees no wrong in accepting gifts from those with whom he does Government business, nor in diverting Government materials to private use.

The chairman of the Democratic National Committee yells "smear" when it is discovered that he is on the payroll of a St. Louis company for the ostensible reason that he has influence on RFC loans.

The close personal friend of the President, a major general, has a desk in the White House where he conveniently hands out receipts for deep freezers presented him gratis and which he distributes where they will do good politically.

Campaigns for the Senate in Ohio and Maryland last year were conducted along lines that set a new political low.

So, when 90 West Point cadets stray from paths of honesty, when nauseous revelations are made of the bribing of college basketball teams, when youths charged with robbery stand up in court, as they did in New York, and brazenly admit their guilt, but excuse it by saying that "everybody's doing it," when teen-agers become delinquent via the narcotics road, when too many youths of both sexes flout the laws of chastity and decency—when these derelictions of the youths of our lands are totted up, there comes a time for sober questioning among the adults.

Where does the fault lie? In the home? Perhaps. In the schools? In part. In the churches? In part. But in the main the fault lies in that nebulous field of public morals and spirituality which was so highly cultivated by the founding fathers and which of late has been so scantily tilled. Among too many of us the accepted premise is that anything is fair unless we are caught; that each of us is entitled to something for nothing, that the world owes us a living; that an honest day's work for an honest day's pay is almost unethical; that gypping the other fellow before he gypps you, is the only policy that pays off.

The level of public morals is low. Unfortunately, the good example is not set in Washington. The President is victimized by his friends, but a false sense of loyalty prevents him from moving forthrightly against them. His reluctance condones wrongdoing. Leadership in both parties is weak, because it is consistently attuned to the next election, not to what is best for the public welfare. In fact, public morals are low because politics at all levels is played at a historic low. The one is the coadjutor of the other.

Yet, we strut the earth telling everybody else to look at us and see democracy in fairest flower—and please copy; we'll foot the bill. We wonder, for instance, what Pravda will have to say about the 90 West Point cadets.

The time is here for moral regeneration. West Point is just one item in the sad chronology. The Roman Empire fell, not because it was overwhelmed from without but because it decayed from within. If this is an appeal for a return to the day-by-day practice of old-time religion, and respect for God's moral law, so be it. When the moral fabric of a nation begins to unravel, it is time to do some patching before the entire garment is gone. The cause and effect of this deterioration nationally will be issues in next year's presidential campaign.

Reply by Nikolai Shvernik, President of the Soviet Presidium, Referring to the "Friendship Resolution" and Editorial Comments

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. WILEY. Mr. President, on Monday of this week, I placed in the CONGRESSIONAL RECORD the exchange between British Foreign Secretary Herbert Morrison and the Communist Party newspaper, Pravda. I stated that up until that time the Russians had not responded to the Friendship Resolution

which we in the Congress had passed. I stated further that I trusted that a real response would come in the form of affirmative Soviet action aimed at definitely moving forward the progress to world peace, rather than a mere accumulation of peace propaganda.

The reply has now come in from Mr. Shvernik. Unfortunately it seems to be just one more instance of Soviet misuse and violation of the natural desire throughout the world for peace. Once again, the Soviets have asked for a Big Five Conference, presumably to settle issues which they could have settled a hundred times previously in the United Nations and affiliated bodies, if they had really a genuine desire to do so. Once again they have tried to pretend that they are extending the olive branch, whereas actually they are merely preparing the way for trapping more gullible people in their net.

The peoples of the world will not fall for the Russian trap.

I promised, however, to place Mr. Shvernik's reply, when it was received, in the CONGRESSIONAL RECORD; and I am happy to fulfill that promise at this time. I ask unanimous consent, therefore, that at the conclusion of my remarks there be printed the text of Mr. Shvernik's letter to Secretary Acheson and President Truman, as well as the text of the resolution of the Presidium of the Supreme Soviet of the U. S. S. R.

Basically, we are still awaiting affirmative Russian action to be demonstrated at Kaesong, and elsewhere—action which will show that the Russians really mean business and intend to halt their warlike steps.

Finally, I ask unanimous consent there be included the texts of a Christian Science editorial which appeared in the August 3 issue regarding the Morrison-Pravda exchange, and a Milwaukee Journal editorial of August 7, regarding the Shvernik reply.

I for one feel encouraged that at least there has been a slight chink made in the iron curtain. Pravda and Izvestia themselves at last got around to printing the Truman-Shvernik exchange. I am convinced that more can be done along this line with patience on our part and a little bit of cooperation on the Russians' part. We will never allow the Russians to play us for a fool, but neither will we throw up our hands in complete disgust and assume that nothing can be done toward encouraging a genuine world peace movement.

Phony peace congresses set up by the Russian stage masters at which their puppets dance are not the answer to peace, but genuine actions are. The next step is still the Russians'. May it be an affirmative, genuine, sincere step.

There being no objection, the letter and resolution and the editorials, were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of August 7, 1951]

SOVIET LETTER TO TRUMAN URGES FIVE-NATION PEACE PACT

WASHINGTON.—Following is the partial text of the State Department announcement

making public a letter from Nikolai Shvernik, president of the Soviet Presidium:

His Excellency DEAN G. ACHESON,
Secretary of State of the United States of America,

YOUR EXCELLENCY: I have the honor to acknowledge the receipt of your communication of July 7, 1951, and of the enclosed resolution of the Congress of the United States of America and to transmit to you a resolution of the Presidium of the Supreme Soviet of the Union of Soviet Socialist Republics.

This resolution expresses the feelings of sincere friendship of the peoples of the Soviet Union toward the peoples of the whole world—it speaks of the fact that the Soviet people is unified in its attempts to establish a stable peace and to eliminate the threat of a new war.

The Soviet people has no basis for doubting that the American people also do not want war.

NONBIAS STRESSED

However, the Soviet people know well that there exist in some states forces which are striving to unleash a new world war, in which the circles in question see the source of their own enrichment. The peoples of the Soviet Union believe that there will be no war if the peoples take into their own hands preservation of peace and defend it to the end, unmasking the attempts of those forces which have interests in war and which are trying to draw the people into another war.

I share your opinion that a desire for peace and brotherhood exists in the hearts of a majority of people. Therefore, governments which not with words but with deeds are striving to support peace must encourage by every means the peaceful strivings of their people.

The Soviet Government assists in every way the unification of the efforts of the Soviet people fighting for peace with the efforts of the peoples of other countries. It hospitably receives communications of peace from any country and by every means contributes to the intercourse of the Soviet people with the peoples of other countries placing no barriers in the path.

There is no doubt that friendship between peoples which is mentioned in your communication presupposes the development of political, economic, and cultural relations and connections between peoples on a basis of equal rights. There is also no doubt that a most important step on this road must be the elimination of any discrimination with regard to the Soviet Union on the part of the American authorities.

CURB ON ARMS VITAL

The duty of all peace-loving peoples consists in steadfastly carrying on a policy of war prevention and preservation of peace, of not permitting arms races, of attaining limitation of armaments and the prohibition of atomic weapons with the establishment of inspection over the implementation of such a prohibition, and of cooperating in the conclusion of a five-power pact for the strengthening of peace.

The conclusion of such a pact would have an exceptionally important significance in the improvement of Soviet-American relations and the strengthening of peace among peoples. Such a pact would raise the confidence of all peoples in the preservation of peace and, moreover, would permit the possibility of limiting armaments, of lightening the burden of military expenditures which lie with all their heaviness on the peoples' shoulders.

In implementing the indicated measures, the American people will always find full cooperation on the part of the Soviet people, who unalterably defend the cause of peace.

I hope that the text of the resolution of the Presidium of the Supreme Soviet of the

Union of Soviet Socialist Republics will be brought to the attention of the American people.

I take this occasion to request you to transmit to the American people my greetings and good wishes from the people of the Soviet Union.

NIKOLAI SHVERNIK,

*President of the Presidium of the
Supreme Soviet of the Union of
Soviet Socialist Republics.*

Moscow, August 6, 1951.

THE RESOLUTION

A resolution of the Presidium of the Supreme Soviet of the U. S. S. R.

His Excellency **HARRY S. TRUMAN,**
*President of the United States of
America:*

Being informed of the joint resolution adopted by the Senate and the House of Representatives of the United States, which was transmitted together with a letter from Mr. Truman, President of the United States, on July 7 of this year, the Presidium of the Supreme Soviet of the Union of Soviet Socialist Republics, combining the work of both Houses—the Council of the Union and the Council of the Nationalities of the Supreme Soviet of the U. S. S. R.—considers it necessary to make the following statement:

"1. Expressing the will of the peoples of the Soviet Union for peace, the Soviet Government always conducts a policy directed toward strengthening peace and establishing friendly relations between states. The principle of this policy was laid down in the peace decree adopted by the Second Congress of Soviets on November 11, 1917, as soon as the Soviet state was formed. Since that time the foreign policy of the Soviet Union has remained unchanged, being directed toward the strengthening of peace and friendly relations among peoples."

(After stressing earlier Soviet proposals for "general reduction in armaments" and "prohibition of the production and utilization of atomic energy for war purposes," the resolution of the Presidium of the Supreme Soviet went on:)

"2. In the resolution of the Senate and the House of Representatives of the United States, it is stated that the American people deeply regret the presence of 'artificial barriers' that separate them from the peoples of the Soviet Union."

DENIES WALLS AGAINST UNITED STATES

The Presidium of the Supreme Soviet of the U. S. S. R. must state that the foreign policy of the Soviet Union does not place any obstacles in the way of friendship of the Soviet people with the American people or with other peoples, and does not create any obstacles to the establishment of business, trade, and friendly relations between them.

However, this cannot be said of the foreign policy that is being conducted by the organs of authority of the United States. This is true not only by such facts as the systematic refusal on the part of the American authorities to issue visas for entry into the United States to agents of Soviet culture and their expulsion in spite of permits for entering the United States previously received through legal channels but also a number of other measures of the Government of the United States of a discriminatory character with respect to the Soviet Union.

(The resolution quoted 11 specific instances of discriminatory measures that occurred during the period of 1948–51. Most of the incidents concerned the allegedly unjustified searching of Soviet vessels in American ports, and detaining of Soviet couriers equipped with diplomatic passports. Also denounced were an alleged recent "hoiigan" attack on the secretary of the Soviet delegation to the United Nations and United States steps to cut down western trade with the Soviet Union and its satellites. The text continued:)

Thus, all these facts bear witness that on the part of the organs of power of the United States of America there is carried on a policy of discrimination toward the U. S. S. R. and artificial barriers are being set up which interfere with the free intercourse of the Soviet and American peoples and which are pushing our countries apart from each other.

ATLANTIC PACT ASSAILED

There arises a legitimate question how to reconcile the statements contained in the resolution of the Congress of the United States regarding the necessity for the elimination of barriers in relations between the peoples of the two countries with the above mentioned acts of the American authorities.

The Soviet people have no doubt that the American people, like all other peoples, do not want war. However, as history shows, questions of peace and war are not always decided by the people. The statements of many responsible representatives of the Government of the United States of America, and also of members of the Congress of the United States, contain direct appeals for the unleashing of aggressive war against the peoples of the U. S. S. R., for the use of weapons of mass destruction against the peaceful population. Such statements, which contradict not only the interests of peace but also the elementary requirements of human morality, must call forth condemnation on the part of the Congress of the United States.

3. The Government of the United States of America came forth as the initiator of the establishment of the North Atlantic military union directed, it is clear, against the U. S. S. R. It has established a wide network of military bases on foreign territory near the frontiers of the U. S. S. R. and, in infringement of obligations taken upon itself, is putting into effect the remilitarization of Western Germany and is reestablishing Japanese militarism. At the same time, there is being implemented in the United States of America a gigantic armament program.

The Government of the United States has unalterably refused all proposals of the Soviet Government aimed at strengthening peace and international security. Thus, up to this time there has not been achieved an agreement for the conclusion of a peace pact between the five powers, for the prohibition of atomic weapons, and for the establishment of inspection over the implementation of this prohibition, and also for the limitation of armaments and armed forces. In the resolution of the Congress, the thought is set forth that now the path is open for the use of atomic energy for peaceful purposes. At the same time, there is no doubt that only after the prohibition of atomic weapons can atomic energy actually be used for peaceful purposes, for the welfare of peoples.

DUAL POLICY CHARGED

The Soviet people are daily convinced that the policy and actions of the Government of the United States of America diverge from its verbal declaration regarding the preservation of peace, and equally from the peace-loving desires of the American people, and that there are being established conditions for the further worsening of relations with the Soviet Union, although no danger has threatened and does not threaten the United States from the Soviet Union.

4. It goes without saying that one can only welcome the approach of the Congress of the United States to the Soviet people and its appeal for the strengthening of friendly relations between the United States and the Soviet Union. However, an approach by words with an appeal for cooperation in the improvement of relations between the U. S. S. R. and the United States and in the strengthening of international peace can give positive results only in the event that there is no divergency between it and the deeds of the Government of the United

States, the policy and actions of the Government of the United States of America.

However, inasmuch as the Congress of the United States states that it is seeking a path toward the improvement of relations with the Soviet Union, it can have no doubts that such attempts by the Congress will find a response in the peace-loving efforts of the Soviet people and the peaceful policy of the Soviet Union.

The Presidium of the Supreme Soviet considers that one of the serious steps on this road could be the elimination of the discrimination toward the Soviet Union in all fields of international relationships which hinder normal relations between our countries.

A still more important step in the matter of improving relations between our countries and strengthening peace between peoples could be the conclusion of a peace pact between the five powers, to which could also adhere other states which are striving to strengthen peace.

The Presidium of the Supreme Soviet of the Union of Soviet Socialist Republics has no doubt that all peoples striving for the preservation of peace would greet with great satisfaction the conclusion of such a pact.

The Presidium of the Supreme Soviet expresses the hope that the Congress of the United States of America will bring the present resolution to the attention of the American people.

AUGUST 6, 1951.

[From the Christian Science Monitor of
August 3, 1951]

DEBATE: NEW STYLE

First, Foreign Secretary Morrison challenged Moscow's Pravda to print a complete statement by him or Prime Minister Attlee in the same way that declarations by Soviet leaders are fully and freely reported in the western press.

Second, Pravda said yes—if it might publish a reply at the same time and have its reply reproduced in the British newspapers.

Third, Mr. Morrison wrote a fine, forthright statement of the freedoms enjoyed by Britons and the reasons why those same peace-loving Britons were willing to rearm in order to protect their freedoms from destruction by an aggressive and expansionist Soviet Union.

Fourth, Pravda wrote a reply (at twice the length) categorically denying Mr. Morrison's assertions and assuring the Russian people that they alone enjoy true freedom, a freedom threatened only by the warmongering of such capitalist nations as Britain and America.

Fifth, the two statements were printed in Pravda and for once gave the Russian people a chance to hear something other than the stentorian voice of their own propagandists interpreting the aims of the western democracies.

Sixth, the two statements were published in more than 20 British newspapers with easy confidence that a comparison of the two would automatically expose the hollowness of the Soviet claims—already familiar through long and weary reiteration to their readers.

Seventh, the case rests, as the facts of the incident speak to democratic ears more loudly than all the thunders of protestation rising from behind the iron curtain. What they say to Russian ears is anyone's guess.

[From the Milwaukee Journal of August
7, 1951]

RUSSIA DONS PEACE FACE

Russia has two faces to present to the world. One is the face of snarling menace. The other is the face of sweet amiability. They are alternated as the men in the Kremlin choose.

After months of menace, the face of sweetness and light now shines on the free world.

The latest example of this is the letter from President Shvernik to President Truman. It dusts off the familiar Russian proposal for a five power peace and disarmament pact, a proposal that has been defeated twice in the United Nations. The reasons it was defeated were twofold: It ignored the U. N. and implied "big power" rule of the world; it provided, in detail, for agreement on Communist terms.

The Soviet change in attitude was first noticeable with the speech of Jacob Malik in which he said that peace was possible in Korea. Immediately other signs began to appear. The Russians resumed participation in four power talks in Berlin. They began to show up at social functions over the world, dropping hints of peace.

Russians even attended Fourth of July celebrations in foreign capitals and flew the American flag on the Fourth from their Washington embassy. The president of Moscow's city soviet rushed off to attend the Paris 2,000-year anniversary fete. The Communist press began talking about co-existence and the "traditional friendship" between Russia and the West.

In Moscow a new publication the News, appeared and was dedicated to proving that Russia has always loved Britain and the United States. In Geneva the Russians informed the U. N. that they wish to take part in East-West trade talks. The Kremlin pushed Korean peace talks and permitted its stooges to back down on several preliminary points of difference in negotiations aimed at cease-fire agreement.

In Moscow, Malik has assured a visiting delegation of Quakers that Russia wants peace, is not trying to export revolution, and isn't conducting an anti-West propaganda campaign. He feigned surprise that anyone would believe anything else.

Does all this indicate a change in Soviet policy which, as President Truman said in his economic message to Congress, "has no other purpose than to blackmail the free world into submission to Communist domination"?

We will believe it indicates a sincere change at our own peril.

Soviet Russia has always used the alternating policy of head patting and shin kicking. Where there is weakness, Russia moves in to exploit it by terror, intimidation and outright aggression. Where there is strength Russia seeks to lull her intended victim into letting down its guard.

For the time being the method of menace has failed. Determined opposition broke the Berlin blockade, saved Greece and Turkey, began rebuilding Europe and unifying it for security purposes. Finally, aggression in Korea was met with strength and stirred the free world to unprecedented rearmament and mutual action for defense. Menace has not worked. The Kremlin has donned its mask of peace.

For the free world this is equally dangerous. Moderate and soothing words from the Kremlin are, as the Italian paper, *Il Corriere della Serra* says, cause for alarm, "for a violent bolshevism will frighten even the simple minded, but when it talks of peace and understanding it is liable to win adherents even in unexpected quarters."

Even a few weeks of the Soviet reasonableness has proved this. The Korean peace bid brought a let-down in urgency over the world. The American Congress showed less interest in halting inflation. Richard Stokes, British minister of materials, said "it looks as though our defense program is not going to be so immediately necessary as it was a few days ago." Signs of a let-down seemed general.

We should know through experience that if Russia eases up on international tensions it will be because Russia is faced by strength that the Kremlin isn't ready to defy. If the free world now slackens in its devotion to the policies which created its present position of strength, it will only open the way for

Russia to resume aggression in the near future.

It would be folly to view President Shvernik's words and other Russian talk about peace in any other light.

Dog Days for Congressmen

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. FULBRIGHT. Mr. President, the Washington Post of Tuesday, August 7, contained an interesting column by the well-known and highly regarded Washington correspondent, Mr. Marquis Childs. His subject was Dog Days for Congressmen, and in covering it, he has given his idea of a typical day in the life of a legislator.

I realize that there is little in the article which is not already known too well by the Members of the Senate and the House of Representatives. However, because of the accuracy of the picture which Mr. Childs has portrayed, I believe that his column will be of interest to the readers of the RECORD. I ask unanimous consent to have it printed in the Appendix.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOG DAYS FOR CONGRESSMEN

(By Marquis Childs)

TYPICAL SCHEDULE

With the onset of the dog days there are always two theories about how to bring a lagging, reluctant Congress around to a sense of duty and action. One is the nose-to-the-grindstone thesis which holds that the more they suffer, the more they are likely to stop stalling and get down to work.

But this is a risky procedure, since it can produce intense irritation and highly irrational behavior. Senator TOM CONNALLY exhibited that last week when he blew his top at ECA Administrator William C. Foster, who had come before the Foreign Relations Committee to explain how policies laid down by Congress on foreign aid were to be carried out. A crotchety 74, CONNALLY is a sort of bunion barometer of the temper of the Hill.

The alternate theory is to call a recess of 6 weeks or so. This allows the overworked, overheated Members to go home and find out what people are thinking, or maybe just take a rest. Or, if they are Senators who are not up for reelection next year, they can get off to some cool place for a long rest. Then they come back refreshed in the early fall.

While rumors of a recess beguiled Congress for a time, the administration has settled on the grindstone approach. Majority Leader ERNEST McFARLAND is setting a target date by which time Congress will have wound up its business and be ready to start home. That date is September 15.

Not a single regular appropriation bill has been finally passed by both Houses. Foreign aid in the amount of \$8,500,000,000 and a military budget of \$60,000,000,000 are little items still in committee stage. That target date is a wistful hope, with the realists assuming it will be October 15 or later before Congress clears out.

So the poor Congressman is stuck with it. Consider his day. It is filled with harassments, pressures and, above all frustrations.

He wakes early, because of the barking of the neighbor's dog, to the realization that it is to be another hot, sticky day. He is alone in the house, left to the not-so-tender mercies of an indifferent servant. The family went back home in mid-July. (Just before his wife went away she said, "Well, if you ever want the children to know what they're supposed to call home, we ought to go back and open the house even though I dread it.")

At the office his secretary greets him with a list of the people he's got to see. And they're calling from the recording room to say they're waiting for him to make the record of the forum discussion on the new price control law. At 11:30 he's got to shake hands with two groups of high school kids from back home. The secretary notes that they both want to have photographs taken with him.

Two committee meetings are on the morning schedule, and one is especially important since Eisenhower's top assistant is going to testify on foreign military aid. But he promised the chairman of the subcommittee considering the Agriculture appropriation bill that he would look in for at least a little while.

His administrative assistant walks down to the recording room with him to talk about the delegation flying in from the home State in the late afternoon. They want to know why that natural gas pipeline has not yet been approved by the Interior Department.

For one reason or another, he is called off the floor a half dozen times after the session begins. He asks unanimous consent to put into the record a speech by the chairman of the conservation commission in his State. The chairman is sitting in the gallery and later he takes him to lunch in the Senate dining room with his wife and her mother and several friends.

The delegation from back home arrives in a pretty sullen mood about delays and red tape in Washington. "So this is the organized confusion you call Government, is it?" the chairman says snappishly in greeting him in the fancy hotel suite the group has taken for headquarters. Through dinner and far into the night the Congressman talks with them; about the reasons for the delay, the scarcity of steel, the importance of the armament program. But he can see that he is not making much of an impression. "You better come home and tell that to the chamber of commerce," says the head of the delegation, "they're getting pretty impatient."

Back in the empty house at last, he sits down to scrawl a note to his wife. " * * * Getting fed up with all this * * * think sometimes it isn't worth it * * * feel sure I could make a pretty good living practicing law back home * * * "

He does not tell her about the note from the real-estate agent saying that the Washington house they rent is to be sold and they will have to find a new place to live. So on and on it goes, and ahead is '52 and still another campaign.

Tuttle Creek Dam in Kansas

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Randolph (Kans.) Enterprise of July 31, quoting Prof. J. O. Jones, professor of

hydraulics at Kansas University in opposition to the Army engineers' proposed Tuttle Creek Dam in Kansas.

I am sure the Senators are aware that I have long contended that flood-control work should start at the heads of the creeks and out on the land where the water falls as rain. Professor Jones, who is a specialist in the field, confirms my belief and says that instead of spending \$68,000,000 on Tuttle Creek Dam to protect the people in the lower Kaw Valley, we need to spend \$1,000,000 on each of 68 small retention dams at the heads of the Kaw River tributaries and protect the whole valley.

The article reveals that Professor Jones was acting dean of the Kansas University Engineering School from 1942 to 1948.

I offer the interview with him to indicate to Members that men expert in the field believe that the Army engineers' proposed works will prove grossly wrong.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

**KANSAS UNIVERSITY ENGINEERING PROFESSOR
FOR A RETENTION DAM SYSTEM**

A member of the flood-control advisory committee to the Kansas Governor today denounced the proposed system of reservoir dams on the tributaries of the Kansas River and advocated a system of small retention dams.

Prof J. O. Jones, professor of hydraulics at Kansas University, told the Journal-World that Tuttle Creek Dam and others like it proposed by the Corps of Engineers "won't do the job."

"We don't need big dams," he said. "Instead of spending \$68,000,000 on Tuttle Creek Dam to protect the people in the lower Kaw Valley, we need to spend \$1,000,000 on each of 68 small retention dams at the heads of the Kaw River tributaries and protect the whole valley."

"It's time we started worrying about the entire valley, the people on the little streams that get floods every year instead of looking at the people in a major disaster that happens only once maybe in 15 years. We must not forget towns like Marlon, Valley Falls, Marysville, and Waterville."

He added that Tuttle Creek Dam would probably be built because public pressure would demand that something be done immediately.

He pointed out that one of the most successful flood-control projects is the Miami Conservancy which is a series of retention dams on the Miami River above Hamilton, Ohio.

"Tuttle Creek Dam would not have averted this disaster," Jones declared. "This was an unprecedented storm. We already had received a nearly record amount of rainfall in June. If all the proposed reservoir dams had been built, they would have been filled by June rainfall by the time these last disastrous rains hit them. The spillways would have been discharging water more rapidly than the riverbanks would have carried it, and we would have had this flood."

For support of his statement, Professor Jones, who was acting dean of the Kansas University engineering school from 1942 to 1948, cited the Kanapolis Dam.

"A 5-foot overflow occurred between Marquette and Kanapolis during this current flood, and Salina has received two major floods since Kanapolis Dam has been completed. This shows the Kanapolis Dam is not what it was cracked up to be."

The hydraulic engineer did say that he felt nothing could have averted this flood,

however. "Engineers would call this a 100-year flood, meaning that it would happen only once in 100 years."

He continued by saying that the Corps of Engineers are making predictions which future history will prove grossly wrong. "Hundred-year floods happen infrequently, but it is impossible to predict at present when another flood is coming."

"When a flood which will top the 1951 flood will occur is impossible to tell," Jones said. "The Corps of Engineers is merely guessing when they make their predictions. Our records on floods are only about 40 years old. When the records are 300 years old, we will be able to make predictions on floods and may be able to tell when the next flood is coming and how big it will be. Until then any engineer who says a dam will handle such and such a flood is putting himself out on a limb."

Retention dams are better than reservoir dams, Professor Jones contends, because they are not kept full, but are used only when the river begins to rise. This allows more space for the water and also keeps the dams from filling up with silt. A steady current through the dam keeps washing the silt down.

"Another reason it is better to have retention dams which are put into use as storage facilities only in flood times is that more land can be farmed around the dam," he declared. "Of course no one lives within reach of the retention dam waters, but farmers can lease the land to farm. Nine years out of ten they will probably not be flooded. This allows more of the fertile, river-bottom farm land to be farmed than if the fertile river-bottom land was kept covered by reservoir dam waters."

"The Corps of Engineers wants multiple-purpose reservoir dams because they can heap intangible benefits onto the river such as wildlife conservatory, recreation, and the silliest reason of all, improvement of navigation on the Mississippi River below St. Louis," he said emphatically. "This allows them to overestimate the benefits and thus build bigger dams."

He attributes what he considers a major fallacy in the Corps of Engineers principle to the 1927 act of Congress. The law only specifies that the benefits exceed the cost. To Jones this is a mistake. He believes that the projects should be planned so that the difference between costs and benefits is greater than the cost. In other words so that benefits increase at a faster ratio than the cost. "Privately financed projects are planned that way; why shouldn't Government projects be the same way?" (Lawrence Journal-World)

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS IS ACHESONISM

John P. Davies, Jr., veteran career Foreign Service officer, has been cleared and returned to active duty without prejudice and with the full confidence of the State Department, after a hearing by the Department's loyalty and security board.

Since neither the charges against Mr. Davies nor the evidence relating thereto have been disclosed, it is not possible to make an independent evaluation of this finding.

However, it is not necessary to go beyond Mr. Davies' own official reports to form an estimate of his qualifications as a political expert, particularly where communism is involved. It is in order to do so since Mr. Davies is expected to be assigned as a political adviser to the United States High Commissioner in Germany.

In recommending an American policy for China November 15, 1944, Mr. Davies said, in an official report to the Department: "A coalition Chinese Government in which the Communists find a satisfactory place is the solution of this impasse most desirable to us. It provides our greatest assurance of a strong, united, democratic, independent, and friendly China—our basic aim in Asia and the Pacific."

When a man so naive as to believe that a government satisfactory to the Communists could be independent of Russia and friendly to the United States can qualify as a State Department political expert, how can the public be expected to follow such leadership?

By contrast there is the case of Angus Ward, a real expert on communism and the Soviet mentality, through his long service in China, Manchuria, and Russia itself.

Because of his fidelity to American principles, the scholarly Mr. Ward spent long, dreary months in a Communist prison at Mukden. Upon his return to the United States, his reward for a long career of distinguished service was an assignment to an obscure post at Nairobi, in central Africa.

When a man who understood communism and was opposed to it is banished in this manner, and when one of the Department's choicest plums is given to an official who so misunderstood communism that he was sympathetic to it, it is easy to see the kind of influences which are running the State Department.

Some departments need a new broom, but this one should be given meat-ax treatment.

Conditions in the State Department

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "This Is Achesonism," published in the New York World-Telegram and the Sun of Wednesday, August 1, 1951. In the light of recent comments, and of the remarks this morning by my distinguished colleague from New York, I feel that this editorial should also be read by all the Members of both Houses of the Congress.

**The Pick Plan for Flood Control
the Lower Missouri River**

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the July 26 issue of the Overbrook Citizen, of Overbrook, Osage County, Kans.

This article is a protest against efforts to stampede approval of huge appropriations for the so-called Pick plan for flood control in the lower Missouri River.

I am advised that the big flood control meeting held in Kansas City recently was completely in the control of the United States Army engineers and that at least one State delegation was advised that the Army engineers had suggested formation of a lobby to pressure this Congress for appropriations to Army reservoirs.

This article, by a Kansas country editor, seems to me a very significant account of that meeting and other happenings in the basin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRY STAMPEDE TACTICS TO GET WAY WITH PICK FLOOD-CONTROL PLAN—ATTEMPT TO BYPASS DEMOCRATIC PROCEDURES MEETS RESISTANCE

Most Kansans probably don't realize it but a lot of things pertaining to their personal interests have been happening this week in the name of flood control.

The Overbrook Citizen editor had opportunity to watch some of the wheels turn and some of the wheels were pretty big and they turned in a fashion to suggest anyone who dared to stand in the way might get flattened out. But it didn't quite work that way.

Tuesday we attended a meeting of officers and directors of the Kansas Soil Conservation and Flood Control Association in Topeka. This organization is composed of 14 member groups of the major valleys in Kansas. They originally organized to promote small retention dams in the uplands operating on the draw-down principle instead of the huge reservoirs advocated by the Army engineers.

Be it said that the flood-control action was at something of a stylike prior to the big flood. Several of the watershed groups had had plans drawn for multiple-dam flood control but lacked power to get a congressional go-ahead. The Pick-Sloan backers were active on the other hand, plugging for the big dams down on the main streams. The politicians, recorgnizing a hot potato, mostly got on a high fence and stayed there. A hearing was held in Topeka last fall at which nothing was decided.

Then came the 1951 flood and its heavy toll of destruction and flood control suddenly loomed as a must. The Kansas City Star, wielding the big political stick for Kansas and Missouri—and favoring the Pick plan—decided the time was ripe to bundle up the whole business and get the Pick dams on order before any opposition would have time to express itself and while the whole Nation was still reacting to the big headlines about Kansas and Missouri.

A gigantic show was organized and staged in Kansas City yesterday. Present were governors of five States, including Ed Arn, of Kansas, and Val Peterson, of Nebraska, the latter a long-time champion of Pick dams. Also Senators FRANK CARLSON and ANDY SCHOEPFEL, of Kansas, and several Congressmen were present. A Who's Who in big industry group were there to lend power to the picture. General Pick and a staff of subordinates were very much on hand. Representatives from Federal agencies concerned were there—Department of Agriculture, Soil Conservation, etc. Agriculture, under Brannan, has devoted all its attention to selling socialism and shirked the task of promoting the welfare of the farmers in the flood-control controversy. Soil Conservation has been meek and lamblike, opposed to the big dams but unwilling to stand up and be counted. Only General Pick, of the Corps of Engineers, is blatantly on record, and, of course, he thinks his dam plan is the acme. Quite a

number of Kansans are of opinion that Pick should be reminded of another general who was recently demoted because he dared to step over into the realm of civilian decision. Pick has made MacArthur look like a small-time operator in that regard.

The big drums of the Kansas City Star boomed and rumbled all last week trying to create a false picture of a great mass swing for the Pick plan. Roy Roberts, the man in control of Star policy, undertook to play god and order the destinies of the people in the wide area of the Missouri River Basin. Maybe he has been successful and maybe he hasn't. His thinking on the matter is fairly obvious and sound up to a certain point. Roberts and political team began with the fact that the recent disaster proves need for flood control. They know the workings of democracy, that the democratic process is slow except when emergencies can be dramatized to force action.

DEMOCRATIC ACTION BYPASSED

Up to that point the Citizen's editor would go along and inform Mr. Roberts. Officers of the Kansas Soil Conservation and Flood Control Association and most everyone else in Kansas were willing to present a united front for flood control, if just a little bit of democratic compromise were included.

But Roberts and company figured one step further. It was their belief that the only method was to adopt the Pick plan since it is already blueprinted and ready to launch and since their sympathies were for the plan anyway. They were fully aware that there is a large reservoir of opposition to the Pick plan in unmodified version. Yet they hoped to stampede Congress by painting a false picture and getting it accepted as true before the opposition could stir itself. They were not willing to permit any single shred of compromise.

Indicating the thickness of the grease on the skids, the official representative of the Marais des Cygnes Valley was none other than Lamar Phillips, of the Ottawa Herald staff, who has been doing a Fuller brush act with Pick dams for several years without any great success or following in the valley area.

The Overbrook's editor, along with a small number of men and women from over the State, had the impression the Kansas City rally was open, which it was, and that there would be opportunity for democratic expression of opinion, which there wasn't. Gov. Val Peterson put on an act of incensed piety at the final meeting when the Overbrookian broke up the love feast by taking the floor and claiming that there had been no opportunity for discussion or hearing of any sort. Peterson tried to be oily and slip out of the embarrassing situation, was challenged again, lost his poise and shifted over to the pose of champion of democratic action. Maybe it was a futile gesture, but the valley group got its statement of policy and recommendations for sensible flood control read before the assemblage and Edith Montfort, of Reading, Kans., stated the case for retention dams in brilliant manner, pointing out that the committee's resolution ignored the method entirely by talking of soil conservation and big dams. There was no hope of winning a vote, so no action of that nature was tried.

NO PLACE FOR DISCUSSION

Last on the program was to be an organizational meeting of the valley residents. The rebellious coterie from Kansas innocently attended since they were valley residents. Phillips was chairman and routine procedures went along until Mayor Gage, of Kansas City, made the mistake of giving an impassioned talk in favor of the Pick plan. This started another argument. The Overbrook editor made a sincere plea that all camps get together and work out a program satisfactory to the majority; then stand

united in demand for flood control. The group in charge of the meeting made it brutally plain that only the Pick plan was to be advocated. It wasn't an open meeting at all.

The situation took on a comic touch when a farmer not with the State association group, took the floor and made an excellent plea for the small-dam system, pointing out that there are thousands of farmers living up on the small creeks who get flooded a dozen times a year and that the big dams would do nothing for them. The meeting stage managers hastily adjourned the meeting.

CONSIDERABLE OPPOSITION

In the meantime the considerable voice of opposition to a one-way ride with General Pick has begun to make itself heard again—a little late in this case, but enough to indicate that Senators and Representatives had better watch their commitments if they want to stay vote happy.

The Topeka Chamber of Commerce held a meeting Tuesday and passed a resolution that the flood-control problem be surveyed by a coordinated group of agencies, the equivalent of saying that it not be left entirely to the Army engineers. Topeka is one of the cities worst hit by the flood and its businessmen can't be accused of indifference to suffering or remoteness of concern.

A member of the flood-control advisory committee to the Kansas Governor, Prof. J. O. Jones, professor of hydraulics at Kansas University, Tuesday declared in the Lawrence Journal-World that the big dams of Pick-Sloan won't do the job and came out stanchly in favor of a system of small retention dams.

The story comes down from Salina that the Kanopolis Dam was badly handled and failed to do its control job. Towns of Marion and Florence, Kans., two that suffered as much as any on a ratio, are reported to still be in favor of the small retention dams.

The general public, vitally concerned whether in the valleys or not, has not been consulted in any way, and there are a great, great many Kansans who appreciate the common-sense value of retention dams over the Army engineer monsters.

If everyone in the State knew of the power play to push the Pick plan across there would be a lot of angry Jayhawkers. And every Kansas politician who allows himself to be stampeded into the scheme will have a lot of fast talking to do.

A PERSONAL NOTE

The story ends with a note by the editor. Our interest in the problem of flood control started as interest in what would be best for the general welfare. We have no personal or financial stake in the game whatsoever. Our conclusions as to the right or wrong of the matter resulted in affiliation with the people advocating a modified version of Pick-Sloan with retention watershed dams being used in highly cultivated plains regions. The Kansas Association sort of adopted us, and almost before we knew it we were into the fight—knuckles, teeth, and typewriter.

At Kansas City we probably antagonized a greater number of important people than has been done by a single citizen in years. We took our course in full consideration of the possible cost because we were convinced that a great, grave, and costly error was being jammed into action.

There will only be one major effort for full flood control, only this one chance to get the job done, so it becomes vastly important that the right formula be decided upon. True wisdom comes only through the democratic process and from God, not from people trying to play God. Sacrificing all sense derivative from competition in order to bypass the democratic process may well result in disaster far greater than that of the recent flood. History is full of examples.

The important people, the big names of Government and those manning the big propaganda mediums have no monopoly on right. There has been and is a united demand for flood control, but this unity is threatened by those who would use the suffering and loss of the great disaster to bulldoze across their pet method instead of seeking the best method.

The sin of whatever of wrong results will be theirs. If necessary unity is destroyed they must bear the guilt. The Middle West is still in America, and America is still a democracy. And the mill of democracy still grinds out the best answers when it is allowed to operate.

Troops to Europe

EXTENSION OF REMARKS OF

HON. ANDREW F. SCHOEPPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. SCHOEPPPEL. Mr. President, many Members in Congress were more than mildly surprised at the statement made some few days ago by General Marshall with reference to the number of Americans who were to be sent across the Atlantic to Europe. Some pretty definite statements were made as to the limited number that were to be sent from our shores to Europe when this matter was under discussion several months ago.

When General Marshall emphatically stated that the War Department was going to send 400,000, editorial comment followed in many sections of our Nation. There appears an editorial in the *Topeka Daily Capital* under date of August 6 entitled "Situation Uncertain," that lays it on the line, and Mr. President, I ask unanimous consent that this be printed in the Appendix of the CONGRESSIONAL RECORD as one of many editorials that touch on this serious determination.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SITUATION UNCERTAIN

The country remains in the dark as to what our actual plans are with respect to sending troops to Europe.

At the time Congress approved the general program of contributing United States forces to the organization to be headed by General Eisenhower, it was understood that Americans would comprise about 100,000 men. Later, the military began talking about 200,000. And still later, Defense Secretary Marshall threw all concerned into more confusion when he said he would send 400,000 across the Atlantic.

Marshall explained, after the Pentagon had failed to do so, that he had hiked the figure to 400,000 in order to include supporting troops—not just those to be used for combat.

Strangely enough, no official had mentioned such a distinction before and Congress was led to assume that the total would be much less than Marshall's top figure.

To make the matter all the more puzzling, we must now ponder the testimony of Gen. Alfred M. Gruenther, Eisenhower's chief of staff in the European area.

Gruenther was called back to Washington to give testimony at a secret session of a Senate committee. The United Press stated that the general said that American arms—not men—is the big problem Europe expects us to solve. It is Gruenther's idea, apparently, that Europeans are able to provide the bulk of the manpower but not the weapons.

Meanwhile, there is increasing pressure from the Air Force to build up its European strength, on the theory that ground troops cannot be trusted to hold against the Communists unless there is more air power overhead.

Here we have Marshall calling for twice as many men as Congress had been led to believe were wanted; Gruenther saying the need is for arms rather than men; and the Air Force insisting upon a greater European strength which would involve men as well as arms.

What Congress has a right to know is just what the military of the United States is planning to do, at what cost in manpower, weapons, and dollars and what the Europeans will do for themselves.

Sooner or later, Congress must draw a line and say "no more beyond this." Otherwise, the military will keep insisting upon more and more of a European build-up.

Clouding the situation still more is the fact that so many American officers and enlisted men are permitted to have their wives and children with them at European bases.

A disturbing article in *Collier's* magazine declares there are thousands upon thousands of American dependents there, and that this not only causes added expense for our Government but tends to refute the idea that danger is imminent. According to the article, a great many officers and enlisted men who should be devoting their entire time to supposedly pressing military matters are supervising grocery stores, administering schools, acting as chauffeurs, and engaging in all sorts of activities not even remotely concerned with defense against the Communists.

Our military leaders in this country picture Americans as trying desperately to build up their forces so they can help "hold the line" in the event of a sudden Russian invasion. But if such an invasion should come, it is pointed out, they would be burdened with the immediate task of evacuating their families.

If the possibility of war in Europe is imminent, as our military leaders say when they go before Congress to ask for added millions of dollars to finance more troops, the maintenance of American families in Europe is foolhardy. Families have no business in the front lines of any war, either actually started or expected to start.

Construction of Dam at Roanoke Rapids, N. C.

EXTENSION OF REMARKS

OF

HON. WILLIS SMITH

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. SMITH of North Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from the column Raleigh Round-Up, by James H. Pou Bailey, a son of the late distinguished

Senator from North Carolina, Josiah William Bailey, which appeared in the *Catawba News-Enterprise* and in other North Carolina State papers of July 20, 1951. This has to do with the attempt of the Interior Department to block the building of a great power project in North Carolina at Roanoke Rapids by the Virginia Electric & Power Co., even after the Federal Power Commission had authorized its continuation. This proposed power installation would have been about ready for operation now but for the obstructions placed in its way by one governmental department after another, and after the proper one having authority had approved its building. The people of the community most affected are indignant at the efforts of the Interior Department in this regard.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RALEIGH ROUND-UP

(By James H. Pou Bailey)

GOVERNMENT VERSUS BUSINESS

The Federal Government about 3 years ago said it wanted to build a gigantic dam at Roanoke Rapids. Virginia Electric & Power Co. said it wanted to build the dam and would spend about \$25,000,000 of its own capital over a 3-year period to develop power for distribution to 450,000 customers in Virginia, North Carolina, and West Virginia.

The matter was turned over to the Federal Power Commission for study to determine if VEPCO or the Federal Government should build the dam and provide the facilities.

Frank A. Hampton, Yadkin County native and many years assistant to the late Senator F. M. Simmons as senior attorney for the Federal Power Commission spent many months on the report.

Last April as a year ago he came out with his voluminous and shocking recommendation: that VEPCO, and not the Government, should build the dam. Since he is employed by the Government and has made a career of working for it, he no doubt gave his employer every benefit of any doubt. But he just couldn't see it and sided with private enterprise. You would have thought that was the end of it. Then you do not know the power-hungry Interior Department, whose Secretary, Oscar Chapman, said his Department would protest the ruling made by the Government's attorney.

Hampton has admitted privately within the past year that some of his Fair Deal friends have looked daggers' points at him since the ruling. The Hampton clan is not given to fear and he stuck to his guns.

Secretary Chapman, with the support of billions upon billions of tax money gathered from private-power companies and others, has moved steadily ahead in efforts to block private-power VEPCO. Last week, this paragraph moved over the Associated Press wires from Richmond, Va.: "The Federal Government went to court today in a new effort to prevent the Virginia Electric & Power Co. from building a gigantic dam at Roanoke Rapids, N. C."

On September 4, the Federal appeals court will review the case.

While the people plead for economy in Government, the Government is going to court in an effort to prevent private enterprise from expanding (and thus paying more taxes) and to fix it so that the Government can spend another \$25,000,000.

Proposed Construction of Roanoke Rapids Dam

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very splendid editorial from the Greensboro (N. C.) Daily News relating to the action of the Interior Department in hindering and delaying the construction of a dam on the Roanoke River at Roanoke Rapids, N. C., although the Federal Power Commission, after holding a complete hearing, granted the application of a private utility company to build this dam.

Hon. Oscar Chapman, Secretary of the Interior, declares in one breath that eastern North Carolina needs more power and that there is a shortage of power in all that region, and yet for 2 years he has prevented the building of a dam at Roanoke Rapids that would supply that power because he wants to wait and have the Government build the dam instead of having a private utility company build it.

The Government has not appropriated any money for this dam, and will not make an appropriation for this purpose for a long time to come, and should not make any at all when a private company is ready, able, and willing to build the dam, thus saving the taxpayers the expense of its construction.

A large group of citizens from all walks of life in the Roanoke Rapids area of North Carolina came to Washington recently and tried to prevail upon Secretary Chapman to withdraw the litigation which he had instituted to prevent the building of this dam, but without success.

It is rather disturbing to have one agency of Government, in this instance the Federal Power Commission, grant the application for the building of the dam and then have the Interior Department, another agency of Government, stall and delay and seek to defeat the carrying into effect of the order made by the Federal Power Commission. This would not be so serious but for the fact that in the meantime the people of eastern North Carolina are denied the power which they so much need, all because the Interior Department wants the Government to get further into the power business.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE POWER IS WHAT COUNTS

While the Daily News looks with some favor on public power, especially where private companies cannot or will not do the job or are in any wise disposed to gouge the public, it seems to us that Secretary of Interior Chapman's continuing attitude toward the dam which the Virginia Electric Power Co. proposes to build at Roanoke Rapids is arbitrary and unwarranted.

The situation boils down to the provision of power which that part of North Carolina and neighboring Virginia needs and wishes.

If the Government could go ahead with its Roanoke River Basin development, that would be one thing. But it cannot at present, and there is no assurance whatever when it can, regardless of how pending court decisions turn out. After all congressional appropriations are necessary for any such project, and the attitude of Congress has been repeatedly shown. The outlook for heavy defense spending in the future strengthens belief that it will be increasingly difficult to get funds for butter to go along with our guns.

Meanwhile a private power company, in this instance VEPCO, is ready and waiting to proceed with the project in accord with the reiterated wishes of the citizenry of the area which is to be served and the hard-won approval of the Federal Power Commission.

It is difficult for us to see, under these realistic circumstances, how or why a Cabinet member should be allowed to use his high office to block progress and at best hold the situation status quo for years.

Northeastern North Carolina needs power, and whoever can or will provide it, under proper regulation and control, should be allowed to do so in the very name of that economic and social progress to which Secretary Chapman, in his particularist approach, is avowedly committed. What the folks around Roanoke Rapids wish is to get that dam going and the power therefrom flowing into a richer, fuller life.

They Pushed Out the Library Walls

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. MORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Karl Detzer, published in condensed form in the Reader's Digest:

THEY PUSHED OUT THE LIBRARY WALLS

(By Karl Detzer)

(Condensed from the Saturday Review of Literature)

One day last spring a Louisville, Ky., woman approached the reservations desk of her city's free public library. She placed the four packages she was carrying in a wheeled wire basket like those which grocery chain stores provide their customers, and then said to the girl at the desk, "I'd like a framed picture for my living room, please."

She was told that most of the 100 originals and reproductions in the library's lending gallery were already out on loan. But she did find a watercolor by a Kentucky artist which she liked. A librarian stamped her card and the picture was hers for the next month.

Next she went to the library's record room, listened through earphones to passages from a dozen records, then borrowed five on her library card. At the book desk she picked up a couple of books—then went downstairs to a softly lighted room where a score of other taxpayers were enjoying television.

Later, at home, along with thousands of other Louisville citizens, she tuned her FM radio to Station WFPL, to hear the Chicago Round Table, followed by a half hour of Mexican folk songs and then 80 minutes of Brahms. This 250-watt station is owned by

the Louisville taxpayers. The public library runs it.

From its collection of 7,500 records and wire and tape recordings, for 14 hours a day, WFPL broadcasts good music, significant speeches, French lessons, open forums, condensed versions of current books and plays, and, by special permission, transcriptions of the best network shows. It also transmits hundreds of other programs each week over a city-wide system of leased telephone wires to Louisville's high schools, the municipal university, all branch libraries, the school for the blind, children's hospital wards, and the city's psychopathic ward.

High-school teachers need only call the library to bring into their classrooms, at any hour, recorded radio programs on whatever subject their pupils are studying. These recordings may be masterpieces of prose and poetry read by famous actors, or the actual voices of Amelia Earhart, Will Rogers, Thomas Edison, and other famous persons of the recent past.

Schools, clubs, and individuals may also borrow films from their library's collection of 550 motion pictures. Last summer a neighborhood grocer, worried about idle youngsters on the streets, borrowed films from the library and set up a screen in the lot beside his store. Each evening 50 to 150 children watched free movies instead of roaming the streets.

In 3 years 3,000 adults have enrolled in the library's free "neighborhood universities." Classes are held four evenings a week in four branch libraries. Professors from the municipal university teach subjects which range from music appreciation to the natural sciences.

By businesslike techniques, Louisville has kept the cost of her library's extra services, including radio, purchases of films and records, rental of leased wires, and all salaries, to about 12 cents a year for each of the city's 368,000 inhabitants.

Behind the plan to take the library to the people who pay for it are two energetic 44-year-old officials known to most of their fellow citizens as "Skip" and "Charlie." Skip is Clarence Reginald Graham, public librarian. Charlie is Mayor Charles P. Farnsley. It was he who started it all. Graham makes it tick.

A little over 75 years ago the Louisville library was privately owned and operated at a profit. Then a group of citizens decided it should be free. They bought a collection of books, lent them at no cost and supported the project with a lottery. Eventually they bought a business building where the library was housed until 45 years ago. Then Andrew Carnegie gave Louisville its present library building. The original structure was leased to a department store, and its rentals pay a large part of the library's annual expense. The library still is not city owned; a board of trustees, appointed by the mayor and city council, holds the title as a nonprofit corporation.

About 25 years ago Louisville built a bridge across the Ohio River and bonded the city to pay for it by charging tolls; any money left over in the toll fund after the bonds were retired was to be spent by the mayor as he saw fit. Three years ago when the last bond was paid Mayor Farnsley found a surplus of \$50,000.

Farnsley had served on the library's board of trustees and knew the institution needed money. He walked into Graham's office and startled the librarian by laying a check for \$50,000 on his desk. "Here's some money, Skip," he said. "Now, tear down the walls. Take the library out to the people."

¹ See Here's a Mayor Who Knows How To Get Things Done, the Reader's Digest, November, 1949.

Graham's first move was to set up the broadcasting studio. The other innovations followed soon after. In the main reading room of the library and in the 10 full-time branches, record players and head sets are available. Most of the listening sets are in constant use.

This was not the first time in Farnsley's regime that the library had broken with tradition. After he became mayor, Farnsley and the board agreed that the "White Only" signs must come down. There were a few dissenting rumblings but nothing happened—except that Negroes and whites used the library in perfect amity.

Television in the libraries caused some of Louisville's cultural eyebrows to lift sharply, but statistics show that in each branch the advent of television stepped up book borrowing by 46 percent in 2 years. It's easy to stop at the desk after watching a show and pick up a book to take home.

When a local educator complained about the cultural level of the average television program, Mayor Farnsley replied, "I'd rather the people came to their branch libraries to watch the shows than go to the saloons."

Farnsley talked the Art League into turning over its fine collection to the library for loan to Louisville's homes. Art dealers greeted the innovation coldly, but soon found that it paid. After living with a picture for a month, a citizen may decide that he'd like to live with it always, whereupon the librarian puts him in touch with a local dealer and arranges a pay-as-you-go plan.

Thus the librarian and the mayor work together to "push out the walls" and take books, music, art, and education to the people. Graham, who last year was president of the American Library Association, stated his credo in a message to that organization.

"The librarian," he said, "must be not only a scholar and educator; he must promote his library's goods with the skill of a huckster." That may be heresy in some library quarters, but in Louisville it's working out fine

deduction for entertainment expenses, in addition to the regular optional deduction."

Of course, Uncle Sam still has a war on his hands and needs money to build up his forces to defend the American people, including the gentlemen who advise how to cheat the Government on taxes, and the businessmen who pay for that advice. But both put dollars before patriotism.

Want to know who is eating those thick, juicy, and tender steaks which ordinary Americans can't afford? It's corporation officials, and the customers they are entertaining at the best hotels and restaurants, largely at Uncle Sam's expense. He also pays for theater tickets, night clubs, and all sorts of other costly entertainment.

"In New York," says financial writer J. A. Livingston, "night clubs thrive on the expense accounts of businessmen, who let Uncle Sam share their entertaining. High-priced cars, used for business, but also for personal enjoyment, are partly paid for by the Government."

The Wall Street Journal reports that "a credit system for eaters-out and night-clubbers" has been a great success from the start. Why? Because it has a big attraction for businessmen. It gives them a ready-made expense account which they can use to reduce the taxes on the profits of their corporations.

Every tax dollar lost in this way means another dollar of taxes must be paid by other people, including those who can't afford to spend a dime for entertainment. Who is responsible for this outrageous gyp business?

It's the Internal Revenue Bureau that let's them get away with it. The Bureau could and should crack down.

Stand for Freedom, Indiana

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. BEAMER. Mr. Speaker, under unanimous consent I enclose an editorial from the *Huntington (Ind.) Herald-Press*. This editorial indicates the mounting indignation at the challenge to the constitutional rights of a sovereign State as indicated by the arbitrary withholding of Indiana's own tax money by the Administrator of the Federal Security Agency:

STAND FOR FREEDOM, INDIANA

Oscar Ewing, Federal Security Administrator, has thrown down a challenge to the people of Indiana that we must accept with speed and vigor. He has told the people of this State that unless we bow to the dictates of his agency, unless we change our laws to suit the secret purposes of the FSA, we shall not receive a nickel of the tax money collected from our people for the welfare of our own aged, blind, and poorer citizens.

Ewing arbitrarily announced his decision to the press before he informed the Governor of Indiana of his action. He has given the Attorney General little time to present Indiana's views on the constitutionality of this decision to the courts. He has acted summarily without a thought for the unfortunate people who may have to suffer the consequences of his decision or for the rights of the people of his native State to run their own affairs.

And Ewing has shown, by this action, more clearly than any other Federal official has ever shown, how great the powers of the Federal Government over the lives, the property and the liberty of the American people has become.

Indiana can either knuckle down meekly in cowardly surrender to this challenge to our constitutional rights as a sovereign State, or we can accept the challenge and combat it with all our resources. We cannot believe that the people of Indiana will tamely submit to this expatriate Hoosier who seeks to make an example of his native State to tighten the grip of the Federal Government over the people.

The final solution, the final victory for Indiana and for States' rights will have to come either in the courts or in Congress. Meanwhile Indiana can take care of its own welfare program with its own resources without Federal aid.

County councils, on whom the main burden of continuing the welfare program will fall, should insist that every possible cut in welfare spending by county welfare departments be made. If it is clearly necessary to spend more money for welfare than can be collected in taxes, funds can be raised temporarily through bond issues. Then if Indiana wins its battle with the Federal Government and our rightful funds are restored to us, any deficits can be paid off.

If Indiana should lose this struggle for States' rights, it will be clear to the people of the United States that the traditional liberty of the people and the sovereignty of the States is lost. For if the Federal Government can force the States to write laws and administer them and keep information about the spending of tax money a secret from the people who pay the taxes, then our constitutional system is dead. It will take a Nation-wide political campaign to restore to the people of America the form of government that they never knowingly or willingly decided to change.

Top officials of Indiana's State Government in both parties, for this is certainly no partisan issue, should enlist the support of the governors of all the 47 States. They should insist that the scores of Members of Congress who believe in States' rights and the sovereignty of the people support Indiana in this major test of constitutional government.

This is Indiana's great opportunity to lead this Nation toward greater individual liberty, toward a return to representative government, toward the restoration of the constitutional rights that have been taken from us by subterfuge, indirection, and secrecy.

If the people of Indiana will stand steadfast together against this threat to their rights, they can start a prairie fire of resistance to bureaucratic dictation that can, in the end, strike off the socialistic shackles that have been forged in Washington by those who would enslave the people without their consent or knowledge.

Proposed Military Spending Drives America Into Communism By Inflation

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. BUFFETT. Mr. Speaker, the military spending plans which H. R. 5054 embraces do not constitute genuine na-

Unscrupulous Business

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from *Labor*, the national weekly newspaper, issue of Saturday, August 11, 1951:

CHEAT UNCLE SAM—TAX BUREAU SHOULD CRACK DOWN ON BUSINESS ENTERTAINMENT

Some gentlemen in New York would like to help labor cheat Uncle Sam. They tell us so, in a circular letter suggesting how it can be done. Of course, this newspaper has no use for such advice, but a lot of businessmen are gladly paying the price for it.

"Simply return the enclosed card," the letter says, and "our expert staff" will "point out tax strategies . . . provide recommendations on capitalizing on new tax changes."

In particular, the letter promises advice on "how to handle entertainment expenses," in such a way as to unload most of the cost on Uncle Sam. "Our tax analysts," it says, "have prepared a complete study on the tax aspects of entertainment."

They can even show an unscrupulous businessman "how to secure the full tax

tional defense. Instead, they take us toward national socialism and suicide. This spending is based on an alleged imminent military threat to our national security. This concept has been characterized as "pure nonsense" by our most able military authority.

This spending program goes far beyond our national defense. It embraces most of the errors I anticipated on March 18, 1947, on the floor of this House.

With those fears now confirmed by Truman's policies, my duty is clear. That duty is to oppose these colossal military spending schemes, even though they carry the sacrosanct label of national defense.

Of course, military appropriations that have for their sole purpose the defense of our country will always have my support.

But I will not vote for global military spending that seems to guarantee ultimate victory for communism in America by inflation. We have been on that road too long already.

Moreover, all history records that such gigantic peacetime military spending does not create security. Instead, it operates to provoke full-scale war and ends in catastrophe.

Gold Reserves

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. HORAN. Mr. Speaker, under the privilege granted to me to extend my own remarks in the Appendix of the RECORD, I am pleased to include a letter to me commenting on the gold reserves which I think very timely and worth the attention of every Member of Congress who is interested in a stable currency, a sound monetary policy, and who is concerned about our present and continuing inflationary processes which, of course, have existed ever since the deflationary pressures of 1929 to 1933.

The letter from Mr. Frank Lilly, of Spokane, Wash., follows:

DEAR WALT: Thanks for sending me the report giving selections from foreign transactions of the United States Government, by the United States Department of Commerce, and specifically calling my attention to the tabulation of the gold purchases and sales which I have found very interesting. This, by the way, is the first breakdown of the gold transactions that I have seen.

I was struck by the fact that this report was made in connection with foreign aid, and it certainly shows that we have given the foreigners a great deal of aid in the form of gold. It is true that \$3,000,000,000, which is the approximate total loss to date, since September 1949, does not sound very large in these days of astronomical figures but it represents the required legal backing for \$12,000,000,000 of currency. Incidentally, the foreigners are giving the gold they are getting from us a much higher value in their

economies than we do in ours, which, of course, gives them a decided advantage.

In every one of the reports made by the Treasury Department and the Department of Commerce, I have noticed that invariably the explanatory notes gloss over our loss of gold by stating in one way or another that, "Even after this reduction, gold holding on March 31, 1951, were in excess of \$21,900,000,000 and constituted over three-fifths of the world's known supply." See page 5 et seq. of this report.

They do not tell us that in losing \$3,000,000,000 of gold we lost almost half of all the gold this country produced in the last 150 years because that gives one an entirely different basis upon which to evaluate our loss of the last 2 years. Nor do they say anything about the fact that we have less gold in proportion to our debts and correlated obligations than any of the countries that we are aiding with our gold.

Actually, we do not have, as stated in this report, "over three-fifths of the known world supply" of gold but only about half of the known amount, which includes gold not presently in the central banks but gold that has gone into private hoards.

I do not need to tell you that figures do not mean very much unless properly evaluated and the figures on our gold losses have not been properly evaluated, either by our Treasury Department or the Department of Commerce. One other point in this connection that should be recognized by Government officials is that our supply of gold should increase on the average approximately \$1,000,000,000 a year; thus, instead of having lost only \$3,000,000,000 in a little less than 2 years, we have actually lost close to \$5,000,000,000.

In September 1949, the total amount of gold was \$24,800,000,000. As of the present time, holdings are \$21,758,000,000. In other words, we have lost more than three billion of gold as compared with the statement in the report of the Department of Commerce that since the foreign devaluations of September 1949, United States gold stocks have contracted by more than one and seven-tenths billions.

This last statement that gold stocks have contracted more than one and seven-tenths billions, is, of course, correct if we take into consideration the word "more"; but it seems obvious that the comment was made with the intent of putting a gloss on the real facts.

It is gratifying to me to know that you are very much interested in monetary matters and I have often wished that you were on the Banking and Currency Committee because I know that you would stir things up. It is true that you are doing a good job on the Appropriations Committee in an effort to hold down expenditures. This is important but, to my way of thinking, nothing could be more important than the soundness of our monetary system which is now, and for several years past has been, unsound.

FRANK.

Congressional Immunity

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Purpose of Stunt Is Achieved,"

by David Lawrence, discussing the question of congressional immunity.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PURPOSE OF STUNT IS ACHIEVED—McCARTHY DEMONSTRATES VALUE OF CONGRESSIONAL IMMUNITY AND WHY HE THINKS PRESS RECOGNIZES ITS ADVANTAGES

(By David Lawrence)

Senator JOSEPH McCARTHY, of Wisconsin, Republican, has given a public demonstration of the importance, as he sees it, of congressional immunity—and why he thinks the press, too, recognizes its advantages.

Congressional immunity is the right of a Member of Congress to say what he pleases on the floor or in a committee proceeding and yet to be free from prosecution for libel or slander by those individuals who may consider themselves unjustly attacked or subjected to ridicule.

The Wisconsin Senator offered on a television program to make public the names of the 29 employees of the State Department who, he says, are now being investigated by the Department's loyalty board in connection with charges involving security risks.

But promptly the moderator of the television program declined to have the names given, and Senator McCARTHY said he understood and sympathized with the desire of the broadcasting company and the sponsor to avoid responsibility for such disclosures.

So the Wisconsin Senator announced that he would meet the next morning at his office the reporters from the press associations and give them the names for publication. He said he not only would announce the names but would permit the reporters to give his own name publicly as their source or authority for the information. He made, however, one condition—that the press associations assure him in advance they would print the 29 names.

The press associations declared that they would give no guarantees in advance that they would print anything about anybody, and that if Senator McCARTHY issued the names, they would then decide on their own whether or not to publish them.

Mr. McCARTHY, of course, knew that the moment the names were printed all immunity vanished not only for him but for the press associations as well, as all the newspapers served by them which printed the names. There is no certainty that the individuals would refrain from filing lawsuits against the newspapers and sue only the Wisconsin Senator, though the press would be jointly liable with him. If he issued the names and they were not printed anywhere, the Senator could be sued for disseminating slander to reporters. He would then have to stand alone in court in his attempt to prove the charges.

But the purpose of the stunt was achieved. What Mr. McCARTHY wanted to do was to emphasize the real reason for congressional immunity—to protect not only members of Congress but the newspapers and periodicals which desired to publish the information made available by Members of Congress and governmental agencies. Without congressional immunity, many a scandal, like the recent revelations of the RFC, would appear in print in only a few publications ready to risk lawsuits. Nation-wide publicity on such wrongdoings would occur rarely.

Curiously enough, the Constitution says nothing about protecting officials of the executive branch of the Government from lawsuits over what they say in their statements or speeches. In some cases already litigated, the courts nevertheless have held that official statements on Government business issued by an executive department is as immune as the proceedings of Congress from suits for libel or slander.

There have been suggestions lately—principally from critics of Senator McCARTHY—that congressional immunity be abolished. Again and again it has been asserted that the Wisconsin Senator would not dare repeat outside of the proceedings of Congress some of the charges he has made concerning individuals who he claims are Communists or Soviet agents. While the Senator did not charge any of the 29 State Department employees with disloyalty or affiliation with the Communist cause, he did seek an opportunity to demonstrate that even so innocent a governmental proceeding as a mere inquiry into charges of disloyalty—which conceivably could wind up in a clearance of all 29 of any wrongdoing or disloyalty—runs into the hurdle of refusal to print unless someone utilizes his congressional immunity to make the information privileged.

So the answer to the congressional immunity problem is not to dare a Member of Congress to repeat the attack outside Congress but to find some means, through the court of public opinion or at the polls, to impress Members of both Houses with the need for self-restraint, or at least restraint while official investigation are under way and before conclusions or findings have been made.

The Imprisonment in Czechoslovakia of William N. Oatis

EXTENSION OF REMARKS OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES
Thursday, August 9, 1951

Mr. O'CONOR. Mr. President, patience is a virtue, and more controversies have been settled satisfactorily by patient efforts to arrive at a solution reasonably than ever have or will be resolved by rash and precipitate action. There are times, however, when patience ceases to be a virtue and degenerates into a vice.

Our Nation has been patient, extraordinarily patient, in efforts to arrive at a peaceful settlement of many claims against the Communist governments. This has been so not only as to matters which are admittedly controversial in their nature, but likewise as to many instances of outright injustice and disregard of international rights and obligations, which have been perpetrated by Russia and various satellite governments in the past few years against this country and its citizens.

Such a case is that of William N. Oatis, Associated Press correspondent, recently exposed to an alleged trial and convicted unjustly on an alleged confession that, in connection with his duties as Associated Press correspondent, he had acted as a spy for the United States Government.

Recently the board of directors of the Associated Press went on record as condemning the farce of the Oatis trial and conviction and demanding that every effort be made to effect his release. On Saturday the directors of the American Newspaper Publishers Association likewise expressed themselves in forceful manner on the travesty of justice represented by Czechoslovakia's treatment

of Mr. Oatis, viewing it as one more effort on the part of Communist countries to destroy a free press for a free people.

On Tuesday of this week the Overseas Press Club of America formally urged the President to take strong action to obtain the release of Mr. Oatis. The steps they propose include the severance of diplomatic as well as trade relations, a ban against entry into this country of persons of Czechoslovak nationality, cancellation of visas of all Czechoslovak persons in the United States under the auspices of their government, freezing of all Czechoslovak assets in this country, and closing the West German-Czechoslovak border.

Mr. President, I am convinced that the people of our country concur wholeheartedly in this statement by the board of directors of the American Newspaper Publishers Association. They realize that Mr. Oatis was not convicted because of any actual transgression of Czechoslovakian laws, but is now in jail simply because he is an American citizen, engaged in semiofficial activities, and thus a prime target for Communist hatred of all things American, and for Communist desire to weaken the prestige of this Government abroad.

There is pending before the Foreign Relations Committee a resolution which I submitted several weeks ago, urging that the Senate express the sense of this body to the effect that Mr. Oatis has been treated in a viciously unjust manner, and that every effort must be made, through expulsion of Communist correspondents in this country and economic sanctions, as well as through appeal to the United Nations, to focus world indignation on this deplorable action by Czechoslovakia, with the object of bringing about the prompt release of Mr. Oatis.

This is not just another incident, to be glossed over and forgotten after perfunctory representations by our State Department. It is a matter that approaches in importance, from a psychological standpoint, the all-out military efforts which have been conducted by this country to stop Soviet military aggression in Korea.

It is a matter so grave that it deserves an important place on the agenda of foreign activities of our country at the present time. I trust that it will be accorded such consideration, and that continuing and the strongest possible efforts will be maintained so that this individual injustice may be promptly corrected, and, vastly more important, that America may let the world know in no uncertain terms that such premeditated insults and aggression against any of its citizens anywhere in the world will no longer be accepted without positive action by our Government.

I ask unanimous consent that the accounts of the action by the directors of the American Newspaper Publishers' Association, containing the text of their resolution, and of the Overseas Press Club of America, be printed in the CONGRESSIONAL RECORD as part of my remarks.

There being no objection, the accounts were ordered to be printed in the RECORD, as follows:

NEWSMEN ASK ACTION TO GAIN OATIS' RELEASE

NEW YORK, August 7.—The Overseas Press Club of America announced today it had urged President Truman to take "strong action" to obtain the release of Associated Press correspondent, William N. Oatis, sentenced to 10 years in Czechoslovakia for alleged spying.

The club, composed of 750 active and former foreign correspondents, proposed six possible courses to be taken, one after another, until they produce results. They are:

1. Severing diplomatic relations with Czechoslovakia.
2. Breaking off trade relations with Czechoslovakia.
3. Sealing off the West German-Czechoslovak border road and railway traffic.
4. An absolute ban against entry into the United States of all persons of Czechoslovak nationality.
5. Cancellation of visas of all Czechoslovak persons in the United States under the auspices or permission of the present Czechoslovak Government, and their deportation from the country.
6. Freezing of all Czechoslovak assets in the United States.

OATIS CASE IS CALLED RED EFFORT TO DESTROY FREE PRESS FOREVER

NEW YORK, August 3.—Directors of the American Newspaper Publishers' Association said today that the imprisonment in Czechoslovakia of Associated Press Correspondent William N. Oatis is "one more effort" by Communist countries "to destroy forever a free press."

In a resolution adopted by its board of directors, the ANPA termed the trial of Mr. Oatis for espionage a "travesty of justice" and said it should "serve as a dire warning to all free people of the ruthless nature of Communist countries."

Oatis was sentenced to 10 years in prison.

EXPRESSES INDIGNATION

The full resolution follows:

"The board of directors of the American Newspaper Publishers' Association hereby expresses its indignation at the travesty of justice as evidenced in the so-called trial before the state court in Prague, Czechoslovakia, a charter member of the U. N. of William N. Oatis, a correspondent of the Associated Press, who has been convicted of espionage and sentenced to serve a 10-year prison term by this court.

"Mr. Oatis has been employed by the Associated Press as correspondent since 1937 and in that time has built for himself a record of integrity, competence, and accuracy.

"His arrest on April 23, his being held incommunicado, denial of the right to be represented by counsel of his own choosing, and being forced to testify against himself are all in contravention of the very elements of justice. His 'guilt' consisted of reporting established facts and developments in the country to which he had been assigned—the duty of a reporter—by the press service which employed him."

DIRE WARNING SEEN

"His treatment at the hands of Czechoslovakia should serve as a dire warning to all free people of the ruthless nature of Communist countries which have no conception of freedom of the individual: Therefore be it

"Resolved, That the board of directors of the American Newspaper Publishers' Association denounces in strongest terms the so-called trial and the conviction of William N. Oatis and that it offers its wholehearted support to the Associated Press and others

who are exerting themselves in his behalf; and be it further

"Resolved, That the board of directors records its deep sense of recognition of the fact that this was not, in fact, the trial and conviction of a newspaperman, but was actually one more effort on the part of Communist countries to destroy forever a free press for a free people."

Americanism or Marxism

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. BROWNSON. Mr. Speaker, the question of whether we shall continue in the same way of life that our Nation was accustomed to during the days from 1776 until recently or whether we shall continue to follow the path of least resistance to big Government control over every activity of our citizens is a serious one.

In this connection I wish every Member of this House, and each of the Senators, would read and understand the following condensation of a speech given by George O. Browne, immediate past president of Optimist International, when he keynoted the thirty-third annual convention of that service club at Detroit, Mich., June 27, 1951.

I have been associated with Mr. Browne since I joined Optimist Club No. 1 of Optimist International in 1937 at Indianapolis and have always been amazed at his willingness to drop the conduct of his own successful business to work to achieve the objectives of this service club. He is truly an example of the highest type of businessman.

The above-mentioned follows:

AMERICANISM OR MARXISM

(By George O. Browne)

During this past year, in view of world conditions, and after careful analysis of the over-all outlook, it seemed to me that as Optimists, if the tremendous expenditure of time, money, ideas, and energy around our slogan "Friend of the Boy" is to continue to have a true value to our countries, it was equally important that the youth we elect to guide be assured of a free country in which to live, with the result that my talks and discussions throughout all my travels has been a challenge to us as Optimists to take an active interest in good government to the end that the fundamental principles of freedom would be retained.

Today I am privileged to keynote this thirty-third annual convention of Optimist International, and I do so most humbly, but with firm convictions, and a sincere optimistic philosophy that, recognizing conditions whatever they may be, regardless of how black the picture, the only successful solution to any and all problems is through an optimistic approach.

AMERICANISM OR MARXISM

There is a price on human liberty. That price is the willingness to assume the responsibility of being free men.

We American people have been living in a state of crisis for the past 21 years. Each

day has been faced as a condition of the gravest emergency. Over 50 percent of the voting population of our country are apparently unfamiliar with any other conditions ever existing in America.

Few Americans realize that for hundreds of years prior to 1776 human beings in the populated areas of the world had been struggling against tyranny and slavery—against forms of government that took away man's freedoms, the very freedoms that were his as a gift from the Supreme Deity.

Few Americans today seem to understand when we refer to the Revolutionary War, that it was a revolution—a revolt by human beings against their government—that it was a "blood revolution" in every sense of the word—that it was as flagrant a violation of the existing laws in America as has ever been perpetrated in the history of North America.

Possibly we have the idea that those early American colonists were thinking of establishing a new nation here in America when they instituted that Revolution—that they knew exactly what they intended to do if they were successful in their efforts. Nothing could be further from the truth.

As Secretary of State James F. Byrnes so ably stated it:

"Our forefathers came to this country not to establish a government, but to escape the tyranny of government. They were not seeking security. They were seeking the opportunity to enjoy freedom."

Having suffered the tyrannies of government both in their home lands and in the Colonies here in America they looked with suspicion on any and all known forms of government. They definitely believed that the gravest and most constant danger to a man's life, liberty, and happiness is the government under which he lives.

Those ancestors of ours did recognize that all civilization is a balance of selfish interests, and a government is necessary as an arbiter among those interests, but that government must never be trusted—must be constantly watched—and must be diastically limited in its scope, because it, too, is a selfish interest and can automatically become a monopoly and devour the civilization over which it presides unless there are definite and positive checks on its activities.

With those fundamentals as the background of their thinking, our founding fathers did establish a government, and at the same time established a new philosophy of government. There was no other government exactly like it in existence and to this day no other government has entirely duplicated it.

PRINCIPLES OF GOVERNMENT

That government which they established, and which to me is Americanism, was founded on just three fundamental principles. First, freedom of the individual. Second, unlimited opportunities for all. Third, a government as the servant of the people, to interfere as little as possible in the lives of the people, to be an arbiter of their interests and to protect them in their necessary dealings with foreign countries.

Thus began the "world's greatest enterprise in freedom." The Constitution, and ultimately the Bill of Rights, is a monument to our forefathers' distrust of the Government, and the division of power between the legislative, judicial, and executive branches succeeded so well for more than 150 years in keeping government authority in its place that we, as Americans, considered our Government as a wise and benevolent institution, capable of assuming the whole burden of social and economic justice.

The "American experiment," composed of free men, depending upon themselves, in 150 years made the greatest economic progress of all times, and under this new philosophy of government built the greatest Na-

tion in the world by any yardstick you care to use as a measurement. There is nothing in the history of humanity that compares with this achievement. Through all these years we, on the North American Continent, have been the envy of people all over the world. We have been known as the New World—The Land of Opportunity.

In 1917, while World War I was in progress, the people of Russia rose in revolt against the tyranny of the Czars and it appeared they had succeeded in throwing off the shackles of human slavery they had endured for centuries. For 7 or 8 months they enjoyed freedom even as you and I—held a free election—elected their representation to go to Moscow and establish a form of government similar to that in the United States. The representatives went to Moscow—they entered the Kremlin with high hopes and lofty ideals and objectives. There a small group of men with guns herded them into an assembly room and announced that they were taking over the government—those who objected were liquidated. Thus the Bolshevik Government of Russia came into being, with possibly not more than 100,000 followers out of a total of 150,000,000 Russian people. Joe Stalin, in a very minor role, was in that group of 100,000. Even that group did not know exactly how they were going to handle the problems of government and eventually intrigue and bloodshed led to an overthrow of the self-appointed leaders of bolshevism, and the new group established the present form of government we know as communism, whereby the government planned the economic and social lives of the people. Today out of more than 180,000,000 people in Russia, there are about 3,000,000 members of the Communist Party—about equal to our present number of Federal employees.

Following World War I defeated Germany, with the conquering nations sapping her entire resources, was trying to set up a representative form of government with many of the characteristics of Americanism. But lack of understanding on the part of the masses, restrictions imposed by the conquerors, paralysis of industry, lack of sound currency, uncontrolled inflation, tremendous unemployment, poverty and hunger, made the people ripe for the remedies offered them by a former corporal in the German army, a paperhanger, who had read a book explaining how government could solve the economic and social problems of masses of people. About the same time in southern Europe, in Italy, where depression had set in, unemployment was prevalent and people were discontented and unable to adjust themselves to a post war economy, the editor of a weekly newspaper was advocating a change in government so that the power and authority be given to government to solve the economic and social problems of the people.

Meanwhile the stagnation of post war depression was rolling over all the countries of Europe into Asia and Africa even into South America. Groups in all countries were advocating having government control of economy and social planning.

In England, the so-called Labor Party, that had been advocating government ownership of nation-wide industry, redistribution of wealth, and government control of economic and social problems for almost 50 years, increased its pressure on the working people, many of whom were unemployed.

By this time in America such words as communism, nazism, fascism, socialism, and similar titles were becoming commonplace. On the surface each appeared to be different from the other. Some were advocating overthrow of government by force, others by the ballot box. In later years, these groups were actually at war against each other.

We, in America, were not much concerned as to what was taking place. Having had two political parties in America for years, both of whom believed in the fundamentals of our form of government, and neither showing any desire to deviate from that course, it was difficult for us to believe that anything serious would come from all this political activity in Europe.

ENSLAVEMENT OF THE PEOPLE

Apparently we believed the mouthings of the leaders of these new movements and failed to look for the basic principles upon which all planned to operate. It is apparent now, as we review our history in the past 25 years, that, as President Truman recently stated, all had just one objective—"enslavement of the people." We know, today, that in spite of the difference in names and the color of the shirts they wore, in each country they were, advocating the same ultimate objective, "Government control of the economic and social life of the people."

Our ancestors came to America to escape the tyranny of that type of government. That form of government is as old as civilization. The pharaohs in Egypt, caesars, the czars, the kaisers, British kings, colonization, war lords in China, ad infinitum through history that has at all times been the prevailing form of government.

In modern times the proponents of this civilization old theory of government were not students of political history.

They had to have some more modern version from which they gained their knowledge. Karl Marx's Theories of Government gave them the detailed patterns that could be followed in setting up a form of government that would vest sole authority in a central governing body to control the economic and social lives of the people and make them beholden entirely to such governing authority. At least everything that has been done in the past 50 years, in the trends of government throughout the world can be found in Marxism.

Marx did his research and wrote his theories while residing in England; he probably had more ardent followers there than any place in the world. He also was a news correspondent for British newspapers and covered the War Between the States here in America.

CLEAR THINKING NEEDED

Why do we continue, knowing the facts, to refer to communism as something different from socialism, nazism, fascism, etc? Why not be honest with ourselves and give it its true name, Marxism? Then we can clear our thinking and recognize that there are just two different ideologies of government—Americanism or Marxism. The one is freedom—the other is slavery. The only difference that exists between the form of governments in the various countries today is the degree toward which they have progressed to the ultimate goals of Marxism. Some are closed than others, but all are well on the road.

Recognizing that all these isms—except Americanism—represent a degree of Marxism, which is government control of the economic and social lives of its people, let's take a look at what is happening in our own countries.

Up until 1930-32, when the world-wide depression finally caught up with the people of North America, American people were going blithely on their way living up to precepts of our founding fathers, as free Americans, depending on ourselves, exercising our initiative and self-reliance, full of hopes and ambitions, and giving little thought to our Government, which with its checks and balances was performing strictly as prescribed by Constitution and the laws enacted by our elected representatives, who as our ancestors intended, were normally honest and incompetent amateurs.

When the impact of depression hit us, unemployment rose, businesses failed, we became panicky. We were "soft." Many lush years of living, much of it beyond our means, with our futures mortgaged for several years ahead in our desire to have all the luxuries that our great creative and productive abilities under free enterprise and unlimited opportunity for all had made possible, found us as citizens totally unprepared to cope with adversity. We did not want to face reality, cut our standard of living back to our income, take work of any kind to keep family and body together. No; we wanted a quick, easy way out. In typical human-nature fashion we refused to admit our own mistakes and sought an alibi.

SOCIAL-SECURITY FIASCO

Social security became a law—a clear abrogation of man's inherent rights. It is absolute dishonesty on the part of Government because as the Government continues its spendthrift policies and continues to build up deficits it has destroyed the purchasing power of the American dollar to the point where any return to the wage earner will be a mere pittance and represents no security at all. If the millions of working people in America who apathetically allow Government to deduct their social-security dues, could understand the bureaucratic absolutism that has been built up and what this will do to them and their children, they would repudiate the whole dishonest business at once. They do not know that the moneys paid in have practically all been expended for other governmental schemes and all that remains is a Government's promise to continue to take enough money annually away from the present and future generations to meet these so-called security payments—and that same Government every hour continues to go farther and farther into debt.

They do not know that when a government takes over the people's economic life it becomes absolute, and when it becomes absolute it destroys the minds, the arts, and the liberties of the people it governs. It is no accident that these same practices were in operation or advocated in all the countries following the Marxian theories long before they became established in America. Men who are fed by their government will soon be driven down to the status of slavery. Had we adhered to our Constitution, this monstrosity would never have been foisted on the American people.

Subsidies to farmers, encouraging overproduction of items not needed, creating fictitious retail markets, and eventually dumping and destroying the produce acquired by such false values. The developments from that point on have been so rapid it is practically impossible to keep track of them.

A Federal Security Administration—one of the greatest stealers of liberty and freedom ever established. A public-welfare deal whereby the Federal Government collects money in taxes from those willing to work, and who are thrifty and industrious, makes a deal with each State to return part of the funds to the State for welfare and relief, provided the States put up an equal amount. Very cleverly the law creating this octopus, giving this bureau sole authority to make its own rules and regulations and judge the equity of its own deeds provided a secrecy clause making it illegal to divulge any information as to how the funds were spent, who received them, or what purpose they served. The records today disclose that each year this bureau has expended more and more funds for welfare and relief at a time when the total number of people employed has risen from 35,000,000 to over 63,000,000 people, and the national total income has expanded from \$65,000,000,000 to an estimated \$300,000,000,000 for 1951. Thank God, this is one place where American people

are beginning to assert themselves. My own State of Indiana led the way by enacting a law opening the welfare records for public inspection. While the law was being nursed through regular legislative changes the giant Federal Security Administration fought it with every known tool of blackmail and gangsterism—threats of cutting the entire State off from Federal welfare funds were promised. Other States are following.

In our softness we have no conception of what Patrick Henry meant when he said, "Give me liberty or give me death." Even back in those days of Revolution we had plenty of so-called statesmen and leaders who wanted to compromise with England and work out a deal, even as we have today. We, as Americans, must come to realize and believe that life is infinitely less important than freedom. Our political leaders told the youth of America that in 1918, again in 1941, and they are telling them that in 1951, as they send them away to die "to make the world safe for democracy."

Are these things we have been doing to our form of government a part of the principles as established by our forefathers?

A free man has a value to himself and to his country—a ward of the state is useless to himself and to the world, but he can be useful as a tool of the state that controls him. He votes in America. In other countries he is nothing more than slave labor serving his political masters.

Let's look a little further. Government ownership and competition with private business. The Tennessee Valley Authority, established for national defense and flood control, generating power and selling it at substantially below its actual cost. The deficit is made up by taxpayers' money, the large part of which comes from areas far remote from the sections enjoying cheap power at other taxpayers' expense. Why? Why isn't a fair price on the basis of cost of production used by this Government agency? You know as well as I, it is again a government trying to hoodwink the people into believing that their government is a great humanitarian looking out for their welfare. Now the Missouri Valley Authority is being created. A few weeks ago I flew over the great Bonneville Dam on the Columbia River. Two years ago I visited Hoover Dam at Boulder. Flood control? Yes, by all means. Government competition in business? No. Do you know that the several Government agencies, Army engineers, Department of Reclamation, and Department of Interior, and heaven only knows how many more, have 16 of these great projects on the drawing boards which if put into operation on the same basis as TVA will enable the Government to take over the electrical, public-utility business of the entire Nation?

I could go on indefinitely with public housing, slum clearance, compulsory savings, tax withholdings, socialized medicine, Government subsidies, Brannan plan, and each and every one of them controlled and operated by a Government bureau, making its own laws, rules and regulations, serving as its own jury and judge as to the proper conduct of its affairs. Again I say, make no mistake about it—literature released by the Federal Security Administration where social security and various public assistance programs including socialized medicine, compulsory health insurance, etc., are being advocated states—and I quote—"Social security and public assistance programs are a basic essential for attainment of the 'socialized state' envisaged in a democratic ideology. A way of life which so far has been realized only in a slight measure." Latest additions proposed are free—I love that word—hospital service for millions of people 65 years or older, and finally a "Fed-

eral Agency for Handicapped" on which 13 separate bills have been introduced to extend medical, surgical, and therapeutic services, vocational guidance and counseling, education and training, and placement in suitable employment, if possible for 28,000,000 such citizens. In Russia it's communism, in England it's socialism, in America it's Government-planned economy and Government-planned social progress.

Let's be realistic—let's be honest with ourselves—it's Marxism, and it makes no difference what other high sounding name you give it or in what country you find it.

This is not a political issue in terms of Republican or Democratic Party in the United States. In both parties can be found these followers of the Marxian ideologies and in both parties there are staunch supporters of the fundamental principles of Americanism. To preserve their position in Government many of those who honestly believe in true Americanism have had to straddle the fence because of the gullibility of the American people in their acceptance of these Marxian theories.

The answer is education—taking an active interest in Government—combining our efforts with those of all other service and patriotic organizations to sell Americanism to all.

It's time to fight. It's time to prove whether or not we deserve the heritage given to us by our forefathers. It's time to demand that our Government be restored to those who are Americans, and it's time to throw out the anti-Americans.

Have we the courage of Patrick Henry? Can we stand up and say, meaning every syllable of it, "Give me liberty or give me death"?

The Lowe Down

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my own remarks in the Appendix of the Record, I include an article from the Sidney Telegraph by Jack Lowe, entitled "The Lowe Down."

Mr. Speaker, Jack Lowe is one of the outstanding editors of a live newspaper in western Nebraska. His remarks on the propaganda put out by the OPS is to the point. I am sure every newspaper editor would react in the same way. I commend the reading of the article to my colleagues:

THE LOWE DOWN

(By Jack H. Lowe)

Every week a cheery little greeting comes to my desk from the Office of Price Stabilization. It starts out with an affable "Hello Nebraskans" and it proceeds to reassure us that if we'll just sit back and relax and leave everything up to Uncle Sam we needn't fear any harm from those bad boys who are trying to hoist prices and boost inflation for their own selfish benefit.

I guess there's something wrong with me because I don't get as much enjoyment out of these dispatches as one should. Maybe it's because I don't read them very thoroughly. I read the first couple or three but the guy who composes them seems to be in a

rut and it got so I could just about recite the contents before I opened the envelope.

I'm not one of those who have a stroke every time someone mentions a Government employee, in fact, I willingly admit that it's a big Government and it takes a lot of people to run it. Government workers are much like private-industry employees—some of them earn their money and some of them don't. You can't condemn an entire system just because there are a few rotten apples in the barrel and I hold no brief for the die-hards who would do away with all Government pay checks.

I do get a little annoyed, however, when my wastebasket fills day after day with Government bulletins, such as this OPS folderol. I'm in the paper business and in order to stay there it may be necessary to slip into the black market. Thus, it is not comforting to contemplate the fact that certain governmental agencies are using paper like crazy, while the rest of us are going crazy trying to buy it.

I don't need any reassurance from the OPS that we are being saved from the inflationary wolf. If the boys in OPS are doing a good enough job it won't be necessary to prove their point with weekly small-talk bulletins. Where I would like to see the results is on the price tags of the things they are supposed to be controlling. So far, I hear a lot of talking but I don't see any results.

There's a story going around about the efficiency expert who was called in to check on a Government agency. He asked his first victim, "What do you do?" "I don't do nothing," was the reply. To the same question his second victim gave the same reply. "Well, what we've got to do first," the expert declared, "is to eliminate this duplication."

I have a sneaking suspicion that OPS would make a lot more friends among the press if it would eliminate these weekly greetings. Newspapersmen don't like to be reminded that the public isn't smart enough to take care of itself. Most reporters are fair judges of human nature and they haven't reached the point where they think the average American needs a guardian.

Many times in this column I've complained because I didn't know enough about what the Government is doing. After reading my OPS propaganda I think it was much nicer the other way.

Please, fellas, call off your dogs.

"American Air Power Is Answer to the Red Army—A Powerful, Long-Range Air Force Is Now Generally Conceded To Be the Principal War Deterrent, and Is Today the Principal Weapon of Our Defense of the Western Hemisphere and the Free World"—Hon. Carl Vinson, Chairman, Armed Services Committee

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. BOYKIN. Mr. Speaker, several weeks ago, I visited with a friend who lives in one of those New York skyscraper apartment buildings—thirty-eight

floors above the street. As I looked out across that great city, it seemed that—with outstretched hand—I could actually touch the clouds.

Across the billions of dollars worth of great skyscrapers, I could see the fringe of Central Park—and the great panorama that stretched before me in the distance. My friend said to me, "Frank, just what will America do if Russian planes break through our air defenses and, after having dropped an atom bomb, continued their aerial operations against our country with that great air armada they recently exhibited in Moscow?"

I told him that, in a large sense, he could quiet his fears—that, for more than a quarter of a century past, CARL VINSON, of Georgia, had devoted his life to looking to the defenses of our country—and that he would continue to do so as long as life remained in his body. Moreover, I said:

The traditions that CARL VINSON—the Nation's most outstanding military authority—will leave behind are certain to survive as long as civilization lasts.

Mr. Speaker, it is needless to tell you how surprised I was to receive, last Saturday, from my friend in New York, a clipping taken from the New York Journal-American, the final of a series of five articles written by the Hon. CARL VINSON, and headed, "Plare supremacy held key to survival of the United States."

Mr. Speaker, I called our good friend, Edward C. Lapping, head of the Washington press bureau of the New York Journal-American in the Press Galleries, and asked him if he could furnish me with the entire series of articles that were written by CARL VINSON. This, Mr. Lapping has done, and with thanks to him and the consent of my colleagues, I propose to extend my remarks in the Record and insert therein those articles as written by CARL VINSON at the conclusion of this statement.

I have often pondered, Mr. Speaker, on just what we junior Members of the House would do if and when we no longer have you all older and more experienced in legislative matters to council us in our every doing. Members like ADOLPH SABATH, "BOB" DOUGHTON, your own good self, SAM RAYBURN, CARL VINSON, "BOB" CROSSER, DAN REED, ROY WOODRUFF, JOHN RANKIN, CLARENCE CANNON, JOHN TABER, EUGENE COX, JOE MARTIN, and others—all of them veterans Members, and all of whom were highly trained and skilled in the intricate matters of legislating in this Congress when I walked down the aisle for the first time, nearly 16 years ago.

The counterpart of these elder statesmen in the House are found at the other end of the Capitol—they live in the personalities of the Honorable Senators KENNETH MCKELLAR, WALTER GEORGE, CARL HAYDEN, TOM CONNALLY, "DICK" RUSSELL, HARRY BYRD, PAT MCCARRAN, ALLEN ELLENDER—all of whom have left an indelible impression upon the pages of world history in these last two or three decades.

Chairing or otherwise active in directing their special committees, these men

have brought centuries of calm and dispassionate prudence, sagacity, and wisdom to this Nation's Congress—and, certainly, their concerted, disinterested, bipartisan actions—without the blaring of trumpets or any fanfare whatever—have, on many, many occasions in times of crises—saved this country.

Mr. Speaker, it is hard to realize that the lacquer and polish that was on the new hardware of your first office door in Washington had not worn off when you first came to this House. More difficult still is it to believe that when the distinguished chairman of the House Rules Committee, the Honorable ADOLPH J. SABATH, first came to Congress that Members of neither House nor Senate of the United States had so much as an office wherein they could hang their hats. In fact, in those days, the Representatives' and Senators' office was frequently found to be in their hats as well as in their pockets because it was in their hats and pockets that many Members carried their bills, reports, notes for speeches, and much of the correspondence that was vital to that days' effort in either the House or the Senate.

It is unnecessary for me, Mr. Speaker, to point out that America was then a very small Nation. Not even recognized as a first-class world power—it was never invited to sit down at any international conference. Then, we had less standing in the world affairs than do some of the smaller American Republics today.

Many fail to realize that it was not until the full military, naval, financial, and productive might of these United States was unloosed upon the armies of the Huns and the Kaiser of Germany in World War I that America even began to emerge as a first-class power. But America has certainly traveled far, and, more certain, she has learned also to travel fast since those days.

Morally, spiritually, physically—in the matter of our agricultural production, our finance, our industry, commerce, transportation, and trade—we have progressed steadily under the care and the guidance of the superb leadership of the elder statesmen of this Nation. Though there are but few left with us now—thank God—they still remain to train the junior Members of this body how to carry on in the long-established American tradition, and the way and practices laid down by the founding fathers.

Mr. Speaker, the two attributes that make for statesmanship in this House are not things that can be found written down in ink on paper. The men of whom I have spoken live as pillars of cloud each day and of fire by night—to light for us, the younger Members, the pathway to what we have all come to call the American way of life.

I have heard criticism of the manner in which we select those Members who are to serve as chairmen of various committees. I doubt if there can ever be devised any manner that is better suited to the American system of government of choosing those who preside over our committees than that long tried and

proven system of entrusting the chairmanship to the senior member on the committee of the party in power. The highest expression of service that a man can give to his colleagues in this body is the measure of service that he renders in filling the chair of some important committee of this House.

Mr. Speaker, there is no man within the sound of my voice but who realizes the long, hard, arduous years of service that are necessary to bring one to a chairmanship on an important committee—but, once there, the welfare of that segment of government with which his committee is charged, rests largely in the hands of the committee chairman.

Mr. Speaker, all that I have said is apropos of but a few words of commendation that I want to pay to one of the most beloved, respected, wise, sagacious, experienced, and active committee chairman that this Congress has ever had. I speak of none other than the Honorable CARL VINSON, of the little inland town of Milledgeville, Ga., who today is not alone known to every member of the Politburo but equally so in every chancellery throughout the world.

Someone one time said "that CARL VINSON is the United States admiral of the ocean and the seas, field marshal of the armies of the United States, and, as for our great United States Air Force, that he is wing commander of everything."

Time was when he was charged only with chairing the Naval Affairs Committee of this House, over which he presided for nearly 20 years, but these were in the old unreconstructed days before the Armed Forces were unified and solidified, and when the total budgeted military appropriations were in millions of dollars rather than in the tens of billions of dollars—as of today.

Some there are who point out that unification has really brought about more military establishments than ever before—but, certainly, insofar as CARL VINSON is concerned, it has brought about the solidification in him of power—probably greater than was ever reposed in one man in the history of this world.

But, Mr. Speaker, CARL VINSON has the wisdom that comes with years. He is a living exemplification of the adage taught me by my father when he said—more than a half century ago, "My son—a man, to be wise—must, in time of crisis, know exactly what to do next," and we know that CARL VINSON always knows what to do next.

Certainly, Mr. Speaker, these are times of peril in this world, not alone with respect to international affairs, but with respect to national affairs within our own country. No one knows better than does your own good self how much this Nation desires peace. Certainly, no one knows better than do you, the reluctance with which we arm not only ourselves, but freemen everywhere. Not alone against the communistic Slav nation of Russia and her satellites, but against the yellow hordes of Chinese Communists, now on the rampage.

Mr. Speaker, it is a godsend that this Nation has, in the personality of the chairman of the Armed Services Committee of the House, a man of great power, of great wisdom, prudence, and great trust—one in whom this Nation and the world can put its trust and reliance in this dark hour of civilization.

Mr. Speaker, to paraphrase the words of a great poet:

When Nature wants to drill a man
And thrill a man,
And skill a man,
When Nature wants to mould a man
To play the noblest part;
When she yearns with all her heart
To create so great and bold a man
That all the world shall praise—
Watch her methods, watch her ways!
Watch how she ruthlessly perfects
Whom she royally elects;
How she hammers him and hurts him
And with mighty blows converts him
Into trial shapes of clay which only Nature
understands—
And while his tortured heart is crying and
he lifts beseeching hands!—
How she bends but never breaks,
When she uses whom she chooses—
And with every purpose fuses him,
By every art induces him
To try his splendour out—
For Nature knows what she's about.

But, Mr. Speaker, when—

Lo, the crisis! Lo, the shout
That must call the leader out.
When the people need salvation
Doth he come to lead the Nation—
Then doth Nature show her plan
And the world has found—the man.

And CARL VINSON is just such a man—a man who can do more work on more things at the same time than any other man I ever knew.

Mr. Speaker, there is unified agreement on every hand that the one thing which has thus far contained the hordes of Communist Russia from making war upon these United States has been the existence of the United States Air Force, the United States long-range intercontinental bomber, the B-36, and our possession of the atom bomb.

In recognition of our power to make effective and almost annihilating strategic attack and the further fact that if and when world war III comes that victory will be achieved in the air, Russia has gone all out in an endeavor to match our prowess in the air.

Accredited military leaders now advise us, however, that the Russian Government * * * actually outstrips us at least in the number of modern planes she now has, but, be assured, indeed, that will not be for long.

We in this House know that the Armed Services Committee, formidable as it is, consisting of 35 members, will bring forth the solution. While there may be some dissention prevailing among the juniors on that committee, theirs are but little voices heard but faintly when Mr. VINSON and his Republican but American bipartisan leader of the minority, the Honorable DEWEY SHORT, together with the older statesmen on the committee, settle the high as well as low affairs of national differences—Army, Navy, Air

Force, Marines, Coast Guard, or whatever they be—that are brought before their committee.

Mr. Speaker, in his speech at the Massachusetts Institute of Technology, Boston, the Honorable Winston Churchill who shared with Franklin D. Roosevelt and CARL VINSON the reputation of being the greatest proponents of "Big Navies" and who had heretofore placed their firm reliance on strong "Naval Forces" to win wars had this to say:

For good or for ill, air mastery is today the supreme expression of military power, and fleets and armies, however necessary, must accept a subordinate rank. This is a memorable milestone in the march of man.

It is, therefore, no surprise to me, Sir, for me to read last night, that our great chairman of the Armed Services Committee should have yesterday issued a statement about air power which was in part reported by the press as follows:

As regards the Air Force expansion, Mr. VINSON stated: that in supporting 138-combat wings he is mindful of a number of considerations that made the expansion appear to him to be decisive. Primary among these, he said, "is the fact that the development of air power has, in combination with new weapons of mass destruction, changed the entire strategic situation.

Chairman VINSON then went on to say:

This country is today vulnerable to air attack. The most effective defense against such an attack is adequate air power to meet it, and, above all, to strike back at its sources. It is impossible in modern warfare to postpone or avoid decisive action in the air. No matter how much strength we may be able to assemble on the ground or the sea, we cannot hope to defeat Soviet power unless we have superior strength in the air. Air warfare, once begun, moves very rapidly toward a decision. If the air battle is lost, the war is certain to be lost. In order to win the air battle, we must have in being an Air Force superior to any that could be thrown against us. An Air Force of the size that I propose is essential for the defense of our allies and for our own security.

The airplanes that this force would require, in addition to the number planned for the 95-wing Air Force, can be provided without the construction of a single new aircraft factory. The immediate outlay for additional base facilities would be in the order of \$400,000,000. Finally, the 138-combat-wing force will require the addition of approximately 300,000 airmen.

Because of the long lead time required for the development and manufacture of present-day airplanes, particularly those of the bomber type, and for the training of airmen, this program will take several years to complete. If we are to have this force in time, the decision to allocate the necessary resources must be made immediately, and the funds should be included in the next budget to be submitted to the Congress.

I have complete confidence in the ability of American industry and engineering talent to produce air power on this scale. The broad base for production expansion laid down during the past year has already begun to justify the investment. Last month, the aircraft industry, under its gathering momentum, produced more airplanes than the schedule called for. The requirements of the 138 combat wing Air Force can be met by the addition of extra work shifts at the factories, more production tools, and the proper allocation of materials.

Mr. Speaker, there is much matter of such vital importance to the Nation contained in the articles written by the Honorable CARL VINSON. It is because of that fact that, under unanimous consent to extend my remarks, I include the same in the RECORD.

In the first of these articles, Chairman VINSON discussed the several types of attack that might be directed against the United States to bring it under the yoke and domination of communistic Russia—and stressed particularly the vulnerability of direct military attack on Alaska, Canada, and the United States. He indicated that the northwest approaches were most vulnerable by air and described the types of aircraft which the Soviets now possess.

He also discussed the recent Moscow air show and talked of the new bomber being built by the Russians—larger than our B-29's—and which bears some resemblance to the B-36.

"Having a range of action," Chairman VINSON declared, "exceeding 2,000 miles, they would be enabled to bomb the northwest corner of the United States and return therefrom to bases in Russia."

"Ordinary bombers," he said, "are not destructive enough to make one-way missions, in which all the bombers are lost, worth while to the attacker except in rare instances. Atomic bombs, however," he declared, "are worth while."

Pointing out the hazard to the Nation of delivery of A-bombs by submarines, Chairman VINSON concluded this article with a vivid and graphic statement as to why the perils of sabotage are always present.

His first article reads as follows:

ENEMY COULD BOMB OUR CITIES, RAID TRADE, AND USE SABOTAGE

WASHINGTON, August 1.—For a generation the Western Hemisphere has been the arsenal of freedom. Today it is also the principal stronghold of freedom.

For the first time in world history the Eastern Hemisphere is threatened with complete domination by a single power.

Only the spiritual and material strength of the Western Hemisphere can prevent that power from spreading over the greatest land mass on earth—the Continent of Eurasia.

If such a catastrophe should occur, the Western Hemisphere would stand alone in its fight for freedom and would have to carry the burden for all mankind.

QUESTION ARISES

The question at once arises, just how can our hemisphere be threatened in these times?

Three major types of attack are available—first, and most evident, the direct military attack; second, and less often considered, an attack on trade routes and on sources of strategic materials, and third, and often overlooked entirely, coordinated acts of sabotage and subversion.

As for the first, the direct military attack, Alaska, Canada, most of the United States and the northeast approaches thereto are vulnerable to air attack by the Soviet using types of aircraft which they now possess.

ENLARGING AIR FORCE

We know that the Russians are rapidly enlarging a long-range striking force similar to the one we used with such decisive effort against Japan in World War II.

They now have hundreds of long-range bombers similar to our famous B-29's.

Recently the Russians staged an air show over Moscow on Air Force Day, which the Russian newspapers called "the favorite festival of the Russian people," and showed for the first time a new bomber which is even larger than the B-29 and bears some resemblance to our B-36.

This new bomber undoubtedly has a considerably greater range than the TU-4, or B-29 copy, which they have been building for several years.

CAN CARRY A-BOMBS

All of these planes can carry atomic bombs of the powerful Nagasaki type. They have a radius of action exceeding 2,000 miles, which would enable them to bomb the northwest corner of the United States and return to bases in Russia.

Of course, their one-way, one-refueling range of action will enable them to reach practically all of the United States and down into Mexico.

We know also that the Russians are increasing as rapidly as they can their stockpile of atomic bombs. This stockpile may be approaching 100 of these terrible capsules of destruction.

Ordinary bombs are not destructive enough to make one-way missions, in which all bombers are lost, worth while to the attacker except in rare instances. Atomic bombs, however, are another matter.

ARE EXPENDABLE

Delivered against vital targets, they may bring results well worth the expenditure of the planes and crews carrying them.

We know the Russian psychology well enough to anticipate that such attacks would be made in the event of an all-out war.

For the first time, then, we have a very critical and difficult requirement of developing a strong defense against air attack from the Eastern Hemisphere which lies to the north of us as well as to the east and to the west.

Ground attack against our hemisphere is, very obviously, much less of a problem and likelihood than the air attack.

ASSAULTS POSSIBLE

But even here, against such areas as Alaska and Greenland (not including strategic Iceland), and against specific targets accessible to troop-carrying submarines, assaults are possible from the sea and air which must be countered in this hemisphere's strategic plans.

Crippling assaults on major bases in this hemisphere from the ground and from the sea are well within Russian capabilities; and if all the Eastern Hemisphere fell within the Soviet grasp, that capability would increase enormously and confront us with a potentially explosive situation.

THREAT FROM SEA

The surface threat from the sea is and will remain negligible so long as America maintains its great naval superiority, a situation likely to continue for many years, provided we maintain, in our defense councils, an adequately balanced military and naval leadership.

So, in summary, our greatest threat, from military action against the Western Hemisphere is from the air; and next, from submarine action, not excluding the delivery of the atomic bomb by that means.

The second major type of threat is the possibility of attack on trade routes and sources of strategic materials.

NEED RAW MATERIALS

Although we commonly lose sight of this fact because of our vaunted industrial progress, there is no escaping the dependence of American industrial might upon the

receipt of raw materials such as uranium ore, tungsten, chromite, manganese, bauxite, tin, columbite, copper, and petroleum which come from various sources outside of the United States, including South America.

The movement of these materials can, of course, be interrupted by air, sea, or ground attack—at the present time, more probably by submarine and air attack than by ground action.

And, as for the third major type of attack, sabotage of industrial facilities and other critical installations of this hemisphere on a major scale would seriously affect our capabilities to support the war effort.

Because of the nature of this form of attack, our facilities are always vulnerable.

In the second of the series, Chairman CARL VINSON discoursed on hemispheric defenses, and told of the plans and the accomplishments that have been made to unify the nations of North and South America. He vehemently declared that—

Action by all is vital, while the varied nature of possible attacks against the Western Hemisphere, and terrible destructiveness of modern weapons, make it evident that our defense against such attacks must be a concerted all-hemisphere defense rather than a defense attack by America alone.

The defense of this hemisphere is conditioned upon what happens in Canada, in Central or in South America, as well as what happens in the United States.

In pointing out the progress that had been made for mutual assistance and hemispheric solidarity, Mr. VINSON cited the Inter-American Treaty of Reciprocal Assistance which, he said, "provides that an armed attack by any state upon an American state shall be considered an attack upon all of them."

The second article in the series by Congressman CARL VINSON, reads as follows:

ACTION BY ALL VITAL TO HEMISPHERE

WASHINGTON, August 2—The varied nature of the possible attacks against the Western Hemisphere and the terrible destructiveness of modern weapons make it evident that our defense against such attacks must be concerted, all-hemisphere defense rather than a defense attempted by America alone.

The defense of this hemisphere is conditioned by what happens in Canada, in Central America, and South America, as well as by what happens in the United States.

Our Monroe Doctrine must be a common effort, not an exclusively American effort, if we are to develop a sound hemispheric defense.

And what is being done in the defense area? Are we developing a sound, unified approach to hemisphere defense on the part of the American Republics?

STARTLING SCOPE

It is startling to know the scope of this effort.

In all of our planning and building for defense of North America against the increasing threat of air attack we are cooperating closely with the Canadians.

Matters affecting the common defense of North America are handled by three boards or committees having combined Canadian and United States representation.

Moving south to Mexico, the United States and Mexico have a mutual arrangement for defense planning known as the joint Mexican-United States Defense Commission.

Before proceeding on southward to see what other military cooperation exists, we

had better examine our treaty obligations with South and Central American Republics. The Inter-American treaty of reciprocal assistance provides that an armed attack by any state upon an American state shall be considered an attack on all of them.

OBLIGATIONS

It is important also to know that this treaty obligation taxes hold when an armed attack occurs within any part of a tremendous area—the territory of any American state or within any portion of a specified area embracing both North and South America, including Canada and Alaska, together with Greenland, the Arctic and Antarctic regions of the continent, and all of the area lying between.

The obligation for common defense in this hemisphere is, therefore, clear and unmistakable.

What international organization sees that this community of defense is worked out? This is the Hemispheric Inter-American Defense Board.

HEMISPHERIC

We have in this Board a military organization consisting of military representatives from all the American Republics with the exception of Panama. Its job is to work out the long-range problems of the defense and security of the hemisphere.

Needless to say, the problems involved in transforming our political objectives into worth-while military measures in Latin America have been very great. However, there has been general agreement that standardization of military equipment, training, and doctrine are essential.

Standardization following United States patterns has been accepted.

As a practical means toward attaining this standardization, most of the Latin-American nations asked the United States to provide Army, Navy, and Air Force missions to assist in the training of their armed forces.

MUTUAL MISSIONS

These missions have been established and are being maintained by the mutual support of the Latin Governments and the United States.

At the same time, the United States has invited Latin-American officers to attend service schools in this country.

Take, for example, the naval problem. There are United States naval missions in Haiti, Venezuela, Colombia, Ecuador, Peru, Chile, and Brazil. We also have an advisory group in Argentina.

Our people in these naval missions are actively assisting the countries concerned in operating their navies along the same lines and using the same principles and the same standards that we use in the United States Navy.

Many American naval officers are assisting as instructors in the war colleges of these countries.

In addition, there has recently been transferred to Brazil, Argentina, and Chile two light cruisers each.

A bill is now pending in the Congress, which I have introduced and which has passed the House of Representatives, to transfer three destroyer escorts to Peru and two to Uruguay. When it is passed, it will also provide important additions to these nations' navies.

In his third article on hemispheric defense Chairman CARL VINSON wrote, in part, as follows:

I am glad to report that the actions taken to meet the various problems have been numerous. Army ground combat forces in Alaska have been recently increased in order to provide additional security there. The antiaircraft units in the Army within the

United States have been doubled. The various operating agencies of vital facilities have been fully informed in the industrial mobilization program, and told of missions designed to prevent sabotage and to increase the security.

In general, the great detail of planned program have now been translated into action programs which now look to the increased security and defense of not alone the continental United States but both continents in the Western Hemisphere.

Chairman VINSON concluded by stating:

The largest bombers today can fly so high that they are invisible to the ground observer and almost completely safe from detection by any fighters which happen to be in the air unless these fighters are guided by radar stations on the ground.

But a complete radar net is indispensable if our fighters are to intercept and shoot down any of the bombers that might attack us.

The third article in that series reads as follows:

HEMISPHERE ACTS TO PREVENT ATTACK

WASHINGTON, August 3.—As to what is being done by our country to meet defense problems peculiar to this hemisphere, let me take the Army first.

Our Army's problems created by the vulnerabilities I have previously described as regards the Western Hemisphere are varied.

They include assistance to agencies operating critical facilities to prevent sabotage and subversion.

STRONGER GARRISONS

Of course, they include the strengthening and support of Army garrisons and outposts protecting the approaches to the Western Hemisphere and the rebuilding and modernizing of the armies of our allies in the Western Hemisphere and Western Europe.

I am glad to report the actions taken to meet these various problems have been numerous.

Army ground combat forces in Alaska have been recently increased to provide additional security there.

The number of antiaircraft units in the Army within the United States has been doubled.

A separate antiaircraft command for the continental United States has been established and is now in operation and integrated into the air defense system.

STUDY TARGET AREAS

Vital target areas have been studied and plans made for their defense. Some units are actually on site right now while others are stationed in the vicinity of their objectives to be defended, and prepared for rapid movement thereto.

Moreover, areas of the United States requiring other ground forces for the defense of vital targets have been surveyed and plans made for their defense.

The operating agencies of vital facilities have been informed of their plans in the industrial mobilization program and told of measures designed to prevent sabotage and increase the security of such facilities.

Since the start of Korean operations the army has increased from 10 under-strength divisions to 18 full-strength divisions, including the supporting units.

MILLION TRAINED

More than 1,000,000 men have been trained in the Army in the last year.

We are maintaining a Western Hemisphere reserve, with plans for its use in various parts of the hemisphere.

Maneuvers have been carried out to test the defenses of the hemisphere, and great em-

phasis is now being placed on the air mobility of all units in the Army.

I should like to mention specifically, also, that our antiaircraft defense is being greatly accelerated.

Down in the Caribbean area our Army forces have also been increased, and extra measures against sabotage and surprise raiding action have been placed into effect.

CLOSE COORDINATION

The quantitative and qualitative aspects of using civilian auxiliaries in the United States ground antiaircraft defense program is being tested in the Canal Zone, and the closest coordination is being achieved with our allies in that area in order to strengthen these important defenses.

I have no doubt that the forces now being used for the defense of this region will soon be further increased to counter a more imminent threat than now exists.

Our principal defense against air attacks, of course, is interceptor fighters. A year ago we were extremely deficient in this type of plane, as we were in all types of planes. But after months of effort we are just beginning to remedy these deficiencies.

The creation of the complicated machines of modern air warfare takes a great deal of time. The old days when a nation could spring to arms overnight are so far gone that we may as well forget them because they are totally inappropriate for air warfare.

TWO YEARS NEEDED

Springing to arms in the air takes at least 2 years after all the experimenting, planning, and designing has been accomplished.

Another necessary part of air defense in these days of fast and high-flying bombers is a complete radar warning and control net. The largest bombers today can fly so high they are invisible to the ground observer and almost completely safe from detection by any fighters which happen to be in the air unless these fighters are guided by radar stations on the ground.

Radar still has its limitations, and under certain conditions bombers can slip through even a complete radar net, so that we need organized ground observers to help out.

But a complete radar net is indispensable if our fighters are to intercept and shoot down any of the bombers that might attack us.

In the fourth of the series of articles written by Chairman VINSON, he stressed the danger to America's outposts—Alaska, Greenland, and Newfoundland—and told of the difficulties which are met in endeavoring to persuade this country that Russia's development of the atomic bomb requires drastic action to improve our defenses.

Mr. VINSON stated:

Recent maneuvers in Alaska have proven that Territory to be a theater in which, generally speaking, only air warfare is possible. The movement of armies on the ground is almost prohibited by impassable snows in winter and bottomless muck in summer.

Greenland is considered a part of this hemisphere. It would be disastrous for these islands to fall into Russian hands—and we have no intention of letting this happen.

Newfoundland is situated on the best air and sea routes to northern Europe. It is also of considerable importance—and we do have bases there—bases which are just as vital to our defense as are those bases in Alaska.

Mr. VINSON concluded by stating:

To this end, we are building more and more all-weather interceptor planes which

carry a special airborne radar designed to assist in intercepting attacking bombers under all conditions.

His fourth article reads as follows:

VINSON POINTS TO VITAL PLANS OF ATTACK
WASHINGTON, August 4.—For some reason it was difficult to persuade people in this country that Russian development of the atomic bomb required drastic action to improve our defenses.

During the past year we have made much greater progress and we already have been able to provide radar installations in the vicinity of some of our most vital targets.

We must, of necessity, concentrate our defenses around these vital target areas because it would be unwise to scatter them in an attempt to cover the entire North American continent.

So tremendous is the task involved that many more months will pass before even these vital areas will have the radar and fighter planes which have been planned for their protection.

In Alaska the construction program, both for air bases and for radar installations, is also being pushed, but we are handicapped by the shortness of the season during which construction is possible. It should be remembered that although we have established small centers of civilization in Alaska, it is still a vast and almost impassable wilderness.

Recent maneuvers there have proved that Alaska is a theater in which, generally speaking, only air warfare is possible. The movement of armies on the ground is almost prohibited by impassable snows in winter and bottomless muck in summer.

We can only hope to defend about four strong points which protect our important air bases and a naval base. These bases must serve for both bombers and fighters and they play an important part in our strategy despite their nearness to Russian Siberia.

Relatively small army units must also be stationed there as a defense against airborne troops.

GREENLAND IMPORTANT

But attacks against the northwestern portion of the United States by bombers from Russia would not necessarily pass over the Alaskan defenses.

To the northeast two large islands play a vital part in the defense of North America against air attack.

Greenland is considered as a part of this hemisphere. It would be disastrous for these islands to fall into Russian hands. We have no intention of letting this happen.

Newfoundland, which is situated on the best air and sea routes to northern Europe, is also of considerable importance, and we have bases there which are just as vital in many ways to our defense as are the bases in Alaska.

SPEEDING INTERCEPTORS

One of the principal complications of defending against such an attack is the increasing capability of bombers to find their targets at night and in all kinds of weather.

We are building more and more all-weather interceptors which carry a special airborne radar designed to assist in intercepting attacking bombers under all conditions.

We do not have enough of these planes, but we are making encouraging progress in building them.

In addition to the possibility of devastating air attacks against us, we have to consider that airborne troops might be used on a small scale against certain targets, so we are maintaining a small reserve force of army troops, highly mobile, for deployment anywhere on the continent to meet such an attack.

We have other small ground units at various critical spots to guard against sabotage and airborne attack.

Our limited amount of antiaircraft is being set up at the points where it is likely to be most needed.

Mr. Speaker, in the fifth and final article of that series dealing with hemispheric defense, CARL VINSON pointed out that the Air Force is the answer to the Red army.

Suggesting that the huge population of Russia gives that nation the edge in ground warfare, Mr. VINSON made it emphatically clear that this country must rely upon a dominant Air Force if it remains free.

He indicated that improvements in harbor defenses are necessary to prevent Soviet submarines from sneaking in and depositing atom bombs, and that while our Army must be numerically small, as compared to the Soviet Army, because of our smaller population, Mr. VINSON declared:

It is even now a highly mobile force of greater fire power and effectiveness, as the North Koreans and Chinese Communists recently have learned.

In conclusion, Mr. VINSON declared:

We have to build these forces to greater size and readiness, and as we assume that burden we move toward our goal of guaranteeing the integrity and security of the Western Hemisphere and of the free world.

The final article reads as follows:

AIR FORCE IS ANSWER TO RED ARMY

WASHINGTON, August 4.—Guided missiles doubtlessly will be perfected some day to such a degree that they will become an important factor in intercontinental warfare. But at present long-range missiles of this type are too inaccurate to be a principal threat.

Their defensive use, against attacking aircraft, is more promising.

Submarines present the greater naval threat to this hemisphere today because the Russians would be able to operate at least a few submarines off our coasts.

These submarines could lay mines which would interfere greatly with our shipping. They also could make direct attacks against shipping.

SUBS COULD SNEAK IN

Improvements in harbor defenses are necessary to prevent Soviet submarines from sneaking in and depositing atomic bombs.

Easiest method for an enemy to introduce an atom bomb into a harbor is to conceal the bomb in the hold of a merchant ship. There is no easy solution to this problem, but serious as it may be, such a method would have only limited usefulness to an enemy during a major war.

Despite the fact that we are by no means invulnerable to attack today, the job of defending the Western Hemisphere is much easier than it would be if we had no friends and no bases elsewhere in the world.

As long as Western Europe remains outside Russian control, and as long as the peoples of Africa and of southern Asia remain free to assist us, prospect of a successful defense of this hemisphere is not discouraging.

Although the Russian Army is the greatest and most powerful land force on earth, we still have—and we must by all means maintain—the most powerful long-range air force—to strike all the way to the source of enemy strength if that strength is used against us in open warfare.

This is generally considered to be the principal war deterrent today—and if so, it is the principal weapon of our defense of the Western Hemisphere and of the free world.

NEED TACTICAL AIR STRENGTH

In addition we must maintain much more powerful tactical air forces in our Air Force, Navy, and Marine Corps. We must retain the world's finest and greatest Navy, which assures us continued communications with allies throughout the world and with our neighbors to the south, and which assures free application of our national power where we will.

Our Army must be numerically small as compared to the Soviet Army because of our smaller population, but it is a highly mobile force of great fire-power and effectiveness, as the North Koreans and Chinese Communists recently have learned.

We have to build these forces to greater size and readiness, and as we assume that burden we move toward our goal of guaranteeing the integrity and security of the Western Hemisphere and of the free world.

Regulation of Use of Natural Gas

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. BOW. Mr. Speaker, I have recently received a letter from the distinguished Senator from Ohio [Mr. BRICKER], which clearly indicates the responsibility and desirability of the States to exercise their sovereign rights. These rights have been protected in the Defense Production Act by an amendment which I introduced and which was accepted by the Congress insofar as the regulation of natural gas is concerned. I ask leave to insert herewith a copy of the letter from Senator BRICKER together with an article carried in the New York Times on August 7, 1951, which indicates the ever-present danger of the attempts of Federal bureaus to flout the will of Congress and continue upon their road of regulation and eventual socialization:

UNITED STATES SENATE,
COMMITTEE ON BANKING AND CURRENCY,

August 7, 1951.

DEAR FRANK: I want to take this opportunity to congratulate you on the fine work you did in persuading the House of Representatives to accept your amendment to the Defense Production Act which will enable the State public utility commissions to continue to regulate the use of natural gas.

As you know, there was no comparable amendment in S. 1397, the Senate's bill to amend the Defense Production Act. In my judgment, however, the Senate would have adopted an amendment identical with your own had it been aware of the plan of the Petroleum Administration for Defense to invade a field of natural gas regulation in which State regulatory commissions are better qualified and are already exercising jurisdiction. I have no doubt that the majority of the Senate conferees on the bill to amend the Defense Production Act shared this view when they accepted the Bow Amendment.

Your amendment offers State governments an opportunity to demonstrate that they can

play an important role in the defense effort. If limitation orders on the use of natural gas continue to be administered efficiently and economically by the States, we may then consider what other defense activities could be performed better at State and local levels. The possibility of serious natural gas shortages this winter in particular localities presents a real challenge. I am confident that the State regulatory commissions will meet these shortages with regulations which are adequate, selective, and flexible, and which subject business, labor and homeowners to a minimum of inconvenience. All this will be in happy contrast to the maladministration which inevitably attends the centralization of regulatory authority here in Washington.

Today's New York Times carries a story on page 38 which indicates that the Petroleum Administration for Defense plans to pressure the public utility commissioners of 15 States into adopting its own proposed order prohibiting the use of natural gas. If this report is correct, it means that the clear intent of Congress is being flouted. I hope that the public utility commissioners who are to meet with officials of the P. A. D. realize that Congress had more faith in their regulation than that proposed by the P. A. D.

If the Secretary of the Interior continues to try to usurp State authority in violation of the clear intent of the Congress, I think we should consider the possibility of divesting him of his responsibilities under the Defense Production Act of 1950.

Sincerely yours,

JOHN W. BRICKER.

Following attached article from the New York Times, August 7, 1951:

RESTRICTIONS SEEN FOR NATURAL GAS—STRONG INDICATIONS ARE ORDER WILL BE ISSUED THURSDAY BY GOVERNMENT AGENCY

WASHINGTON, August 6.—There were strong indications today that a Government order restricting sales of natural gas would be issued Thursday, to take effect immediately.

Officials of the Petroleum Administration for Defense would neither confirm nor deny this.

However, they invited commissioners of 15 States, in which the order is likely to apply, to a conference here Thursday at 9 a. m., eastern standard time.

It is expected the order will be presented to the commissioners along with an appeal for their cooperation.

The recently enacted Defense Production Act contains a provision that no limitation can be applied in any State where a local regulatory commission is satisfied that it has the situation under control.

One official, who declined use of his name, said it was likely the order would be read to the commissioners with the understanding that, "here it is—you can kick this order in the teeth if you want to, but here is what will happen if you do."

What will happen, in PAD's contention, is that there will be a serious gas shortage next winter.

The proposed order would prohibit use of natural gas for heating any newly constructed homes. Sales to new large-volume consumers, such as industrial establishments, would be permitted only under PAD licensing.

PAD says the basic reason for the proposed order is a shortage of steel, which has prevented completion of a number of important pipeline projects.

PAD invited to the conference the public utility commissioners of Virginia, Maryland, West Virginia, Ohio, Wisconsin, Michigan, Indiana, New York, Pennsylvania, Delaware, New Jersey, Connecticut, Rhode Island, Massachusetts, and New Hampshire.

Boss of Overseas Bases

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. MANSFIELD. Mr. Speaker, I am inserting in the Appendix of the RECORD a news story by Edward J. Michelson on Edward T. Dickinson.

Ed Dickinson has had a remarkable record both in Government and private industry. It is indeed fortunate that, in times like these, the Government can avail itself of the services of this outstanding individual. That he has made a great personal sacrifice to serve his Government goes without saying, but the United States gains by Ed Dickinson's devotion to his country.

Mr. Speaker, the article carried in the Washington Evening Star of August 4, 1951, follows:

BOSS OF BASES IN THE WILD BLUE YONDER

(By Edward J. Michelson)

The United States Air Force has acquired a husky ex-marine with extensive diplomatic, military, and industrial experience as director of the \$3,000,000,000 public works construction program at home and abroad.

Edward T. Dickinson, 40-year-old secretary to the little Cabinet group of Army, Navy, and Air Force Secretaries, has been assigned to oversee the building of new installations from New Hampshire and Newfoundland to the Middle East and the Western Pacific.

Mr. Dickinson's job, expected to last a year, is the latest in a career that started with a cafeteria dishwashing job in the Bronx, N. Y., in June 1932, the month he was graduated from Yale.

From the Bronx and dishwashing, Mr. Dickinson moved to a Brooklyn bank whose responsibilities included the finances of the Brooklyn Dodgers' baseball club. Then he sold insurance for 2 years in Manhattan, going on to the United States Steel Corp. as executive assistant to the late Edward R. Stettinius, Jr., then board chairman, to take charge of research.

"I guess that I am the only Yale man who received his degree and a certificate from the New York City government qualifying me as a dishwasher in the same month," Mr. Dickinson observed.

"Furthermore, I landed in Government as a result of a task assigned to me by the steel company."

That was in 1939-40, when Mr. Dickinson was sent to Washington to report on the New Deal's temporary National Economic Commission. Mr. Dickinson encountered such prominent New Deal economists as Leon Henderson and Robert N. Nathan.

The next thing we knew, his employers in Pittsburgh were asked to lend-lease him to Donald M. Nelson, Director of the War Production Board, for a planning assignment. This led to Mr. Dickinson's appointment as chairman of WPB's Executive Committee, which planned the conversion of American industry to all-out war mobilization basis.

Once that planning work was completed, Mr. Dickinson tried to get into uniform, despite a White House order freezing key civilian officials in their governmental jobs. Mr. Dickinson was accepted by the Marine Corps, commissioned a second lieutenant, and assigned to Maj. Gen. William J. Donovan's Office of Strategic Services.

Much of what the young man did in war-time is classified in the archives of Central Intelligence, but it is known that he went into France before the D-day landings in Normandy as part of an Anglo-American intelligence team that achieved a distinguished record.

With his return to civilian life as a reserve lieutenant colonel, Mr. Dickinson has had about a year's duty in private life—as an executive of J. Arthur Rank's international motion-picture production enterprises. He was called back into Government in 1948 by Paul G. Hoffman, then organized the Economic Cooperation Administration.

Mr. Dickinson quickly became known to the press corps as head of an ECA division that did the "banking" chores of the multi-billion-dollar foreign economic aid program. He dealt with the foreign technical and procurement missions sent to Washington to explain how much they needed to rebuild their national economies, how they would use the money, and to what extent they would restore their farm and industrial production to prewar levels. As a key aide to Mr. Hoffman, Mr. Dickinson traveled throughout western and southern Europe, checking up on the use of such American help.

More than a year ago, as the emphasis switched from economic to military aid, following ratification of the North Atlantic Treaty Organization, Mr. Dickinson's travels were extended to the Far East. He was sent to Indo-China, Siam, Burma, Malaya, Indonesia, Formosa, and India to report on the military needs of non-Communist, southeastern Asia. He also was one of the three-man interdepartmental coordinating committee set up to work out the military-aid-to-Europe scheme known as MDAP, mutual defense aid program.

Mr. Dickinson also has been testifying frequently on Capitol Hill in closed-door committee sessions on the justification for outlays to help countries build up their resistance potential against Communist aggression.

Mr. Dickinson emphasizes that the Defense Department is not seeking to build an "Iron ring" around Russia, as the new military public-works program has been described.

"We found in ECA that the weaker a nation is, the more susceptible it is to Communist penetration. What has been accomplished in Greece and Turkey is to strengthen the free world in the Levant, not to put ourselves into a position to attack any one."

The Nuremberg Trials

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHEEHAN. Mr. Speaker, as time goes by it becomes increasingly apparent that the wisdom of the Nuremberg trials will come back to haunt us.

It was thought by many that the Nuremberg trials would have laid down a basis for international law, but more people are beginning to feel, as stated in the editorial entitled "Nuremberg Again," in the Chicago Daily Tribune of August 9, that—

Far from strengthening the foundations of international law, it has profaned the ideals of equal justice before the law.

The editorial from the Chicago Daily Tribune of August 9, is as follows:

NUREMBERG AGAIN

The American Bar Association Journal for July contains two articles that contradict each other. One is a defense of the Nuremberg trials by John J. Parker, chief judge of the Court of Appeals of the fourth circuit, who served as an alternate member of the Nuremberg court. The other is by Dr. Harry Elmer Barnes, the historian, who reviews two books dealing with the Roosevelt diplomacy.

There are two quotations both dealing with how the United States got into the war.

Dr. Barnes says:

"Mr. Roosevelt led us into war by the series of deceptions which culminated by inducing the Japanese to make their 'surprise' attack on Pearl Harbor. The formula, as revealed by Secretary Stimson's Diary, was to maneuver the Japanese into 'firing the first shot.' It worked out with complete success, though Mr. Roosevelt and top officials in the Army and Navy knew many hours in advance that the Japanese blow was about to fall and had agreed nearly a year before that, if Japan ever made a surprise attack, it would, in all probability, be made at Pearl Harbor."

Judge Parker says, "The evidence leaves no doubt that the cowardly attack by the Japanese on Pearl Harbor in December 1941 was the result of German aid promised Japan."

Dr. Barnes has studied all the relevant documents, including those made available at Nuremberg. Judge Parker, it appears from his paper, has studied only the documents that were introduced at Nuremberg and thinks that, because the record is a very long one, it includes everything that is relevant. He seems to have forgotten that documents bearing on the Hitler-Stalin alliance were excluded to spare the Russians embarrassment. The oversight is a serious one because it enables him to conclude that the trial was fair and that its influence has been salutary.

Judge Parker does his skillful best to answer the many criticisms of the Nuremberg proceedings, including the charge that they were ex post facto and that Russians, though equally guilty, were not tried, and, on the contrary, were represented on the bench. As his interpretation of the attack on Pearl Harbor indicates, however, his mind is closed to the possibility that our own diplomacy was bent on war. He makes much of the fact that the Russian judge could be outvoted, and he assumes that the American, French, and British judges were representing national viewpoints which were wholly above reproach. The more the evidence accumulates, the less tenable this thesis becomes.

Judge Parker allows himself to say that the trial was of value "chiefly because it strengthened immeasurably the foundations of international law."

If that means anything, it means that the trial discouraged aggression and totalitarian brutalities such as the enslavement of captive peoples. He ought to look around him, at Korea, for instance, or any of the satellite countries.

First the North Koreans, then the Chinese, violated the international law that was "immeasurably strengthened" at Nuremberg. Then—and this is more significant—the members of the United Nations, with the fewest exceptions, steadily sought to save the aggressors from humiliation or punishment. Judge Parker seems to have forgotten that the United States itself accepted a proposal to end the present war on an understanding that Communist China would eventually be rewarded by recognition and the acquisition of Formosa.

Hitler's henchmen were hanged, among other reasons, for their murder camps and their slave-labor battalions. Can Judge Parker say that the sentences have altered Soviet practices in Russia or the satellite countries?

Can he find any evidence that the punishment of the Germans for "violations of the laws or customs of war" have tempered subsequent behavior? Naturally he can't because men today remember that if the Germans were punished for their shooting of hostages, etc., the victors were not punished for the senseless bombing of Dresden, for example, or the brutal destruction of Hiroshima after the Japanese were already suing for peace. Was the sinking of hundreds of merchant ships by our submarines, without warning, in accordance with "the laws of war"?

To accuse Judge Parker of special pleading is, of course, not to say that the men convicted at Nuremberg should have gone unpunished. It is to say that a law which is aimed only at the vanquished is not law. The right way to have dealt with Hitler's lieutenants was to turn them over to German courts—or Polish, Czech, Norwegian, or French courts—to be tried for murder and usurpation and whatever other crimes they committed, that were clearly defined as offenses when the crimes took place. There is little chance that the guilty would have escaped.

The Nuremberg court was a victors' court, a fact that is obvious, though Judge Parker tries to disguise it. Far from strengthening the foundations of international law, it has profaned the ideals of equal justice before the law.

Congress Urged To Determine Troop Commitments

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. GROSS. Mr. Speaker, I have long been convinced that the American people want Congress to recapture the constitutional powers upon which this Republic was founded; to protect this Nation against future undeclared wars, so-called police actions and repeated emergencies whereby homes are broken and Americans shipped out on the spur of the moment to fight and die on foreign soil.

The following editorial from the August 5 issue of the Waterloo (Iowa) Daily Courier is an example of a justified revolt against usurpation of power by the Executive:

CHECK ON TROOP SHIPMENTS NEEDED

Under existing law, there is no restriction whatever on the number of American troops which can be sent anywhere in the world by the President's order.

The Korean War proves, moreover, that the President is able to send large numbers of American men into combat on the other side of the world without consulting Congress. By calling the conflict a police action, he may thus evade the constitutional provision that only Congress may declare war.

This is too much power and responsibility to place in the hands of one man. Even if the public had complete confidence in the administration it would be unwise to

allow the President that much power. It is through such precedents that dictatorships are created.

Unfortunately, furthermore, a recent example indicates that the administration is not above tricking Congress and the public. Earlier this year when Congress was discussing possible legislative restrictions on the number of troops to be sent to Europe, defense department officials testified that they planned to send four additional divisions. According to the standard size of United States divisions, this would mean an additional 100,000 men to be sent to join the 120,000 men already on occupation duty.

Acting on this assumption, the Senate adopted a resolution which approved "present plans . . . to send four additional divisions of ground forces" but declared that no further forces should be sent without further congressional approval. This was not legally binding on the President; but it represented the prevailing and publicly expressed belief that the total force in Europe would not exceed 220,000 men.

Defense Secretary Marshall at the time did nothing to correct this misapprehension, if it were that. A few days ago, however, he calmly announced that the United States planned to have 400,000 men in Europe—nearly twice as many as the previous estimate. Had Congress realized that the Defense Department desired to send that many men it would probably have adopted legally binding restrictions on the total allowed.

Such a restriction, however, may still be imposed. If the administration is not going to be frank and honest in telling Congress about its plans, then Congress will have to arrive at what it considers a safe figure and compel the administration to abide by it. Sentiment for such a restriction is growing in Congress and the Marshall incident has caused the reintroduction of restrictive amendments to appropriation bills. The question of drafting and sending men abroad is the greatest power that a government can exert over its citizens. To say that Congress does not have the right to regulate and restrict this process is to deny the whole concept of representative government.

Korean Ill Wind and the Marines

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. MANSFIELD. Mr. Speaker, I am happy to insert at this point in the RECORD, a news article out of the Christian Science Monitor which I think will be of interest to the House:

KOREAN ILL WIND AND THE MARINES (By Harlan Trott)

WASHINGTON.—Korea has been the Marine Corps' salvation, at some military experts see it. A year ago, this elite organization was wasting away, methodically being whittled down for the sake of economy. As its size was reduced, its functions were absorbed. Marine aviation was cut to the vanishing point. When the conflict commenced in Korea, the corps was unable to assemble a single, full-strength division and the closest marine troops to Korea were thousands of miles away.

Today the Marine Corps is a revitalized service, and congressional plans have progressed to the point where at least a 300,000 and perhaps a 400,000-man corps will be al-

lowed under law, including a stronger marine air arm. Moreover, the outlook is good for including the Commandant of the Marine Corps either as a full-fledged member of the Joint Chiefs of Staff or as a consultant to it.

For this improved position, the marines are thankful and the country is fortunate. In the uncertain, dangerous days ahead, despite the imminent truce in Korea, the need for a stronger, expanded Marine Corps is more evident than ever.

Though it shouldn't have been necessary, the marines proved their usefulness and value in Korea. In this the publication of a letter which characterized the marines as the Navy's police force played a measurable role. Even such a once-upon-a-time critic of the marines, General of the Army Douglas MacArthur, became an ardent leatherneck backer. Korea, said General MacArthur to one Marine general, would once and for all solidify the corps' position in the country's military structure. If this prediction proves correct, the country gains in strength and security.

What have the marines done in Korea to achieve this?

1. The Inchon landing. From a scant 12 months' perspective, this almost impossible feat has gained the reputation of being the outstanding amphibious assault of military history. A month after the marines landed and captured Seoul, the downfall and destruction of the North Korean Army were complete. Any fair-minded observer who has studied this operation will agree that only the marines with their background, experience, and day-by-day training could have brought it off. Amphibious warfare is specialized work for which only the marines and the Navy are prepared.

2. The now classic Hungnam evacuation, or as the marines call it, "the attack toward the sea." Outnumbered 10 to 1, isolated for 10 days, the Marine division fought its way out of a Chinese trap to freedom, bringing all of its equipment with it. If any battle proved that the average American can be trained to be a superb soldier, that battle did.

3. The marines' specialized version of close air support. Flying from two small Navy jeep aircraft carriers, the marines demonstrated techniques of using airplanes for ground fighting which proved far superior to the Air Force system. The marine airmen were themselves experienced ground fighters, and understood the problems and language of the foot soldier. Secondly, their planes and weapons were designed for the task. Napalm, the jelled gasoline fire bomb, was their specialty and was used with consummate success in Korea.

4. The individual marine. In Korea he used four weapons almost forgotten in the 1951 fog of atomic clouds and jet smoke; his rifle, his hand grenade, his bayonet—and his intelligence. Well-trained, well-led, well-equipped, the leathernecks' consistently excellent performance in Korea reawakened the American people to the need and usefulness of this elite organization.

We have talked with many marines and naval officers, all of them battle-tested officers. The consensus is that a larger but still volunteer Marine Corps, protected by law, with the Commandant seated as a consultant to the JCS, is a wise move. Few of them, however, wish to see the corps divorced and given autonomy from the Navy. The corps is inextricably joined with the Navy, and if their unique abilities are to be maintained it must remain as part of the Navy.

No credence is given to the idea that an expanded corps will constitute a second army. The specialized marines, say the experts, will be the ever-ready fire brigade ready for instant service anywhere the Navy takes them. If another perimeter war breaks out in Iran or Indochina, Denmark

or the Dardanelles, as it did in Korea, at least two divisions of marines will be on the spot and landed to protect American interests until the Army arrives.

Recently military writers have repeated the theme that "militarily Korea has been worth while." In the case of the marines this overglib statement is even more true. There might have been no victory in Korea without the marines, and there might have been no marines without Korea.

Allied Arms Chaos

EXTENSION OF REMARKS OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHEEHAN. Mr. Speaker, in the very near future, the House of Representatives is going to debate the foreign-aid bill and, although there is recognition of the need for aid to our foreign allies, there is a grave doubt in the minds of many people as to whether or not our foreign allies are doing their share toward helping themselves.

Mr. William Stoneman, of the Chicago Daily News foreign service, points out in the article below the fact that the United States, Britain, and France have almost completely failed to standardize their weapons. No agreement as yet has even produced a standard caliber for infantry rifles or a standard type of artillery piece.

It would seem a matter of common sense that insofar as we will be called upon to furnish the bulk of the money and the bulk of the arms equipment that an agreement should quickly be reached so as to prevent an enormous duplication of effort and expense.

Mr. William Stoneman's observations on this important phase of arms standardization as reported in the Chicago Daily News of Tuesday, August 7, are as follows:

BARE ALLIED ARMS CHAOS (By William Stoneman)

LONDON.—American opposition to Britain's new .28-caliber rifle has advertised a fact that North Atlantic officials have previously made every effort to hush up, play down, or ignore. That fact is that the United States, Britain, and France have almost completely failed to standardize their weapons.

Endless conferences between highly paid experts of the three countries have not even produced agreement on a standard caliber for infantry rifles or a standard type of artillery piece. There has been agreement on only two really important things:

All countries of the North Atlantic Treaty have theoretically agreed on a standard screw thread. If the theory is converted into practice, you will be able to fit an American bolt into the British nut of the same gage.

The French have agreed to produce weapons which will take ammunition made for American standard 105 and 155 millimeter artillery pieces.

There have been other achievements in the direction of standardization, but most of them stem from the fact that so many NATO countries are being equipped with American weapons. But Britain and France have refused to go over in toto to American designs.

Their refusal is thoroughly justified in some cases. But all along the line American, British, and French officers and officials have refused to agree on standard designs where they were obviously desirable.

The answer is that standard designs should have been imposed on the member countries at the very beginning before most countries were tooled up.

In the particular instance of the .280 rifle the British argue that they must adopt the new weapon for several reasons:

1. The old British infantry bolt-action rifle is completely obsolete and a new auto-loading weapon must be adopted.

2. It is better for them to adopt the .280 than the American .30-caliber Garand because the Garand itself is obsolescent and the .280 is a superior weapon.

3. The .280 is extremely light and of revolutionary design. Waste of ammunition will be avoided by adjusting the gun to prevent firing in bursts. Americans have argued that British soldiers would lose all of the advantage of the light ammunition by firing it too much "on automatic."

The question which is bound to linger, irrespective of the outcome of this controversy, is how much money has been paid to how many different men for not agreeing on this subject many months ago.

The West Point Scandal

EXTENSION OF REMARKS OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. AYRES. Mr. Speaker, judging from the letter printed below, many Americans are concerned about the happenings at West Point. Mr. Stein has put forth his views in a very clear manner. I hope many of us will consider his opinions.

BARBERTON, OHIO, August 5, 1951.

Hon. WILLIAM AYRES,

Member of Congress for Akron District, Washington, D. C.

DEAR Mr. AYRES: I guess you have seen the newspaper reports about the cheating scandal at West Point, and perhaps have had other, more detailed information about it. I want to give you a few of my thoughts regarding the naval and military academies and feel sure that you will be interested since you are one of the few Congressmen who has shown concern over the treatment of the Reserves, and enlisted men generally.

My own navy experiences convinced me that the men chosen to be officers were not, as a whole, especially well qualified for their work. Many were too immature to lead, many were frankly indifferent to the welfare of their men, most of the junior officers didn't even seem to care much about helping get their work done by their men. I think that the trouble stems directly from the method of apportioning the appointments to the service academies.

The present system of allowing the Members of Congress to select the candidates for entrance examinations is defective in many ways. The appointees are boys, not men, and they cannot be expected to know that they want military careers; consequently many of them leave the services after serving the minimum required time, and the citizens of the Nation lose a man educated at their expense. Again, to place boys into a school in which the emphasis is on obedience and discipline will make, in 4 years,

men who will have lost their mental independence, and will rely on regulation rather than reason, authority rather than right, and precedent rather than justice. The court-martial system of military justice and the recent scandal at the Detroit Tank Arsenal, as well as the Navy supply corps disgrace in Hawaii during the war, will bear out this contention: that West Point and Annapolis produce more than Eisenhower and Bradleys. And while formerly, when a Congressman's or Senator's constituency was smaller, and class educational distinctions made the range of candidates even narrower, the people's Representatives to the Federal Government may well have been the best selectors of future officers for the Armed Forces. I doubt that any man, trying to represent 50,000 or more people, at least 500 of whom will annually be boys potentially candidates for the service academies, can possibly know anything about very many of them, or even take the time to examine those who show a desire to take the examinations. And even under the best of circumstances this system gave no guaranty, or even any real reason to believe, that the cadets would for the most part become men who would stay in the military and naval services.

I should like to see the congressional appointment system abolished, or greatly curtailed, in favor of selection of future officers from the enlisted men of the Army and Navy, as is now done to a small extent. In this way men would be entered into West Point and Annapolis, and they would be men who knew the military life first-hand, had had the experience of being commanded, understood the difference between a good and bad officer, and who liked the military life well enough to stay with it. I suppose that some of the more childish activities of the schools, such as football, would be put into their proper place, and that there would be complaints about having to defer marriage to the age of 24 or 25 but, from the point of view of procuring officers who would serve for 10 or 20 years (the law should be changed from the present 3-year-after-graduation requirement), and give mature, intelligent direction to the Army and Navy, such minor losses as Army families, athletic teams, and perhaps even some of the privileges of rank are unimportant. And I think you are one Congressman who is not unduly concerned over the possible loss of a valuable patronage you now control, although the loss of such a privilege as handing out a few free college educations a year is not a thing many men would deny themselves. I have a distinct idea, gained from recent news articles and the resignations from the Academies after the close of the late war, that some Army officers and Congressmen considered football ability rather than ability and desire to serve as the criterion of eligibility for entrance.

In brief, I think the present method of selection of candidates for training as Army and Navy officers is obsolete, and should be replaced by selection from applicants with several years' service as enlisted men in the service in which they want commissions.

WILLIAM B. STEIN.

Rescue Our Missionaries

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in

the RECORD, I include the following editorial from the Boston Pilot of August 4, 1951:

RESCUE OUR MISSIONARIES

There has been a noticeable decline in interest among our American people in the conferences being held in reference to the question of a cease fire in Korea. The heat, the baseball pennant race, the television of a wrestling match, or the stench created by the sputtering out of the latest marriage of a Hollywood star, all seem to be more important.

In the easy way of people who are accustomed to having their every want satisfied we take it for granted that our desire for peace also needs only to be talked over with somebody or other to be fulfilled. In Korea, however, there are many people, our own people, who must be shocked, horrified, "let down" and legitimately infuriated by our attitude.

Among them is a small group who are truly the most forlorn of the forgotten. These are the devoted missionaries, Catholic and non-Catholic, who for no motive save that of extending the sweet Gospel of Jesus Christ have devoted their lives and their energies to the people of the Far East. They have been taken captive by the Communists with all the grief that that implies, not the least of which is the interruption of their good and noble work.

We ask now if these Americans are included in the Korean conferences, point 4 of which refers to "arrangements relating to prisoners of war." Our spokesmen have put the question for us to the chief of the Communist delegation. They have received, at best, loose and ambiguous replies.

This matter of the missionaries is too important to be lost in the general confusion of things. In the name of right and decency, we have a duty to watch news reports of the negotiations carefully. Amid the hooting and horn-blowing that greets the announcement of an armistice the voices of the men of God crying in the wilderness may not be heard.

A Good Suggestion

EXTENSION OF REMARKS OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. MARTIN of Massachusetts. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the New York Journal-American of August 2, 1951:

The suggestion made by a reader of the Seattle Post-Intelligencer, and printed in an adjoining column on this page, for adequate and merited recognition of Gen. Douglas MacArthur at the Japanese treaty ceremonies in San Francisco in September, will strike a responsive chord in the minds of the American people.

Surely the peace we now enjoy with Japan and the formal treaty perpetuating it are attributable to General MacArthur more than to any other man.

The American victory in the war against Japan was achieved under the brilliant military leadership of General MacArthur.

The subsequent occupation of Japan under his administrative leadership is universally recognized and acknowledged as the most constructive program of postwar rehabilitation ever undertaken by a victorious nation within the territories of a vanquished power.

Within the space of 6 years, Japan has not only been made capable of restoration to a peaceful place in the world family of free nations but has given proof of being worthy of the respect of her former enemies.

General MacArthur accepted the administrative responsibilities of the Japanese occupation with the intention of achieving that objective, and most of the rest of the world was either skeptical or openly scoffed.

But the treaty which will be formally signed in San Francisco will attest his success, for the very first time in human history, in accomplishing first a victory and then a peace designed to increase and perpetuate the concepts of brotherhood which constitute the world's best safeguards against future war.

Surely the peace treaty with Japan should be written into the permanent record of world history with full and proper recognition of the indispensable contributions of General MacArthur to the triumphs of American military power and the policies of American administration which made it possible.

It is a matter of unconscionable injustice to General MacArthur that he has been deprived of the opportunity to participate personally in the final dramatic and historic chapter of the Pacific conflict in which he commanded the American Armed Forces so magnificently.

It is a matter of great mortification and humiliation to the American people that petty politicians, solely for the purpose of concealing their own mistakes, have had the power as well as the shameful desire to send General MacArthur into exile at a time the highest and best of the world's honors should be paid him.

But it would be an even more shameful thing if the San Francisco ceremonies attending the signing of the Japanese Treaty should not be conducted with all possible recognition of his honored and respected and beloved name.

The Eisenhower Myth

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial published in the Washington Times-Herald under date of August 8, 1951, and entitled "The Eisenhower Myth." The editorial follows:

THE EISENHOWER MYTH

Senator HENRY CABOT LODGE, JR., of Massachusetts has launched a boomlet for himself as candidate for the Republican presidential nomination in 1952. Observers experienced in politics call this a transparent maneuver. LODGE will be up for reelection next year and the political wisecracks say that he is fearful of being trimmed. They say that he wants to bill himself for the role of favorite son in the hope of getting a clutch on the Massachusetts Republican delegation to the national convention, so that he can throw the delegation to General Eisenhower and thus advance a claim to the vice presidential post if Eisenhower is nominated.

The chief support of Eisenhower for the nomination comes from people like LODGE who have slipped or are slipping. Governor Dewey, of New York, twice an also-ran in the race for President, has now settled down in the role of spoiler in the hope of killing off

the chances of Senator TART, the logical candidate. Dewey is out for Eisenhower. So is Senator DUFF of Pennsylvania, whose hold on the Republican Party in Pennsylvania is slipping. Former Senator Harry Darby, of Kansas, who held the post by appointment for 13 months, then bowed out of the picture, is another of these disappointed king makers.

Aside from such people as these in the Republican Party, the ballyhoo for Eisenhower as a Republican nominee comes from New Dealers, New Deal propagandists, Europe Firsters, and other brands of world savers. Senator PAUL DOUGLAS, a New Dealer, has gone so far as to propose that Eisenhower be nominated by both parties, which amounts to an endorsement of totalitarian one-party government. Columnists and commentators playing the New Deal game are constantly whooping up Eisenhower. So is the un-American press in New York.

Before these self-seekers proceed too far, they ought to appraise all of the handicaps under which Eisenhower would labor as a candidate.

As a Republican candidate, Eisenhower would be a joke. He was one of the coterie owing his advancement to George C. Marshall when the latter was Mr. Roosevelt's Army Chief of Staff. To put Marshall into that post, Roosevelt had to jump him over 34 senior officers. For Roosevelt and Marshall to install Eisenhower as supreme commander in Europe necessitated jumping him over 366 officers who ranked him. Eisenhower achieved his advancement through New Deal patronage, and he is not likely to forget it.

After the end of the war, it was Mr. Truman who appointed him Chief of Staff, which was as high as he could go in the Army. When he completed his tour of that office, Eisenhower was picked up by the extremely wealthy internationalists comprising the board of trustees of Columbia University and was named president of Columbia. But Truman kept showering favors upon him. When the new Joint Chiefs of Staff in the unified Defense Department fell to quarreling, Truman called Eisenhower back on leave from Columbia to serve as an unofficial referee.

When the administration determined to send American troops into an Atlantic Pact army in Europe, Eisenhower, with the support of the Truman administration, was given the job of commander of the European army. He conducted a preliminary tour in Europe and came back to lead the administration's propaganda for this venture. He thereby repaid the favor of being appointed commander, even though, in an unguarded moment later, he made it plain that the European army is militarily useless. He said he thought it could hold the Breton Peninsula, which was equivalent to saying that it could not stand up to a Soviet attack anywhere east of a point where it would stand with its back to the sea.

Mr. Truman recently referred to General Eisenhower's obligations to him by stating that the general was free to do what he pleased politically in 1952, but the President said he felt confident that Eisenhower would pursue the line of duty. This was an indirect hint to Eisenhower to keep off Truman's preserve.

Not only does Eisenhower labor under the handicap of an obligation to Truman and the New Deal, but his supporters must also be aware that his candidacy would bring his military record in World War II under review. His military biographer, Capt. Harry Butcher, says that it was a byword among American officers that "Eisenhower is the best general the British have." Eisenhower got this reputation by acceding to a British war plan calculated to allow the British commander, Field Marshall Montgomery, to achieve all of

the decisive break-through to achieve victory.

Montgomery fell on his face each time he tried, but that did not prevent Eisenhower from diverting supplies from General Patton's unstoppable American armor at a time when Patton thought he could wind up the war. These supplies were given to Montgomery for the ill-conceived parachute attack designed to seize the mouth of the Rhine—a maneuver that ended in failure.

Long before the campaign in Europe, Eisenhower had shown his partiality to the British. It was he who helped cover up the errors of the British Gen. K. A. N. Anderson, which led to the Allied defeat at the Kasserine Pass in North Africa, and it was he who, by dismissing the American general, Lloyd Fredendall, cast the stigma for that set-back upon American arms.

Nor will Eisenhower's political decisions at the time victory in Europe was within Allied grasp pass unchallenged. It was he who called off General Bradley's victorious armies when they were across the Elbe, thus reserving for Russia the enormous political advantage of capturing Berlin. This decision certainly is not unrelated to America's later difficulties with Russia in maintaining the right of ingress and egress at Berlin—difficulties which necessitated the costly airlift at a later time.

Eisenhower it was, also who turned General Patton from his unchecked advance upon Prague and let the capital of Czechoslovakia fall to the Red army. Very few blunders of the war have had more calamitous consequences than the decision to yield Berlin and Prague. It was little wonder that Eisenhower was received in Moscow and there awarded a Soviet military decoration for his contributions to Stalin were great.

Nor will some of Eisenhower's other acts and utterances escape critical scrutiny. When he wrote his war memoirs, he was favored with a special ruling by the Bureau of Internal Revenue which permitted him to account for his royalties as a capital gain—a favor accorded no other author. It meant a difference of \$600,000 in tax on a million-dollar deal and permitted him to pocket three-quarters of a million dollars, instead of \$150,000, which was all that anyone else could have kept.

Eisenhower's remarks before a Congressional committee that "nominal pay"—perhaps \$10 a month—was ample pay for transcripts is not going to endear him with the lower ranks of the Army. His order during the advance into Germany to "shoot everything that moves" will not commend him to humanitarians, and his remark at the time of assuming command of the European army that henceforth he must consider himself as only one-twelfth American is not likely to commend him to patriots.

But perhaps the General's greatest handicap is the ambiguity of his political attachment. He has refused to declare himself either a Democrat or a Republican. There are reports that in his younger days in Abilene, Kans., he was a registered Democrat. If any party should be so unwise as to cast aside its own outstanding leaders, whose convictions are a matter of public knowledge, and to seek as a candidate a man who has consistently rebuffed and repulsed it, that party would proclaim itself devoid of principle and self-respect. It would condemn itself as interested only in winning office for the sake of jobs and patronage. It would humiliate itself by advertising its utter want of conviction. It would so exalt one man as to dedicate itself to personal government.

Those who hope to profit by hitching themselves to Eisenhower may be in for a cruel disillusionment. Their man is very vulnerable. So far he has got off lightly because he has adopted the pretense of being above politics. People recalled that in 1948 he disavowed any interest in the New Deal

nomination, saying, "It is my conviction that the necessary and wise subordination of the military to the civil power will be best sustained and our people will have greater confidence that it is so sustained when life-long professional soldiers in the absence of some obvious and overriding reasons, abstain from seeking high political office."

Once Eisenhower abandons that position and jumps into the political arena, his opponents will be less charitable. They will begin exploring the Eisenhower myth and showing out of what material it has been created.

Bob Angers' Column

EXTENSION OF REMARKS

OF

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. WILLIS. Mr. Speaker, the phenomenal success of Mr. Thomas J. Watson, chairman of the board of International Business Machines Corp., was built around the simple slogan "Think." The complexity of our problems as Congressman could be simplified and the burdens of the demands made upon us could be lightened if we devoted a few minutes before commencing work every day to just plain thinking.

This morning I read the column of Mr. Bob Angers in the Franklin Banner-Tribune. It made me realize how patriotic yet how sensible our people are. It impressed me with their generosity, tempered with good judgment. In other words, it made me think. I commend this article to you, my colleagues. In this great land of ours you and I do not even have to agree with all Bob Angers has to say; just so he helps us to think our way through during these critical times.

The article follows:

THE COLUMN

To the great American bread line this column is respectfully dedicated.

Giveaway programs have gotten to be somewhat of a phobia in your land and mine. We give away automobiles, deep freezers, and college scholarships at the drop of the merchandising hat. Most of the time the giveaway is tied in with a promotional campaign designed to make the public conscious of a certain product and create a desire to buy that product. Sometimes the programs are a nuisance, but generally they provide good entertainment and the prizes are worth the effort.

But it appears like the giveaway has been given the wrong slant at the so-called diplomatic level of our Government.

Solid Americans hate communism, socialism, and fascism with a passion. They recognize the danger they pose to Americanism. And they'll do almost anything to combat them. In fact, they've done almost everything to oppose them and know that the battle never ends.

American lives and treasure have been poured into the struggle and Americans have not been mealy-mouthed about the sacrifice. They clipped the Kaiser's wings in World War I and broke out the shears when his Nazi counterparts set out to rule the world. Japan felt the American whiplash after Pearl Harbor, and Russia and her stooges in Korea

have had their rose-colored glasses smashed by a solid punch in the nose.

We have shown a willingness to help anyone who wants to play on our team, including a lot of our former enemies and men like Franco who stood ready to hop on Hitler's band wagon with a knife in his hand to slip in our back.

Sometimes America looked like an international Santa Claus riding a big red fire engine in four different directions at once. Arms, food, clothing, medicine, scientific assistance, and money have gone out in generous doses to Greece, France, England, Turkey, Finland, Holland, Norway, Africa, Israel, Iran, Spain, India, China, Russia, the Philippines, South America, Japan, Germany, and a hundred other places.

Two and one-half world wars have made most of us internationalists in our thinking. We despise war and its misery and waste, and that's been a big reason why we've been a party to conducting the biggest bread line in the history of the world.

Not many of us are so proud but what we haven't accepted a helping hand in a moment of despair. But most of us have enough pride to want to stand on our own two feet at the earliest date. And it's that ingrained principle of Americanism that makes us ask questions about some of the people abroad that seem to be making a profession out of living off American handouts.

God helps people who help themselves, and it's about time that that adage be applied to American diplomacy. Let's help people who deserve help and who, in some measure, indicate that they want to help themselves.

Our economic capability is limited. America has only so much wealth and resources that she can expend before she reaches the danger point of economic collapse. Today our tax burden borders on the same percentage that caused the fall of the Roman Empire. And can you see the end in sight? We can't. If American policy is to be guided by the principle that the outstretched hand from abroad is the signal to reach for your pocketbook.

Anyone who exhibits a sincere desire to do battle with communism is deserving of the support we are financially and militarily able to give him. However, we should have a good look at people like Tito and Franco before opening Fort Knox. France and Italy have shown some resiliency since the war, but they have a whole lot of dirty dishes to wash before they put on new white skirts. Socialism, as advocated by some of our British friends, is contrary to our own free-enterprise thinking. Something for nothing is a false concept. Whereas we don't want to tell another country how to run its affairs, we should at least be good bankers and reserve the right to ask how they propose to pay their debts. A time limit on a loan will result in more satisfactory payment than the open note.

Wheat for the starving Indians? Yes. Arms for our embattled allies? Yes. Money for our destitute friends? Yes. But in each instance let's do business on a business-like basis. Determine the need. Determine our ability to provide the goods. Determine the time limit and conditions. Determine whether or not it is in the best interest of the United States.

America has its own problems and its own needs to satisfy. We have a never-ending battle against disease. We have to figure out a way to lessen the number of traffic deaths on the highways. We have to break up the unholy alliance of the gambler and the corrupt politician and restore moral dignity to public office. We've got to settle the tidelands issue at an early date. There are roads and hospitals to build, crops to harvest, children to educate.

We're not so preoccupied with our own pressing problems that we overlook the as-

sistance we can render abroad. On the other hand we want to be free agents and shouldn't get so ensnared in foreign affairs that we can't put out our own fires.

The bread line has its place, so long as we don't have to mortgage the kitchen and shoot the cook in order to pay the bills.

Surplus Food Acquired in Parity Program Has Been Distributed to Hungry People—Congressional Authority for Use of CARE's Facilities Wisely Exercised

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. HAYS of Arkansas. Mr. Speaker, on previous occasions I have presented to the House some of the details of a remarkable record being made by CARE, a private, nonprofit organization which has been recognized by the Congress as an effective agency for overseas relief. This organization is acting in certain areas as a representative of the United States in the program of food distribution.

The shadow of hunger still casts a pall over many countries, although United States governmental aid has done much to relieve suffering through food grants. Governmental food grants naturally tend most often to take the form of loans to purchase supplies. Food is thus made available in the stores of shortage areas—but too often those who are hungriest do not have the money to pay for it.

It is a most happy circumstance, therefore, when food can be brought, free, to people who need it sorely—a happy circumstance and one that merits public attention.

Such is the case in a program of international food aid that has been made possible by the joint participation of the United States Government, the American people, and CARE.

Our Government's part in the program came when—by act of Congress—millions of pounds of farm surplus, which had been bought by the Department of Agriculture to support parity prices, was made available, without charge, to welfare agencies for relief distribution.

CARE's part came in applying for a large share of this agricultural surplus, to be delivered to the hungry and needy in food-short countries across the seas.

And the American people's part in the program comes in generously contributing the funds to cover CARE's cost of handling, processing, shipping, and distributing this food.

The farm-surplus distributions are being made in addition to the nonprofit agency's well-known service of distributing its own CARE package assortments of food, textiles, books, and other needed supplies to the people of Europe and Asia.

For the farm-surplus program CARE acquired from the Commodity Credit Corporation of the Department of Agriculture approximately 43,000,000 pounds of agricultural commodities—milk powder, egg powder, butter, Cheddar cheese, and dried beans.

This was food which had been lying useless in our warehouses—food which Communist propagandists throughout the world had been quick to seize upon as an example of the selfishness of our democracy. People who are hungry are easy prey to such claims. But now this food is bringing sustenance to millions of people overseas—and every pound CARE delivers is unmistakable proof of the concern of Americans for the welfare of their fellow men.

It is in Yugoslavia—a country the Cominform is most anxious to recapture—that these food gifts are making the greatest impact. I am advised by Paul Comly French, the able director of CARE, that the agency is distributing the bulk of the farm surplus it acquired—36,294,668 pounds of milk and egg powders—to relieve the hunger caused by Yugoslavia's unprecedented drought last year.

Under the CARE plan, each \$5.35 contribution from an American donor guarantees that a 300-pound unit of farm-surplus supplies—200 pounds of milk powder and 100 pounds of egg powder—will be divided among 100 needy Yugoslavians. The distribution is made on the basis of 2 pounds of milk powder and 1 pound of egg powder per person—the equivalent of 8 quarts of milk and 3 dozen eggs.

The recipients of this free American food come from special categories of persons—young children, expectant mothers, invalids, hospitals, orphanages, students, old-age homes, and the people of areas which suffered most severely from the crop failures. Those categories were agreed upon by representatives of CARE, the United States Embassy at Belgrade and Yugoslav Government welfare officials. It was also agreed that recipients would be chosen purely on the basis of need without political, religious, or other discrimination.

Distribution of the food is made on a monthly basis through Government food outlets in the six federated republics of Yugoslavia. Those certified to participate receive a special CARE ration card which they present at their local food shop. As they receive their CARE ration, each recipient signs a special receipt. Each list of 100 persons is then turned over to the CARE mission in Belgrade, which sends a microfilm copy to CARE headquarters in New York for forwarding to the donor who contributed \$5.35 for that particular 300-pound consignment.

These lists also serve as a guide for six trained American observers CARE has stationed in Yugoslavia to check on the distribution. CARE's observers make field trips to visit the food distribution shops, and—from the names and addresses on the receipts—make spot check to the recipients' homes. They make certain that the rations are being issued equitably, that the people know how to

use the powders, and that they know the food has been provided as a free gift from the American people.

So far two million persons—one out of every eight Yugoslavs—are participating in the CARE-ration distributions. By the time the program is completed, an estimated 4,000,000 persons will benefit. CARE's observers, who have complete freedom to travel wherever they wish, report that virtually everyone in the country knows about the free food that is being sent by Americans. The Yugoslav press and radio have given wide coverage to the program and word-of-mouth has spread from grateful recipients to their relatives and friends in every city and village. Everywhere, the people express their gratitude to their American friends.

But Yugoslavia is not the only country whose people are benefiting from the surplus-food gifts. Needy persons and institutions in Austria, Great Britain, France, Western Germany, Greece, Italy, Norway, and India are being helped by the remaining 6,788,362 pounds of surplus commodities which CARE acquired.

Those supplies—milk powder, egg powder, butter, cheddar cheese and dried beans—have been supplemented with additional items CARE purchased on the regular market and have been assembled in two types of units: A \$5 family package, containing 24 pounds of food, and \$125 institutional package which contains 954 pounds of food in the European assortment, 710 pounds in the units being distributed in India.

For this part of its surplus-food program, CARE follows its customary procedure for package deliveries. American individuals or groups who subscribe the parcels may designate the country and the type of person or institution they wish to help. Overseas representatives of CARE and its 27 American member welfare agencies select the recipients on the basis of greatest need. Delivery is made in the name of the donor, and CARE returns a receipt giving the name of the recipient, so that a direct person-to-person link is established.

A total of approximately 202,000 family and institutional packages have been assembled by CARE for distribution in the eight countries. Displaced persons and destitute university students in Western Germany, famine-sufferers in India, war orphans in France are among the hungry who are being reached by these friendship-gifts from Americans.

A fact which has surprised both CARE representatives and United States Government representatives overseas is the wide coverage these CARE surplus-food distributions have received from the local press and radio in every country. It is as though everyone is anxious to spread the word of the help that will reach the most helpless of the people.

The retail value of the total 43,000,000 pounds of surplus commodities which CARE received is estimated at \$10,500,000. To cover the cost of its handling and distribution overseas, CARE is asking the American people for \$1,423,000.

Those are small sums in comparison to the \$11,000,000,000 worth of foreign assistance we have given through the

Marshall plan in the past 3 years. Yet, dollar for dollar, the release of surplus foods to CARE is one of the best investments the United States Government has made.

It has made it possible for CARE in the name of the American people, to reach directly millions of persons who need to know that America is their friend and is anxious to help them. It is bringing a return of friendship and good will that will pay important dividends in the years to come—the years that will determine the outcome of our efforts to help build a world of freedom and peace.

Harry J. Anslinger, United States Commissioner of Narcotics, Warns Us That "The Narcotics Peddler Does Not Kidnap Children; He Destroys Them"

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday August 9, 1951

Mr. VAN ZANDT. Mr. Speaker, during the past several months the spotlight of public opinion has been focused on the dope traffic as radio, television, and the press united to emphasize the dire effects that have followed the illegal sale and use of deadly drugs.

As the American people were told of the vicious criminal racket which operates throughout the Nation, it is apparent that it has become so widespread in its operation that no man, woman, or child is immune from its destructive effects. In fact, it is revealed that our teen-age population has been a fruitful source for the traffic in deadly drugs and that boys and girls of high-school age have succumbed to its evil influences.

Under leave to extend my remarks, I wish to call attention to the following address on the subject by Hon. Twain Michelsen, judge of the superior court of the city and county of San Francisco, delivered on July 15, 1951, over radio station KYA:

Before proceeding with my discussion of the illicit narcotic traffic, I wish to acknowledge, with a deep sense of appreciation, the generosity of Jimmie Tarantino in turning over to me the facilities of this station, which means all of his usual Sunday broadcast-time. He asked me if I would impart to you the benefit of my many years of study of the most vicious criminal racket ever to fasten itself upon the people of the world. Because Mr. Tarantino is himself crusading against the dope traffic, I have accepted the offer of his radio time.

So that you, my listeners, may gain even a slight insight into the enormity of the narcotic traffic, let me say in passing that it goes back deep into the centuries. And, as always, cruel and pitiless exploitation, sitting high on the throne of profit, has been its evil guiding spirit. I shall discuss this subject in two general phases. Today, I shall briefly touch upon the international aspect of the traffic; next Sunday, at this same time, I shall discuss specific cases, as they affect local and national levels.

The world is indebted to Harry J. Anslinger, United States Commissioner of Narcotics, for the zeal and devotion with which he has pursued the dope assassin into hidden parts of the world. Handicapped as he has always been by an all too limited Bureau personnel, he has, nevertheless, carried to many countries the light by which vigorous, though limited, suppression of the dirty commerce in contraband narcotics has been accomplished. During the life of the now dead League of Nations, he was one of the American representatives on the Opium Advisory Committee of the League, and there his powerful voice was always raised in opposition to the international intrigues that spawned the opium monopolies in the Far East. By his side, in the field of decency and common morality, there stood the fine figure of Director Russell Pasha, of the Central Narcotics Intelligence Bureau of Egypt. It was he who first sounded the warning that the Suez Canal was "wide open to smugglers of narcotics." It was he who confided to the people of America that "the majority of Manchukuo heroin destined for America is being routed from the Far East ports through the Suez Canal." In his clear voice, speaking in terms of spiritual values, as well as in warning of the insidious entrapments of the international drug peddler, he said, and I quote: "The world keeps on saying that it is agreed to stop narcotic traffic, conventions are signed and ratified, blacklists of proven international traffickers are drawn up and exchanged, and yet no finality is reached in dealing with these international rogues who seem able to pass free and unmolested in many countries of Europe and the Far East. Their continued existence and ever-green activity is a sad reflection on the world's lack of joint determination to be done with these plague carriers."

Again, this same spokesman for emancipation from the awful degradation and slavery of drug addiction, made the following striking statement: "The whole question of the drug situation in the Far East was so fully dealt with by the representative of the United States of America in the session of the advisory committee (of the League of Nations) at Geneva, that I do not propose to enlarge upon the subject except to say that it is rapidly becoming the most serious menace of the civilized world." Nor has the picture changed since those fateful words were spoken in the late thirties. Indeed, the traffic in dope has become more monstrous, more shocking, until now the world is reeling under its murderous impact. In urging the Government of Egypt to close its doors to some five-hundred-odd persons who had been deported from his country, Director Russell Pasha sounded this frightening note: "I trust that the Egyptian Government will stand firm and remain adamant in refusing reentry into this country of these incorrigible foreigners who so nearly brought Egypt to its death."

There you have it, ladies and gentlemen, a traffic in poison, a traffic in murder on the installment plan, a traffic that so nearly brought Egypt to its death. And do not lull yourselves into a state of complacency and indifference by assuming that what happened in Egypt cannot happen here. It all but happened in China, in India, and it was the diabolical plan of the Japanese war lords, before the outbreak of World War II, that it should happen in America. Let it be said here that one of the greatest stumbling blocks to the winning of the fight against the narcotic traffic lies in public apathy, and indifference to the utter seriousness of the traffic. For instance, are you interested to know that while America is spending close to a billion dollars a month in fighting the British-recognized Communists in Korea, Communist China, herself,

according to Commissioner Anslinger, is one of the two major sources of supply of heroin which is now undermining the health and morals of thousands of the youth of America? Does it interest you, Mr. and Mrs. America, that Commissioner Anslinger, when he appeared before the Senate Crime Investigating Committee recently, stated with what must have been bitterness in his heart, that "The narcotics peddler does not kidnap children—he destroys them?"

Does it interest you to know that during World War II, according to congressional records, "opium monopolies were stubbornly maintained by governments other than ours," that 2 percent of the entire revenue of the Dutch East Indies was derived from smoking opium; that in British Burma 5 percent of the country's revenue was similarly derived; that in the British Federated Malay States it was 6 percent; that in British North Borneo it was 10 percent; that in British Sarawak it was 11 percent; that in the British Unfederated Malay States it was 12 percent, and in the British Straits Settlements it was 20 percent? There has been a breakdown in the family of nations in relation to this death-dealing commerce, just as there has been a breakdown somewhere in the American family in relation to widespread narcotics addiction; there is a breakdown, too, in the forces of law and order, and in the courts throughout the land, in the giving of probation and suspended sentences, and light jail sentences, to the crookedest and most unconscionable of all criminals, the dope peddler. Recently the eminent columnist, Sokolsky, referred to parents who are jittery over the widespread narcotics investigation, not knowing what is happening within the four walls of their own homes. He lays down the forceful principle that, and I quote: "Neither the police nor the schools can do much in combatting social evils without the cooperation of parents, particularly among children whose parents have so lost control of the family that it has practically ceased to exist as a social unit. . . . No matter what progressive educators say about the social value of self-expression in a democracy, children who grow up like alley cats, without moral restraints and inhibitions, will not resist the temptations of their environment. Those restraints and inhibitions must be developed in the home."

You see how closely related the two philosophies are: Commissioner Anslinger and Director Russell Pasha point to the world's lack of joint determination to be done with the national and international dope racketeer, while Sokolsky places a part of the blame squarely in the lap of the indulgent and neglectful parent in relation to the narcotic addiction of his own child.

What Director Russell Pasha has said of Egypt, can be applied to the great opium monopolies fostered in India, first, by the British East India Trading Co., the property of the House of Sassoon, later taken over by the British Government itself, both of which laid waste the physical and moral substance of the poverty-stricken masses of that great country of innate culture and spiritual attainment. The British Crown itself received subsidies from and fed on this filthy business, until, at the close of the century, there were no less than 10,000 emporiums where opium could be purchased openly under government protection and license. This subjugation of the people of India, under the imperialistic heel of Britain's opium monopolies, presents one of the blackest pages in the history of the world, as does her opium record in China, where, for over a century, the Chinese have fought bitterly to throw off the curse of drug addiction. China fought two short wars with Great Britain because of the opium traffic;

she lost both, and was compelled by Britain to accept legalization of the business. Hong Kong was one of Britain's grand prizes, snatched from the lap of the gods of war and dope, just as Hong Kong today is one of her prizes, through which the potentials of war are flowing to the common enemy, and through which, during this very hour, there is a reported flow of heroin from Tientsin and points in Manchuria. Commissioner Anslinger recently stated, "It is reported that the former heroin manufacturing factories in Tientsin, North China, and Manchuria have resumed operations, and there is evidence that some of this heroin is finding its way into the United States by way of Japan."

He further states that this heroin was allegedly smuggled into Japan aboard a British aircraft carrier from Hong Kong. Thus we find that Communist China is opening the floodgates of contraband narcotics, just as the Japanese war mongers did in their narcotics invasion that struck deep into the heart of China. It is disconcerting news, as Commissioner Anslinger says, that Communist China proposes to offer 500 tons of opium for export. And that is only the beginning. Anslinger sounds the warning, too, that Italy, Turkey, and Greece are exporting large quantities of contraband narcotics, including heroin. "These stocks," he says, "constitute a great danger in the illicit traffic in various countries, particularly the United States, where large quantities have been smuggled from Italy" and which illicit diversion "has reached teenagers in several countries."

Mexico, too, offers a disturbing example of failure of joint determination to be done with the narcotics racket. In 1947, the Economic and Social Council of the United Nations passed a resolution requesting the Government of Mexico "to take appropriate measures, in fulfillment of its international obligations under the narcotics conventions, to suppress the illicit cultivation of opium." There existed then in Mexico between 10,000 and 12,500 acres of poppy fields, producing from 32 to 40 metric tons of opium, and Commissioner Anslinger has stated that "it is reported that between 20 and 30 secret landing strips for airplanes have been constructed in Mexico to handle the transportation of narcotics from Mexico to the United States." In pleading for a stop to this narcotic invasion, Commissioner Anslinger warns: "The United States is concerned over the narcotics situation in Mexico because most of the narcotics produced are intended for smuggling across the border into our own country and are a serious menace to the health of our people."

He states further and I quote again: "The marijuana traffic is particularly serious along the Mexican border, and the flow of this drug from Mexico remains unabated." With a force of about 270 persons, the Federal Bureau of Narcotics cannot suppress these smuggling activities; nor can the Customs force, with its reduced personnel. The Kefauver committee has recommended an increase in the personnel of Federal law-enforcement agencies, especially the Narcotics Bureau. In a stirring plea for increased Federal appropriations with which to fight the dope racket, Lyle Wilson, a United Press staff writer, wants to know, "why the Bureau of Narcotics has been the forgotten agency of Government. How come," he demands, "we will be spending in the next fiscal year 15 times as many dollars to control disease of farm animals and poultry as we will spend on narcotics control?" Put this same question, ladies and gentlemen, to your Congressmen, and insist upon an answer. And put to yourselves this question: What are you going to do about the web of crime, degeneracy, and death that this infamous dope traffic is weaving about the heart of America, and your children?

**Thank You, Jersey Journal—Congress, I
Am Sure, Will Retain the RFC Law to
Help Business Weather Gales and
Misfortune.**

**EXTENSION OF REMARKS
OF**

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SIEMINSKI. Mr. Speaker, on behalf of the people of my district, the Thirteenth Congressional District of New Jersey, which includes Bayonne, with its great naval base and a part of Jersey City, with its politically astute citizenry, I here express my thanks to the Jersey Journal, a home-town paper, for its forthright opinion on the RFC law and its retention.

I recently wired the editor of the Jersey Journal requesting an editorial opinion on the RFC. Should the law be retained or revoked, and the corporation dissolved? Some feel that the RFC has outlived its usefulness and that banks and the Federal Reserve Board are sufficient to nurse the needs of business. Herbert Hoover, for one, would abolish the RFC.

The editor of this home-town paper graciously responded to my request. I am sure the information contained in the below-listed editorial from the Jersey Journal of Wednesday, August 8, 1951, will serve to beat back and defeat those who would abolish the RFC:

**KEEP RFC LAW, BUT STAMP OUT USE OF
INFLUENCE TO SECURE LOANS**

The conflict over the question in Washington as to what ought to be done about the Reconstruction Finance Corporation will be answered by a large portion of the public and by investigators of that problem this way.

Retain the Federal Reconstruction Finance Corporation, but

1. Tighten it up so as to safeguard the millions of dollars that are being loaned to business under that law

2. Stamp out, by nonloophole law, anything that looks like purchase of influence to get loans from the RFC, but do not reject any application for a loan after it is settled that the loan will be utilized to save an embarrassed business and put it on its feet again

It was toward the end of President Hoover's administration, in 1928 and 1929, and on the eve of the depression period that the Reconstruction Finance Corporation law was enacted by Congress. The law was passed to save and brace up legitimate business that needed additional funds, but could not get them from the existing banks because the loan would conflict with the stringent bank regulations which opposed loans to a business not solvent or in imminent danger of insolvency

President Roosevelt's administration, in 1929, enlarged the law and it served a useful purpose in the gloomy depression period and saved many a business from going over the precipice.

Great enterprises that could not have obtained loans from banks got loans from the Government under the RFC law at terms more liberal than those which banks were allowed to make.

Moreover, such loans, in the majority of cases, were so safeguarded that the Govern-

ment in only a very small number of cases lost money. In the vast majority of loans the business helped was able to repay the loan in a fixed period, according to agreement. In that way investments were saved while an army of employees were protected against want.

It is true that in recent days, as the pressure for loans has increased, Washington has been fed with stories of influence bought to get loans. There have been fantastic yarns about vast sums paid to men of influence to use their power to get loans from the RFC, but in many of these cases confirmatory proof has been lacking. In a few cases stories of large sums paid for influence have been confirmed.

What should be done is to discourage in every possible way the use of money to get loans by the purchase of political influence in Washington, and then let the law continue to help business weather gales and misfortune.

**Korean Campaign Veterans Educational
Benefits**

**EXTENSION OF REMARKS
OF**

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star:

THEY DESERVE EQUAL TREATMENT

Simple justice requires enactment by Congress of legislation to end the discrimination which now exists between veterans of World War II and those of the Korean campaign. Some of the inequities already have been corrected, but others remain, particularly in the field of benefits under the so-called GI bill of rights. A bill introduced jointly by Senators GEORGE of Georgia and KERR of Oklahoma, is one of several intended to insure equal treatment for those who are fighting and have fought for their country in far-away Korea.

The George-Kerr bill would give to Korean war veterans education and training advantages similar to those extended to other veterans. Under the proposed legislation veterans of 90 days or more of active service since the start of the Korean war would be eligible for 1 month of free training for each month of service. Veterans whose schooling was interrupted by active military duty would get a maximum of 4 years' education or training. Those who had not been in school at the time of call would be entitled to a year of the benefits.

It was not until a Korean veteran was denied treatment at a Veterans' Administration hospital in Arizona last May that a law was passed giving such men full hospitalization privileges. The veteran, a former marine, had been turned away from the hospital because the Korean outbreak was not a "war" within the meaning of the law as it then stood. Under the old law only men with wounds or other ailments incurred in actual combat could be hospitalized by the VA. The law was amended to authorize treatment for non-service-connected ills as well as combat disabilities.

Korean veterans also are given free insurance by the Government, but with restrictions not imposed on World War II policies, which were paid for by the soldiers. The

new policy is a term-insurance plan which cannot be converted to other forms. Burial benefits of \$150 are provided in addition. The Government also provides compensation for service-connected disabilities.

The Veterans' Administration is said to be preparing a bill along the lines of the George-Kerr bill, but more restrictive in its benefits. The purpose of the VA measure would be to extend to Korean veterans all of the rights accorded to veterans of World War II, with conditions based on lessons learned in administration of the GI bill of rights. Legislation of this sort is long overdue.

It's About Time

**EXTENSION OF REMARKS
OF**

HON. HENRY J. LATHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. LATHAM. Mr. Speaker. It is about time.

The disclosure that \$217,000,000 in projected foreign aid has been earmarked for the Chinese Nationalist Government on Formosa is heartening to every enemy of communism, but it remains to be seen whether the proposal represents a real change of heart by the Truman administration or is merely another smokescreen to deceive the American people.

For 6 long years Secretary of State Acheson has been the chief architect and salesman of policies that could lead only to the complete overthrow of the legitimate Nationalist Government of China and complete victory for the Communists. Even when the Republican Eightieth Congress voted, over administration protests, to furnish \$125,000,000 in military aid to the Chinese Nationalists, the State Department subverted the will of Congress by throwing every possible obstacle in the path of actual delivery of the aid. The State Department proved itself a master of paper shuffling, haggling, and delay. Instead of bullets and bread, the Chinese Nationalists often received the State Department's polite regrets.

Another reason for questioning the sincerity of the present proposal is Secretary Acheson's recent statement that there has been no change in United States policy toward China, despite a speech by Assistant Secretary Dean Rusk suggesting a new and friendlier attitude toward the Nationalists. Eighteen months ago President Truman insisted that the United States "would not provide military aid or advice to Formosa." If Mr. Acheson's recent statement is true, now can the earlier policy laid down by Mr. Truman possibly square with what Mr. Rusk is now telling the Senate committees?

I hope that the catastrophic anti-Nationalist policy of Messrs. Truman and Acheson is indeed dead, at long last, and that they now intend to help our anti-Communist friends in China. If such a policy had been adopted 6 years ago, China, the hub of the Orient, would still

be in friendly hands, there probably would have been no Korean war, and 80,000 American casualties would never have occurred.

**Samoa Chief Disappointed and Provoked
by Budget Under New Administration—
High Chief Tufele Asks Support of
Governor in Request for More Funds**

**EXTENSION OF REMARKS
OF**

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. FARRINGTON. Mr. Speaker, I have received a most interesting letter from High Chief Tufele, of Ta'u, Manu'a in American Samoa, protesting strongly against the funds allowed the administration of American Samoa under the proposed appropriation for fiscal year 1951-52.

High Chief Tufele is among the outstanding leaders of American Samoa. Although he has differed sharply with other high chiefs of Samoa on questions involving the administration of the islands by civil authority, he is respected by all who know him for his leadership and deep and sincere interest in the welfare of his people. His views, therefore, are deserving of the most careful consideration.

I offer this communication from High Chief Tufele as further evidence of the widespread dissatisfaction that is currently developing in Samoa and again urge that an investigation immediately be undertaken by the appropriate committee of Congress for purposes of appraising this situation from every standpoint and taking the necessary steps to bring about enactment of an organic act.

The government of the people of Samoa is at present and has been for more than 50 years conducted without the authority of organic law. This has, from time to time, made them the victims of serious abuses of authority. As far back as 1930 a joint committee of Congress recommended the enactment of an organic law to protect the Samoans in this fundamental right. Up to the present nothing has been done to fill the need despite continued representation. Now the inauguration of civil government makes it imperative that such a law be undertaken promptly.

This is a task that is long overdue. I strongly urge that it be undertaken at once.

The communication from High Chief Tufele follows:

DISTRICT OF MANU'A
(TA'U, MANU'A).

Pago Pago, American Samoa, July 6, 1951
The Honorable JOSEPH R. FARRINGTON,
Delegate from Hawaii,
House of Representatives,

Washington, D. C.

TALOFA MR. FARRINGTON: Since you and I hold common interest and mutual understanding in the needs and problems of our Polynesian people, especially the Hawaiians and the Samoans, I take this liberty to make

this communication for your information in relation to the present economic condition of our people and Government. And while this letter comes to you, my sympathy goes to our first civilian Governor, the Honorable Phelps Phelps, who has found conditions here quite unfavorable to his administration, since the Department of the Interior survey team which visited Samoa in April-May last year had failed to obtain a full study of our economical needs before making its report and preparing its first budget for the Government of American Samoa for 1951-52.

It is needless for me to remind you of my opposition against the idea of changing the Navy Department's administration in American Samoa at this period in favor of a civilian agency, due to the fact that I realized the people of Samoa and its Government were happy and have been enjoying life under the Navy regime. On the other hand, I had feared that such quick change would have only resulted in economical chaos and political division and discontentment among the people of Samoa if Washington and our Government should fail to fill the needed needs. But, in spite of this, Washington ordered the change. And because of my love for our people and my concern about our future, I had to disregard my opposing position for the sake of harmony and unity of my people; and, too, for our noble relationship with the United States. I have pledged my cooperation and support to Governor Phelps for his administration, just as I have served and supported the naval regime.

However, I should like to remind you that some of our people were induced to believe in some false promises by the sponsors of the new change movement. And to assist the inexperienced natives to support such movement, they were caught under the soft and easy-going nature of our race of which they should not be blamed.

As you are well aware of our race's human trait, under this particular environment, sometimes they try to be loyal—or want to be loyal—to everyone at one time but yet, in most things they do or say, as a rule, they are not sincere nor they have deep concern as to how the other fellow feels toward what was being said and done. And facing a serious mistake is not seriously considered because, in my honest opinion and experience, of the soft and free environment in which they live, and, too, they do not take into consideration the seriousness and importance of responsibility. To try to reconcile the inexperienced and insincerity of political mind, with a small group of experienced men with American ideas of government, is just like that phrase "You can lead a horse to the river, but you cannot make it drink."

While the Samoans were debating the changing of administration, the sponsors of the Issue, together with Mr. Emil J. Sady's mission to Tutuila and Manua at the end of 1948 and the first part of 1949, told and promised the people that under the Interior Department Samoa would and could have a much higher and better standard of life. As a result, after Mr. Sady had departed from Samoa, the cry for "a new change" or to "remove the Navy" spread like hot lava throughout American Samoa. The inexperienced and easy-going Samoans, with selfish individuals, had to ride in the chariot of the "false prophets." They were convinced and took for granted that under the civilian administration Samoa's bread and butter will just flow from the benevolent United States Government, and that a "gold mine" would be found in every corner of American Samoa. Mr. Sady's mission planted this picture in the minds of the people.

Permit me to quote here some of the Interior Department representative, Emil J. Sady, statements to chiefs of American Samoa, January 1949:

1 President Truman was astonished at the changes of opinion as regards naval admin-

istration or a civil government. He considers that some enemy has been at work in Tutuila. Mr. Sady has been commissioned to look into the matter and explain the idea of civil government.

2 "You are civilians the same as I, and no civilian can be satisfied with a military government."

3 The civil government does not intend to change the customs of the Samoans, particularly in regard chiefly to titles and land. No white man will be able to acquire Samoan land. If a Samoan wishes to sell a piece of land to someone else he will have to inform the Faipule (legislature) who will consider whether after the sale enough land will be left for the family. The Faipule will decide whether the sale can be made or not.

4 The Samoans will enjoy the title of American citizens and will be able to settle in the United States and buy land there if they wish, but the people of America will not be able to do the same in Samoa.

5 With regard to the discussion that has been going on about taxes, the civil government will not impose taxes, except in the case of those whose income exceeds \$5,000 a year. Few Samoans have so much, therefore in practice they will pay no taxes at all.

6 Hospitals will be supported at government expense and the Samoan medical practitioners will be sent to the American universities to take their degrees as doctors and will act in that capacity in Samoa.

7 No taxes will be imposed for schools, which will likewise be supported at Government expense. There will be no personal tax, nor any house tax, except in the case of hotels and houses for rent.

8 The people will be better off than before. Two million dollars will be appropriated for Tutuila the first year.

9 The new civil governor will not have the same authority as the naval governor, nor will he be able to act in an absolute and military fashion.

The purpose of my being in Tutuila again this time was to attend the special session of the Fono to discuss and decide on the first budget of the Interior Department's administration for 1951-52. And we were expecting to be adjourned in 2 or 3 days. But, instead, we were in session 9 days, the longest special Fono, so far, in the history of our legislature. This is due to the fact that Samoa, including the sponsors of the movement for change, is disappointed and provoked with this budget which was born from the report of the survey team which I have already mentioned.

To enlighten you with some of the survey team's report you may wish to be assured that on page 1016 of the Interior Department's appropriations for 1952 hearing before the House Committee on Appropriations, Eighty-second Congress, and part 2 of the report says:

"The estimated total budget for the government of American Samoa is \$1,278,000 for budget year 1952. This is a reduction in costs of operation over fiscal year 1950 of \$489,180, nearly half a million dollars, etc."

The proposed budget is much too low to meet the economic needs of the government, in comparison with that of the naval administration, and adding to this were some of the indirect privileges which were deriving from the navy activities and from its personnel, including the Fitaifita Guard—fat income of which a very good proportion had been a great boast and asset to the island government revenue.

The people of Samoa were also unconsulted by the survey team with their mission. Consequently, the Fono voted unanimously in rejecting the budget and the survey team's so-called Green Book, which is now to be the guide of the new administration. And instead, the Fono has voted to ask the Governor to use his own good judgment, with the advice of the Fono, to promote means that would fill the necessary needs,

etc., before a new budget would be provided. And the only solution I can see is our Governor's proposed trip to Washington in or about the last week of August, next month, to seek more financial assistance from Washington.

I truly feel that Governor Phelps' position, in facing such unfortunate situation, should not be jeopardized by some other people's mistake, since I understand he was appointed Governor 9 months after the survey team had made its report. But as I have said, because of the inexperience of our people in American ideas and ways of government, some of them are accusing some innocent persons and the Interior and Navy Departments. Yet, on the other hand, Governor Phelps, after his arrival and installation, has publicly pledged his willingness to cooperate with the people and to accept advice from them in order that he could work with our citizens. And that is what he is now doing, devoting his full time to study closely the heart of Samoa's problems. And for this reason, with his deep interest and sympathy in the welfare of Samoa and its future, the Governor is now winning the hearty support, sympathy, and respect of the Samoans. And when he goes to Washington the Governor will be accompanied by the soul and prayer of the people. Personally, I am in full support of his administration and the purpose of his visit to Washington.

May I say this as an honest statement: Samoa will long remember and appreciate their relationship with the Navy because it has kept up its moral obligations to the Samoan people and their needs, by upholding and for the constant build-up of our economic, health, education, and social life which made the people of American Samoa the proudest of the South Pacific. Through this progress and the preservation of the land, our customs, traditions and culture for the last 51 years Samoa should be maintained as the symbol of American leadership for every race and every people to enjoy life as they were given them by its birth and by God. And I certainly believe the United States Government will not allow its child to be decayed because of a small amount of financial help.

Knowing your interest and sympathy in the course of our people's life, I am very happy to know that Samoa has an understanding friend in Washington who can transmit the spirit of their message to the President and the Congress of the United States. And I am sure when Governor Phelps comes to Washington he would want to confer with you on the purpose of his visit. With your kind brotherly help I feel certain our Governor's mission will not be fruitless, and which will mean so much to the happiness and bright future of your Samoan brothers.

May all the good blessings of our Lord pour upon your head, and that you may have every strength, wisdom and courage to carry our friends' hopes in the field of essential responsibilities.

Ia soifua and aloha nui loa,
TUFELE-FA'IGA'OGA.

Question of the Week

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. BENDER. Mr. Speaker, the President is making his own "investigation" into charges that the Democratic na-

tional chairman received fees from a St. Louis company which received a RFC loan. When does he finish the investigation; 1960?

A Model for Screening Academy Aspirants

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. CLEMENTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, from today's New York Times:

IN THE NATION

(By Arthur Krock)

A MODEL FOR SCREENING ACADEMY ASPIRANTS

WASHINGTON, August 8.—Plans for a congressional inquiry into conditions at West Point, as an outgrowth of the cribbing scandal, appear to be suspended for the present. But a limited investigation could have constructive results. Under the direction of Senator RUSSELL, head of the Armed Services Committee, such a review would be kept free of headline hunting, lapses into sentimentality, and interference with the Army's handling of the immediate matter. The same could be expected from the Committee on Expenditures in the Executive Departments through the subcommittee of which Senator HOVER is chairman.

A pertinent subject

This committee has developed and practiced a written code which is a model for all investigations. Senator RUSSELL, in the MacArthur hearings, followed an admirable if unwritten one. Both should guide any committee of inquiry, whether or not composed of a congressional group. And one thing open to useful examination originates in Congress itself. This is the course pursued by Members of Congress in selecting their nominees for the student bodies of the two service academies. Though the West Point scandal affects only a small percentage of the cadet corps, the subject is pertinent.

Methods of congressional selection have been the special study of at least one Member, who has applied his research effectively and well. He is Representative JOHN F. KENNEDY, of the Eleventh Massachusetts District, hero of a great Navy exploit in the Second World War. When a youth from his district gets a nomination to West Point or Annapolis he has gone through a screening process carefully and scientifically calculated to assure that he will finish his course with honor and become a professional soldier or sailor to whom the security and moral reputation of the United States can be entrusted. None of his nominees has yet failed to make or hold the grade.

Results of the study

Mr. KENNEDY's study led him to the conclusion that the nominating system generally employed by his colleagues does not enforce essential standards and is responsible for the fact that quotas of the Service Academies go unfilled and too many graduates abandon their military careers. It persuaded him also that West Point scouts follow a bad practice in using the nominations assigned to the Academy to recruit and help to admission as many athletes as they can.

This practice is a matter for Congress as a whole to correct; it is within its province.

But the nominees from his district are Mr. KENNEDY's own affair and he has concentrated on their selection. While it is true that a large number of his colleagues require competitive tests (the civil-service designating examination), they often choose their nominees on other grounds—to pay political debts or to please influential families and friends. Mr. KENNEDY traced to this method some gloomy statistics he collected on "undesirable attrition," the term used to describe nominees admitted as cadets who later were detached by the military authorities.

Mr. Kennedy's system

In the Eleventh Massachusetts District the first step is to announce open competitive examinations. Those applying are then given a physical test on Army-Navy standards, the study having disclosed the fact that many nominees fall on this test at West Point and Annapolis. The next move is to examine applicants for aptitude and achievement under a system specially developed by the Civil Service Commission. There follow tabulation and estimation of the records made by the nominees in colleges and secondary schools where deans and headmasters are asked to fill out a very searching questionnaire into the applicant's character and personality.

All these hurdles successfully passed, the surviving applicants appear before a selection board. On this there are three members—a clergyman who was an Army combat chaplain, a psychologist in the Harvard Medical School, and a retired Army doctor who specialized in interviews while in the service. This board, after concluding its labors, gives each nominee his competitive rank, chooses the winners, and notifies them that they have been selected for appointment. After that, of course, they must pass the tests required by the Academies.

Available for all

The study on which this careful screening is based was costly to Mr. KENNEDY, and most Members of Congress could not have undertaken it for that reason. But now it is available to all of them, and they are at liberty if they choose to introduce in their districts this system of selection or to improve it by their analysis of the study. The record and findings of an investigating group might be of additional assistance in producing, and putting to general congressional use, standards and procedures for choosing nominees to West Point and Annapolis that could root up one of the causes of conditions which are of national concern.

It is of vital importance to assure that the two service cadet corps will always live up to their obligations to the United States, in the Academies and afterward, and remain as symbols of the finest moral, mental, and physical elements of the American society. This necessity, brought acutely to mind by the West Point story, can be met in good measure by broad application of the system established by Mr. KENNEDY.

Disgraceful Practices in National Arsenal Plant

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including an AP dispatch out of Detroit, Mich., which appeared in the Milwaukee

Journal of recent date illustrating, if true, the disgraceful plant practices in an Army tank arsenal at Detroit. It is inconceivable that this condition could exist.

ARSENAL ENGINEERS QUIT IN DISGUST

DETROIT, MICH.—A former engineer at the Army's tank arsenal here was quoted by a Wayne County official Saturday as saying he quit his job in disgust over waste of money at the Government plant. The engineer, Frank Mitchell, told the official:

"It took 7 days of milling and machining to turn out a gun breech, and it cost \$1,000 in wages alone. They waited until the breech was completely machined before X-raying the metal for flaws. Out of every 11 X-rayed while I was there, 10 were thrown out.

"I merely suggested that they X-ray the casting before they machined it to save all that work and expense. I was told to mind my own business or I would be out of a job."

Mitchell also said that 3,000 blocks, used to check precision instruments, were sold to a new employee.

"A week later," Mitchell said, "the employee quit his job and sold most of the blocks back to the arsenal at a profit."

"That was too much for me," Mitchell said. "So I quit and got another job."

West Point Dismissals May Bring Wider Probe

EXTENSION OF REMARKS OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SIKES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pensacola (Fla.) Journal:

WEST POINT DISMISSALS MAY BRING WIDER PROBE

The rumpus at West Point, where 90 cadets have been discharged for cheating on examinations, is not likely to die down soon and may result in further repercussions which will reach to higher authority than the cadets themselves.

It appears that the dismissed cadets are not going to take it lying down. From statements made by some of them, the cribbing was more widespread than the record 90 dismissals indicate and it has been going on, not for 4 or 5 years, but for 12 or more.

But even if it has been in practice by some for only 4 or 5 years, it would appear that the 1950 and 1951 graduating classes contained some of those who cheated. Yet none of those graduated have received any discipline.

The cribbing, or obtaining outside help, as the official report gave it, stems from the cadets receiving questions of past examinations and preparing their answers. But the queer part of it is that these same questions were asked year after year to class after class.

This is a peculiar way for instructors to conduct examinations. Naturally students will ask each other what questions were asked and try to post themselves on the possible questions.

But for instructors to ask the same questions time after time is an indication that the instructors were too lazy to prepare new sets of examination questions for each suc-

ceeding class or year. This, to say the least, shows that instructors were not giving their all to their work, or that they were intentionally asking the same questions to permit cadets to prepare themselves for passing the tests. Certainly it is a peculiar system and will not be found in any ordinary college.

No one set of questions would prove the fitness of the cadet. Training should be primarily to make the cadet use his brain, to know how to think, not to be able to answer a static set of questions by rote.

The situation resulting from the many dismissals and the hearings which may follow is likely to bring a deeper investigation into the methods of instruction and tests at the Military Academy and may spread to training academies of other branches of the armed services.

Plan for Flood Losses

EXTENSION OF REMARKS OF

HON. FRANK M. KARSTEN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. KARSTEN of Missouri. Mr. Speaker, the editorial from the Kansas City Times of Monday, August 6, which I include herewith discusses S. 1935 and H. R. 5022, companion bills introduced on Wednesday, August 1. The editorial points up the urgent necessity of prompt action by the Congress to assist in restoring the situation in the flood-devastated areas of Kansas, Missouri, and Oklahoma.

PLAN FOR FLOOD LOSSES

The question of direct aid for the flooded tens of thousands is now before Congress. Companion bills introduced in both houses by Senator THOMAS C. HENNING, JR., and Representative RICHARD BOLLING call for the creation of a flood-claims commission to handle the job.

The urgency of direct restitution should be too obvious to justify much argument. While many of the larger businesses can probably manage to rebuild with their own resources or loans there is a sharp limit. Tens of thousands of families and small businesses are wiped out. Without some direct aid a considerable number of the larger businesses will be seriously crippled.

Families that have lost their homes and life savings present the powerful human appeal. This area and the Nation are also confronted with a far-reaching economic problem. A total loss of a billion dollars is too much to be carried by the home owners, farmers and businessmen of one area. Without major aid the best that could be hoped would be a heavily mortgaged population.

Any aid program necessarily assumes an orderly plan of administration. The Hennings-Bolling proposal for a flood claims commission strikes us as the logical method. The formula for distributing aid raises the most complicated problem and we don't pretend to know what it should be. It is hard for anyone to know prior to actual experience with the problem. Within limits considerable latitude should be given the commission.

There isn't much time for arguing the details of a formula in advance of setting up a commission. Such an official body is needed desperately today. Up and down the river valleys families and businessmen are trying to figure their way out. Local plans are going

ahead. The Kansas City, Kans., plan for rebuilding a large part of Armourdale with rental housing is one example. Many homes that represent life savings may not be rebuilt. What can these people expect?

The big question is how far the Federal Government will come into the picture. Considering that the Government now has a policy of appropriating billions for a multitude of purposes, most people think it will surely recognize a widespread flood disaster. But nobody knows. Populations are set adrift in an atmosphere of uncertainty. Until there is a Federal policy, local plans are made in semidarkness.

The Hennings-Bolling companion bills should bring the problem to a head—and quickly.

Oil Grab by Bureau Exceeds State Fears

EXTENSION OF REMARKS OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. HÉBERT. Mr. Speaker, I am directing to the attention of the House a most illuminating article which appeared in the New Orleans Times-Picayune of Sunday.

If ever the insidious hand of the Department of Interior was exposed in connection with the theft of the tidelands, it has been exposed in this article.

This is a typical example of what can be expected as long as the Federal Government persists in its policy of destruction of the sovereignty of the individual States and the power grab, through sheer might and paramount dominion of the Government over a less powerful State.

Those who scoffed at the suggestion that inland States would suffer now see the real menace behind this proposition where it develops that the Federal Government is not only interested in what they call the tidelands but in any piece of ground under which there is oil no matter where it is located.

But read this most informative article for yourself and see the plot unfold:

OIL GRAB BY BUREAU EXCEEDS STATE FEARS— ARBITRARY LINE TAKES IN CLOSE-BY FIELDS (By David Kleck)

Unless Congress enacts new legislation, Louisiana faces a loss of land and underlying minerals which will be unexpectedly staggering.

State officials expected heavy losses by Louisiana as a result of the United States Supreme Court decision giving the tidelands to the Federal Government. However, the loss which they anticipated does not compare with the loss which the State will suffer if the Federal Department of the Interior has its way.

Within the past few days the Interior Department showed its hand. Judging by the area it is claiming, the department classes as tidelands almost anything that is damp and produces oil.

As the House of Representatives was considering the quitclaim bill, which it passed Monday, the United States Solicitor General, Philip Perlman, was sending two Coast and Geodetic Survey charts to the Louisiana attorney general. A heavy line superimposed on these charts represents the Interior Department's conception of the Louisiana seaward boundary.

Oscar Chapman, Interior Secretary, says that these charts speak for the United States.

This graphic interpretation of the broad language of the Supreme Court decision against Louisiana not only claims 26 offshore oil and gas fields, but, by virtue of peculiar meanderings, the line claims at least two more and parts of four other fields lying in the marshy, ragged Louisiana shoreline.

The Supreme Court decision gave the Federal Government ownership of the minerals "underlying the Gulf of Mexico lying seaward of the ordinary low-water mark on the coast of Louisiana and outside inland waters."

The charts indicate that Perlman and the Interior Department have decided to their satisfaction that these words are sufficient authority to run their so-called boundary line into water areas such as Atchafalaya Bay, historically a bay (and not part of the Gulf of Mexico) since Louisiana entered the Union.

This bay, in which the line is drawn with some exactness, contains two fields which are therefore claimed by the United States: Atchafalaya Bay gas field and the Rabbit Island oil and gas field. To emphasize just how official the Interior Department considers this line, it has issued orders effectively stopping exploratory operations in these areas by the Texas Co. and Shell Oil Co.

As a result of the drilling ban, both companies stood to lose numerous 3-year leases granted by the State. Since drilling before the end of the primary term was necessary to hold the lease, and this was, in effect, prohibited, the Louisiana mineral board alleviated the severeness of the Federal interference by extending primary terms 2 years.

Besides circumventing these two fields, the Perlman line crosses the Belle Isle, Holly Beach, Timbalier Bay and Grand Bay fields, the last-named producing over 10,000 barrels daily. Federal authority has already been exerted in portions of these producing regions jutting over the so-called boundary.

Under provisions of the quit claim bill passed Monday by the House, Louisiana would be protected from any liberal interpretation of the Supreme Court language and the consequent encroachment on the State's resources. Title out to the 3-mile limit would be given to Louisiana and California, and in the case of Texas, to the 10½-mile mark, due to terms of the treaty by which it entered the Union.

Royalties from oil operations between these belts and the edge of the Continental Shelf would be given to the States at the rate of 37½ percent. The Federal share would be given, not to Washington bureaus, but to retirement of the national debt.

Interior's so-called boundary line, never recognized as anything but a draftsman's line by Louisiana officials, came into open discussion at the July 26 meeting of the State mineral board. Certain offshore tracts had been offered for bids and Chapman had written O. G. Collins, chairman of the mineral board, asking that they be withdrawn from leasing.

Chapman protested that the board was offering leases owned by the United States and referred to the superimposed line on the charts where, he said, "was delineated the line claimed by the United States as the landward boundary of offshore area covered by the decision and decree of the Supreme Court in the case of the *United States of America v. State of Louisiana*."

In addition, the Chapman letter particularly described segments of the line in words. Using the term "ordinary low-water mark," which hardly anyone can determine along the shifting Louisiana shoreline, he described the Perlman line across Breton Sound

and around Timbalier Bay, locations of the nine protested tracts up for lease.

Louisiana legal officials noted that Chapman's language implied he was acting for the United States. They searched for the authority for either the Solicitor General or the Interior Secretary to delineate Louisiana's boundary. The found none.

Chapman's protest brought a written reply from John L. Madden, Louisiana assistant attorney general, who conceded receipt of the charts and said in part:

"However, only the charts are official, not the line superimposed thereon by someone presuming to act for the United States in attempting to fix the boundary between the inland waters and those extending seaward from the low-water mark.

"This action, in superimposing the line, was not made under court directive, and, in the absence of the consent and approbation of some authorized representative of the State of Louisiana, must be viewed as being unilateral in nature."

The mineral board then advised all parties that "no lands are hereby offered for lease which might cover any property over which the United States might hold paramount rights and power." But at the same time the board refused to withdraw the protested tracts on the grounds that it had no power to disclaim any Louisiana rights or to agree to a line of demarcation.

Of the nine protested tracts, two were awarded Kerr-McGee Oil Industries, Inc., paid a \$101,000 bonus for a 1,377-acre tract in Breton Sound, and Gulf Refining Co. paid a \$48,950 bonus for the eastern one-third (950 acres) of the disputed tract in the South Timbalier area. It is in this disputed area of Breton Sound that numerous New Orleans residents have filed lease applications with the Federal Government.

To the west and north of the Perlman line, the Interior Department had previously expressed disinterest by means of a letter to the Shell Oil Co. This area was leased in April. More than 63,763 acres were awarded to various companies for a \$2,695,941 bonus, an average of \$42.28 an acre, compared to the Federal leasing figure of 50 cents.

In regard to the disputed tracts, C. J. Bonnacarrere, secretary of the Mineral Board, said that should the Perlman line ever become official (it bisects both awarded tracts), the Louisiana lease in the area of the Federal claim would be invalid.

Oil observers at the Mineral Board hearing noted that the Kerr-McGee Co. had asked that the protested tracts be put up for bidding. This company is owned in part by Senator ROBERT F. KERR (Oklahoma, Democrat), who was one of President Truman's staunchest defenders in the General MacArthur controversy. This fact lent encouragement to the idea that this time the President may not veto the bill as he has previously indicated he will do.

With evidence that the Interior Department regarded this line on the charts as the official claim of the United States, the Washington correspondent of the Times-Picayune asked Interior officials to cite the authority for the so-called boundary.

Attorneys for the Department said that the Supreme Court decision was the basis for drawing the demarcation lines and that the general formula for Louisiana territorial waters was set forth in the California case.

The Supreme Court decision against Louisiana is couched in broad terms. A review of the decision against California shows that the Court, in both the decree and decision, spoke only of "lands, minerals and things underlying the Pacific Ocean lying seaward of the ordinary low-water mark on the coast of California, and outside of the inland waters, extending seaward three nautical

miles and bounded on the north and south, respectively, by the northern and southern boundaries of the State of California."

Although Interior Department attorneys cite this type of language in both the Louisiana and California cases, it appears that some unusual interpretation has been evolved to permit the plotting of a line with considerable accuracy. These attorneys added, that if Louisiana does not agree with the line, it has the right to resist the Federal claims through court action.

Legal authorities predict that, if the quit-claim bill fails, Louisiana will be involved in this type of litigation for years to come. While the Supreme Court language does not contain a directive for the use of a formula, it appears that the solicitor general, in drawing the line, used a geometric formula proposed by the American delegation to a conference on international law at The Hague in 1930. This conference did not result in any treaty or convention.

The Louisiana legal position, in part, is indicated by these comments of legal officials:

1. The Supreme Court did not authorize use of the formula.

2. Even if the formula is reasonable, Louisiana might apply it in one way, the United States in another. "It depends on who has the pencil."

3. The Supreme Court language speaks of the Gulf of Mexico as being the boundary of Louisiana, yet the Perlman line intrudes into numerous bays.

4. The Federal official who draws this line has the same authority to correct it tomorrow as he has to draw it today.

A perusal of the Perlman line shows it to be generous to the State in character, relatively speaking, in Chandeleur Sound before it swoops down into Breton Sound at a point where a gas field is shut in. Little oil has been discovered in this section of the State. Virtually no oil has been found in either St. Bernard or Orleans parishes which abut this area.

The Perlman line strikes into the Plaquemines Parish shore at the exact spot where a promising oil field, Coquille Bay, is being developed. It then goes down, presumably on the low-water mark, to slice off a section of Grand Bay, and in the Delta section, it dips in East Bay enough to claim the South Pass block 24 field.

Off Iberia Parish, the line shoots into Atchafalaya Bay in such a northerly manner as to nip the Belle Isle oil and gas field and then completely circumvents the Rabbit Island and Atchafalaya Bay fields.

When questioned, attorneys for the Interior Department said that whether there is oil production or not is wholly immaterial in setting forth the delineation of the marginal lands.

The language of the formula only emphasizes the difficulty that would be encountered in attempting to derive it from the language of the Supreme Court. In reference to bays and similar inlets, it says:

"For indentations having pronounced headlands no more than 10 nautical miles apart, a straight line shall be drawn across the entrance; the envelope of all arcs of circles having a radius equal to one-fourth the length of the straight line shall then be drawn from all points around the shore of the indentation; if the area enclosed by the straight line across the entrance and the envelope of the arcs of the circles is greater than that of a semicircle with a diameter equal to one-half the length of the line across the entrance, the waters of the indentation shall be regarded as interior waters; if otherwise, the waters of the indentation shall be regarded as open sea."

"Where the headlands are more than 10 nautical miles apart, the line shall be drawn across the indentation through the point nearest the entrance at which the width does not exceed 10 miles, and the same procedure shall be employed to determine the status of the waters inside the line."

Even if this formula eventually becomes official, it poses a question of applying it to the shifting Louisiana shore line, the marsh and "floating islands" areas that change nearly every time they fall victims to storms and hurricanes. Since determination of the boundary involves consideration of the "low-water mark," the finding of this line sets forth a legal problem of truly incredible magnitude.

In the California case, the special master appointed by the Supreme Court to aid in determining the boundaries, said in his recent report that "ordinary low water" could be determined from observations of the Coast and Geodetic Survey over a period of 18.6 years. "Ordinary low-water mark" is taken as "the intersection of this plane of the mean of all low waters with the shore line."

The problem of applying this reasoning to the Louisiana shore line, if even to determine the unofficial boundary directed by the solicitor general is apparent. Chapman, in his letter of protest, specified that the Perlman line be drawn, using "low-water marks," but as Mineral Board Secretary Bonnacarreire says, "Who knows what low-water marks are? I don't."

Another protest against the "arbitrary manner" of attempting to define Louisiana's boundary without foundation in law, was delivered by State Land Register Lucille May Grace.

In compliance with the court decree that Louisiana account for all revenue from the offshore areas since June 5, 1950, Miss Grace compiled her report and forwarded it with vigorous protest.

Her report showed that in this period Louisiana received \$2,413,371 in bonuses and rentals from leases in the claimed area and \$1,193,291.57 in income from offshore production, a total of \$3,606,662.57.

Bolivar E. Kempt, Jr., attorney general, in forwarding the report, said:

"She points out that no specific line had been agreed upon by Louisiana to indicate such separation and that her report has been made in protest.

"I would also like to emphasize the fact that this statement—of income—has been made without knowing the exact area involved in the suit aforesaid and that a correct report cannot be made until such line is definitely fixed and agreed upon."

Just what process will be employed in determining a 3-mile boundary off Louisiana, in the event the quitclaim bill passes into law, has not been indicated. Legal authorities admit the impractical aspects of adding 3 miles to the present arbitrary line created by Solicitor General Perlman.

Although the bill will not give Louisiana full ownership of the vast offshore area the State helped to develop, it will—

1. Protect Grand Bay, Belle Isle, Timballier Bay, and probably Rabbit Island and Atchafalaya Bay. It will also prohibit Federal encroachment on such expanding bay fields as Coquille Bay.

2. Give the State ownership to these fields: Creole (307 barrels daily), block 33 West Cameron (58 barrels), most of Bay Marchand (5,968 barrels), block 24 South Pass (1,863 barrels), and most of Main Pass, block 69 (6,048 barrels).

3. Allow State leases outside the 3-mile limit to be exchanged for Federal leasing. It thus prohibits any group from employing the Federal Mineral Leasing Act to gain offshore leases at 50 cents an acre. It has

been noted in this connection that off the coast of Cameron Parish and Texas a group of 18 cooperatives filed in 1947 Federal lease applications for 1,800 square miles of coastal water bottoms. These cooperatives, although domiciled all over the United States, filed in the same manner and applied for leases side by side.

Although the bill does these things, legal authorities warn the Congress should immediately set about determining the line of demarcation, if it passes, else litigation and subsequent problems might be dogging the offshore operations for years to come.

Four Prayers for Americans

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I take particular pleasure in inserting the following article which appeared in Pageant magazine, including prayers by four of our Nation's foremost clergymen:

FOUR PRAYERS FOR AMERICANS

In a grim world of retreating freedoms, with atom warfare an ever-present fear, Independence Day has become more than a patriotic anniversary in which Americans commemorate old sacrifices and prepare themselves for the new challenges that lie ahead. Today, Independence Day has become also a time of spiritual stock taking; an occasion of somber spiritual reflection when millions of our citizens realize anew they must turn to divine help to guide them through the crises imperiling their hopes and lives. In keeping with the grave spiritual demands made upon our people in these troubled times, four of the Nation's foremost clergymen have written for Pageant Independence Day prayers, emphasizing the eternal principles that must prevail if freedom survives.

"SAVE US FROM OURSELVES"

"(By the Reverend Patrick J. Peyton, CSC)

"Hail, full of grace. From the cross you were bequeathed to us as our mother, the last gift of your dying Son, so we, your children everywhere, claim your loving intercession with our Father. And because the church in the United States has placed itself under your special protection, we in this land urge a double claim upon you—our mother and our lady.

"Mary, be with us in these dangerous times. Bring God's blessing on our leaders; obtain that they shall be led by Him. Bring God's blessing on all who take up arms to defend our country. By God's grace fortify us against whatever dangers may strike at us from abroad or from within. Above all, save us from ourselves. Inspire and teach us to live God's way at home.

"Mother of the holy family, take under your mantle the families of America, custodians of the soul of the Nation. Daily family prayer used to be a custom in this land. It is no longer. The family is the weaker for it. The Nation is the poorer. By your own prayers, to which God always listens, implant that saving custom in the American family again, and in that way strengthen the bonds of love that hold the family together, foster the spirit of partnership be-

tween man and wife, instill the love of God in His children. Teach us that if enough families pray together they can save the world.

"Mother of love, teach us to love one another. Bring God's blessing also on the Russian people, teach them also what you teach us, and bring us all into our Father's house.

"Queen of the family rosary, we ask it in His own sweet name."

"WE SHALL MARCH WITH HOPE"

(By Dr. Julius Mark)

"O Lord, God, Father of all men, we turn to Thee in humility and gratitude as have countless generations of Thy children throughout the ages.

"We are humbled by the thought of Thy power and majesty. We become conscious of our weakness in the presence of Thy limitless might. We turn to Thee in contriteness of heart that a part of Thy strength may find a habitation in our souls.

"Grant, O Father, that we may ever prize as our most precious possessions the freedoms which belong to all Americans. May we never cease to be grateful unto those who sacrificed and died that the liberty which was born on these shores might be preserved. Remove from our hearts every vestige of religious intolerance, racial prejudice, and social arrogance.

"It is not Thou, O loving God, who hast forsaken us. We are lost, because we have abandoned Thee. Thou art with us as always, an ever present help in time of trouble; pleading with us to hold fast to the radiance of Thy presence. May we heed Thy call in humbleness of spirit and return to Thee and live.

"Strengthened by the conviction that Thou art ever near, determined to recapture the courage of heart and forthrightness of purpose which the consciousness of Thy presence will bring us, rededicating ourselves to the matchless principles of freedom and justice which our founding fathers labored to establish in this blessed land, undaunted by the sacrifices which the defense of our liberties may entail, inspired by the will to do everything within our power to translate into blessed reality the dream of one world firmly founded on an enduring peace and one humanity living in accordance with Thy teachings of mutual forbearance and mutual understanding, we shall march, with courageous faith and lofty hope, toward the Promised Land of universal brotherhood.

"To achieve this purpose, which we are assured is Thy will, may the words of our lips, the meditations of our hearts and the works of our hands be acceptable in Thy sight, O Lord, our Strength and our Redeemer. Amen."

"KEEP ALIVE THE FAITH"

"(By Dr. Ralph W. Sockman)

"Eternal and ever gracious God, in whose law is our life and in whose love is our hope, our hearts are filled with gratitude for this good land which Thou hast given us for our heritage. Humble us with a sense of our deep debt to those whose pilgrim feet opened the paths of opportunity and laid the roads of liberty. May the memory of our fathers' sacrifices make us worthy to be their sons.

"Sober us by the thought of what others have done for us and enlarge our vision of what we can do for others. Help us to be equal to our high trusts, reverent in the use of privilege, just in the exercise of power, and generous in the protection of weakness. May we so follow in the footsteps of those who worthily went before us that we shall leave a better land for those who come after us.

"O Thou Eternal Spirit, in whom the dreams of men are born, keep alive in us the

hope and faith which sustained our founding fathers when this Nation was young and weak. Preserve us from needless fear and false trust. Make us ever mindful that our real strength is righteousness and our true greatness is service. Let not the darkness of these days dim our confidence in the ultimate triumph of truth and justice.

"Save us as a people from violence, discord, and confusion. Bless our land with the benefits of true learning, honest industry, and sound judgment. Restrain the passions of men that greed for gain shall not corrupt the public conscience or weaken the respect for law. Grant wisdom to our leaders and loyalty to our citizens that with malice toward none and charity for all we may do the right as Thou dost give us to see the right.

"O God, grant us grace to see the goodness of those nearest to us and to feel brotherly toward those far away. Guide our President and the rulers of all nations in the paths of peace and may they so persevere in the pursuit of justice, that strife and hate shall give way to brotherhood and good will. May Thy whole family throughout the earth find food for the body, faith for the mind, and hope for the heart so that the old wounds of war may be healed and new ways of fellowship may be found. These favors we ask in the name of The All Highest. Amen"

"MAKE OF THY CHILDREN ONE HUMANITY

("By Dr. Harry Emerson Fosdick)

"Eternal Spirit never far from any one of us, but most near when we most deeply feel our need of Thee, we lift to Thee our prayer on behalf of our Nation.

"Thanks be to Thee for the heritage of her great tradition. We humbly acknowledge that we are the children of sacrifice. Our liberties have been purchased by the courage and self-denial of our sires, the blood and tears of martyrs and the faithful toll of many nameless heroes have made possible our freedom. Grant us a just sense of our unpayable indebtedness, and gird us with resolution so to live that our children's children shall rise up to call us blessed.

"Amid the bewilderment of these present days be our guide and stay; save us from confusion of mind and futility of life; let not love of ease sap our courage, nor dismay spoil our faith. Match us with the need and challenge of our time, and as Thou hast entrusted our Nation with great power, so bless her with character and leadership, devotion, and self-sacrifice, that we may prove worthy of our high opportunity.

"We pray for the peace of the world. Cast down the pride and arrogance of tyrants; uphold all endeavors to unite the nations in amity and good will; forgive and override our embittered divisions of nationality and race; save us from war's suicidal self-destruction; and grant that as we have conquered distance and made the world one habitation, so by Thy grace we may conquer misunderstanding, hatred, and violent strife, and make of Thy children one humanity.

Grant to us one by one such inner resources of strength and courage that we may be not the victims of our disturbed time, but the creators of a nobler nation and a better world. Make us worthy citizens of our country; let not our loyalty fail, or our self-sacrifice prove unequal to the need. Arouse us from lethargy, apathy, and self-seeking, to withstand the evils which afflict our people from within and the dangers which threaten them without. Grant guidance to our leaders. And now in our day of need and opportunity, make us strong to do Thy will, and resolute to fulfill for the future the promise of our Nation's past.

To this end may we have wide margins of reserve around our daily need, and deep wells from which to draw our fortitude, our wisdom, and our faith. Amen."

Fiscal Year Ends on Record Note— 2,486,755 Civilian Employees

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. BENDER. Mr. Speaker, figures are now available on the end of the fiscal year which departed on June 30, 1951, unmourned and unsung. The executive branch of the Federal Government wound up its work with 2,486,755 civilian employees on your payroll, to whom we paid out the sum of approximately eight and one-half billion dollars in wages.

Just to keep things moving along on a fine, high level, your Federal agencies added 15,697 men and women to the rolls in June, from civilian offices alone, and the military departments hired 27,952 civilians to keep them company, for a grand June total of 43,649 new names on the payroll.

If you are wondering what these people are all doing, you have many folks right alongside you. Some of these who are wondering are included in the lists of those employed. They are put to work at trivial tasks which many of them find impossible to justify. Others simply sit around waiting for assignments. A filing clerk employed in one office tells me that she is paid \$50 a week for work that a 10-year-old could do and she is ashamed to take the money.

Sweat on, Mr. Taxpayer, sweat on.

Fourth of July Issue of the New Yorksky Dennik

EXTENSION OF REMARKS OF

HON. JAMES G. DONOVAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. DONOVAN. Mr. Speaker, there are published in my district, on the upper East Side of New York City, two valiant newspapers, the New Yorkske Litsky, printed in Czech, and the New Yorksky Dennik, printed in Slovak.

On the Fourth of July this year, these papers published statements and articles by outstanding political figures and distinguished Members of Congress. These included the Vice President of the United States, Hon. ALBEN BARKLEY, Hon. ERNEST W. McFARLAND, the majority leader of the Senate, Hon. KENNETH S. WHERRY, minority leader of the Senate, the Honorable JOHN McCORMACK, the Honorable JOSEPH W. MARTIN, leaders of the House. They also contained statements of the following Members of the Senate and House of Representatives: Hon. WILLIAM BENTON, Hon. HARRY P. CAIN, Hon. EVERETT MCKINLEY DIRKSEN, Hon. THEODORE F. GREEN, Hon. WARREN

G. MAGNUSON, Hon. BRIEN McMAHON, Hon. WALLACE F. BENNETT, Hon. HUBERT H. HUMPHREY, Hon. WILLIAM F. KNOWLAND, Hon. BLAIR MOODY, Hon. LEVERETT SALTONSTALL, Hon. MARGARET CHASE SMITH, Hon. A. J. SABATH, Hon. KARL STEFAN, Hon. CHARLES A. BUCKLEY, Hon. J. K. JAVITS, Hon. JOHN LESINSKI, Hon. ANTONI N. SADLAK, and Hon. ALFRED D. SIEMINSKI.

In recognition of the magnificent service rendered by these newspapers, I should like to include in my remarks a letter sent to the editor of one of these papers by the American Heritage Foundation.

THE AMERICAN HERITAGE FOUNDATION,
New York, N. Y., July 18, 1951.

Mr. ANDREW J. VALUCHEK,
New York Dennik,
New York, N. Y.

DEAR Mr. VALUCHEK: I cannot overlook the opportunity to express my sincere thanks for your magnificent support in devoting an entire issue of the New York Dennik to advertisements and editorial material commemorating the 175th Anniversary of the Signing of the Declaration of Independence. Yours was the outstanding contribution in the foreign language field, and will not be topped by any of the thousands of other publications that carried the commemorative stories of Rededication throughout the land.

I know you will be pleased to hear that our national program of Rededication to the principles of Independence and Democracy was an unparalleled success. Seventy-three major cities held special commemorative ceremonies and 10,000 smaller communities gave special and sober significance to the anniversary. It was truly a day of rededication and encourages the American Heritage Foundation to believe that it is possible to continue this program throughout the remainder of the year as other significant national holidays and anniversaries occur.

The highest reward of good citizenship is good government. The recent anniversary program convinces us that the American people as a whole are alert to the dangers that confront us and willing to participate in any worthy program that will help to preserve and maintain our precious heritage.

We look forward to working with you again in the near future.

Very sincerely,

C. M. VANDEBURG,
Executive Consultant.

Music and Musicians

EXTENSION OF REMARKS OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 10, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the New York Herald Tribune on July 29, 1951, under the heading "Music and musicians," in reference to S. 1553.

The author of the article, Dr. Virgil Thomson, is not only a distinguished American composer, but a critic of note, who has served as music critic of the New York Herald Tribune since 1940, and

is the author of books of musical criticism, including *The State of Music* and *The Musical Scene*. A native of Kansas, Dr. Thomson is a member of the National Institute of Arts and Letters, and a chevalier of the French Legion of Honor. He holds degrees from Harvard and Syracuse Universities.

Among some of Dr. Thomson's distinguished contributions to American music are two operas, two symphonies, a number of choral works, and works for small instrumental groups, as well as incidental music for plays and films. His most recent film score was the music for the documentary film *The Louisiana Story*, which won for its composer even more acclaim than his previous musical scores for the United States Government documentary films, *The Plough That Broke the Plains*, and *The River*.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MUSIC AND MUSICIANS: THE KEFAUVER AMENDMENT

(By Virgil Thomson)

One of the curious results of the recent investigation by a senatorial committee into organized interstate crime has been the proposal in Congress by Senator ESTES KEFAUVER, of Tennessee, of an amendment to the Copyright Act. This law, passed in 1909, determines, along with other matters, the royalty due to copyright owners of musical works whenever these latter are made into gramophone records for purposes of sale. It also provides the legal basis for the collection by musical copyright owners of performing-rights fees. Such fees have been held collectible by Supreme Court decision for the use of music in restaurants, dance halls, hotels, and the like places, whether or not admission is charged. Other decisions have established the principle that radio broadcasts constitute performance for profit, within the meaning of the act, and are subject to copyright charges. Also that public playing of mechanical reproductions constitutes performance of a musical work.

JUKE-BOXES PAY NO ROYALTIES

Our copyright law is far from ideal, but it does offer protection to authors and composers in all the main marketings of their work save one. That one is the nationally popular juke-box.

For reason unknown to this commentator the authors of the Copyright Act specifically exempted from any payment of performing-rights fees musical uses that involve coin-operated machines in establishments where no admission is charged. In 1909, of course, such uses were minor—in a few penny arcades and the lower saloons. But in the last 20 years the juke-box has become hugely popular. And although it contributes, along with all the other forms of mechanical transmission, toward reducing radically the composers' and publishers' profits from sheet music sales, efforts to remedy the injustice through amendment of the copyright law have consistently failed in Congress.

RACKETS IN THE INDUSTRY

Senator KEFAUVER has found a new approach to the problem, namely the interest our Federal Government has in not being defrauded of taxes. It seems that there are 500,000 juke-boxes in operation in the country and that the annual gross intake of these is around \$500,000,000. They are mostly owned and serviced, moreover, by large

organizations in which criminal elements seem to have penetrated. Evidence of widespread gangster control of the juke-box owner-distributor industry was found by congressional investigators in cities as far apart as New York, Los Angeles, Chicago, Kansas City, Miami, New Orleans, and Duluth. Nobody knows just how much money is made, who gets it or what methods of brute force are employed in its collection.

AMENDMENT'S TRIPLE ARM

Now the Federal Government not only enjoys receiving the taxes due it; it also aspires to put down criminal organizations. And prosecution for nonpayment of income tax is one of its arms. The Kefauver amendment to the copyright law gives it a further arm. It requires all companies owning or servicing juke-boxes to declare to musical copyright owners (or their agents) every month all the records that have been available in all the machines under its jurisdiction during that time. The great collection societies such as ASCAP and BMI are thus brought into the picture, with the same rights of policing public taverns, demanding certified accounts and suing for redress in the courts that they enjoy with regard to other royalty collections. These certified accounts will be available, moreover, to the tax authorities. The whole juke-box industry will be thrown open to inspection through establishment of the copyright owners' right to collect performance fees. The fact that composers and their publishers will receive money hitherto denied them by law corrects a long-standing injustice, and this advantage is reinforced by two others, which facilitate the collection of Federal taxes and hinder the operations of organized interstate crime.

HOW IT WORKS

The amendment specifies the payment of 1 cent per record side per week (a side being defined as 4 minutes or any fraction of that) as due for the presence of any disk in any jukebox. The charge is small and the accounting not difficult. Establishments charging admission are exempted, since they already pay, no owner or licensee of a jukebox being liable to pay a copyright owner twice for the same usage. Tavern-keepers owning a single juke-box are also exempt, unless the machine is serviced, under contract, by a larger firm.

The amendment seems to have been carefully reflected and phrased. The benefits offered composers are obvious. A loophole long obnoxious to them in the copyright act would be closed by its enactment. Congress has previously refused, however, to vote for that closing. The Kefauver amendment now offers Congress the inducement of augmented Federal revenues and also an instrument for exposing to public view (and court action) criminal parasites that have fastened themselves onto a legitimate industry.

the House of Representatives to create a Special Committee To Study Psychological Warfare.

Important contributions to the study of psychological warfare are being made daily. These contributions are being lost because they are being sent out in all directions. They are not being concentrated in the files of a single committee or commission so that this complex art of moving minds may be scientifically studied.

The late Will Rogers usually prefaced his remarks with: "All I know is what I read in the papers."

Mr. Speaker, what do we, as Members of the House, read in our CONGRESSIONAL RECORD?

Let us look over a single issue—that of August 6, 1951.

Senator MUNDT—page 9475—suggested that refugees from behind the iron curtain be trained to spread the story of freedom and returned, with the disguise of plastic surgery, to be literally the newsboys of liberty.

Senator McCARRAN—pages 9486-9488—brought out that effective propaganda is inseparable from effective national policy.

The gentleman from Pennsylvania [Mr. Flood] proposed—page 9504—that Stalin be challenged to permit the Voice of America one jam-free hour of broadcast to the Russian people.

The gentleman from Mississippi [Mr. SMITH] included in his extension of remarks—pages A4912-A4913—an article by Eugene Lyons, an experienced veteran of psychological warfare, entitled "A Neglected Element in the World Equation: The Russian People."

Senator WILEY—pages A4920-A4923—extended his remarks to include an invitation to Soviet Russia to respond to the congressional resolution of friendship for the Russian people.

Each speech, each extension of remarks to which I have here called attention, has been a contribution of value to the sum total knowledge of psychological warfare.

Will this Congress permit these contributions to be lost?

Mr. Speaker, I answer this question with another question.

Will this House support a Special Committee to Study Psychological Warfare where these contributions will be preserved and used?

Special Committee To Study Psychological Warfare

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, there is a very real need for

Doorway to Slavery

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. CLEMENTE. Mr. Speaker, under permission previously granted me, I ask that there be printed in the Appendix of the RECORD the fourth of a series of

articles on teen-age drug addiction published recently by the Long Island Daily Press:

"HOW I BECAME A DOPE ADDICT BEFORE I WAS 18"—ARREST COMES AS RELIEF TO A BETRAYED LUCY

(Fourth in a series of articles telling the sordid story of Lucy D., who became a dope addict and peddler before her eighteenth birthday. In previous installments Lucy told a reporter how she got into the dope habit by accepting a marijuana cigarette from a boy friend who told her, "Everybody does it." She switched to heroin after falling in love with Ralph, 20-year-old "hypo," going to live with him in his flat and then marrying him just before he was jailed by narcotics agents. By that time Lucy was such a confirmed addict herself that, in order to get money, she began to peddle dope. Soon she was making money, but she had shriveled from a healthy pretty girl to an emaciated, blotchy-skinned fearful woman, free from worry only when she was under the effects of H")

(By Geraldine Scott)

While Lucy was selling heroin and cocaine for a living, she knew she was in constant danger of being arrested. She knew Mr. B., her friend who supplied her with the stuff and paid her a good commission, had been to prison at least once.

"But when a man makes several thousand dollars a week, a year and a day's sentence in jail can be worth it," Lucy commented. Especially for a man like Mr. B., who was not a hypo himself.

"Many of the big poddlers aren't"

When Lucy's husband, Ralph, was picked up by the police, Lucy was questioned briefly and released. She quickly left Ralph's apartment for good and made no efforts to see him, despite his careful instructions how she was to try to smuggle H to him while he was behind bars.

"I didn't know any policeman could tell just by looking at me that I was a hypo. I didn't know I had been released in the hopes that I would lead narcotics agents to bigger bait."

Lucy kept moving from place to place while she peddled her dope. Her apartments, always in nice residential areas with convenient entrances, were soon hangouts for a small group of addicts.

"We would take our fixes and just sit, listening to jazz. That kind of music sounds wonderful when you're high. When you're a hypo, you live in a world of your own. You have two purposes in life. You live for your fix of H and you do things only to get money to buy the H."

Another teen-aged girl, May, became a member of the crowd that would gather at Lucy's.

"My troubles started when I let May come live with me. She was a beautiful girl. Her parents were religious people and had been strict with her, but she had a bad love affair and wanted to die. She was only 16, but could not get over it. Someone gave her heroin and she decided to go for a slow suicide."

Then Lucy discovered whom May had loved.

"It was my husband, Ralph. He was about to get out of jail and she said she planned on seeing him. I hadn't been in touch with him since the day he was picked up, and I didn't even want him to know where I was. I told May she'd have to leave. She didn't like that and went off in a huff."

"I scrubbed everything up good the night she left and had just taken a fix when the doorbell rang. I wasn't worried very much when I opened the peephole and they asked for May because I knew I was cool (not hot

or likely to be arrested). I had never been arrested. But I didn't think it was a customer. They always telephoned before they came. I slammed the peephole shut."

"Then a man's voice said, 'Open the door. This is the narcotics bureau.' I grabbed my outfit and what stuff I had in the apartment, threw it in the garbage disposal unit and breathed a sigh of relief. They broke in the door before I could open it. I felt cool and confident. But not for long."

May had betrayed Lucy. She had left her kit with some H in a drawer in the kitchen and the agents went right to it.

"So they had me. All of a sudden I didn't care. I was so tired of the way I had been living I was relieved that it was all over."

"I never would have had the courage myself to kick it off, but now that I was going to have to do it, I was almost glad. Of course I was terrified at the thought of the pain I was going to face. I never had endured it, but I knew others who had and I remembered what they told me."

From the narcotics agents, who remained to question her for 3 hours, Lucy learned Mr. B. had been arrested. The agents took over her telephone and took all calls from her customers.

"The agents being there was almost a relief. It was the first time for months I had a chance to talk to real people. People outside our circle."

"I began asking the agents what jail I would go to and how long I would be likely to stay. At that time I figured on a year and a day sentence—the usual one."

"As I said before, a short sentence is worth it to the big wheels. A long one is a different story."

Dr. Arthur Prudden Coleman

EXTENSION OF REMARKS OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. RADWAN. Mr. Speaker, I want to pay tribute today to a great American educator and, with it, offer for the RECORD his recent statement entitled "Understanding the Russians." I refer to none other than Dr. Arthur Prudden Coleman, president of Alliance College, Cambridge Springs, Pa.

Dr. Coleman, after serving in the Armed Forces of the United States in World War I, completed his studies for a bachelor of arts degree at Wesleyan in 1920. Thereafter, his post-graduate study took him to Yale, Columbia, the University of Prague, as well as the Universities of Krakow and Warsaw. In 1925, his well-earned doctor of philosophy was conferred upon him at Columbia University.

After teaching languages at Olivet College in Michigan, Dr. Coleman became professor of Slavic languages at Columbia University. It was at Columbia University that Dr. Coleman's courageous action in the cause of freedom brought about national attention.

In 1948, Columbia University accepted a Polish chair from the Communist-controlled regime in Warsaw. This provided for an annual \$10,000 grant from

the Soviet satellite regime in Poland. It should be pointed out that to the present day, Columbia University continues to accept this grant. This is difficult to understand in the light of the present international situation and, more so, in the light of our knowledge of the insidious workings of communism throughout the world. Numerous protests made to Columbia University have proved futile and no satisfactory explanation has been given to date for its continued acceptance. Columbia University's acceptance of this grant, in 1948, was too much for the "Connecticut Yankee stomach" of Dr. Arthur Prudden Coleman. Resigning in protest, Dr. Coleman wrote:

I stated that I was sorry to go and would stay (1) if the courses were withdrawn; (2) if the \$10,000 already accepted were devoted to the purchase of needed scientific instruments for the devastated universities of Poland; (3) if President Eisenhower would investigate Stalinist infiltration at Columbia.

Dr. Coleman further emphasized:

These were rejected and I walked out determined to fight publicly the prostitution of American Slavic departments by means of Communist subsidies.

The resignation of Dr. Coleman heightened the protest of conform funds that were beginning to be accepted by American colleges to institute various chairs related to Slavic study and teaching.

Dr. Coleman's background should serve to make for better understanding of the following statement released by him:

UNDERSTANDING THE RUSSIANS

The news that comes to us from the outside world these days is frightening indeed. At last, it seems, we are beginning to reap the whirlwind we sowed the seeds of at Tehran and Yalta. Crisis impends in the Far East. But the seeds of this crisis were sown in Europe. The cloud no bigger than a man's hand from which this tempest has grown first took form in Europe on the very territory from which the ancestors of 6,000,000 loyal Americans of Polish extraction once emigrated. The misguided policy which has led us to the far-eastern clash was begotten by our State Department in Eastern Europe. Now its liquidation proceeds apace in the Far East, but only its liquidation, not its origins. The origins were in Eastern Europe. In Korea, all our errors of judgment with respect to the peoples of Central and Eastern Europe have come together in one awful culmination, and brought us to the brink of Armageddon.

Yes, the Korean crisis is the fruit of our policy as a Nation with respect to the peoples of Central and Eastern Europe. What has that policy been, and what is it still today? Let the man who was one of its chief architects tell you. Let George Kennan, one of the master minds of our State Department, define that policy.

In an address delivered recently before the Russian Institute at Columbia University, and reprinted in shortened form in the June 26, 1950, issue of the New Republic magazine, Kennan gives us a clear exposé of our State Department's policy. "Understanding the Russians," Kennan's address is called, and this title in mockery, I have taken from him as the title of my own analysis of what is wrong.

As we read Kennan's words, we are at once brought up sharp; for here, in clearest terms,

is a confirmation of our people's worst suspicions. In clear outline, and coming from such a source it can certainly be taken as official, we have the pattern of thinking that has prevailed in our State Department for at least 6 years now. Here we have the policy that has brought up by one false step after another to our present deadlock with the Soviet Union, and, specifically, to the Chinese crisis.

Kennan's statement is, first of all, a masterpiece of omission and evasion. It is a plain sidestepping of the central issue in our dealings with the Soviet Union. The central issue in those dealings should properly be the question of the races other than the Russian who are now held bound within the Soviet grip. Kennan has not a single word to say on this issue.

As everyone who has studied history knows, Russian foreign policy has since the time of Peter the Great had a single fixed idea driving it forward. That idea is that the Russian state cannot fulfill its destiny, cannot even in fact exist as a state, until and unless it embraces within its sphere of influence all the Slavic branches. This means not only the Orthodox Slavs of Serbia and Bulgaria whose culture has the same roots as the Russian, but also the western Slavs—Poles, Ukrainians, Slovaks, Lusatians, Czechs, Croats, and Slovenians—whose culture, along with our own, derives wholly, or, as in the case of the Ukrainians in part, from Rome and the West.

This fixed idea of Russian policy, this idea that never changes though the centuries elapse, is never once mentioned by Kennan in his address before the Russian Institute. In complete silence, this architect of policy for our State Department passes over the aspect of Russian thinking that is at once most central and at the same time most crucial for us in our relations with the U S S R.

From the policy which I have referred to above, the Russians have never, I repeat, deviated in all the centuries. At times they have been able merely to inch forward in the direction of its realization. At other times they have gone forward to their goal with leaps and bounds. The latter we have seen them do in our own time, and with the sanction of our own State Department.

Yet nowhere, in his whole address, as reported in the New Republic does this spokesman for our Nation's policy at any time, either directly or by implication, once refer to this fixed idea of the Russian policy.

What Kennan does do, on the other hand, is spend long paragraphs in an effort to show us why we as Americans must be patient and tolerant and infinitely forbearing with the Soviet Union. Kennan is, of course, as a patriotic American, against communism. But despite this, his plea turns out almost as an apology for communism, as he urges us, the American public, to be endlessly patient with the evils of communism. The Russians, Kennan argues, have suffered so long and so bitterly through the centuries; have patience, you Americans, with their struggles upward. They lived for so long, these Russians, as Kennan says, "in archaic darkness and intolerance," forgive them now. Be tolerant with the Soviet system, he tries to persuade, and help the Russian people as they strive to emancipate themselves, ever so painfully, from the grip of ancient usage and symbols. Never forget, this official of ours urges, that in the Russian people there is "immense good, immense faith in humanity," and a profound belief in certain abstractions such as decency, honesty, kindness, and loyalty.

Of course Kennan is right. Of course we must be patient with the Russian people, and pity them, as they rise from the darkness of the past. But what about the people

who are the victims of the Russians, the people who are slaves, today, because they stand in the way of the realization of Russia's ancient and fixed idea? What about expending a little patience on them, a little effort in order to understand their point of view? What about a little pity for their fate, the more so as they are, culturally, our brothers born.

It is here that we find the terrible and tragic fallacy underlying Kennan's smooth reasoning. In all the dealings of our State Department for the last 6 years and more the effects of this fallacy are to be seen. Daily we have been led, by this cruel and unsound reasoning on the part of our officials deeper and deeper into the abyss, ever and ever further on the road, not of understanding the Russians, but actually of utterly and completely misunderstanding them.

Kennan wants us to understand the Russians. Yet, he and other officials like him have consistently misunderstood them. For they have evaded, as we have said, the principal issue in Russia's thinking with respect to the outside world. They have sidestepped the central matter of Russia's thinking with respect to the outside world. They have sidestepped the central matter of Russia's relations with the rest of the Slav world. These other Slavs, Russia has always considered her own legitimate prey. Yet, in all Kennan's address, there is no mention whatsoever of this. In his tender and nostalgic concern for the Russian people, among whom he has spent much time and whom, understandably, he loves, this State Department spokesman has permitted himself to forget the very existence of at least half a dozen peoples. In his sympathy for one race, he has shown himself willing to throw half a dozen races straight to the wolves. He passes over in silence the horrible massacre in Katyn Forest of 4,000 Polish officers.

This is the great and tragic fallacious premise on which all our foreign policy for at least 6 years has been built. Russia's fixed idea of absorbing, often by violence, the other Slavs has been whitewashed. It has been accepted as inevitable, and its manipulators the most skillful diplomats in the world, have been given the green light. Poles and Czechs, Slovaks, Ukrainians, Croats, and Slovenians, and other Slavs of western orientation, have been viewed as proper material for Communist, Stalinist exploitation. This is putting it brutally but truthfully, nevertheless; this is the way the State Department, in its heart, has for too long felt about the matter.

As long ago as in 1930 I saw with my own eyes the origins of this policy. In the summer of that year I was in Warsaw when the Sherwood Eddy party came through on its way back from the Soviet Union. The members of the party were all leaders of American life. Perhaps the most conspicuous of the group, both because of his height and his high position, was the Honorable Francis R. Sayre, who figured recently in the news in connection with the Alger Hiss case. The Eddy group was rapturous in its praise of what was then called the great experiment, and full of the wonders of the new gospel. The lecture on Polish culture which Paul Super, as director of the Polish YMCA, had arranged for the party in Warsaw was listened to politely but with pleasant unbelief and often downright skepticism. Only the paradise to the east captured the imagination of the party, and they had no patience with the slow evolution going on in other countries like Poland.

It was then that the nefarious policy we have been following since 1944 got its start. In the early thirties, Americans by the carload made the great pilgrimage to the Red god in Moscow, and all too many of the pil-

grims came away captivated. It was a great trip, every minute of its guaranteed enjoyable by a well-drilled army of modern Potemkins, and those who took part in it were all too often deceived. All too many have looked back to those days with nostalgia ever since. George Kennan does this.

Kennan and his associates in the State Department are victims of that old mood, which saw everything that transpired in the Soviet Union as either good, or, in the light of history, forgivable. Toward the Soviet Union they wore blinders, and refuse to see things as they really are. Mainly, they take no cognizance of the central purpose of Soviet policy, the fixed idea of which I have spoken above.

So our officials go on telling us, Forgive the Communists and pity them. Be patient with Stalinism. Look with tolerance and forgiveness on the new, Red, tsardom that has replaced the white. Do not be disturbed when this new terror far outstrips the old Romanov terror in spreading its evil tentacles about the Slavs of the West.

It is a dreadful thing to have to report the above. We who are familiar with Eastern and Central Europe know how desperately fallacious the advice is. We know that the Red tsardom of Stalin is infinitely more dangerous to the world than the white tsardom ever was. As a people we Americans had no use for that, because by tradition we are against hereditary absolutism in any form. But with Stalinism; ah, here many high experts do not even recognize the danger, much less combat it. Here we Americans are childish and gullible. Be patient with the Red tsardom, our officials counsel, even forgive its brutalities. Not only that, some even go so far as to see in Stalinism a very force for good. Some are urging that Stalinism is playing the role of deliverer in the case of such peoples as the Poles and the Ukrainians, Slovaks and Czechs. Daily I read statements in the American press to the effect that these branches of the great Slav family naturally belong inside the Stalinist empire. This is a monstrous lie, as the Polish American Congress has proven.

Understand the Soviet Union, Kennan exhorts. To which I reply: Alas, we understand the Red tsardom only too well. Poles and Ukrainians, Czechs, Slovaks, Croats, and Slovenians, and the other Slavs understood the policy of their neighbor centuries before our State Department officials were born, the poorest displaced person can testify. It is rather into a complete misunderstanding of Soviet policy and ideals that these officials have led us. It is high time the tide was checked, and the officially created misunderstanding reversed. Our policy of appeasement of Soviet sophistries must be reoriented.

Do not lose heart. The tide can be turned. Slowly we shall forge ahead, if only the whirlwind now loose in the Far East, which had its source in eastern Europe, does not prove too great for us to cope with short of a general cataclysm.

We must hang onto the thought that, in the long run, justice does prevail. We must not give up, but keep fighting in the hope that at long last we may have a part in seeing that justice is done in the heartland of Europe, among the people of Poland and all the other countries tragically located between the German lands and the Soviet Union.

We must train for our State Department experts on the Far East and on eastern Europe who have a heart as well as an intellect. Not only the little man but the small country has a right to life, liberty, and pursuit of happiness.

Poland must be free with all the other victims of Soviet imperialism.

ARTHUR PRUDEN COLEMAN.

Consolidation of Veterans' Administration Offices

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

AUGUST 9, 1951.

The Honorable EDITH N. ROGERS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN ROGERS: We, veterans of World War II, have just learned that you have introduced a resolution to rescind the so-called economy consolidation of the New York, Boston, Richmond, and Philadelphia offices of the Veterans' Administration.

It is with a sincere and appreciative feeling of gratitude that we take this opportunity to thank you for your spontaneous indignant reaction to a move which so completely disregards the principles of true economy and the welfare of loyal American war veterans. We wish to assure you that the stand you have taken is shared by all the able and sympathetic members of the New York delegation and by many of the delegations of other States.

It is gratifying to know that in our hour of need we were fortunate to find men and women of your caliber in Congress who saw fit to champion the cause of the veteran.

Sincere thanks,

Morris Cohen, Brooklyn, N. Y.; Vincent Burke, New York, N. Y.; Sartora Tharl, Bronx, N. Y.; David Stein, New York, N. Y.; Howard Blincoe, Williston Park, Long Island, N. Y.; Salvatore J. Sciocelli, Brooklyn, N. Y.; Benjamin Elherfer, New York City; A. L. Kupper-Smith, Bronx, N. Y.; Lorraine Clark, Brooklyn, N. Y.; Christine F. DuVall, Huntington, Long Island, N. Y.; Maxwell Lefler, Brooklyn, N. Y.; Louis Nathan, Brooklyn, N. Y.; G. A. Jackson, Brooklyn, N. Y.; George F. Urban, Brooklyn, N. Y.; Jack Amir, Bronx, N. Y.; James B. Grant, Jamaica, N. Y.; Irving Jumbler, New York, N. Y.; Thomas R. Matthews, New York, N. Y.; Michael Jacob, Staten Island, N. Y.; Alex Slutzky, Brooklyn, N. Y.; Richard S. Nieves, Brooklyn, N. Y.; Nicholas A. Rodolles, Brooklyn, N. Y.; Theophilus Brown, Bronx, N. Y.; John Sheehan, New York, N. Y.; Sidney Glaser, Brooklyn, N. Y.; Charles Levin, Brooklyn, N. Y.

AUGUST 9, 1951

The Honorable EDITH N. ROGERS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN ROGERS: We, veterans of World War II, have just learned that you have introduced a resolution to rescind the so-called economy consolidation of the New York, Boston, Richmond and Philadelphia offices of the Veterans' Administration.

It is with a sincere and appreciative feeling of gratitude that we take this opportunity to thank you for your spontaneous indignant reaction to a move which so completely disregards the principles of true economy and the welfare of loyal American war veterans. We wish to assure you that the

stand you have taken is shared by all the able and sympathetic members of the New York delegation and by many of the delegations of other States.

It is gratifying to know that in our hour of need, we were fortunate to find men and women of your caliber in Congress who saw fit to champion the cause of the veteran.

Sincere thanks,

Emily W. Shy, Bronx, N. Y.; Charles A. Gibbs, Jr., New Rochelle, N. Y.; D. E. Lorelli, Elmhurst, Long Island, N. Y.; John A. Lupiano, Brooklyn, N. Y.; Harry Sfarli, Brooklyn, N. Cohen, Louis V. David, Charles A. Grecco, Hannah Weisblatt, Lawrence Newman, Nathan Helfand, Frances Edwards, Phillip S. Carson.

Need for Two-Party Politics in the South

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks, an editorial that appeared in the Evergreen Courier, Evergreen, Ala., under date of July 19, 1951. The writer of this editorial clearly stresses the necessity for a vigorous two-party system in the South. I commend this editorial to all House Members:

TWO-PARTY POLITICS

We are sincere in our belief that the South as a section of the United States would fare better in every way if two-party politics prevailed in this section. We believe that the people of the South should realize that they must progress politically just as they must progress commercially, industrially, and agriculturally. This is a new day in the South and it is time for a new dawn in southern politics.

We do not look for active two-party politics in the South without proper leadership. Some of our political leaders must have the intestinal fortitude, the guts if you'll pardon us, to abandon the National Democratic Party in fact as well as in principle. We believe it is their moral obligation to furnish the lead in developing the other party, the Republican Party.

Of course, the Republicans must not sidestep their responsibilities in the South's political transformation. They must do away with this idea that the South is already in the other fellow's bag and campaign actively here. They must put up war funds to develop strong State organizations. Above all if they want our support they must adjust some of their party principles to conform with southern ideals that must not fall, State's rights, segregation, and decentralization.

But, we cannot go to bed and await the dawn. We must fight the encroachment of Truman's socialistic administration in every way possible. And if we would have two-party politics we must vote our convictions, whether they lie with grandpappy's party or not.

Organic Act To Guarantee Future of Samoa Asked by High Chief Mariota Tuiasosopo; Says Promises Unfulfilled and Samoans Deceived

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I offer for publication the first of a series of articles written from Pago Pago, American Samoa, by Richard A. Greer, in which he outlines the

point of view of High Chief Mariota Tulasosopo, speaker of the house of representatives, on current developments in Samoa.

The position taken by High Chief Tulasosopo emphasizes the importance of prompt consideration by the appropriate committee of Congress of legislation to provide organic law for the Samoans.

The article by Mr. Greer is from the Honolulu Star-Bulletin, and is as follows:

HIGH CHIEF CHARGES INTERIOR MADE PROMISES BUT BROKE THEM

(By Richard A. Greer)

This is the first of a series of articles about American Samoa to be written by Mr. Greer, a former instructor at Kamehameha School for boys. The articles are particularly timely in view of the recent petition to Congress from Samoan chiefs asking for an investigation of civilian administration in the islands. Mr. Greer resigned his position in June to return to the South Seas for an extensive tour as a free-lance writer. He was a instructor at the American High School in Pago Pago during 1949-50 when on leave of absence from Kamehameha where he had taught since 1946.)

PAGO PAGO, AMERICAN SAMOA, August 6.—Mariota Tulasosopo is one of American Samoa's most prominent citizens. He is of high Samoan rank, heads the department of Samoan industry, and occupies the speaker's chair in the house of representatives.

Today he gave his views on the new civilian government that the Department of the Interior has officially operated since July 1.

"At the start," said Mr. Tulasosopo, "I would like to congratulate Gov. Phelps Phelps. He is a fine executive and is very popular with the Samoan people. He has proved his sincere interest in our welfare.

"Despite this, government under Interior has not begun well; nor has it made a good impression on the Samoans. During the period of political friction that occurred when the change-over from Navy to Interior was being discussed, a definite minority of the native people favored Interior control.

"Today I estimate that 90 percent of Samoans want Navy control to continue until a satisfactory organic act can be framed. This act, unlike the present proposed one, must guarantee the future of Samoa.

"Also, during the period of discussion, representatives of Interior came to Samoa. They made many promises. Nearly everyone here accepted these, as my people look on the promises of white men much as they look on the promises of God. But we were deceived."

EXAMPLES GIVEN

"Here are some examples:

"1. Interior told us that transfer of control would not necessarily remove the military Samoans interpreted this to mean that the Fita Fitas (Samoan naval unit) would remain. But at once this group was broken up. Many families were separated when former Fita Fitas went to Honolulu to join the Regular Navy. Samoa lost a payroll of \$200,000.

"2. Interior told us not to worry about money, because the department could get money from Congress more easily than the Navy could. But appropriations have been much smaller than formerly.

"3. Interior told us that medical supplies and personnel would not be reduced because of the transfer. But today we have fewer supplies and personnel.

"4. Interior told us that Samoa would receive special Federal aid for education. This aid has not appeared.

"5. Interior told us that wages and employment would rise after the change-over. Interior is now reclassifying wages, and it is possible that they may go up later. However, Samoans want an increase now because our cost of living has risen almost 20 percent recently. The level of employment is not being maintained.

"6. Interior made political promises. One of these was that our land would be protected—that non-Samoans would not be allowed to buy it. The proposed Organic Act contained a clause giving us such protection.

"But an identical clause in the Organic Act for Guam was struck out by the Senate on the ground that it was discriminatory. The Organic Acts for Guam and Samoa also provided that each possession would be represented in Washington by a commissioner.

"This clause also was struck from the Guam Act, I can only thank God that Guam got the treatment first. As soon as we found out what had happened, the legislature of American Samoa sent a dispatch to Washington asking that the Samoan Organic Act be held up."

GOT FAVORABLE ANSWERS

"I can conclude this part of the story by saying that we in Samoa have raised every possible question, and that in every instance Interior gave a favorable answer.

"Another cause of trouble is that certain personnel sent to Samoa by Interior proved highly objectionable. Nearly all have been unfamiliar with Samoa and Samoans.

"Originally it was planned that there would be a period of a year (July 1, 1950-July 1, 1951) in which Interior people would be here working with the Navy to learn the job and the place. Instead, the transition came suddenly, and the new Government personnel were not ready."

TRANSPORTATION BROKE DOWN

"The break-down of transportation that occurred when the Navy left has brought hardship to Samoa. Navy ships and planes stopped coming. No others took their places. Stocks on hand were limited. Now we must go for long stretches without flour, sugar, meat, etc.

"It would be unfair, however, to imply that Interior has brought no satisfaction. At his inauguration the Governor read letters from President Truman and Secretary of the Interior Chapman. These guaranteed the protection of land as well as of Samoan customs and culture.

"The messages were received with great joy, since they build confidence that no steps will be taken to break the letter or the spirit of the treaty which our chiefs made with President McKinley when Samoa was ceded to the United States."

MERCHANTS ARE HAPPY

"Samoans who have adopted European ways of life and who no longer live under our matai system feel that under Interior they will have more freedom to participate in government and society. In other words, they feel that there will be more democracy. Local merchants are happy so far. They are making more money.

"The Navy commissary store is closed, and everyone must buy from privately run business. It will be hard, though, to build up enthusiasm for Interior unless it gives better financial support. This is needed urgently now.

"You ask if I think Interior will succeed. There are really two questions in that one. The first is: Will Interior succeed in meeting its own aims? The other is: Will the Samoan people be happy? I cannot answer the first question."

"IT'S" OUTLINED

"As to the second, I should say that the Samoan people will be happy if:

"1. Land continues to be protected as at present. Our Samoan matai system of economic and social organization depends on control of the land. It will die if the land goes. What will take its place?"

"2. Our economy continues to be based on products of the land and not on wage income. Otherwise our way of life will disappear. At present only 500 of our 19,000 people are working for cash.

"3. Samoan culture and customs are preserved. An active educational program is needed to do this.

"4. The Samoan legislature has power to control business in Samoa and to protect the Samoan people from exploitation. Interior now encourages outside firms to come in. This means that Samoans will be employees only. Therefore the only income that Samoa gets will be from wages. Profits will go elsewhere."

NO BIG BUSINESS

"There is little chance for big business to develop here. We need all the financial support that such small business as we may develop can give us.

"An exception to the above is such enterprises as the new fish cannery. This business requires large capital outlay and does not in any way diminish the resources of Samoa or use lands needed by our people.

"It may seem that Samoa is judging the new government before it has had a chance to prove itself. That is not our intention. We realize that it will take some time for Interior to get its program into operation.

"We do, however, feel that it is our duty to make suggestions that will help the program succeed. Samoa is waiting and hoping.

Successful Conclusion of Korean War

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. TABER. Mr. Speaker, the war in Korea is under discussion by negotiators at the present time, with, I am afraid, very little prospect of a satisfactory solution. The present Joint Chiefs of Staff have no program as a result of which they see a prospect of a successful conclusion of the trouble we are now in. Is it not about time that something was done by the military establishment to create a policy that might bring victory?

The people are about fed up with the way that the thing has been carried on and the utter lack of terminal facilities which the war seems to present the way it is being conducted.

For the information of the Congress, I am calling attention to part 2 of the hearings upon the Department of Defense appropriations, pages 71 and 72:

[Excerpt from Department of Defense Appropriations Hearing for 1952 (Army)]

SUCCESSFUL CONCLUSION OF KOREAN WAR
(P. 71-72)

Mr. SCRIVNER. On page 2 of your statement you use the phrase: "Ering the war in Korea

to a successful conclusion." What do you conceive the successful conclusion to be and how long is it going to take us to reach it?

General COLLINS. Of course, that is really out of my field.

Mr. SCRIVNER. Well, that would be military, would it not, to bring it to a successful conclusion?

General COLLINS. Well, it could be brought to a successful conclusion from a military point of view in a number of different ways. Actually the ultimate decision as to what would be a successful conclusion is not made by military men. It will have to be made by the Government as a whole.

Mr. SCRIVNER. Yes.

General COLLINS. I would say if the Chinese Communists were to withdraw from North Korea and we went back to a condition which existed prior to the attack of the Communists into South Korea, and could then, from there, go on to a sound negotiated organization and peace, which was what was to have happened prior to the North Korean attack, that it would have been a successful operation. Certainly then the Communists would have been driven from South Korea. Their aggression has been very costly to them. That would be in my opinion, a victory from a military point of view.

Mr. TABER. Do you see any prospect of that happening?

General COLLINS. I cannot see any immediate prospect, Mr. TABER, but I do not think it is impossible of happening.

Mr. TABER. The thing that bothers me, frankly, is that the military in control at the present time have no program and no prospect that they can call attention to that will bring the thing to a head and clean it up. Is that not about right?

General COLLINS. We certainly cannot guarantee any program.

Mr. TABER. You do not have any program you think would bring it to a head?

General COLLINS. We believe that the program that we are now following in Korea, Mr. TABER, will ultimately bring a successful conclusion. Not in the immediate future.

Mr. TABER. In 10 years?

General COLLINS. Yes, sir. I would certainly hope much before then.

Mr. TABER. Not much less.

General COLLINS. I would not hazard a guess—

Mr. TABER. No.

General COLLINS. As to whether it would be a year or 2 or 3, it would be difficult to estimate.

Mr. SCRIVNER. In other words, there is not anything now, as we see it, of any definite character that would give us any idea upon which we could base our thinking as to how long the Korean war may last?

General COLLINS. Nothing definite; no, sir.

Navy Department which eminently qualifies him for the position which he now holds. I know that Mr. Kimball will keep in the forefront of the minds of the Members of Congress and of the American public the importance of the great American Navy as an indispensable element in our defense team. There have been times in the past when the Congress and the public were inclined to forget this fact. Experiences in Korea have proved once again that we need a strong Navy if we are to have a sound national defense.

I am sure that Secretary Kimball is keenly aware of the fact that although a continent, North America is an island mass, and that we need a Navy not only to defend our shores from an invading force but also to maintain the lines of commerce around the world. With a strong Navy we can also make certain that any future war is fought in the enemy's back yard—not in ours.

I would like to include herewith an article from the St. Louis Post-Dispatch on Sunday, August 5, 1951, which is as follows:

NAVY'S DAN KIMBALL, A ST. LOUIS DYNAMO—NEW CIVILIAN HEAD OF NAVY IS EXPECTED TO SPEED TEMPO IN THE PENTAGON—PROMOTED FROM UNDER SECRETARY AFTER MATTHEWS NAMED AMBASSADOR TO IRELAND—STUDENT AT SOLDAN HIGH SCHOOL—SUCCESSFUL IN BUSINESS

(By Raymond P. Brandt)

WASHINGTON, August 4.—Dan Able Kimball, the new Secretary of the Navy, is a 55-year-old, 6-foot plus native St. Louisan whose formal education ended during his second year at Soldan High School. Kimball was promoted from Navy Under Secretary to Secretary when Francis P. Matthews finally accepted President Truman's offer to name him the American Ambassador to Ireland.

There will be a change in the tempo of the huge Navy establishment as the result of Kimball's rise to the civilian directorship of an organization with a capital investment of more than \$75,000,000,000 and a personnel force of 1,000,000 uniformed men and women and 435,000 civilian workers. In money terms alone the Navy has more physical assets than the combined wealth of the country's 10 largest corporations. Its inventory of more than 2,000,000 movable items is valued at \$12,000,000,000.

Kimball is an energetic, happy-natured gregarious business executive who makes quick decisions to get things done; Matthews, a Nebraska lawyer turned financier, is on the shy side, with a preference for the background except in Roman Catholic and humanitarian activities. The retiring Secretary will be more at home in the American Embassy in Dublin than he was at the Pentagon. Kimball will be in his natural element bossing the Navy.

As Under Secretary, Kimball served as operating vice president of a governmental enterprise with global ramifications. While the Secretary is more concerned with higher policy, the Under Secretary devotes most of his time to administration, the budget, legislative matters and personnel. Kimball, with 2 years' experience as Under Secretary, will be in a position to supervise much more closely than Matthews.

Interviewed in his Under Secretary's office in the Pentagon, surrounded by valuable naval pictures assembled by former Under Secretary W. John Kenney, Kimball appeared to take his promotion in his easy-go-

ing strike. He is 6 feet, 3 inches tall, and weighs 212 pounds stripped. His deep voice is in keeping with his size. His blue-gray eyes go with his ready smile.

As in all the new offices of the top military, he has several large leather lounge chairs and a sofa for informal conferences. Kimball likes to do his talking in this corner of the room, where he can stretch his long legs on a low table and at the same time reach for a telephone. The interview was interrupted six times by telephone calls. He handled that business quickly without losing track of the questions.

"I was born in my grandfather's home on the corner of North Taylor and Labadie," he said, "and you can't throw a stone in St. Louis without hitting one of my kinkfolk."

"My grandfather, a steamboat captain, had lived in Hannibal and I have relatives there. My grandmother went to school with Mark Twain. My father was an insurance man and my mother, Mary Able was born in Memphis."

"I got my early schooling in Pittsburgh and Texas and came back to St. Louis to enter Soldan. During the Civil War my grandfather was one of the few steamboat captains to have the run of the Mississippi River and he brought cotton up North for the Unionists. We had a claim of \$90,000 against the Government for unpaid cotton and Speaker Champ Clark tried to get the money for us. When we thought everything was all right and we were going to be rich, Congress passed legislation outlawing all such claims."

"Things weren't going so well for us in St. Louis so we moved to Los Angeles when I was 15 years old. I had to quit Soldan during my second year. I had played center on the football team. I was a skinny fellow then."

"In Los Angeles I went to work in an electric automobile garage instead of going to school. Back in St. Louis I had worked in an electrical carriage shop owned by Dwight Blossom, who lived in a big house across from Soldan. I liked machinery and automobiles and I stayed at the electrical job till 1917 when I enlisted in the Army Air Force Jimmy Doolittle and I were in the same squadron and we were commissioned second lieutenants the same day. I came out of the Army Air Force in 1919 as a first lieutenant."

The Doolittle friendship lasted through years. When Kimball was appointed Assistant Navy Secretary for Air in March, 1949, he bet Doolittle, who had become a lieutenant general, that the Navy job was only "temporary" and that he would be back in private business in a year. Doolittle was generous and gave him a year and a half. When that time had elapsed and Kimball was Under Secretary, Doolittle proposed that the money be given to some worthy cause. The "worthy cause" selected was a dinner at the F Street Club for a group of their friends.

Shortly thereafter Kimball gave another dinner—for women White House correspondents who had been excluded from the annual dinner of the White House Correspondents' Association. This subtracted nothing from his popularity. It was a typical gesture for Kimball, who likes fun and knows how to get along with people.

When he returned to California from the World War I Army, he joined the General Tire & Rubber Co. as a salesman and signed up with the International Correspondence School for a course in electrical engineering. Within a year he became the Los Angeles sales manager, and within a few years he was named sales manager for 11 Western States. He came to Washington in November 1941 as a vice president of the company, to see what it could do in the war effort.

Reminded that this was before Pearl Harbor, he replied: "Sure, but everybody knew

Hon. Dan A. Kimball

EXTENSION OF REMARKS
OF

HON. CLAUDE I. BAKEWELL
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BAKEWELL. Mr. Speaker, it is a source of deep gratification to the residents of the city of St. Louis that a former St. Louisan who was born in our city has been appointed and confirmed as Secretary of the Navy.

Dan A. Kimball has a background of experience both in business and in the

by that time we were going to get into the war."

Kimball was told that his company could best serve the war effort by going into the manufacture of rockets and guided missiles. This was an entirely new field, not only for the company but for almost every other business organization. Kimball took over in his breezy but efficient way.

The result was the Aerojet Engineering Corp., a subsidiary of General Tire. Kimball was made executive vice president. Among its other contributions was JATO—jet assisted takeoff—for naval planes and from carriers and heavy seas. It is now used in civil aviation.

Kimball was in and out of Washington during the war and postwar years. During these visits he met John L. Sullivan, then an Assistant Treasury Secretary and later Under Secretary and Secretary of the Navy. Sullivan is responsible for persuading Kimball to come directly into the Government. Kimball has cut all ties with General Tire.

The new Secretary has great energy at work or play. He arrives at his office in the Pentagon at 8 a. m. and starts digging into the paper work and conferences. His associates say he can go through a voluminous and detailed contract or military paper in half the time needed by ordinary persons. He uses the telephone whenever possible. For the more relaxed problems he likes to have guests in for luncheon in a small room off his main office.

He has a private pilot's license and on Government business he flies whenever he can, sometimes taking over the controls for a while. He served as Assistant Secretary of Air for 2 months before becoming Under Secretary of the Navy in May 1949.

As Under Secretary he speeded up defense unification by being an ardent team man with his two opposite numbers, Archibald S. Alexander of the Army and John A. McCone of the Air Force. These men talk the same language, lay all their departmental cards on the table, and work out the conflicts that plague the three services. Each official has the highest regard for the other two.

Because of his team play and his gregarious nature, Kimball is a favorite of President Truman, who likes his earthy language and his direct approach.

The new Secretary has all the outward appearance of a successful businessman and Truman asked him one day:

"How come you are a Democrat?"

Kimball replied by telling a family episode. One of his grandfathers was found crying during a political campaign. A distressed friend asked the old man why he was in tears.

"I've been a good Democrat all my life," the grandfather replied, "but I just can't vote for Bryan again."

While Kimball thought his job in Washington was temporary, Mrs. Kimball, to whom he was married in 1925, kept their home in Los Angeles. She has moved to Washington. The Kimballs have no children. She was Dorothy Ames, of Chicago.

The Secretary is more at home on a golf course than at official functions. His best score this year was a profitable 82. He is notable for his spectacular sport shirts and shorts, usually of Hawaiian design. He is an inveterate smoker of fine cigars and, like President Truman, takes his occasional bourbon with branch water.

As a busy Under Secretary he has not had much time for serious reading. He says his ICS course to electrical engineering enables him to read blueprints and that the demands of his office require the reading of lengthy official reports, several newspapers, and a couple of news magazines. Of the six

volumes of naval history of World War II, he has found time to read only four. Now that he will have an Under Secretary to take over many details of administration, he hopes to read the rest of this series.

Presidential Veto of H. R. 3193 and H. R. 3549

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mrs. ROGERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of a letter sent to me, written by Omar B. Ketchum to Hon. JOHN E. RANKIN, chairman of the House Committee on Veterans' Affairs:

AUGUST 7, 1951.

Re Presidential veto H. R. 3193 and H. R. 3549.

HON. JOHN E. RANKIN,
Chairman, House Committee on Veterans' Affairs, House Office Building,
Washington, D. C.

DEAR MR. RANKIN: It is the opinion of this office and the Veterans of Foreign Wars that President Truman was hasty and ill-advised in vetoing H. R. 3193 and H. R. 3549, which were approved by the House and Senate after most careful consideration. Consequently, we are urging the Congress to override the vetoes of these two bills.

It should be pointed out and emphasized that H. R. 3193 was intended to provide a special pension allowance, in accordance with American history and tradition, for those World War I and II veterans now on the pension rolls who are so helpless or blind or so nearly helpless or blind as to require the constant aid of an attendant. This type of a benefit is not something new and has been applied to Spanish-American War veterans for many, many years. In fact, on July 30, 1947, President Truman approved Public Law 270, Eightieth Congress, which increased from \$100 to \$120 monthly, the pension payable to Spanish-American War veterans who are so helpless or blind as to need an attendant.

It is estimated, based on figures obtained from the Veterans Administration, that H. R. 3193 would benefit approximately 20,000 World War I and II veterans who are presently receiving monthly pensions of either \$60 or \$72 (average about \$63) now on the pension rolls of the Veterans Administration. The first year's cost of the proposed increase for this small group of helpless veterans would be approximately \$13,680,000. Surely this cannot be considered as an excessive cost for our helpless old veterans when we are appropriating billions for the relief of foreign nations.

The bill, H. R. 3549, which was also vetoed by the President, would have modified the pension eligibility requirements for a few old widows of veterans of the Civil War, Indian Wars and Spanish-American War by eliminating the requirement for proof of dependency. This change in eligibility requirements was suggested by spokesmen from the Veterans Administration during hearings on the subject before the House Veterans Committee and was accepted by the Veterans of Foreign Wars. There is no doubt but what Veterans' Administration

spokesmen made this suggestion because there was only a handful of the old widows involved and that the cost of a few additional pensions would be less than the administrative costs in trying to determine dependency. The cost of this legislation was so negligible that no attempt was made to provide an estimate for the Congress.

May we respectfully urge that action be taken by the appropriate leadership of the Congress to give the members of Congress an opportunity to override or sustain the veto of the President with respect to these two bills.

Respectfully yours,
OMAR B. KETCHUM,
Director.

Appropriations for Flood Control

EXTENSION OF REMARKS OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. MILLER of Nebraska. Mr. Speaker, it is a little amazing that President Truman should take the Congress to task about appropriations to prevent floods in the Missouri Valley. His remarks, "It would be necessary to elect Members of Congress from the great Midwest who are more in sympathy with the idea of flood control," seems a little ridiculous. The President has a short memory on some things.

I remind you that on August 3, 1946, one day after Congress had adjourned, President Truman saw fit to issue an Executive order that froze the funds designated for public works, including flood control. The order was dated August 2, and the echoes in the Halls of Congress had hardly died away when he took this step to stop the work on flood control. The bill had been signed just 10 days before, after it had been approved by the Bureau of the Budget and passed by Congress. The appropriation had been sent to the President for his approval or disapproval. When he signed the bill, in the presence of a score of Members of Congress, there were pictures taken and pens passed out to those who sponsored the flood-control bill. He called it a great forward step. This was just 10 days before he issued his famous freeze order which stopped the forward march of flood-control work. He made inoperative, without approval or even consultation with Congress, the appropriations designated for flood control.

It was the opinion of many men at that time that he was without statutory or constitutional authority in taking such a step. With that thought in mind, I introduced House Joint Resolution 176, on April 22, 1947, which had for its purpose preventing the Chief Executive from freezing and making impotent the funds as provided by the Congress for flood control and other public works. It was my contention that if the President could nullify the acts of Congress for flood-control work, he could do the same

for a part or all of any appropriations. If the Congress once concedes that the Chief Executive has this power, then the Congress would lose control of the purse strings and popular self-government under the Constitution, would be at an end.

When the President complains about appropriations for flood control today, he should remember the action he took on August 3, 1946.

Foreign Aid Commitments

EXTENSION OF REMARKS OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial published on August 6 in the Casper (Wyo.) Tribune-Herald upholding the obvious intent of Congress to insist upon close scrutiny of foreign aid commitments, and the widespread feeling among Members of Congress that this country should withhold aid from nations selling arms or other materials of military value to Russia or Soviet-dominated areas.

I am very gratified to read this editorial in one of the leading newspapers in my State. It reaffirms my position, which I believe to be in accordance with the thinking of my own Wyoming people. Correspondence received in my office has given ample indication of this viewpoint, but publication of this editorial lends even more strength to my own position.

For a long time now, Mr. Speaker, I have expressed exactly this view: That the United States should give more thorough study to foreign aid proposals and that we should insist that the dollars we send abroad not be turned against us, directly or indirectly.

I do not oppose foreign aid within the limits of our ability and to truly friendly nations. Let me make this point very clear. But I do oppose spending ourselves into national bankruptcy—an end result which would destroy not only our own Nation but perhaps also the very nations we bankrupted ourselves to assist. I oppose with equal vigor sending aid to nations which use this American aid to further their own ends with nations considered unfriendly to us.

We find ourselves, sometimes, in the embarrassing position of man's best friend, the hot-dog. We feed the hand that bites us.

Since the Casper editorial reflects this view much more skillfully than I can, I quote it herewith:

Looking ahead, we'd say that getting foreign-aid cash and considerations from Uncle Sam isn't apt to be as easy in the future as it has been in the past.

Just the thinking of Congress seems to indicate that old Uncle Sammy isn't going to be quite as loose with the small change as he has been of recent years.

The move now in Congress is to get through a bill that will prevent American military, financial, or economic aid from being given to any country that is selling arms or other materials of great military value to Russia or any of the nations now directly under Russian domination.

The administration is kicking a little at this one. The point is made that some of these nations selling strategic materials to the Reds are also selling them to us and that we must not jeopardize our own supply. Also, the point is made that it is almost impossible to determine what is a strategic material. Under certain conditions foodstuffs come under the heading of strategic materials and so would many other very ordinary run-of-the-mill items which many countries are now selling to Russia and her satellites.

Nevertheless, approaching the problem from the standpoint of the value these several nations are receiving in military aid and economic aid, we believe that they should play ball to the extent of not aiding and abetting the Russian cause by supplying that cause with materials of strategic value.

After all, the American taxpayers have been sold the foreign-aid program on the grounds that it was necessary to our own security in that it would strengthen these nations that receive it and thereby make them less likely to fall for the Communist system and less likely to fall prey to any Communist aggression against them.

That is the point as we believe the American people understand it.

Then it does not seem logical that we should strengthen one of these nations at the expense of the American taxpayer so that the nation receiving the aid can build new factories to supply Russia with greater quantities of bomb detonators each year. We are simply defeating, by that action, the very thing we started out in the first place to achieve.

Let Congress snug up the purse strings on foreign aid. We cannot dictate and should not dictate how another nation runs its own affairs but, let us remember that this cash going out for foreign aid is American cash and we have every right to establish the conditions under which it can be granted.

The theory behind the foreign-aid program is that it is designed to strengthen the free world. Supplying arms or minerals or other strategic materials to the Reds is going counter to that program.

Congress is on the right track.

Letter From Florence C. Moulton

EXTENSION OF REMARKS

OF

HON. CHARLES P. NELSON

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter:

AUGUST 6, 1951.

Mr. CHARLES P. NELSON,
Member of Congress,
Washington, D. C.

DEAR MR. NELSON: You were in our town the Fourth of July, and I heard your talk in part and I remember the words you said toward the end, about the fear existing.

That fear is well founded, but the Government can eradicate it not by broadcast-

ing a lot of courage propaganda but by doing some common-sense things for a change.

I always had the feeling that Congress represented the people and that the mass of the people could not be sold a bill of goods. "You can fool some of the people some of the time, and some of the people all of the time, but not all of the people all of the time." The 1950 elections were an indication. But too many people have fallen for the propaganda mills the administration has put out to keep itself in power. When 40 percent of the middleman's income is taken in taxes, there is a work slowdown, because there is no incentive to work in order to give 40 percent of it to a bunch of stupid spenders who have made about all the mistakes in the book, causing Mr. and Mrs. Middleclass to greatly lower their standard of living. When there is a work slowdown, companies fail, there is unemployment, and the Government does not get so much in taxes. The open and the hidden taxes are now so great that the law of economics which cannot be propagandized is beginning to take effect.

I lived through the 1929-33 depression, but many have not. There are some false myths being circulated and emphasized:

1. The one about the shortages of things. Really, we have too many subsidized surpluses.

2. The worthlessness of our dollar myth. Dollars can buy very well now. Try paying cash on the barrel head.

3. The war scare with Russia. She is dangerous but a bluff. We can outproduce her and should stop being so scared. If we were one-half as loud about our confidence as she is, we'd outbluff them.

4. Make saving instead of buying more attractive by raising the interest rate on bonds and savings accounts and do not tax away the thrift of the common people. A government produces nothing; it can only spend what it takes from the workers.

I notice that Dr. Edwin G. Nourse, the former Presidential adviser on economics, resigned to stump against crazy spending. I heard him in Wellesley, Mass., last November.

European countries do not dare to waste the way America does. If just the dreadful waste everywhere were halted, we would not need to be taxed so. I heard once over the radio a broadcast for inexperienced office workers at \$2,600, no experience needed, and a place to live for Washington jobs. What private business could dare to try such a dangerous practice? Lately there was a broadcast about a law for general wage hike in proportion to hike of living costs. All small businesses and lots of large ones would fail or fire half their force if this crazy and artificial rule went through.

It just seems to me, an innocent bystander, that Washingtonian planners have gone plumb, screeching crazy in their last-stand tries to keep on maneuvering this artificial prosperity picture. What most of us already have and probably will have for untold years ahead is blood, sweat, and continuous toil, but they do not dare to tell us that after 1920.

As I see it, the United States of America is now on the brink of a blow-out, by timetable about comparable to September 1928, maybe later, in a supersucker period. One cannot stop the storm but look diligently for a shelter. A lot of debt-ridden populace have none.

Do your part on voting on the side of common sense on all bills that come up. I notice how circumspect all the really good government people are. They deal in historic generalities because present actualities are so stoked with dynamite.

Sincerely,

FLORENCE C. MOULTON.

St. Lawrence Seaway**EXTENSION OF REMARKS**

OF

HON. CLARE MAGEE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. MAGEE. Mr. Speaker, we in the Missouri Valley believe that the growth and health of one area promotes that of the entire Nation. Our fate is especially linked with the St. Lawrence seaway and power project, which is not only vital to hemispheric security but vital to the economic health of the Missouri Valley. Under authority granted, I include in the Record an editorial on this subject from the Milwaukee Journal of Saturday, July 14, 1951:

It has always been hard to convince a western Nebraska or Montana farmer that he should give two hoots whether Milwaukee or Detroit were ever connected to the sea or where the steel mills got their iron ore.

It wasn't that the western Nebraska or Montana farmer shouldn't give two hoots—it's just that nobody had ever effectively showed him why he should.

An important step has now been taken to overcome that indifference among midwestern States not bordering on the Lakes. At the first governors' conference of inland America, held recently in Omaha, the seaway was offered as a vital project for the continued growth and economic health of the entire Midwest. The case for the seaway was offered with evidence, and it got a good hearing.

The conference, called by Govs. Mennen Williams, of Michigan, and Val Peterson, of Nebraska, was designed to work out a plan for interregional cooperation. Nebraska and other Missouri Valley States are deeply interested in Missouri Valley flood control, irrigation, transportation, and hydroelectric power development. The Lakes States are interested in St. Lawrence transportation and hydroelectric development. Yet both areas, intertwined in the heartland of America, have joint interests in a mutual industrial-agricultural economy. Each area needs the other to prosper to the fullest extent.

As Maj. Gen. Lewis A. Pick, Chief of the Army Engineers and coauthor of the Pick-Sloan plan for the Missouri Valley, told the conference, the Missouri Valley development is 40 percent completed and on its way to realization. But the St. Lawrence seaway has not been started—and yet is almost as vital to the Missouri Valley as the river development itself.

Is that too strong a statement? Conference speakers didn't think so. As Governor Williams and General Pick told the conference, the industrial pattern of the Midwest may change if Labrador's iron ore does not get adequate seaway facilities. Without ore, steel mills will move east. Without steel mills, industry will concentrate in the east. Without expanding industry, the Midwest will have a dominantly agricultural economy.

With the seaway, steel will stay in the Midwest, and so will industry. Further, agricultural and industrial products will find cheap transportation to the east coast. Wheat from Nebraska or Kansas, for instance, will no longer have to go all the way by rail, or be transferred from lake vessels to barges to ocean vessels at Albany. Wheat could go to any seaport in the world after being loaded at Duluth, Milwaukee, or any other lake port.

Thus the seaway would have lasting and direct benefits to Midwest States which do not border the lakes. The Omaha conference was the first big attempt to sell that idea. It's a sound idea. It needs more selling. We hope that the conference and lakes leaders will continue the sales job they have started so effectively.

Annexation Covenant**EXTENSION OF REMARKS**

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Wright Morrow, Democratic national committeeman, from the Houston Post of August 8, 1951:

ANNEXATION COVENANT—TIDELANDS DECISION
BREACH OF FAITH—CONGRESS SHOULD REVERSE

(By Wright Morrow)

Recent discussions in the newspapers concerning the Texas tidelands deal with a subject vitally important to Texans—as well as all good Americans. Statements made by Price Daniel, attorney general, are authoritative. He is a student of the subject and is the lawyer for Texas in this case. Statements by Drew Pearson, self-appointed adviser to Texas people, should have no weight, but, unfortunately, no matter how misleading his statements, he has a wide audience. The purpose must be to confuse the issue because the facts are so very plain.

Now comes along Senator Burton K. Wheeler, who turns out to be the lawyer for applicants for Federal leases, which explains his opposition to recognition of the rightful ownership of Texas to her tidelands.

The editorial in today's Houston Post—about Senator Wheeler's claim—is highly commendable. The plain truth is that the Supreme Court of the United States has by judicial edict abrogated the solemn agreement made by the Republic of Texas and the United States in 1845, recognized as absolutely valid for more than 100 years. This decision should be reversed by Congress, which has the right and power to do so. Here are the facts:

Texas was an independent republic; a sovereign nation. Texas owned vast unappropriated public domain. For eight years she maintained her independence and was recognized as a sovereign nation by many prominent nations, including Great Britain, France, and the United States. Texas also owed a very considerable debt. Her people desired to become a part of the United States. There was objection to the annexation of Texas in the Congress of the United States because of the fear that such action might bring on a war with Mexico, and also saddle the Government of the United States with the Texas debt. (Sounds strange now that anybody in the Congress would be worried about a debt of a few million dollars.)

In 1844 a proposal was made by Texas that she would become a member of the United States, would cede her public lands to the United States, which country would in turn, assume and agree to pay the public debts and liabilities of Texas. Though this proposal was advocated by President Tyler, it was re-

jected by the United States Senate by a vote of 35 to 16.

In 1845 the political situation became more propitious. The President-elect, James K. Polk, had been elected on a platform which included the annexation of Texas. The resolution finally providing for the consent of Congress to the annexation was passed by the House in January and the Senate in February and signed by President Tyler as one of his last official acts on March 1, 1845.

The provision in the earlier proposal under which Texas would have ceded her public lands to the United States was deleted and the resolution passed, specifically provided that Texas should retain all her vacant and unappropriated lands lying within her limits, as well as her debts. The specific language in the resolution is this:

"Texas shall also retain all the vacant, unappropriated lands lying within its limits to be applied to the debts and liabilities of said Republic of Texas and the residue of said lands, after discharging said debts and liabilities, to be disposed of as said State may direct."

By resolution of December 19, 1836, the First Congress of the Republic of Texas established the boundary of Texas in the Gulf of Mexico three marine leagues (approximately 10½ miles) from shore. This was the condition and the boundary at the time of the annexation of Texas in 1845.

President Tyler, in his message to the Congress, advocating the annexation of Texas, used this language:

"Texas voluntarily steps forth, upon terms of perfect honor and good faith to all nations, to ask to be annexed to the Union. As an independent sovereignty her right to do this is unquestionable."

On June 1, 1845, the Senate and House of the Texas Republic passed a resolution providing consent on the part of the government of Texas, reciting in a preamble the specific terms of the offer of statehood contained in the joint resolution of the United States Congress. In addition, Texas provided for a constitutional convention to be called in Austin on July 4, 1845, to write a constitution for the new State of Texas. This convention met and during its proceedings ratified and accepted the "proposals, conditions and guaranties" contained in the resolution of the Congress of the United States. On December 8, 1845, the Congress of the United States accepted the terms and formally admitted the State to the Union.

This is a positive, accurate and true statement of the historical record showing that Texas did retain all of its vacant and unappropriated lands lying within its limits when it became a member of the United States. Those lands included the submerged lands for three marine leagues (approximately 10½ miles) from shore, seaward into the Gulf of Mexico. This was the exact situation and the boundary of Texas at the time she became a member of the Union and no honest person can differ with this historical statement. This position has been recognized and maintained since the year 1845—more than a hundred years. For the first time, by the decision of the Supreme Court of the United States, the solemn covenants and obligations taken by two sovereign nations were abrogated and nullified.

The people of Texas regard this decision as a complete breach of faith. This is the property of Texas and the revenues that have come from such lands have been appropriated by Texas to the upkeep and maintenance of the public-school system. Whether these lands be valuable or not is incidental. They belong to the State of Texas, and have been taken under a doctrine strange to our law creating a new concept of paramount right which, while

disclaiming the ownership, nevertheless, embraces all rights of ownership, including the right to take the property and all of its resources

We complain that other nations have expropriated private property; we certainly cannot condone the taking of property under such judicial interpretation contrary to the Constitution and without compensation to the owner.

The only way this decision can now be avoided is by the Congress of the United States. A few days ago, the House of Representatives in Washington passed a bill by an overwhelming vote recognizing that these tideland areas belong to the several States, giving effect to the title as it has stood for a hundred years. The same bill is now pending in the United States Senate. In all good conscience, as well as by every legal yardstick, Congress should recognize this ownership and every Texan and every American who believes in upholding constitutional rights should communicate with his Senator or with any Member of the Senate whom he knows, urging immediate passage of this bill. If the President should thereafter veto it, the same should be passed over his veto. The fact that Texas has a larger claim than the other States is due simply to the fact that under the boundaries fixed by the Republic of Texas—an independent nation—prior to her annexation, she is entitled to the 10½ miles seaward. The other States have a similarly righteous claim to that part of these areas within the limits of their respective boundaries.

There has been continuous misleading propaganda that this was an oil company fight. This statement is not true. I am sure that any oil company or any individual who sought to develop any of these submerged lands or to purchase any of them would naturally want to know where the title was before dealing for it. But quite aside from the value of these lands for oil or any other purpose, they are rightly the property of these sovereign States and to refuse to recognize that the decision of the Supreme Court in this matter is wrong, is a serious threat against our American system of constitutional government. The issue has been clouded in the public press, confusion does exist to a large degree caused by discussions of columnists like Drew Pearson (if, indeed, there are others like him).

The interest I have is that I am an American citizen who believes in the preservation and maintenance of our free constitutional government. The attempt to take these submerged lands by judicial edict is an unwarranted use of the judicial power and announces a doctrine entirely new and strange to American jurisprudence.

I cannot urge too strongly that every man and woman who wants to maintain our system of government, who believes in right and justice, should communicate immediately with anyone they know in Congress, particularly in the United States Senate, urging this bill be considered and passed immediately with an overwhelming vote.

Parental Delinquency

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Jonesboro Evening Sun, Jonesboro, Ark., of Thursday, August 2, 1951:

PARENTAL DELINQUENCY

Fred C. Baxter, referee of the juvenile court in Detroit, has retired after many years service. He had become a recognized authority on matters pertaining to youth, particularly those who came before the court charged with delinquency.

His parting words when leaving the position where he served so long and so well were "Our present crop of youth is as good as any. I wish I could say as much for their parents."

There is a statement which could be pondered long and well by modern parents. What Fred Baxter says amounts to this: The youngsters are all right, and whatever trouble they get into can be blamed on their parents. That is the conclusion of a man who has been handling youth for many years.

Parental neglect is responsible for youthful delinquency. There is evidence of that on every hand. Family life no longer exists in many homes. Families broken by divorce are responsible for considerable juvenile delinquency, but youngsters who lack the influence and example of parental interest furnish the major share of juvenile cases.

Few boys whose fathers have time for them get into trouble. Girls who look upon their mothers as their best friends and companions are seldom seen in a juvenile court. It may sound old-fashioned and fundamental, but families who meet regularly around the dinner table have few problem children.

If society paid more attention to parental delinquency, youngsters would be less of a problem.

An Example Given

EXTENSION OF REMARKS

OF

HON. MYRON V. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks, I wish to submit an editorial of July 31 from the Independence Daily Reporter, Independence, Kans., entitled "An Example Given." This editorial sets out the example of what private enterprise can accomplish when emergencies arise, as in the instance of the recent disastrous floods in Kansas:

AN EXAMPLE GIVEN

A railroad is a large complex business, big as some Government agencies, yet the Santa Fe got its trains running while Federal agencies were getting ready to give relief to flooded businesses. Furthermore, it proposes to rebuild dikes to protect its tracks in the Argentine district without waiting for the Government to unwind its red tape, and hopes it will be repaid.

Newspapers in the area published despite flooded-out plants and the big regional newspaper, the Kansas City Star, delivered its paper by all sorts of expedients. It got the papers into some places where they were not receiving even first-class mail.

The greater flexibility and drive of private enterprise was in many instances giving a good example during flood times of its ability to get its job done better and faster than Government.

There are areas of human activity in which Government has its place and the resources to give aid not otherwise available, but the floods have shown a good example of how much better private enterprise does what it can.

Address by Hon. George D. Aiken, of Vermont, Before Missouri Farmers Association

EXTENSION OF REMARKS OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, August 10, 1951

Mrs. SMITH of Maine. Mr. President, the Senator from Vermont [Mr. AIKEN], who, in my opinion, is the outstanding authority in our country on agricultural legislation, this week delivered an address at the annual convention of the Missouri Farmers Association, Inc., at Columbia, Mo. I commend the address to the attention and study of my colleagues and of the American people, and I ask unanimous consent that the address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

After several years of frustrated hopes, I am very happy at last to attend this meeting of the Missouri Farmers Association.

I have followed your work for a long time.

I know full well the great good which this organization has done for the farm people of Missouri, and the splendid example you have set for rural America as a whole.

At this time, I want to personally thank you for the signal honor you conferred upon me last year even though I could not be with you at the time.

The distinguished service award of the Missouri Farmers Association now occupies a conspicuous place on the wall of my office and often serves to inflate my spirits and renew my courage when it seems as if it might be futile to go on fighting for the objectives which one knows to be right, but apparently never quite attainable.

Washington is a beautiful city. To the visitor it is impressive, inspirational, and grand.

There is much that the casual visitor does not see, however.

He does not know of the emissaries of special interests and pressure groups that day after day concentrate their efforts on that beautiful Capital.

Your Member of Congress does, however, and so do those engaged in the other branches of Government.

At times we get rather cynical and suspicious and have to get out into the grass roots in order to restore our faith in human nature, and that may be another reason why I am with you in this great farming State of Missouri today.

You are holding this meeting at a time when the world is more on edge and uncertain as to the future than at any time within our memory.

A state of political and economic tension exists over most of the globe.

If there is any part of the world where this tension and uncertainty is most acute, that part is probably the United States.

Are we headed for war or peace? Does the future hold promise of ever-greater prosperity or possible depression?

Can democracy survive or will government by monopoly take over in America, as has happened in many other countries?

I would like to survey briefly the events of the past 15 months in order to provide a background for our discussion on the place of agriculture in our affairs today.

Only 14 months ago, the economy of our country seemed headed for a slump or at least a descent to lower levels.

Over 3,000,000 men were unemployed. Except for a few heavy industries, the lag in production and construction created by World War II had been largely overcome.

Farm prosperity was on the skids to such an extent that limitations on growing certain crops had been invoked.

Congress increased the borrowing authority of the Commodity Credit Corporation from \$4,750,000,000 to \$6,750,000,000 for price support purposes.

Nearly \$4,000,000,000 had actually been spent on loans and purchases of farm commodities by Government as of June 1, 1950.

Then came the Korean outbreak and the situation changed virtually overnight.

The trend toward depression was definitely off. Unemployment began to ease off. Demand and prices stiffened.

Consumer prices, particularly prices of meats, shot up sharply, although there was no increase to speak of in the price of farm animals for several months afterward.

Our Armed Forces in Japan were sent into Korea to hold back the Communist forces from the north while in this country reservists and National Guardsmen were called to the colors in ever-increasing number.

Orders for war materials increased the tempo of our industrial plants and as more and more men were put back to work in industry, purchasing power increased and along with it the demand for more civilian goods and a higher standard of living.

The Korean war definitely warded off serious economic trouble for the United States.

After the North Korean invasion, the President requested Congress to give him certain powers to deal with the situation.

He asked for higher taxes, for power to allocate critical materials, more drastic controls over credit, etc.

He did not ask for price and wage controls and it was generally understood that he did not want them at that time.

Congress, however, felt differently. We did not know how long the war would last or how quickly and to what extent it might spread.

Prices and wages were on the upgrade already.

So in the Defense Production Act of last September 8, Congress made provision for price and wage controls which the President could exercise when and if he found it necessary.

Price and wage controls are not a cure for inflation.

They cannot even prevent inflation.

But if properly and promptly exercised, these superficial remedies can hold the line to a reasonable degree until the more basic remedies for inflationary causes can be applied and the need for direct controls is abated.

CANADIAN EXAMPLE

Instead of freezing prices and wages promptly last fall, the Government actually took steps which tended to increase prices.

It is true that credit controls were strengthened and taxes increased.

This undoubtedly has had a beneficial effect on the situation.

But while these practical basic controls were being applied, there was being made available to banks through the purchase of Government bonds by the Federal Reserve banks some \$8,000,000,000 of new credit. It was not until March this year that steps were taken to stop this inflationary practice.

Had this new credit been used for purposes of increasing productive facilities, it would not have been harmful.

But, as a matter of fact, some 60 percent of it was made available to dealers, processors, and speculators who used it to bid up prices of many commodities, with cotton leading the way.

The situation was still further aggravated by a series of scare pronouncements predicting scarcity and higher prices to come.

This induced considerable panic buying in late fall and early winter.

By January the President concluded the time was ripe to impose price controls.

I am not going to discuss the operations of the price-control program to date.

My vocabulary is totally inadequate, and besides everyone here knows what has happened as well as I do.

You know of the Nation-wide propaganda campaign by the metropolitan press and others—even high Government officials themselves—to make it appear that the farmer and not the "love of money" is the "root of all evil."

You know only too well how the roll-back on beef in May took \$500,000,000 from the farmer without reducing consumer prices a single penny. You know too that only a half dozen farm commodities are selling above parity today.

Every farmer in America can thank his lucky stars that when the Defense Production Act, with its provision for price controls, expired on July 1 of this year, the Eighty-second Congress stepped forward and said to the control boys, "You are going to stop right here. You cannot go on with your plans to further throttle the American farmer and make him the scapegoat for everything that goes wrong." Not horse-meat—horse-sense Congress.

The price-control law enacted by Congress a few days ago gives the President all the power he needs to adequately control inflationary tendencies as far as price and wage controls alone can do so.

Let us hope this power will be used wisely. It will not control the billions upon billions of cost plus contracts.

So let's not discuss price controls further but consider where we are now and what we have learned from our thirteen months of crusading in Korea.

First, as I have already said, the Korean war warded off depression by skimming off the surplus labor supply of the Nation through the increase in the Armed Forces, by increasing consumer purchasing power, by Government buying, and by creating an added demand for consumer goods which were coming into heavy surplus.

And where are we today? Instead of the predicted shortages, there are still surpluses of almost every kind of consumer goods on the market.

Even the restriction on the use of materials for the manufacture of goods has so far failed to materially reduce the output.

For the first 6 months of this year, there actually came off the assembly lines more automobiles than were produced during the corresponding months of 1950.

There are heavy supplies of almost every farm commodity except finished beef and a promise of heavier surpluses to come with the autumn.

The industrial productive capacity of the Nation is increasing tremendously under the new tax deferment plan which enables manufacturers to amortize the cost of a new facility over a 5-year period instead of the usual 20-25 year period.

Certificates of necessity amounting to \$8,450,000,000 had already been approved as of July 27 of this year.

The Congress has been told that General Motors alone is constructing 41 new plants at a cost of \$245,000,000 although only about 10 percent of that great corporation's existing facilities are presently engaged in producing war materials.

It is apparent that the productive capacity of the United States will soon be so great that except in times of all-out war we can maintain a force of 5,000,000 men in the armed services and still be able to produce all the civilian goods which we will need.

Should the time come when war clouds no longer threaten and the enormous pro-

ductive capacity of American industry is no longer needed for war preparation we will be confronted with a problem of major degree.

What a tragedy it is that as a Nation we must rely upon war or the threat of war to maintain full employment and economic prosperity.

What a challenge to us all to find some other way to maintain prosperity in the midst of plenty.

It is against this baffling background that we must view the American agricultural scene today.

From here on I will devote myself to the consideration of those things which pertain particularly to the American farmer—his hopes, his prospects, and his problems—your problems and mine.

Like American industry the American farmer can, if not hamstrung or hog-tied by too many rules and regulations, produce far more than enough to meet the needs of the country for food and fiber.

Those who say we are nearing the limit of our capacity to produce are looking through dark-colored glasses.

True, we must guard against the loss of our land and forests by floods or other causes.

That is just what we are doing, although our pace may be too slow in this respect.

If we take care of our land, however, continue our scientific research, and keep abreast of new developments, we can far exceed our present production or needs for the foreseeable future.

Although this is not the place to discuss the comparative merits of the agencies, I will say here that over the country as a whole, the Extension Service, the Production and Marketing Administration, and the Soil Conservation Service have all done splendid work in preserving and improving the land and water resources of our farms.

I give these agencies much credit for the 35-percent increase in production which our farmers made during World War II.

The increased productivity of our farms has brought with it certain problems.

It is so easy to overproduce now.

As a sponsor of the Agricultural Act of 1948 and a supporter of the amendments offered in 1949, I can say that I believe the laws now on the statutes give the farmer reasonable protection against bankruptcy caused by overproduction.

Some people think that price support legislation is designed to guarantee the farmer a profit. That is not so.

The primary purpose of price supports is to encourage the production of an adequate supply of food and fiber and to build a defense against economic depressions for the whole country.

Although we have been hearing most about price ceilings lately, it is a certainty that we will be hearing more about support programs from now on.

We will apparently have another splendid crop year nationally with heavy surpluses in some commodities.

The Government purchase and loan program will again become increasingly important by harvest time this fall.

The increased activity of this program will be the signal for renewed and intensified attacks upon our farm people by those who will use the support program as an excuse.

The farmer is today subject to attack on two fronts.

On one front by those who would break the independent political power of American agriculture, which today is greater than our numbers would indicate.

On the second front we are continually under attack by those who would break the economic power of the farmer thus making him an easier subject for exploitation for profit.

So long as the farmer had a mortgage on his farm and stock; so long as he was willing to pay what price was demanded and sell for what the market would pay; so long as he left the farm just once a year to attend the county fair; so long as his children quit school at 15 and so long as he voted the straight ticket, he was a pretty good fellow and not subject to abuse and criticism.

But, when he showed up in town in good clothes and driving a new car to meet the kids coming home from college, and when he began to ask questions about the fellows he was asked to vote for, and when he joined with his fellow farmers to make lower-cost purchases or higher-priced sales, he became transformed into a sinister being whose main purpose in life is to gouge the consumer and to deprive the gentlemen of the commodity markets and the farm supply monopolies of their traditional right to make a few million honest dollars.

He was no longer a simple-minded patriot, but a menace to society that had to be dealt with.

Agriculture traditionally has been a target for those who either want to exploit farmers directly or use them as decoys to draw attention away from the real offenders in the grab-bag groups.

For too many years, the farmer has supplied food and fiber at prices far below what he rightfully should have received. Many farmers went broke doing it.

In recent years, since the farmer has been doing better in making a living, there is a tendency to blame him for everything that goes wrong, and to point the finger of scorn at him if he makes a profit, or to play him against other groups in accordance with the "divide and conquer theory."

Those who do this seem to forget that we are operating under a capitalistic system, where profit is the economic yardstick.

Is it so unjust that the farmer should make a profit as industry does?

The fact that the farmer's profit is so much less than industry's should not bar him from the right to make some.

The farmers of this Nation have been, and still are, the main bulwark of our democracy.

The farmer's traditional self-reliance, his fortitude, his propensity for hard work, and his love of freedom have contributed greatly to the perpetuation of our way of life, and our form of government.

Perhaps the greatest pitfall the farmer faces today is the temptation being held out to him to barter these sterling qualities for an easier, seemingly surer gain—short-lived though it surely would be.

To yield to this temptation now would undermine the source of our strength at the very time we need it most.

It would be tragic, indeed, if the American farmer should be lured into the belief that only the genius of an all-powerful, benevolent state can provide the answers to our problems in peace and in war through regulation and control of our daily lives.

Those who would break the independent political power of the farmer would make him dependent upon Government payments for a sizable portion of his income—that portion which represents the difference between profit and loss.

There is no denying the fact that this is the road that leads to political servitude.

It is no idle saying that with control of the purse string goes the creeping paralysis of absolute control.

The recent proposals to freeze parity, which is the farmers economic yardstick—by calculating it only once a year—the effort to freeze ceilings on farm commodities below parity—some far below and the demand for authority to establish general consumer sub-

sidies are all steps which if granted would put the squeeze play on the farmers.

For many years I have advocated a plan whereby people with little income can be sure of enough to eat.

I have not and do not now advocate a general food subsidy for all.

Such a course at this time would be not only expensive but contributory to inflation as well.

Furthermore, I insist that any consumer subsidy at all should be labeled for what it is and not charged up to the farmer as part of an agricultural-relief program.

As farmers we have as much right to a fair price in the market place as has anyone else

The best hope for farmers to stand off the forces of either political or economic monopoly is for them to stand together.

As you well know, a strong rallying point for farmers is the farm organizations.

The unorganized farmer today would fall an easy prey to organized political or economic exploitation.

Your Missouri Farmers Association is an outstanding example of what farmers can do through organized cooperation, functioning through able leadership.

By all means we must maintain and strengthen our farm cooperatives.

Cooperatives have been a powerful factor in combating monopoly and keeping alive the spirit of free competition in America.

They, in the truest sense, represent real economic democracy, because they are owned and controlled by the farmers who use them. Cooperatives have come a long way in America.

Today there are more than 19,000 farmer-owned and controlled cooperative associations and mutual companies in the United States

That figures out at an average of more than 6 co-ops for each of the 3,000 counties in the country.

There are 282 farmer marketing and purchasing cooperatives in Missouri alone

That is why so many of you live in good homes, cultivate good farms, and send your children to college.

The figures I have been giving are separate and apart from the nearly 1,000 locally owned and controlled rural electrification co-ops throughout the Nation.

Here in Missouri, the REA program has made characteristic, tremendous strides forward.

There are 48 REA co-ops in your State, 43 of which are in operation now and 5 in the process of starting operation.

The number of electrified farms in Missouri has increased from 17,893 or 6.4 percent of the farms in the State in 1935 to about 160,000 farms or around 70 percent in 1950.

Every REA co-op in Missouri is paid up to date as of March 31, 1951, in principal and interest on its loans and \$800,000 in principal has been paid in advance of due date.

This is a record of which you may be justly proud.

This is an investment which you will have to fight for if you would maintain it.

During the last 15 years, the average Missouri farm has doubled the per month consumption of electricity.

The rural electric co-ops were organized to serve territory which public utility operators said could not be economically served.

They predicted that anyone—including the cooperatives—would go broke trying to serve the areas that now are being served.

The percentage of electrified farms in the United States has increased from 10.9 percent in 1935 to 86.3 percent in 1950, and these co-ops are still going strong.

Now that the co-ops have done what the corporations said was impossible they are

being subjected to an all-out attack intended to either destroy them or bring them under control of the corporate monopolies.

They need to have an ample, continuing supply of electricity at reasonable rates and sufficient transmission lines of their own to guarantee that service will continue to be available to co-op members.

Day after day, 365 days in the year, the electric power monopolies are working for legislation that will require the co-ops to buy their power from the private utilities and to transmit power only over company-owned transmission lines.

If they succeed in this scheme the time, effort, and expenditures made to date by REA cooperators will have been in vain for farmers will still be at the mercy of the utilities in the pricing schedule and in the transmission of power

The electric light corporations have designated the last week in August as Rural Electrification Week.

What effrontery it is that these corporations who did everything within their power to prevent the extension of cooperative electric lines into the farming areas should now have the nerve to claim credit for bringing light and power to 3,000,000 farm homes which are served by the REA

They want the public to think the job is done and that they did it

So long as 30 percent of the farms in Missouri are still without light and power the job is not done.

The monopolies are just up to their same old tricks of trying to prevent any development in the field of electric service which they cannot control. They use the divide-and-conquer theory on regional basis—Missouri Valley versus St. Lawrence

Their ultimate aim is unquestionably to take over or control the cooperative systems of the country.

This is no time for complacency just because most of our farms are now served with electricity.

The REA is in danger. Farmers must fight to save it, and fight hard

A continuing threat to co-ops in general is the insidious and relentless propaganda campaign that is being waged against them.

Those who do not like the competition of cooperatives want to see them destroyed at any cost and by any means.

The ringleader of this attempt to discredit the co-ops is the so-called National Tax Equality Association

This association with the high-sounding name has been labeled "an unscrupulous racket" by Congressman DANIEL A. REED, of New York

A long list of contributors to the NTEA was published in the CONGRESSIONAL RECORD of March 20, 1951, by Congressman REED.

This is a revealing list and shows that the main contributors to this attack on farm cooperatives are the power interests, grain dealers, lumber groups, and fertilizer interests.

The enemies of farm cooperatives try to give the impression that co-ops do not pay taxes.

We all know that the co-ops pay taxes like any other business on real estate, personal property, equipment, occupational licenses, social-security taxes, various excise taxes, sales taxes, and use taxes.

Congress has never considered it proper or advisable to tax patronage refunds in the hands of the cooperatives, since the co-op members themselves pay income taxes on these refunds.

And if I read the signs correctly, the present Congress will never be a party to any effort to destroy farm cooperatives—but will tell the "unscrupulous racketeers" referred to by Congressman REED just where to get off.

All farmers, both co-op members and non-co-op members, need to be on the alert

against the forces that would destroy them, and make them puppets of monopoly empires.

Big government and big business—both can be monopolistic. Both can be equally dangerous insofar as the welfare of the rank-and-file citizen is concerned.

A lesson we must learn well is that we have to be alert on the home front as well as on the international front.

So long as the forces of aggression abroad are on the prowl, we need to keep our Nation strong—so strong that others will be afraid to attack us—but this effort will be for naught if in the process we lose either our economic or political freedom right here at home.

We must not overlook the fact that America's main strength is in ourselves.

Just as our Nation so often in the past has faced many hours of need, this again is America's hour of need—need for true faith in democracy and sincere devotion to the cause of freedom—need for men and women of character and of courage who will neither be bought nor scared nor fooled.

Whenever our country has been in need, the farmers have been in the forefront ready to do their part in a crisis.

Organized agriculture can make tremendous contributions to the defense of the Nation against any foreign foe.

Organized agriculture can be the first line of defense against loss of our political or economic freedom at home.

There is no higher example of the effectiveness of farm organizations than the Missouri Farmers Association.

May your good work continue on an ever improving basis.

Enact H. R. 1896 and Relieve the Milk Situation

EXTENSION OF REMARKS OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. MURRAY of Wisconsin. Mr. Speaker, we are continually confronted with schemes to control the cost of living, with certain administration spokesmen constantly clamoring for more and more power in order to put the producers of this Nation into more and greater strait-jackets.

Once more I wish to call attention to H. R. 1896, a bill which I introduced to authorize the shipment of grade A milk into the District of Columbia. This legislation will not create any new jobs on the Federal payroll; nor will it require any interference with the normal channels of trade.

We hear much about the good-neighbor policy, but we would like to have the Congress be good enough to Wisconsin and other Midwestern States to allow grade A milk to be sold in the city of Washington.

Washington is the only city over which the Congress has the direct responsibility. In allowing grade A milk to be sold in Washington at a reasonable price, no doubt the consumers of other cities would see the light and permit the good products of Wisconsin to be sold within their

condines on the basis of scientific facts and common sense.

Wisconsin produces over 10 percent of the milk of the Nation and can supply more grade A milk than any other State at the present time. It is prevented from marketing this milk in Washington by artificial trade barriers and discriminatory regulations, but the Congress can change this situation any time it wishes to do so.

Means have been devised for concentrating milk, thereby reducing the transportation charges by two-thirds, which places the Midwest closer to the Washington markets.

One dairy plant in my district has an intake of over a million pounds of milk a day and many other reliable milk co-operatives and privately owned dairy plants in our State have equally large intakes of milk. If some of this milk could be brought into Washington and distributed, it would not be necessary to curtail the supply of milk at Fort Belvoir and other Army camps as it is at the present time. We must remember that this dairy product constitutes 30 percent of the consumer's needs and yet it only costs 15 percent of the consumer's dollar.

I am asking that this bill, H. R. 1896, be passed so the milk companies of Washington may sell this grade A milk the same as any other grade A products.

Flight to Freedom

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial which appeared in the New York Herald Tribune on August 6, 1951, entitled "Flight to Freedom":

FLIGHT TO FREEDOM

The news about Poland is good and loud. In the last 2 days the free world has been treated to the thrilling stories of Poles who risked their lives for freedom. First there was the mutiny on a Polish mine sweeper, with a dozen crewmen taking asylum in a Swedish port. Then came the melodramatic tale of four Polish youngsters who fled to Sweden in a ramshackle airplane after overpowering airfield sentries and eluding military pursuit. Now these are only episodes involving a few people, but they speak with a simple force capable of only one interpretation. The state of affairs inside Poland is obviously bad from the viewpoint of Stalin and Molotov. Just how bad is a matter for speculation, but these heroic escapes are the best kind of evidence that the Poles have had enough of their Russian slave masters. Marshal Tito was quite evidently not speaking utterly through his hat when he said some days ago that Poland is in a state of revolt.

We applaud the bravery of the Poles who chased everything for liberty, and hope that Sweden will provide real refuge for them and all others to come. These breaks for freedom show the Russians have not yet

managed to crush the human spirit in Poland, and that this satellite state will require force, and then more force, to be kept in bondage to the Kremlin. Stalin and Molotov must be worried, and for good reason. In the end, no amount of force can keep Poland under heel. We hope there is plenty of trouble inside Poland; the more of it the better toward hastening the day that tyranny collapses of its own weight.

I Am a Bureaucrat

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, August 10, 1951

Mr. LEHMAN. Mr. President, there was published in the spring issue of the Public Administration Review, the Journal of the American Society for Public Administration, an article entitled "I am a Bureaucrat," by Wycliffe Allen. This is a pseudonym for a Government employee who has written here what I consider a very interesting commentary on the present mental attitude and plight of thousands of Government workers. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

I AM A BUREAUCRAT

(By Wycliffe Allen)

According to both the press and the CONGRESSIONAL RECORD, I am one who gormandizes at the public trough. I am the incarnation of all the sloths through all the ages. I live off the hard-earned salaries of neighbors and the profits of tax-paying industries.

For this parasitical existence, I give, apparently little value. I am supposed to put in, each day, 8 hours of cat naps intermingled with pen-pushing. I am believed to manufacture red tape in amazing quantities and to protect myself from reformers by means of the greatest lobby in Washington. The movie industry, like the cartoonists, finds me a fit subject for ridicule.

Still, be what I may, I am a good portion of the brain, arms, and legs by which our national hopes and aspirations are brought to their fruition. During war and in all peacetime emergencies, the administrative machinery of which I am a part is an essential ingredient in whatever is the country's formula for winning through. And yet, in spite of whatever may be my successes, as a bureaucrat my loyalty to the Government for which I work is questioned indiscriminately and constantly.

For years, standard Federal practice has required the fingerprinting of all new or transferred employees, with copies to the FBI. Yet recently Congress appropriated \$20,000,000 to investigate me all over again. That I survived is a minor matter.

So now, investigated, fingerprinted, reinvestigated, I am a provedly loyal Federal bureaucrat—an officeholder. How did I get that way? Well, public belief to the contrary notwithstanding—I worked for it.

In the beginning, a careless college question, tossed during a swimming pool chat, cast the die. "Ever think of public service?"

I thought of city, county, State, and Federal Government. County governments I discarded; they were, it seemed to me, "the black continent of American government." That left cities, States, or the Federal Government. Each of these offered a challenge. In varying degrees they faced the problem of maintaining political decisions as the essence of democracy, while improving efficiency of operations and decisiveness of action.

After a graduate year of intensive scholastic effort, I gained employment with an industrial engineering organization which devoted its full activities to city, county, State, and national governmental organization and techniques. Subsequently, for the greater part of a decade, I hit the sawdust trail of improved local government administration. World War II tossed me into administrative military service. When World War II was over, I competed for, and won, what is considered a well-paying job in a Federal agency, well-paying, of course, by public employment standards, not by any others.

Thus you, the tax public, have paid my salary, directly or indirectly for over 15 civilian and military years. What has my work meant to you? With many other bureaucrats I have played a small part in improving the level of service you receive from government for the price you pay. Many cities and some States can now make numbers of so-called business-managed industries look a ledgerly red by comparison. In the past 20 years, interest in effective operations has mushroomed among public officials. In addition to the usual night school and correspondence efforts of ambitious clerks, key administrators—city, State, and Federal—have been willing to study specialized college courses on their own time and out of their own pockets. City managers travel at night halfway across a Midwestern State to hold weekly seminars on management techniques, with a managers' correspondence course as text. Finance officers, assessors, personnel men, public works officials avidly complete correspondence courses from the Institute for Training in Municipal Administration, and study at the extension courses in their city as they work toward a graduate college degree. Their annual standard of comparison is not the personal profit sheet but improved effectiveness of service. Many operations, in government as elsewhere, are susceptible of cost analysis; it has been applied with zest. Yes, you'll find cost accountants, systems accountants, industrial engineers in the public service, though without the titles or salaries of their industry counterparts. They are all bureaucrats—like me.

Occasionally I read with envy of some of the administrative practices in industry. An industry may rely almost completely on sales to the Federal Government for its balance sheet profits, but the "protectionist," red-tape-creating devices you have forced on me are not extended to it. Pounds of regulations, inspections, internal audits, and post-audits, the General Accounting Office and the Civil Service Commission—all of these were created by you in laws so written that the conclusion to be drawn from them is inescapable. You do not trust me to do a job without circumscribing restrictions, not unless it is a job in private employment.

So you protect the purity of public business by legal red tape. I have seen competent staffs struggling for several years to try to cut away needless and costly strictures in administrative channels. For the most part these were created by your fear of me and fellow bureaucrats, a fear extended through your legislative representatives.

Abonders shun the Federal service, with its stiff bonds for certifying officers, its General Accounting Office audits, and its various investigatory agents, including Treasury agents and the FBI. Nevertheless, you load Federal employees down with triple pro-

cedural checks and minutiae. Our accounts are not designed primarily to serve useful administrative purposes. The design is that they shall be kept in such manner as to allow the General Accounting Office an easier audit, and also to permit congressional inquiries to be answered rapidly.

You make us hire employees in 1950 by methods prescribed as an aftermath of a disappointed job-seeker's assassination of President Garfield in the 1880's. You make us discipline employees by means of a letter-writing etiquette reminiscent of Victorian parlors. You make us fire them by legal document. When your congressional representatives cut appropriations, the resulting layoffs are carried out by regulations operating in such a way that master mechanics or naval gun foremen with 20 years of experience are laid off while a war veteran with 1 year of service remains, secure as long as he earns a "good" efficiency rating. "Good" represents far less than a numerical average. Career service? What happens to the 20 years of training and skilled experience the Federal Government loses? You concede this to be a waste of money and men? And yet you do not correct it—you, working through your representatives.

There are not only wastes to be corrected, there are basic inequities, too. Assuming your desire for improved governmental service, bureaucrats can see but three reasons why you do not make your views known to your legislators.

First, you don't really care. Government exists only as a whipping post for after-dinner bull sessions. It affects no other part of your life.

Second, you think in the terms of programs and ideas, but not of the details required to carry them out. Perhaps your Congressman thinks the same way. An economy committee of the House or Senate might, if it meant business, call upon the General Accounting Office, the Civil Service Commission, and the Bureau of the Budget to assist it in saving Federal funds by pointing out to the committee administrative anachronisms or needless details required by Congressional legislation. But does it?

Third, you are doubtless a member of one or more organized pressure groups acting on your Congressman to secure favorable legislation, or to lay before Congressmen sentiments accurately reflecting public opinion. Your group may concentrate on the Federal Government for direct economic gain, as have the labor groups, or the National Association of Manufacturers. Or it may expect the Federal Government to save its individual consciences for its having failed to do, as private individuals, what the Government is requested to do. In this connection, the privileges legislated for veterans in the Federal service are of interest when compared with industry practices toward veterans. Or, finally, your pressure group may concentrate on the Federal Government as a sounding board for broad ethical, theological, economic, or social convictions affecting a way of life. As such it may be responsible for a new basic law. Laws have to be administered.

Federal agencies are thus created to meet needs. Generally speaking, those needs are impressed on Congress by constituents. If you care to review events leading up to the creation of one more Federal agency, you may find its ghosts in your pressure closet. When a Presidential reorganization or Hoover Commission report threatens your independent agency, your anguished cries bear no relation to the improved services that might result. When economy is called for, you demand cuts in all appropriations except those for your pressurized baby. Initial cuts in the budget recommended by the Appropriations Committees of the House and Senate disappear, and the budget as passed may be as large as, or larger than, that submitted by the Chief Executive. So I, the

bureaucrat, catch the hot potato—and hold it. There is no other receiver. Provided with an appropriation to carry out a given program, I hire employees to do the job. Immediately arise the cries, "Too many employees," "bureaucratic waste," "empire building."

Yes; I am a bureaucrat, a public officeholder. I am proud of that fact, proud that I serve with other bureaucrats dedicated to performing the work of the Federal Government as effectively as you permit us to do. Naturally there are a few drones among us bureaucrats, but surprisingly few. You will find their counterparts in industry in as great or in greater numbers.

Partisan politics is no problem in the Federal administrative service. As in industry, it is office politics which causes the havoc, office politics based on cliques, personalities, and ambitions. Even so, we have no sixth vice presidents, in charge of the executive lunchroom, who are related to the board chairman.

Your Federal Government is the largest corporation on earth. Many of its administrative ills are common to any organization plagued with bigness, private or public. Many, too, will be corrected only when individuals and groups look beyond their special interests and accept an occasional bureaucratic recommendation in the interests of all. Your Federal Government has become big because the fancied or real needs of people were translated by their representatives into law. The only possible profit sheet for Government must be in terms of services rendered now or human and physical resources developed for posterity. Working for such a corporation is a challenge which requires considerably more than 8 hours of my day, bureaucrat though I be. You would be shocked at the pleasure I get from snipping red tape here and improving a process there. For I am a taxpayer, too.

Taxes Set Record in 1950

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Friday, August 10, 1951

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Taxes Set Record in 1950," issued by the Bureau of the Census, Department of Commerce, yesterday.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TAXES SET RECORD IN 1950

Federal, State, and local Government tax revenue in 1950 amounted to a record \$54,-626,000,000, according to a report on governmental revenue in 1950 issued today by the Census Bureau. This was 2 percent above the 1949 amount. The previous high of \$54,495,000,000 was for 1948.

The 1949-50 increase was the net result of a small decrease in Federal collections and of marked increases in State and local government tax yields. Tax revenue of the Federal Government decreased slightly from \$37,810,000,000 to \$37,684,000,000. State taxes rose from \$8,349,000,000 to \$8,940,000,000, or 7 percent, and local government taxes rose from \$7,417,000,000 to \$8,002,000,000, or 8 percent. These amounts relate to net revenue in the various fiscal years, after deduction of tax refunds.

Total tax yields in 1950 were equal to \$360 per person. About 70 percent of this amount, or \$248 per capita, was collected by the Federal Government. The States received \$59 per person, and local governments the remaining \$53 per person. Tax revenue in 1942 had amounted to \$23,027,000,000, or \$171 per capita.

Taxes provided 95 percent of the \$57,565,000,000 total of governmental revenue in 1950, the Census Bureau report shows. Charges for governmental services and other nontax revenue produced the remaining \$2,939,000,000.

Because of financial grants and tax sharing as between the Federal Government, States, and local governments, each level finally has for its own direct spending a different amount than it collects in taxes and charges. Taking account of such intergovernmental transfers, the Federal Government had 63 percent of total governmental revenue in 1950 "for its own purposes," local governments 23 percent, and the States 14 percent.

Taxes on individual income provided 29 percent of all governmental revenue in 1950, the Census report shows. This source yielded \$16,472,000,000 or \$109 per capita. About 95 percent of this amount was collected by the Federal Government. The 1950 yield was 2 percent higher than in 1949 but was substantially less than the record \$19,762,000,000 collected in 1948.

Sales and gross receipts taxes and customs provided \$12,986,000,000 in 1950 as compared with \$12,596,000,000 in 1949. This category includes excises and selective sales taxes, such as those on gasoline, alcoholic beverages, and cigarettes, as well as "general" sales taxes.

Corporation income taxes amounted to \$11,043,000,000 in 1950 as against \$11,844,000,000 in 1949. These amounts compare with the high of \$15,547,000,000 set in 1945, when the World War II excess-profits tax was in force.

Property taxes amounted to \$7,366,000,000 in 1950 as compared with \$6,842,000,000 in 1949 and \$4,544,000,000 in 1942. Local governments collected nearly all of these sums, the States receiving only about \$300,000,000 annually. Property taxes provided 52 percent of total local government revenue in 1950. In addition to tax revenue, local governments received fiscal aid amounting to \$4,166,000,000 as well as \$1,377,000,000 from charges and miscellaneous nontax revenue.

Social insurance taxes provided nearly 7 percent of total governmental revenue in 1950, the Census report shows. Death and gift taxes and other minor tax sources accounted for about 5 percent.

Veto of H. R. 3193 and H. R. 3549

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Friday, August 10, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and telegram:

DISABLED AMERICAN VETERANS,
Washington, D. C., August 9, 1951.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: The Disabled American Veterans protests the veto by the President of the United States on August 6, 1951, of the bills H. R. 3193 and H. R. 3549.

Historically, the Disabled American Veterans has always been a "single purpose" organization dedicated to the welfare and rehabilitation of the service-connected wartime disabled. In protesting the Presidential veto of H. R. 3193 and H. R. 3549, we are cognizant that the provisions of these two bills are designed primarily for veterans, or their dependents, eligible for non-service-connected pensions. Our endorsement of these two bills, however, is justified by the knowledge that many veterans in receipt of part III benefits should actually be service-connected.

H. R. 3193 is applicable only to those who are blind or helpless because of physical or mental disability and require the regular aid and attendance of another person. To deny to this small segment of veterans of World War I and World War II sufficient pension to employ the services of an aid appears extremely inequitable. It must be borne in mind that veterans of the Spanish-American War have already been granted a pension equal to that provided by H. R. 3193. An additional factor that should be considered is that it is far more costly for the Veterans' Administration to maintain these blind and helpless veterans in a hospital than it is to provide them with a pension of \$120 a month.

With respect to H. R. 3549, its application is so limited that the Veterans' Administration was not requested to give an estimate of the cost when under consideration by the Congress.

It is understood that the bill would add a very limited number of widows of veterans of the Civil War, Indian War, and the Spanish-American War to the pension rolls and at an age when their remaining life expectancy is of extremely short duration.

Your assistance in effecting the passage of H. R. 3193 and H. R. 3549, despite the veto of the President of the United States is sincerely solicited.

Respectfully,

FRANCIS M. SULLIVAN,
National Legislative Director.

BOSTON, MASS., August 9, 1951.

EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.:

Massachusetts veterans bitterly disappointed by President Truman's veto of H. R. 3193 and H. R. 3549. The action of the President in vetoing a bill to provide a pension increase to helpless and blind veterans of World Wars I and II is inconsistent and indefensible. The veto of proposal for the modification of eligibility requirements for a few old widows of Civil, Indian, and Spanish-American wars is equally unjust and indefensible. The Department of Massachusetts Veterans of Foreign Wars therefore, in the name of justice and decency, urge you to override the President's veto.

TIMOTHY J. MURPHY,
Department Commander, Veterans
of Foreign Wars.

Moral Leadership: Our National Necessity

EXTENSION OF REMARKS OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Friday, August 10, 1951

Mr. DONOHUE. Mr. Speaker, I wish to include a very timely and thought-provoking editorial by Mr. George So-

kolsky, which appeared in the Times-Herald issue of August 9, 1951.

With scholarly conciseness, Mr. Sokolsky analyzes one of the most challenging problems of the hour and presents some constructive suggestions which are worthy of wide dissemination and interest, especially to those who occupy positions of public leadership.

His article follows:

THESE DAYS

(By George Sokolsky)

Senator FULBRIGHT's proposal, which amounts to shifting the West Point scandal to an investigation of intercollegiate football, is not sound. The problem is not football; it is the morals of a nation. It is not whether subsidized, paid athletics in the colleges is to be forgiven; it is rather that something has gone out of this Nation when cheating is taken as lightly as fixing, which used to be called graft.

It is easy for those who think only in the terms of immediate party politics or, even worse, of their personal friendships to shunt off everything that happens into the category of the usual.

But those who insist upon a moral criterion cannot help asking, "Why is it usual? Why has it become usual?"

It is possible to say that the twentieth century is not the nineteenth century, but that does not mean that the twentieth century is an improvement on the nineteenth or even on the twelfth century. What is called modern does not necessarily mean better as anyone who listens to Bach and Shostakovich on the same program knows.

If by improvement we mean that an automobile is a superior means of locomotion to a horse and buggy, or that a gun is superior to a bow and arrow, then we have made very great progress.

But when the morals of man are considered, we are halted by the astonishing retreat of the twentieth century with its excess of divorces, its broken homes, its emphasis on homosexuality, its acceptance of materialistic Marxism in wide areas that were so recently Christian, its avoidance of such concepts as faith, honor, dignity, sacrifice. If we assume that God is old-fashioned and that his natural law is superstition, then we must not be shocked by what happened at West Point.

These 90 men accused of cheating contend that they are not the only ones and that it has been going on for some time.

Does that make it right? Is that an excuse for conduct? Because some men are dope peddlers, is dope peddling justified? The position is so illogical that the men who use it as an excuse display their unworthiness.

This is a question that Americans have to answer if they wish to preserve our Nation and our civilization. It is impossible to say that "deep freezers," "mink coats," fixers close to the White House, and incident after incident of loose morals in high places are usual in all governments. In our long history such incidents have been unusual.

These are the clinical evidences of a decaying civilization, just as wholesale and prolonged cribbing at West Point is a symptom of degeneracy among our Armed Forces. For these young men, under the circumstances of West Point education, could not have engaged in this practice without officer connivance. This undoubtedly is their real defense.

These symptoms need to be studied back to their causes. When there is such widespread degradation among the people, it means clearly two things:

1. The moral leadership of the Nation is inadequate for influencing oncoming generations in decent, dignified leadership and living;

2. The religious training of youth is inadequate to sustain them through the trials of life by precept, inspiration, example, and by supplying the automatic restraints of moral conduct.

The individuals involved in the West Point scandal will suffer personal indignity and a loss of great opportunity, but there is much more to this. This Nation is now challenged by an incident which involves all our children. What is being done in our schools to build character? The public-school ideal was designed not only to teach reading and writing, but to breed a race of decent, honest, God-loving human beings. What happens to our children in the first years of their lives? This we need to understand if we are to grasp our current apathy concerning indecencies.

It may require moving deeply into the whole question of national morals, of up-bringing, of education, of purely functional schooling without religion.

We need to know why our people are not outraged at the shameless corruption of our country. Something has gone terribly wrong with us, and we need to know what it is and why it happened.

It Could Happen Here

EXTENSION OF REMARKS

OF

HON. MYRON V. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. GEORGE. Mr. Speaker, in connection with the disastrous flood that has just taken place in Kansas, under leave to extend my remarks, I wish to submit an editorial from the *Arkansas City Daily Traveler*, *Arkansas City, Kans.*, of July 30, entitled "It Could Happen Here." This editorial very well explains how industry is affected without proper flood protection:

IT COULD HAPPEN HERE

On top of all its direct losses from the great flood, Topeka was hit last week end by another kind of blow as a result of the Kaw's mighty rampage. It lost a big industry to the river.

The John Morrell meat packing plant in Topeka will not reopen. Company directors feel the cost of rehabilitating the big establishment from river damage is too great to justify continuing the operation.

Loss of 1,200 Morrell jobs is certain to prove something of a shock to the State capital, particularly coming on the heels of the flood itself. Topeka is big as Kansas towns go, however, and the city has been booming lustily. The set-back is likely to be a temporary one with the slack quickly absorbed.

The Morrell decision, however, is one which deserves due attention in Arkansas City. This community's largest industries also are situated in the river valleys—the Santa Fe, Maurer-Neuer, Kanotex and Arkansas City flour mills to quote the top of the list. They are potentially just as vulnerable to flood invasion as was John Morrell in Topeka. The ultimate results of such a disaster might prove just as costly to the community or even more so.

The experience of Topeka, Kansas City, Manhattan, Ottawa and other unfortunate Kansas cities proves conclusively the grim necessity of maintaining the most complete flood protection humanly possible. The Kaw's unprecedented rampage illustrates

clearly the folly of resting on historical performances.

Arkansas City should do everything within its power to continue the ceaseless job of improving its river defenses. What happened in Topeka might just as easily have happened here.

Republican Eightieth Congress Vindicated by Events

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, remember President Truman's 1948 campaign accusation that the Republican Eightieth Congress was the worst in the Nation's history? That vicious libel has recently received repudiation from an unexpected and highly qualified source.

Democratic Chairman CARL VINSON, of the House Armed Services Committee, told the Rules Committee on August 6 that the Republican Eightieth Congress had done "much more" to build up the defenses of the country than was done by the Democratic Eighty-first Congress. Mr. Vinson said that the Republican Eightieth Congress established a "magnificent" record in the field of national preparedness and had voted defense appropriations that went "far above" the requests of the Truman administration.

This week the House approved a \$56,000,000,000 defense appropriation bill for 1952. This action was preceded with warnings that "we are not now strong enough to exert the maximum force for peace in the world" and with expressions of concern over the "race against time" in achieving maximum defense.

I voted for these necessary, unavoidable defense appropriations—as I have consistently done in the past. But I voted for these appropriations fully aware that the amount of the appropriations and the present concern over the race against time are both immensely increased because the Truman administration thwarted and stymied the preparedness measures voted by the Republican Eightieth Congress. The American people need to understand that fact.

This "worst" Eightieth Congress voted expansion of the Air Force to 70 groups and appropriated funds for that purpose; President Truman impounded \$978,000,000 of those funds and cut the Air Force back to 48 groups.

This same Republican Eightieth Congress appropriated \$189,000,000 for a superaircraft carrier. President Truman scrapped construction of the carrier in 1949, after it had been started, with an immediate and subsequent waste of millions. Carrier construction was later resumed at three to four times the original cost.

The Republican Eightieth Congress re-enacted the Selective Service Act and

authorized an armed force of 2,000,000 men. President Truman cut that figure to 1,459,000 and suspended the draft for a considerable period of time.

I voted for all of these defense measures in the Eightieth Congress. Nor is that all.

At the time the President was launching his so-called foreign-aid programs "to contain communism" I fought in Congress to halt shipment of oil to Russia and demanded that we stop shipment of other war materials to the Soviet and its satellites. I personally halted the sale of \$828,000,000 worth of machine tools to Russia. I cited the hopeless inconsistency of squandering billions of dollars on aid to European countries to halt communism while we were authorizing a loan to Soviet-dominated Poland.

Moreover, beginning in 1946, I urged withdrawal of diplomatic recognition of Russia, and I proposed that we "draw some lines" and say to the Russians, "Thus far and no farther." I warned repeatedly that a soft, vague, inconsistent foreign policy was being followed by the State Department, and I cited unmistakable evidences of communistic influences in high administration circles.

Beginning with the initial British loan and the aid-to-Greece programs, I warned that the billions then asked for foreign aid were only the prelude to many more billions. I said repeatedly that this spending would create dangerous inflation in this country. I warned repeatedly that, despite administration assurances to the contrary, this foreign-aid program would prevent neither war nor huge defense expenditures. And I particularly warned that the "new departure" represented by the Greek-aid program would ultimately involve American manpower. Here is what I wrote in my *Washington News Letter* of March 26, 1947:

This new departure will mean . . . the stationing of thousands of American boys in strategic spots throughout the globe . . . not immediately, but eventually.

Developments have shown that I was entirely right, just as developments have vindicated the record of the Republican Eightieth Congress in the matter of national defense. Yet the administration is still following its 1948 strategy of trying to cover up its blunders by smearing those Republicans whose record has been vindicated by events. The American people must not be fooled again.

Does Our Foreign Policy Deter Communism or Does It Instead Make Communism's Victories Possible?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. BUFFETT. Mr. Speaker, except for the foreign policy followed by the

Roosevelt and Truman administrations, Russian communism today would be out of existence except for possible remnants in the caves of the Urals.

No unbiased student of world affairs will deny the soundness of this observation.

American intervention in World War II, plus lend-lease to Russia with no questions asked, plus the Communist-inspired unconditional surrender and the Morgenthau vengeance plan, plus other blunders, gave the fruits of World War II to the men in the Kremlin.

Those gains the Russians did not win—, instead, they were given to communism by the American Government.

The fact that the administration may not have intended those consequences in no way alters their reality.

The obvious question from the consequences of those actions now becomes: Is our present foreign policy going to be discovered a few months or years hence to have been a similar tragic combination of sucker plays into the hands of the Soviets?

Members who are not willing to blindly follow the administration line, and who are willing to brave the smears of the administration propaganda machine, will be interested in a recent analysis by Women's Investors Research Institute of our chronic failure foreign policy. A meaningful section of that study follows:

FOREIGN POLICY A CONTINUING FAILURE

The present foreign policy of this country to establish a durable peace in the world by bringing security to Western Europe is not new. That was the underlying theme of the lift the arms embargo legislation in 1939 and Lend Lease I in 1941. Both of these proposals were advanced by the same general coterie as programs which would keep the United States out of war and bring security to Western Europe.

Both programs failed—but the foreign policy continued the same.

That policy also was the foundation of the Bretton Woods agreement—failure of which was followed by the Marshall plan. And, as the Marshall plan began to crack at the seams, the North Atlantic Pact was pulled forth like a rabbit from a magician's hat.

Again the same sponsors, Secretary Marshall, Secretary Acheson, Deputy Secretary Lovett, General Bradley, and their congressional admirers, said it would do the job of itself, but the record shows they dropped hints that, instead of actually regarding it only as a measure for the best interests of the United States, they believed it to be the stepping stone that would take the United States into some form of a world government.

Thus, this foreign policy has been kept alive for years by the simple technique of never disclosing to Congress or the people the next step in the program that must be accepted to keep alive this policy with continuing transfusions of American dollars and blood.

Always, each new scheme is put forth as the final one; with promises that no more will be needed. However, careful examination of testimony reveals hints are dropped that more is to come—or later events establish the next phase actually is under secret preparation while the planners are publicly stating nothing more will be needed. * * *

FOREIGN-AID PROGRAM CONTRIBUTES TO COMMUNIST PLANS

The evidence seems to establish that the present foreign policy of this country will

not defeat the Communist program for world empire, rather, if it is continued, it can well contribute to the ultimate success of that world empire plot.

Should Congress continue to accept the statements of these individuals—whose plans always have failed—and approve the present multi-billion-dollar program now before it or—should it refuse consideration until it has had time to submit the foreign policy to a thorough and searching study?

Of course, Members who advocate this latter approach will face the danger of smear attacks from those forces in this country and abroad who wish to compel Congress to commit the United States irrevocably to this international army project and its many ramifications.

However, these same forces also are insisting—as part of this program—that Congress compel the youth of this country to face—with courage—the danger of war in Europe and elsewhere in support of the present foreign policy and its global commitments.

If it is a question of Members of Congress being asked to risk political careers or the youth of the country being compelled to risk their lives for a policy and program that apparently cannot achieve its stated objective—should that decision be too difficult for Americans?

WILL CONGRESS CHANGE MANAGEMENT OR POLICY?

The United States Government today is the biggest business in the world. The executive branch is its management, Congress is its board of directors, and the citizens of the United States are its stockholders.

If the management of a private corporation continued to dissipate its assets and insisted upon carrying forward a policy which resulted in one failure after another and was heading that corporation into bankruptcy—while its principal competitor continued to grow and expand its business—the board of directors of that corporation either would change that management and/or its bankrupting policies or face removal from office and legal action by the stockholders.

Under our constitutional form of government, Congress has the power not only to change the management of the Government, but also to compel a change of Government policy, foreign and domestic.

The Constitution grants Congress the power to impeach the President or any Cabinet officer, and the Senate has the power to remove any Cabinet officer by simply, through a majority vote of those present and voting, rescinding its previously granted approval of that officer's appointment.

Is it not time that Congress began to exercise some of these constitutional powers for the protection of the citizens and their savings and for the survival of this Republic with its capitalistic system?

MARCH 17, 1951.

Mr. Speaker, H. R. 5054 and the other gigantic military spending schemes which go along with it, are a reckless dissipation of our economic resources.

General MacArthur said at Boston, July 26:

The free world's one great hope for survival now rests upon the maintaining and preserving of our own strength. Continue to dissipate it, and that one hope is dead.

I submit that H. R. 5054 continues and accelerates the dissipation of our strength. Why do we learn nothing from the succession of bloody blunders of the past decade?

Why Americans Don't Vote—10 Commandments To Get Out the Vote in 1952

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. JAVITS. Mr. Speaker, I am appending hereto 10 commandments to make 1952 a record electoral year developed by Dr. Ernest Dichter, of New York. It is Dr. Dichter, a psychological consultant to business and public institutions, who is responsible for developing so much of the basic research on this subject. He began his study of why so many Americans do not vote in Portland, Maine, in 1948, and brought these results to me. As a result of his study and the implementation of his recommendations through the work of the Greater Portland Research Council, voting in that city rose by one-third in 1 year. I became interested in the subject and introduced House Resolution 89, providing for the appointment of a select committee to determine why so many eligible Americans do not vote—generally about 50 percent in Presidential and 40 percent in congressional elections.

Dr. Dichter's 10 commandments on voting follow:

1 Stop urging citizens to vote by saying it is their duty to vote. It's like telling a consumer to buy a certain brand of soap because they ought to. You have to sell voting with the same technique that national advertisers use.

2 Stop talking about how few people vote. It makes those who do vote more self-conscious and tells the nonvoter that he's not the exception. This removes the feeling of guilt and permits him to continue as a passive observer of the Nation's political life.

3 Make the idea of voting a pleasure. Call in your city's top radio, television, and show people and glamorize the whole voting process.

4 Have your local newspapers run series of picture interviews with prominent and average citizens in which they are asked why they do vote, but not why they do not vote.

5 Encourages debates in the old American tradition. The more the citizens are steamed up on the issues, the better the chance that they will become voters; also, if you're looking for an edge on your opponent, be the one that calls for the debate.

6 Before registration time comes around, have your high-school and elementary-school children visit with city, State, and local officials. When they come home with their impressions, they can help inspire the folks to register to vote.

7 Ask your newspapers to set aside a page, and your radio and television stations to reserve a regular period of time, during which voters can see in print, hear and see in action, the candidates and their views—and the more candid the better. A number of American newspapers already have run election battle pages.

8 Open the channels of communication between the citizens and elected officials. One community has worked out plans for

free telephone service whenever a citizen wants to call the mayor. Ideas like this work.

9. Encourage development of local town-hall meetings. Discussions of issues 52 weeks a year make voters.

10. Take a tip from successful advertising campaigns. When you publicize that John Smith has switched to voting, it makes thousands of others think that voting is a good idea. Use mail, billboards, newspapers, car cards, radio, and television for this.

Plant Dispersal

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. MARTIN of Massachusetts. Mr. Speaker, President Truman has instructed the various Government agencies to bring about dispersal in direct contravention of the action of Congress last month.

As the RECORD plainly shows, the committee bill amending the Defense Production Act of 1950 was brought into the House with the provision to force plant dispersal on many of our industries.

This was to be done by refusing Government loans; certification for amortization under the Internal Revenue Code; access to Government-owned equipment, facilities, or processes. The provision was rejected by the Congress.

The President has today directed Defense Mobilizer, Charles E. Wilson, to go ahead with the dispersal program in defiance of Congress by withholding certificates of necessity; allocations of critical materials for construction purposes; Government loans and, by implication, defense contracts.

Nothing could be plainer concerning the intent of Congress than the rejection by the Congress of legal authority to accomplish what President Truman now seeks to do by extra-legal procedure.

The Congress has, indeed, fallen to a low estate when the executive branch continually circumvents its wishes by subterfuge, indirection and outright defiance.

The future of our Republic has unquestionably reached a critical time when the President of the United States resorts to methods which have been the chief weapons of the very dictatorships we fought to eliminate in World War II.

Once upon a time when we had men in office who respected the authority of the Congress, and when we had a Supreme Court which would deliberately and conscientiously examine the proceedings of the Congress to determine congressional intent, such flagrant disregard for the will of the people's elected Representatives was almost unknown.

What kind of example does the President of the United States set for the world when he borrows pages from the abhorrent doctrines of Hitler, Mussolini and Stalin in violation of both the intent of Congress and the constitutional oath which he is sworn to uphold?

No one will quarrel with the desirability in some cases of plant dispersal, but it is obnoxious to any true American when it becomes a fixed Government policy to force dispersal by such methods.

If the Government can capriciously force entire industries to move from one part of the country to another, then there is nothing to prevent the Government from employing the same methods to move entire segments of our population from one section of the country to another. Let that day arrive and the average American citizen will be no better off than a Soviet slave.

Resignation of Dr. Condon

EXTENSION OF REMARKS

OF

HON. RICHARD B. VAIL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. VAIL. Mr. Speaker, the announcement today of the resignation of Dr. Condon prompts the following comment:

JOINT STATEMENT BY CONGRESSMEN VELDE AND VAIL

We note with deep satisfaction the resignation of Dr. Edward U. Condon as Chief of the National Bureau of Standards. This separation has been too long delayed in the light of the wealth of documented material establishing Condon as a security risk, the term applied to him by the Committee on Un-American Activities of the Eightieth Congress, which was impeding in its investigation by the action of the President in impounding the FBI file recording his activities, notwithstanding almost unanimous passage of a House resolution requesting the surrender of said file.

The reasons assigned for his resignation and the commendatory letter of acceptance by the President are hardly consonant with a communication received by Congressman VELDE from Secretary of Commerce Sawyer under date of July 30, 1951, reading in part as follows:

"Absence from the city has delayed my reply to your letter of July 19, in which you request that my department consider the data submitted by you with a view to bringing the information to the attention of our loyalty board.

"As a matter of fact, some weeks ago I was sent some information with reference to Dr. Condon which I immediately turned over to my security officer, Col. Newman Smith, with instructions that it was to be carefully studied and if such course were justified turned over to the departmental loyalty board for consideration. I have asked Colonel Smith to review the speech made by the Honorable RICHARD B. VAIL was attached to your letter. I shall, of course, be willing to submit to that board any additional evidence now held by your committee bearing upon the question of Dr. Condon's loyalty, and I would appreciate receiving from you any information which you feel should be submitted to the loyalty board, or I will be glad to have my security officer contact you or your committee to that end."

We believe that the mutual expressions of Condon and President Truman represent an effort to cover up the real cause of separation which is made apparent by the foregoing. His resignation under fire is too significant to justify confidence in the assigned reasons.

Jesus, the Master Economist of All Times

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. SCHWABE. Mr. Speaker, I have just read a very interesting article in the Lookout of July 29, 1951, entitled "Earning More Than a Living," by A. B. Segur, president of A. B. Segur & Co., industrial engineers of Oak Park, Ill. In this article, Mr. Segur very carefully reasons from premises to his conclusion that Jesus is the master economist of all times. This is a worthy exposition and challenges our serious attention during these times when there are so many fly-by-night, would-be economists attempting to lead us astray and get us to follow some wild economic theory.

The article follows:

In our colleges there is a study known as economics which, briefly stated, is the science of making a living. We claim to have learned a great deal about economics in the last 100 years. Whole libraries are given over to the subject, and there are definite and fundamental rules or laws of economics.

After we have studied all the books in these libraries and listened to profound professors teach lengthy and complicated courses in economics and then read Matthew, Mark, Luke, and John, we discover that every one of the laws of economics has been definitely stated and fully explained by Jesus, the great Teacher. There is nothing about the science of making a living that Jesus did not explore thoroughly with His disciples. He is the master economist of all time.

Not only did He state these fundamental laws, He illustrated them in a way all can understand. As an example, let us consider just one of His laws of economics, or of making a living.

If we ask any group of 10 young people, "What do you plan to do when you finish school, and why?" at least 8 of the 10 will answer that they are planning courses that will yield large returns in money, honor, or coveted position. Perhaps one or two will explain that they are seeking the greatest opportunity for service to their fellow man. If the 10 are observed throughout their lives, it almost certainly will be found that those who receive the greatest rewards, including the most money, are those who think in terms of service rather than in terms of material return. They derive more happiness, as well as more fame, money, and other benefits that life has to offer.

What does Jesus have to say about this principle of economics? We read in Matthew 20: 28, 27, that "Whosoever will be great among you, let him be your minister; and whosoever will be chief among you, let him be your servant." This law of economics is repeated and defined and illustrated again and again in the four Gospels.

In Matthew 25: 14-19 it is illustrated by the parable of the talents, repeated in Luke 19: 12-26. Jesus showed that a man is rewarded in accordance with his success in discharging his responsibilities. The man in the parable who did a good job was well paid. The man who did not properly discharge his responsibilities was condemned. There was no reward for the man who rendered no service.

Jesus was not content with these statements, although they are so clear that anyone can understand them. In part of the

lesson text for August 5, Luke 12: 13-21. He uses a different approach to the same subject. This time it is a rich farmer, a moneyed man who might be counted as a success in the eyes of the world, who is the failure. Note that this man was not condemned because he had much wealth. He failed because he did not discharge the responsibility that went with that wealth. He had more than he needed, but it did not occur to him to devote his surplus to the benefit of his fellow men. He was incompetent; a failure. The judgment passed upon him is identical with that passed upon the man who failed, as told in the parable of the talents. He had rendered no service, therefore, there was no place for him in the scheme of things relating to the kingdom of heaven.

But even the parables were not enough. Jesus dramatized His teaching in regard to this single law of economics when, during the tender moments just before the last supper, He washed His disciples' feet.

Paul, in his writings, simply tells us how to put into use these teachings of Jesus. We read in the second portion of Scripture given for the study of next Sunday's lesson, II Thessalonians III: 7-10, how the great apostle applied this principle of economics, which Jesus had taught. Said he: "For even when we were with you, this we commanded you, that if any would not work, neither should he eat." Paul's point was this: I earned my food; I paid my way. I was a good example of what a Christian ought to be and do.

Now let us return to the 10 young people who set out to make their way through life, as mentioned earlier. Some of them will think, as many people do, that the success of Dr. Ivy in discovering new drugs to cure cancer, of Edison in inventing the electric light, of Steinmetz in the development of alternating current motors, of Fulton in devising the steamboat, of David Livingstone in the exploration of Africa, and of other notable men and women is attributable to the fact that they had exceptional ability and opportunity. Not so. As we become acquainted with successful people we learn that they generally are quite ordinary folks. They recognize that they have a responsibility, that there is some great duty that means more to them than life itself. Time and effort mean nothing as they pour their very lives into their work. And then, because they spend more time and more effort than others, they emerge as more successful than others.

On the other hand, we read about racketeers and gamblers, along with those who corrupt their office and betray public trust. They operate under the fallacy, which is directly opposed to the fundamental law of economics taught by Jesus, that they can get something for nothing. This fallacy motivates the gambler, the thief, the grafter, the crook—and while it may lead to temporary affluence and power, its inevitable end is failure.

But let us not blame only those who are branded as criminals. They are at fault, but unless there were those who wanted something for nothing at gambling, or who wanted to violate the laws of society under the assumption that they are not to be restrained as others are restrained, there would not be any place for them.

Broadening our view, let us look to the recent history of all the totalitarian movements—fascism, nazism, communism. Back of every such movement are people who feel that, through their leaders or through their systems, rewards can be obtained without responsibility. They seek to avoid individual responsibility, and thus they lose their freedom.

In our own country there may be many things about government that are objectionable, but the responsibility rests with the

individual. If he can be educated to look first to the discharge of responsibility and then to the rewards, we need have no fear of the future. The laws of economics taught by Jesus never have failed, nor will they ever fail.

As for our individual hopes and aspirations, as we face the subject of making more than a living out of this life, let us take courage in the fact that the opportunities offered by this old world are not exhausted. Instead, there are thousands of great opportunities yet to be discovered and developed. The future will bestow its rewards upon those who look first to their responsibilities toward their fellow men—those who decide that to be great is to be servant of their fellow men, diligent, purposeful, persistent.

Every good farmer knows that stored wheat is likely to be eaten up by weevils. Storage is both dangerous and expensive. And in the industrial field we recognize many abandoned manufacturing plants that once represented prosperous organizations, but the owners attempted to take their ease, to live off the past, to rest on their oars, with the result that their plants got behind the times, their assets disappeared. Individuals are like that. If an individual tries to keep his reserves in storage, bestowing his time and efforts upon himself and himself only, he eventually faces difficulties.

An individual, a corporation, a church, or a government succeeds only when the inevitable law of economics, the ten-talent principle enunciated by Jesus, is followed.

Young Men Fear Present Trend Toward Centralization of Power in National Government

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. SCHWABE. Mr. Speaker, a few days ago I received a letter from Mr. Lee Price, Jr., president of the United States Junior Chamber of Commerce, in which he states that—

Through their representatives in convention, a hundred and forty thousand thinking young men of America recently expressed themselves on a matter of concern to all of us.

Mr. Price enclosed with his letter a resolution adopted by the United States Junior Chamber of Commerce in convention assembled at Miami, Fla., June 8, 1951, which follows this introductory statement, and speaks for itself in most eloquent, patriotic, and forthright American language, that we all should be able to understand. Mr. Price says that this resolution expresses our belief in the subject and our fears for the loss of individual rights, and yes—eventually liberty itself.

This resolution clearly shows that our young men fear the present trend toward centralization of power in National Government, as clearly set forth in their resolution, as follows:

FEDERAL ENCROACHMENT

Whereas there exists in this Nation an undesirable trend toward the centralization of power in our National Government to the hurt, destruction, and detriment of State and local government; and

Whereas the usurpation of power by the Federal Government is inimical to the best interest of our people and of good government, Federal, State, and local, and will tend to ultimately place in jeopardy our American way of life; and

Whereas this trend has become further intensified and augmented by recent court decisions whereby the Federal Government has obtained ownership to public lands and lands adjacent to the shores of the coastal areas of the sovereign States of the Union, which rights and properties were heretofore recognized as being vested in the States by previous judicial decisions, treaties, and legislative enactments; and

Whereas it is the consensus of this convention that these decisions have established dangerous legal precedents rendering all States and subdivisions of local government vulnerable to the dangers of further nationalization of properties, both public and private, without compensation, including the material resources of coastal and submerged lands and including oils, minerals, marine animal and plant life. It is the further consensus of the convention that these decisions, in effect, destroy valuable legal precedent and legislative enactments, and that they obliterate certain treaties whereby one of the States of the Union was admitted to statehood; and

Whereas it is the consensus of this convention that national defense will benefit most and the American Nation will be made safer by continuing the development of our national resources under State and local control and through private enterprise; and

Whereas the only recourse now available to the States and persons so affected by these decisions is the enactment of legislation by the National Congress whereby the land and property so affected by said decisions will be by the Federal Government conveyed back to the States and persons heretofore recognized as being the owners of said property: Now, therefore, be it

Resolved by the United States Junior Chamber of Commerce in convention assembled in the city of Miami, Fla., on this the 8th day of June 1951, That the Congress of the United States be memorialized to forthwith and immediately enact suitable legislation to curb the existing trend toward nationalization of these properties and resources, and further that said legislation conveyed back to the States and persons heretofore recognized as the owners of said resources and properties, the said resources and properties affected by said decisions, be it further

Resolved, That the Congress be memorialized to otherwise enact legislation giving proper recognition to local and State governments and terminating the trend toward nationalization which now exists; be it further

Resolved, That a copy of this resolution be spread at large upon the minutes of this meeting, that a copy of same be forwarded to the President of the United States of America, the Supreme Court of the United States, to the President of the United States Senate, and to the Speaker of the House of Representatives.

Hungarian Deportations

EXTENSION OF REMARKS OF

HON. WILLIAM C. LANTAFF

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. LANTAFF. Mr. Speaker, since its advent to power the Communist regime

in Hungary, in the manner of all tyrannies, has engaged in constant aggression against its own people. Incapable of maintaining its authority under circumstances which would permit the free expression of the popular will, it has ruled from the very first by force and terror, by the systematic suppression of all human rights and freedoms, and with the intervention and support of the Soviet Union in derogation of the Hungarian people's independence. It is now employing the cruel device of deportations on a mass scale in order to crush even passive dissent and to frighten all elements of the population into active support of and participation in the Communist program.

I am gravely concerned at this tragedy which is taking place in Hungary. I cannot escape bitter depression at the thought of these thousands of helpless and innocent people—good people—who have been evicted from their homes, who have been forcibly removed to detention camps and other locations throughout the countryside, from which they may undergo still further deportation, and who have thus been deprived of all rights and liberties by a ruling minority unbouedly ruthless and despotic.

We here in this House have much to occupy our attention, and some of us may not have paused to consider the full extent and effects of this latest demonstration of Communist savagery. The expulsions began in Budapest a little over 2 months ago, and have since continued from that city and from other urban centers in Hungary. They are not aimed at any special group, but are directed at Catholics, Protestants, and Jews alike, and include the very young and the very old, the sick and the well. These thousands of Hungarians, who have been characterized by the Communist authorities as undesirable, were evicted from their homes on a few hours' notice. They were not told where they were going, and they did not know whether they might ever return. Those who may survive the shock of their uprooting, of forced labor, of separation from other family members and friends, and of other countless cruelties can only exist from day to day in total despair and with dark foreboding of their ultimate fate. Needless to say, this action of the Hungarian regime has intensified to a new pitch the state of fear which prevails in that unhappy country.

We here in America have reacted with deep abhorrence to these new violations of the rights of man. Our Government has already charged the Hungarian Communist regime with willfully and systematically violating the human-rights provisions of the Treaty of Peace, and has stated its intention of submitting evidence of these violations to the Secretary-General of the United Nations. The President and the Secretary of State in recent statements have denounced in the strongest terms the deportations being carried out by the Hungarian Government and have affirmed that the United States will also present in due course to the Secretary-General all available evidence on these acts which involve

the further wanton suppression of human rights and fundamental freedoms.

We must assuredly do all that we can to render effective our condemnation of these outrages by the Hungarian Communist regime and to check any further such assaults upon humanity. The time has long since passed when we could stand by silently while untold numbers of our fellow men are enslaved and murdered. Having fought two great wars within our lifetime which have involved the great issues of human rights and freedoms, we know that attacks on these principles anywhere may eventually threaten our own rights here at home and that a policy of systematic persecution on the part of any government is the rightful concern of all governments which believe in and practice respect for human rights and freedoms. Communism, like nazism, is a godless and inherently evil thing. It is a creeping menace to liberty, peace, and progress, and, as such, it must not be permitted to wield and extend its brutal power or one day it may engulf us all. Throughout their history the American people have been devoted to the proposition that every human being has inalienable rights and that he must not be arbitrarily deprived of these rights or of his liberty without just cause and due process of law. If we and the other free peoples of the world are to maintain our way of life, our self-respect, and our spiritual and moral integrity, we must be prepared to stand up and defend that proposition again and again until it is established firmly throughout the entire world and the ordinary people of any nation can go in peace about their daily work, free from fear and terror such as that which grips the people of Hungary.

I respectfully urge the Members of this House to support any action on the part of our Government which may be designed to expose Communist violence and oppression in Hungary and elsewhere and to check the barbarities which have outraged the conscience of civilized mankind and brought calamity to untold numbers of innocent and helpless human beings.

Administration Attempted To Write Rigid Economic Controls Into the Defense Production Act

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. SCHWABE. Mr. Speaker, a few days ago I received one of the most interesting letters I have received recently. It is from one who understands the American free-enterprise system, and pleads for the protection of the principles of this system which are, or should be, precious to every American. It is an intelligent exposition of the folly and the fallacy of the New Deal program of price controls, roll-backs, and other

numerous phases of the New Deal program of planned economy which were attempted to be written into the Defense Production Act, recently passed by Congress. The act as it passed apparently did not place the President, his New Deal advisers, and those who are ever found trying to take unfair advantage of someone else, in the position they doubtlessly coveted. The printed bill which was submitted to the House of Representatives for consideration, contained 84 pages, and it dealt with numerous subjects, although some of them were rather remotely connected with the defense program. Read what this clear-thinking American has to say about the way the administration attempted to write rigid economic controls into the Defense Production Act:

We are alarmed by the tremendous propaganda campaign sponsored by the administration in an effort to write rigid economic controls into the Defense Production Act. Apparently, the Democratic organization is attempting to deluge Congress with protests on high prices, and labor leaders are exhorting members of unions to contact their political representatives demanding a price roll-back.

The party line seems to be directed at meat prices, but it is apparent that the real objective is to roll back prices on many manufactured commodities, and force strict economic controls on industry for an indefinite period.

No mention is made of excessive Government spending or inflationary fiscal policies. Neither is there any suggestion of rolling back wages. Obviously, the basic cost of any commodity or service is wages, and we all know there is a definite relativity between increases in wage rates and end prices.

We believe that prices on manufactured products generally have been stabilized under the General Ceiling Price Regulation effective in January 1951. Since that time, prices on many commodities have declined, and the economic law of supply and demand will control prices much more effectively than any artificial Government control.

In our judgment if all prices on manufactured products were rolled back to pre-Korea levels, the cost of living would not be materially reduced, and the loss of tax revenue would necessitate new taxes with the net result of reducing the purchasing power of the average worker.

It may seem dangerously premature to talk of eliminating emergency Government controls while all-out war is still an imminent possibility. However, such controls can undermine our economy, and if the Russian Communists can force us to maintain indefinitely a rigid system of Government controls, they will have won a tremendous victory.

The suggested controls under the Defense Production Act would surely chisel at the foundation of our normal economic system and so long as we have these controls many of our key business decisions will be made in Washington bureaus rather than by businessmen based on sound economic principles.

As we see it, our problem is to increase our capacity to produce, so that we can carry both a major military program and an expanding civilian economy. With the increased production facilities which will be available in many industries in the coming months, we believe this goal is attainable, especially if we are reasonably free from unwarranted restrictions and controls.

We believe that you are in agreement with our philosophy, and we hope that you will use your influence to protect the principles of our free enterprise system, which are precious to every American.

Democratic Lawyer Believes Truman Administration Is Deliberately Attempting To Destroy American Way of Life Through Excessive Taxation

**EXTENSION OF REMARKS
OF**

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. SCHWABE. Mr. Speaker, I am just in receipt of a most interesting letter from a prominent lawyer of the State of Oklahoma, who says:

I have been a Democrat all my life, but I am not a Socialist. I believe in our American institutions, and I am intensely interested in their preservation, but I am convinced that the socialistic administrations of Roosevelt and Truman have done more to undermine and to destroy them than have all of the evil acts of all of their predecessors combined.

In the next paragraph of the letter, this Oklahoma attorney says that the Truman administration is deliberately attempting to destroy the American way of life through excessive taxation.

The statements in this letter are worthy of the most serious consideration and concern of the people of this country. The author of this letter does not reside in my congressional district. He resides in one of the strongest Democratic sections of our State. His sentiments are those which are expressed in the letters of many others who write similarly on this and other controversial issues of the day. The entire letter, which is dated July 19, 1951, omitting the salutation and signature, follows:

I sincerely hope you can see your way clear to vote against the proposed increase of 12½ percent in income taxes which is now under consideration.

You know and I know that this increase is not necessary if the Government will just curtail its extravagant expenditures for non-military purposes and foreign aid. This can be done without in the least interfering with our preparedness program.

Taxes are already so high that there is no longer any point in trying to increase one's income, and the increase in taxation now contemplated will serve to completely destroy all incentive to individual effort. One hears this on every hand.

When the amendment authorizing the levy and collection of taxes on incomes was first proposed, its proponents ridiculed the idea that any administration would ever be so utterly foolish as to levy a tax of 10 percent on incomes, but we now find ourselves facing a proposed levy in excess of 90 percent on incomes in the higher brackets, and this is confiscation.

If any relief from this unjustified and unbearable burden is to be expected, it is very clear that it must come from Congress and not from the socialistic administration now in charge of our Government, and it is to you gentlemen that we appeal.

I have been a Democrat all my life, but I am not a Socialist. I believe in our American institutions, and I am intensely interested in their preservation, but I am convinced that the socialistic administrations of Roosevelt and Truman have done more to undermine and to destroy them than have all of the evil acts of their predecessors combined.

Truly, the power to tax is the power to destroy, and we firmly believe that the Truman administration is bent, not on the preservation of the American way of life, but that it has deliberately set about to destroy that way of life through excessive taxation, and that its aim is to erect a socialistic state on the ruins of the Republic established by our fathers.

Men of your caliber surely see where we are headed and must realize the ever increasing momentum with which we are drawing toward the destruction of all that has made America worth while, and I appeal to you to forget politics and to vote against this iniquitous measure and to thereby—to some extent at least—aid in curbing the reckless and needless extravagances of an administration which has so clearly demonstrated that it has neither the desire nor the inclination to curb itself.

Mutual Security Bill

**EXTENSION OF REMARKS
OF**

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following statement presented to the House Committee on Foreign Affairs during recent hearings on the mutual security bill by Mr. Cass Canfield, a distinguished American publisher:

My name is Cass Canfield. My address is 49 East Thirty-third Street, New York, N. Y. I am a vice president and a member of the executive council of United World Federalists, Inc., an organization devoted to supporting and strengthening the United Nations. I am also chairman of the board of the publishing house of Harper & Bros., New York.

I am appearing before your committee today to testify in support of a feature of the mutual security proposals which are before you—specifically the program of economic aid to underdeveloped areas, commonly known as the point 4 program.

There is tremendous support for this program all over the country. As a publisher I come in frequent contact with the thinking of the American people, and I can assure you that in the whole field of American foreign policy no subject excites the imagination as greatly as this does, and no subject is quite as popular with the reading public or the lecture-attending public. People see in this bold, new program a truly great approach which makes clear to the world America's peaceful and benevolent intentions and at the same time demonstrates dramatically those productive and technological skills which make us a great and formidable power.

For these reasons, I am a little dismayed that in the present bill the point 4 features are not clearly labeled as such, but are scattered throughout the bill in various places. The program which is carried on by the Technical Cooperation Administration in the State Department in cooperation with other departments of the Government, is certainly point 4. And so also is a good deal of the ECA program in southeast Asia and its program in the dependent overseas territories of Africa. According to the report of the International Development Advisory Board, all of these activities together accounted for the expenditure of nearly \$300,000,000 during the fiscal

year which has just ended. ECA programs in the underdeveloped areas differ somewhat from TCA work in that ECA supplies some capital grants and materials as well as technicians. But these are all point 4 in the broadest sense. The excellent work which is done by the Institute for Inter-American Affairs is also point 4, as we use the word, and it has been carried on most successfully for many years. It is now under the supervision of TCA.

All of these point 4 programs have proven themselves. Dollar for dollar they have been the very best bargain that the United States could ever obtain. The few dollars we spend for technicians who show people how to increase their own wheat crop, might cost no more than one shipload of wheat, yet this investment returns dividends year after year. It not only frees the United States of the need to make contributions which it might otherwise make—it earns for us the lasting good will of the people to whom we have given the very best kind of help, the help which enables them to help themselves. And it helps to make them strong in a very real sense; strong in materials, strong in health, and strong in self-respect, so that they are the more effective allies in peace or in war.

There is still another avenue of point 4 work which we feel is most useful. That is the technical assistance which is made possible through grants to the United Nations and its specialized agencies. The skills which are so desperately needed in underdeveloped areas are not the very highly trained aptitudes of Detroit, but are rather simple carpentry, farming, and manufacturing methods which abound in many countries. We do not have to use our own valuable manpower to teach these skills. The use of a simple plow can be taught to an Indian by an Italian as well as by an American. And when we make these gifts through the United Nations we are making not one friend but many. We are bringing together nationals of many countries in a joint venture which will cement the bonds of all of our countries. We are avoiding the accusation of seeking to dominate the world. And above all, we are helping the United Nations to grow into the strong, important, and useful agency for world law that we all want it to become.

I hope that when the present bill is disposed of this Congress will have time and opportunity to return to the point 4 proposal and to discuss it again in the light of the great proposals which were made in the report, *Partners in Progress*, by the International Development Advisory Board. I refer particularly to the proposals for an International Development Authority and an International Finance Corporation, both of which would be related to the International Bank for Reconstruction and Development, which is a U. N. agency. These are long-range programs, and the basic legislation for them must be started now if it is to bear fruit within the next few years.

I would like to point out also that in addition to the scientific and professional personnel which the point 4 programs are now using overseas, the technical assistance work could be well augmented by working farmers, shop and mill workers, and by other typical United States citizens. These people could participate actively in the community life in other nations and teach the magnificent skills that have made possible the high living standards which we have in the United States.

I have not testified on the other portions of the bill, because ours is a limited purpose organization. I would like to say in passing, however, that in the present unsettled international scene, the United States has no choice but to build strong defenses and to aid in building the defenses, economically and militarily, of the entire free world. We

feel, however, that at the same time that we build our armaments, we should present to the entire world a proposal for what President Truman has called "foolproof" universal disarmament under world law. We must confer upon the U. N. additional powers which are carefully limited and defined but which are adequate to prevent aggression and maintain peace.

I say that we should urge this at the present time for several reasons. First, even if these proposals are not accepted, the fact of making them in all sincerity will demonstrate to the entire world that the United States is truly a peace power and the United States is interested in abolishing war. It will be of tremendous value to us in winning the confidence and support of people everywhere. It will provide substance to the message of the Voice of America and greatly heighten its effectiveness. The United States has during the last 5 years, carried on a benevolent and altruistic program of foreign aid which is without rival in history. We have labored constantly for peace, and yet the Russians have succeeded in many parts of the world in convincing people that our intentions are warlike. It is urgently important that we make the world realize that the United States, while building strength, is seeking peace and is planning foundations upon which permanent peace can be built.

I also urge this course because bills like the one we are discussing today, involving the authorization of billions of dollars in expenditures, make it plain that until some method of permanent world peace is devised, the citizens of this country, and indeed the citizens of every country in the world, will have to make tremendous sacrifices. The high American living standard which we now enjoy cannot indefinitely continue if larger and larger portions of our income must go to the tax collector. And yet until a really foolproof U. N. peace plan is adopted, we cannot afford to drop our guard for a single instant. This is a tremendous dilemma to which I hope the members of this committee will devote their early attention.

Red Cross United Fund

EXTENSION OF REMARKS OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. GRANAHAN. Mr. Speaker, the American Red Cross is a great, humanitarian organization which has always had the respect and cooperation of all of our people, and the support of so many of our outstanding citizens.

At this time, however, the great humanitarian work of the American Red Cross is being endangered by the willfulness and dictatorial attitude of the national board, in their edict that the southeastern chapter of Pennsylvania covering the counties of Philadelphia, Montgomery, Chester, Bucks, and Delaware, disassociate itself from the United Fund. This edict is arbitrary and illogical and may cost the Red Cross many precious dollars in its forthcoming campaign. The fact that so many public-spirited citizens who have worked long and tirelessly for the Red Cross in both fund-raising and administration, have resigned in protest against the national

board's attitude is proof that there is something wrong in the relations between the top governing body and its regional affiliates. Certainly the men in a community know their own situation best, and it has been proven that the Red Cross has obtained more funds through the United Fund campaign among industries and business establishments than they received in the past through their individual drives. At a time when the Red Cross needs good public relations so badly and funds with which to carry out their important and vital activities, the arbitrary action taken by the national board can cause a breakdown in the second largest Red Cross unit in the country.

This action on the part of the national board has resulted in tender of resignation by the chairman of the southeastern chapter, Mr. Arthur C. Kaufman, one of our outstanding citizens in Philadelphia whose record of service to the Red Cross is well known. I am including herewith the letter of resignation submitted by Mr. Kaufman, which points up this problem and the problems presented in this situation:

AMERICAN RED CROSS,

Philadelphia, Pa., July 27, 1951.

To the Board of Directors, the Southeastern Chapter American Red Cross:

About 1 year ago I accepted the chairmanship of the southeastern chapter of the American Red Cross in an earnest endeavor to bring some order out of the chaos which then existed.

After having served on the board and the executive committee for a great many years—and having worked on many annual fund drives—I realized fully the immense task ahead, which could only be accomplished over a period of years.

During my tenure of office, with the help and cooperation of the staff, the executive committee and the board of directors, some progress has been made, although there is still much to be done to modernize and "democratize" the chapter if it is to serve the people of this area properly.

Here, as elsewhere in the United States of America, it should be recognized that many of the shortcomings of the Red Cross are because of the smugness and reactions by policies of the national body, which is most unfortunate in a charitable organization chartered by the Congress of the United States—and, as such, intended to serve all people of this country regardless of race, creed or color.

Obviously, any local chapter can go only so far in a broad approach to its problems when the guiding principles of the national organization are based on such narrow thinking as that voiced by a member of the board of governors who inquired recently whether I knew that "the Red Cross had done thus and so for 70 years."

The most recent of these manifestations of the bigoted policy of the National Red Cross has been its arbitrary ruling that the southeastern chapter (the second largest in America) must withdraw from the local United Fund. This manifesto was issued with a complete disregard for the wishes of the people of this community who have unequivocally voiced their desire to give their money in a single annual drive. Business, industry, and the recognized representatives of organized labor have made it crystal clear that this is the only way they intend to support charitable organizations, including the Red Cross, and all Philadelphia newspapers have enthusiastically supported the plan.

Because of this, the executive committee and board of directors of the southeastern chapter of the American Red Cross almost unanimously voted to join United Fund in its 1951 drive, which was most successful. In this joint endeavor every step was taken to protect the best interests of the Red Cross. Notwithstanding our sincere efforts, the chapter has been publicly rebuked and humiliated by the national body.

As one who, in common with many other members of our board, gives freely of his time and efforts in behalf of civic and charitable enterprises, we feel this was entirely uncalled for, and the many letters we have received from businessmen, women, industrial leaders, and Philadelphia labor organizations, as well as the editorials in the Philadelphia newspapers, have confirmed our judgment in this matter. Further, we do not believe it is possible to carry on successfully the splendid and necessary work of the Red Cross in this area without the full support of all the people.

And, finally, we are convinced that unless the Congress or the people of the United States bring about a reorganization of the National Red Cross toward the end that it be an organization of the people—instead of following the dictates of a traditional minority—it cannot properly carry on its work as "the greatest mother of them all."

So, for these reasons, it is with profound regret that I find it necessary to tender my resignation as chairman of the southeastern chapter of the American Red Cross, and I hereby do so, same to take effect at the convenience of the board of directors.

In retiring as chapter chairman, I express my wholehearted appreciation to the fine members of the staff, to the board of directors, and to the members of the executive committee who have so sincerely given of their time and energies in my support.

ARTHUR C. KAUFMANN.

Mr. Speaker, the national board has been urged to reconsider its attitude and take remedial action to avert the spread of the situation, which threatens to become general in all parts of the country and which would unnecessarily hamper the great humanitarian work of the American Red Cross, which is indeed a matter of national interest and one which should engage our particular attention.

Civil Defense

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and newspaper articles:

LEVITTOWN CIVIL DEFENSE CORPS,
Levittown, N. Y., August 8, 1951.
Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN ROGERS: This letter is deliberately addressed by me as director of civil defense for Levittown, Long Island, N. Y., to a Member of Congress from another State. My reason for writing to you is that I wish to stress a national challenge and its reflection on the local level.

In Congress the Members are constantly confronted with the problems of creating and

maintaining a system of civil defense which covers the Nation. Here in Levittown we are, perhaps, somewhat removed from the over-all strategic level of Capitol Hill—but, by the same token, Capitol Hill is removed from our immediate province.

Civil defense in Levittown, and in thousands of communities throughout the country, is a community endeavor. It has called forth the best efforts of the best elements of the community. But, even in our almost 100 percent support of civil defense here, we can use help.

Specifically, we respectfully urge the Members of Congress to remember that they are leaders of their own communities' civil defense efforts. We ask the Members of Congress to aid the work of their local civil defense groups, to lend the weight of their office and of their prestige. You, as individuals, can help your civil defense in your own community, by urging people to join, by using your influence with them to enlist them in the community effort.

It would be nice to feel that, with all the work to be done by Congress, this task could get on without you. Personally, however, I think it is even nicer to feel that each and every Congressman can and should play such a key role in his own community's civil defense.

I write this letter, not as one of your constituents, but rather because of your past record of civic vigilance and understanding. Please pass on to your colleagues this sincere request for their support "on the old home grounds."

Respectfully yours,

[From the Levittown (N. Y.) Tribune of August 2, 1951]

AROUND THE GREEN
(By R. E. A.)

AN OPEN LETTER

To the honorable J. RUSSELL SPRAGUE,
County Executive, Mineola, N. Y.

We note the appointment this week of Cyril J. Ryan to the position of civil defense director for Nassau County. It is reassuring to note that the new director comes to his post with a wealth of previous experience as leader of Freepart's CD efforts during World War II and again during the present emergency.

We should like to call your attention to the director of this community's civil defense program, Robert E. Lackey. He has so ably organized the Levittown CD that many in this community are confident that he could be of inestimable value as an aide to the new county director.

Guiding the civil defense program for Levittown, a community of 60,000 people, has been a challenge which Bob Lackey has met successfully. His experiences here, plus his natural ability for creating confidence and respect among his staff workers, lead us to suggest that his services be utilized for the common good of the county.

Sincerely yours,

R. E. A.

[From Newsday of July 30, 1951]

ONE-MAN DRIVE BOOMS LACKEY FOR BIG CD POST

LEVITTOWN.—A one-man effort to boom Levittown's CD director for the top CD job in the country was launched last night by a prominent Levittown businessman.

Harry Diamond of the Levittown Exchange Club and Chamber of Commerce, and assistant auxiliary police chief, predicted that in a matter of days a grateful community will flood County Executive Sprague's desk with written recommendations for Robert G. Lackey to fill the post vacated by Lt. Gen. Cornelius Wickersham last month.

Wickersham, while in office, was lavish in his praise of the blinded veteran who in 12 months' time has set up what has been called the best local CD program in the country. Lackey was originally appointed to his present post by Wickersham, who had been advised of Lackey's coordinating ability by Sprague.

Said Diamond last night, "Lackey's popularity transcends politics. Every organization is back of him. Lackey is the type of man who inspires confidence—he is honest, sincere, has an excellent memory, and a terrific faculty for coordinating."

Diamond added that "considering the job that Bob Lackey has done—unparalleled by any other local director"—it would seem "more than wise and profitable" for the county to appoint Lackey to the post.

"Aunt" Jennie Wanzor, Republican committeewoman for the Levittown area, when told of the expected flood declared herself "1,000 percent behind Bob Lackey."

Vocational Training for Indians

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BERRY. Mr. Speaker, under unanimous consent, I include in the RECORD the following editorial published in the Mobridge (S. Dak.) Tribune under date of August 2:

The National Congress of American Indians, in annual convention last week at St. Paul, adopted resolutions asking more vocational training for Indians in high school, more adult education on reservations, and scholarships for outstanding Indian students. These requests are logical, and fit in with bills which West River Congressman E. Y. BERRY has introduced to make benefits like rights under the GI bill available for the Sioux. Representative BERRY has lived on Standing Rock Reservation for many years as lawyer and newspaperman, and is offering the best approach to the Indian problem that has appeared.

While United States Exhausts Its Resources, the Kremlin Drives for Conquest of Remaining Areas With Undeveloped Resources

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Arnold C. Schumacher from Economic Trend Line Studies, a weekly letter of economic analysis:

MINERAL RESOURCES, THE BLUE CHIPS IN THE INTERNATIONAL POKER GAME

For almost 6 years the world has lived in an atmosphere of growing tension between two major power blocs. The Soviet Union, together with its satellites, has shown every

intention of aggression, either indirectly by promoting unrest or by direct military action. The fighting in Korea is supported primarily by the Soviet Union and the United States as one test in the struggle against Communist imperialism. There is every indication that this world tension will continue for many years, and the danger is always present that it may explode into a full-scale world war.

Modern warfare is a contest, the outcome of which depends mainly on access to raw materials and productive capacity. Individual nations, when faced with invasion, may put up a heroic defense of their homeland and offset, to some degree, the superior equipment of their enemies. England and Russia were two prime examples of this type of fighting in World War II. However, in the long run, it is still superiority in weapons and resources which decides victory. The will to resist is no substitute for planes, tanks, and guns; and if the Axis Powers would have had access to the rich resources of the Western Hemisphere and Africa, in all probability England and Russia would have gone down to defeat in World War II.

Whether the present struggle is decided in future years by a relatively peaceful process of attrition or by another great war, the final victor will be that group of nations which controls the advantage in raw materials. The products of modern technology depend on a rich supply of minerals. Processing and manufacturing capacity is of no use without them, and with it processing and manufacturing plants can be built. Therefore, it is very important that the United States and other countries outside the Russian orbit, which are trying to build a united front against communism, keep the advantage which they now have in mineral resources.

The mineral resources of the world can be divided into seven zones for purposes of analysis. The strategic value of these areas vary greatly, and essentially, they are the chips in the present international poker game.

Zone I The Western Hemisphere, North and South America. This area is the richest storehouse of minerals in the world and contains the world's principal supplies of copper, coal, iron, lead, nickel, petroleum, sulfur, phosphates, antimony, bauxite, fluor spar, and zinc. These two continents also have the greatest industrial capacity and the largest pool of technology and skill of any area of comparable size. The great oceanic and Arctic barriers serve as a magnificent natural protection against invasion by a foreign enemy.

Zone II Australia, South Pacific, and New Zealand. This region has had a long tradition of ties with the Anglo-American culture and contains important sources of lead and zinc as well as lesser supplies of nickel, copper, chromite, tin, and uranium.

Zone III British Isles, Spain, Portugal, and Africa south of the equator. Because of rich and undeveloped resources in the southern half of Africa, this area is probably the most vital to the Western Hemisphere. That portion of Africa which lies south of the Sahara Desert supports the world's largest chromite and uranium production. It is the heartland of diamonds, cobalt, tantalite, and columbite and contains important deposits of manganese, tin, copper, mica, graphite, platinum, and antimony.

Zone IV. Western Europe, the Scandinavian countries, and northern Africa (except Egypt). This region is rich in coking coal, cobalt, potash, mercury, and iron ore. It also has the greatest concentration of skilled labor and manufacturing capacity of any area outside of North America.

Zone V. Arabia, Egypt, Iran, and Iraq. Contrary to popular impressions, this area is not as vital as certain others in the defense of the West. The Near East's only important

mineral resource is petroleum, and while these countries play an important role as the oil barrel for Europe, their value is otherwise limited. Some reserves of manganese and sulfur are present, but these are not significant in the world picture.

Zone VI. India, Indochina, Malay States, Dutch East Indies, Philippine Islands, and Japan. Southeastern Asia, together with Japan and the Philippines, form a heterogeneous mixture of cultures and peoples, characterized by low living standards and seething political unrest. This zone is the world heartland of tin and natural-rubber production. Important reserves of petroleum, chrome, manganese, and bauxite are also present. While the region is important in the world mineral picture, it is not vital to the West, and it presents serious political management difficulties.

Zone VII. U. S. S. R., China, Poland, Rumania, Czechoslovakia, and Manchuria. The Soviet sphere is well supplied with antimony, chrome, manganese, nickel, phosphates, potash, platinum, and bauxite. Iron ores not already being used are believed to be of low grade and poorly located. It does not seem probable that the area contains sufficient known quantities of such vital minerals as petroleum, copper, lead, and zinc to support a prolonged global war.

The following tabulation shows the latest estimates of mineral resources, as a percentage of world total, located in each of the seven zones outlined above. It will be noted that zone three provides the greatest supplement to Western Hemisphere resources.

Percentages of world total mineral resources

	Western Hemisphere	Australia, South Pacific	British Isles, Spain, and South Africa	Western Europe and Scandinavian countries	Arabia, Egypt, and Iran	India, southeast Asia, Philippines and Japan	Soviet sphere

Source: Engineering and Mining Journal, June 1951.

CONCLUSION

Serious deficiencies in the Western Hemisphere are confined to chromite, diamonds, manganese, tin, cobalt, and tungsten. Of these, adequate supplements are available from zone three (mainly southern Africa) in diamonds, cobalt, chromite, and manganese. Substantial additions of tin and tungsten are also available. If the Soviet Union should gain control of zones four and five the Communist bloc would increase its mineral position enormously. Such an acquisition would greatly alleviate shortages of petroleum, iron ore, copper, zinc, and steel-making capacity. If, by chance, the Communist coalition should acquire the resources of the Middle East, Western Europe, and Africa, then they would have an advantage over the rest of the world and very possibly realize plans for world domination.

The United States in future years will be forced to rely to an increasing extent on foreign sources of minerals in order to keep its

huge manufacturing capacity in operation. Several countries which can export large quantities of raw materials to this Nation suffer from unstable political systems and undeveloped economies. It is of prime importance that the United States take whatever action is necessary to help these countries realize their potential wealth and see to it that the returns are used to help raise living standards in backward areas. The famous so-called point 4 of President Truman has this as its stated objective. However, much greater reliance should be placed on getting private capital to do the job. Adequate guarantees of protection of property and proper agreements on the distribution of profits should encourage private investment abroad, and this would remove a part of the burden from the American taxpayer and provide efficient development.

The Issue Is Not TV, But Fair Play

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 10, 1951

Mr. KEFAUVER. Mr. President, in accordance with the permission granted during the debate today, I present for printing in the RECORD the article entitled "The Issue Is Not TV," written by Telford Taylor.

The article is as follows:

THE ISSUE IS NOT TV, BUT FAIR PLAY—TELEVISION IS ONLY THE MEDIUM; THE NEED IS FOR HIGHER STANDARDS IN CONGRESSIONAL HEARINGS

(By Telford Taylor)

Some friends of mine have vacationed for many years in Maine at the home of a picturesque and elderly resident who sets his face sternly against all intrusions of the machine age. Perennially inconvenienced by the lack of a telephone, my friends recently obtained his grudging consent to install one. A few days later they discovered the old gentleman hopping excitedly in front of the theretofore hated instrument and shouting into it, no doubt addressing some equally venerable crony. "By gum, Elisha, this is the coming thing!"

Ever since the opening television broadcasts of the Senate crime hearings in New York City, most of the American public has found itself in the same situation as the Maine gaffer. Television is not merely Arthur Godfrey and Milton Berle and Howdy Doody. It is not only the entire gamut—from excellent to execrable—of "entertainment." It is, essentially, a device which enables multitudes to view and hear, from any distance, happenings and occasions of the most diverse description. This is the primary lesson of the Senate crime hearings, so far as concerns television.

It is a lesson that should have been learned much sooner. This is not the first time that a public event has scored a hit on television. Last fall, telecasts of the United Nations sessions on the Korean question aroused intense public interest and much comment in the press. Nor was the crime investigation the first dramatic congressional inquiry to be televised. As long ago as 1948 the House Un-American Activities Committee hearings involving Alger Hiss and Whittaker Chambers were watched on television.

In large part, the terrific impact of the New York crime telecasts derived from the

cumulative conditioning of the television public which had thus already been accomplished. The crime hearings, however, seem to have caught the rhythmic moment and precipitated full awareness of the almost boundless opportunities inherent in television communication.

But excitement over the opportunities must not be allowed to obscure the risks and responsibilities. Did the televising of the Kefauver hearings manifest a valuable new ingredient of democratic government? Or did it, rather, exploit and aggravate the sensational features which all too frequently disfigure congressional investigations? What about the rights of the witnesses who were haled before the committee and subjected to the heat, glare, and public exposure of news reels and television in addition to the barrage of questions from the committee members and counsel? These and other problems have aroused grave concern and should be settled by debate rather than default.

In addition, there is the question whether governmental proceedings other than congressional investigations will soon become targets of the television camera. Shortly after the conclusion of the New York crime hearings, great controversy arose in New York City over proposals to televise the city council finance committee's hearings on an increase in the sales tax. An anti-sales tax citizens' committee asserted that "a real public hearing today means that the public is entitled to see it on a television screen."

Televising of Senate and House sessions have been publicly urged, but for the time being this does not seem to be a probability. And so far no one has seriously suggested televising court proceedings. These possibilities must be kept in mind to check the general soundness of one's conclusions, but for the moment the propriety of televising congressional investigations is the issue on the floor.

In approaching this question, the historical origins and constitutional basis of congressional investigations must not be overlooked. By nature, the investigative power is part of the process of legislative decision, and its main purpose is to furnish the legislators with information necessary to a considered decision. Nearly a century ago Judge Daly, of the New York Court of Appeals, described the investigative power as extending to "any matter affecting the public interest upon which it may be important that the legislature—should have exact information, and in respect to which it would be competent for it to legislate. The right to pass laws necessarily implies the right to obtain information upon any matter which may become the subject of a law." And in the exercise of this right, the power of the legislature "to compel witnesses to appear and testify before its committees, and to punish for disobedience" is a necessary concomitant.

The purpose of the Kefauver hearings, accordingly, was not to decide whether Frank Costello or any other person had been guilty of a crime. The facts disclosed by the investigation may, indeed, bear on such matters, but the committee's authority under the Senate resolution which established it is to study "whether organized crime utilizes the facilities of interstate commerce . . . for the development of corrupting influences in violation of the laws of the United States or of the laws of any State," and on the basis of its study to bring before the Senate "such recommendations as to necessary legislation as it may deem advisable."

It is fundamental, therefore, that neither Costello nor any other witness was on trial and that the hearings were in no sense a judicial proceeding. Yet, indubitably, thousands of people who read the newspapers or watched the television screen assumed or concluded that the hearings indeed consti-

tuted a trial. Even journalistic comment on the hearings has been replete with references to the trial, court attendants and other verbiage suggestive of judicial proceedings.

These misunderstandings, indeed, are the basis of one of the objections most strongly raised against televising the hearings. It is argued that television gave wide currency to the erroneous notion that the guilt or innocence of the witness was being adjudicated.

But is television the culprit here? Nearly every well-publicized congressional inquiry, where the conduct of individuals is scrutinized for its bearing on questions of legislative policy, has precipitated the same confusion. One need only recall the public reaction to disclosures about the transactions of Charles E. Mitchell, Albert H. Wiggin, the Van Sweringen brothers, and other leading financiers who were grilled by Ferdinand Pecora in the Senate banking investigation of 1933-34.

If misunderstanding arises, to be sure, television will spread it; but if action is taken to correct misunderstanding, television will spread that, too. Rather than sacrifice the benefits of public enlightenment, to which television can contribute so effectively, it would seem wiser to turn the advent of television into an occasion for improving congressional committee procedures and clarifying their nature and purpose in the mind of the public.

Another argument is that televising a witness' face and behavior in the witness chair violates his right to privacy. Under the laws of New York and other States, an individual is protected against unauthorized publication of a person's appearance and testimony in official public proceedings.

A witness in such hearings may refuse to divulge information which bears no reasonable relation to the object of the proceeding. But if he has knowledge of relevant facts, what he has to say and his manner of saying it are subject to official and public scrutiny.

Here again television presents no new basic issue. If a witness can be required to appear and testify on the record before a public sitting of the investigative body, if the record of his testimony may be printed and distributed in official reports and quoted in the press, and if—as has long been the practice—the press and newsreels may publicize his appearance visually as well as verbally, there is little logic in drawing the line this side of radio and television.

For the public character of legislative inquiries (unless security considerations require secrecy) is no superficial appendage, but highly functional. In judicial proceedings the public is admitted in order to minimize the risk of secretly corrupted Star Chamber proceedings. But the public is not expected to participate in or influence the actions of judge or jury; on the contrary, the utmost precautions are taken to insulate them from outside pressures. The legislative process in a democracy, by contrast, should be responsive, though not immediately submissive, to the expressions of the electorate.

The public, in short, is entitled not only to receive the information uncovered in legislative investigations but also to comment on it and supplement it by petitions and letters to the legislature or through other appropriate channels. Public participation is an organic part of the legislative process, and it is a necessary part of the lawmakers' burden that the lightning of the public's anger should beat about their heads and the sunshine of its smile warm their hearts. This is why maximum publicity, within the limits of decorum and fairness, is desirable.

But if the right to privacy is not a valid test, most assuredly fairness is. Even though congressional hearings are non-judicial, and guilt or innocence is not at stake, unproved charges made and incom-

plete facts divulged in the course of an investigative hearing can have the most disastrous effect on individual reputations. If the televising of hearings tends to make such hearings unfair, then either the televising should be foregone or steps taken to mitigate its dangerous effects.

There are, it seems to me, three principal respects in which television may tend to undermine the fairness and decorum of congressional investigations, unless preventive measures are adopted:

1. Excessive noise, light, heat, or other disruptive circumstances: Much has been said, and rightly, of the glare of lights and general disturbance which now accompanies an important congressional investigation. It is unfair to a witness to subject him to the interminable popping of flash bulbs, the heat and dazzle of klieg lights and the jumping about of innumerable photographers seeking new angles. Furthermore, these things make a Roman holiday of the occasion and degrade the lawmaking process.

It is not generally realized, however, that television is not the sole or even the principal offender. At the New York crime hearings the television cameras were placed in the corners of the room and were relatively unobtrusive. In large part, the glare and heat of lights and the flash bulbs and almost incessant motion were due to the newsreel and press photographers.

Nearly, if not quite all, of this disturbance is wholly unnecessary in a chamber which is properly equipped. At the United Nations, television cameras are located in glass booths, the room is brightly but not oppressively illuminated, and the camera work proceeds practically unnoticed. At the Nuremberg trials, newsreel and other cameras were likewise confined to corner booths and other inconspicuous vantage points, and their operation in no way detracted from the solemnity and quiet of the proceedings.

There is no reason why similar restrictions cannot be enforced in congressional hearings and every reason why they should be. Neither flash bulbs nor the clicking of cameras nor any moving about of press representatives within the "operational area" of the hearings should be permitted while the committee is in session. Installing the necessary booths will run up the costs. But if congressional hearings are important enough to be photographed and televised, they are important enough to justify the expense of preserving the proper atmosphere, in fairness both to the witnesses and to the legislative process itself.

If these precautions are observed, I do not think that "mike fright" or "stage fright" will discomfort many witnesses. It is, in any event, the inherent tension of public controversy that is the primary cause of nervousness. The microphone has become a standard item of furniture in large public rooms, and witnesses may legitimately be required to accommodate themselves to it. No doubt the witness who is poised and articulate, or who conveys an impression of simplicity and sincerity, will appear to best advantage with the public. But this is characteristic of all human intercourse, and these qualities are just as valuable before a jury as before the microphone or camera.

2. Incomplete presentation: One of the most serious hazards is that television may carry only the sensational parts of a hearing, or that the portions selected may distort or "slant" the presentation. This may occur by design, by accident, or by the pressure of commitments to broadcast other programs during the course of the hearings. Of course, this risk is not peculiar to television; it is also inherent in newspaper coverage. But variety in reporting techniques and editorial points of view is at least a mitigating factor in the case of the press. Moreover, even though scurrilous and one-sided journalism may be tolerated in our society, these

qualities cannot be allowed to pervade the radio waves.

It is highly necessary, therefore, that television broadcasts of congressional investigative hearings be complete, or if unavoidable circumstances necessitate selection, that the most scrupulous fairness be exercised so that the nature of the selection does not work to the damage of any individual or to the prejudice of a fair presentation of the issues. Congressional committees should not permit broadcasts of their hearings without advance plans and assurances that satisfy these standards.

3. Commercial sponsorship: Only one of the national networks which carried the New York crime hearings obtained a commercial sponsor—Time magazine—for these programs. The propriety of allowing a private concern to exploit for commercial advertising a governmental proceeding has since been much debated. For the defense it has been argued that sponsorship helps the networks meet the costs and thus encourages them to carry more of such events than would be the case if sponsorship were prohibited.

However, it may be doubted whether this would be the effect in the long run. Private concerns sponsor programs for advertising or good-will advantages. In the nature of things, they will seek to capitalize on the most "colorful" hearings or portions of a protracted hearing. If commercial sponsorship is permitted, the networks will come to depend on it, and the inevitable result will be selective coverage based on advertising considerations—the very outcome which it is vital to avoid.

Furthermore, one cannot overlook the possibility that a venal committee and an uninhibited advertiser might prostitute the investigative process and concoct a show to the political advantage of the one and the financial benefit of the other. And in any case, it would be most unfortunate if the determination whether or not to broadcast a governmental proceeding or a part of it should hang upon the advertising judgment of a commercial concern. Rather we should continue to enforce the public interest responsibilities of the networks, perhaps assisted by grants from nonprofit foundations, and eventually supplemented by the operations of noncommercial radio and television stations.

Nor is the question of taste a trivial one. It has been argued that advertising sponsorship of the KERAUVER telecasts was no more to be condemned than advertising in newspapers, the circulation of which was raised by coverage of the hearings. This overlooks the basic difference between use of the same general medium and direct sponsorship of the coverage itself, as if an advertiser bought and paid for the newspaper space in which the press accounts were carried.

It simply is not seemly that Presidential addresses, proceedings of Congress, and its constituent committees, or other official events should come to us "by courtesy of" soap, beer, or bubblegum, or even any less personal and more dignified commodity. All considerations lead to the conclusion that commercial sponsorship should not be permitted.

No doubt there are problems to be worked out in addition to those discussed above. Now that millions of people can be given a window through which to watch congressional investigations, it is high time that the general standards of procedure should be overhauled and raised, in the interests both of good legislation and fair play for individuals. Under proper safeguards, the televising of public hearings should be a highly beneficial thing, both in principle and in fact. The citizen's opportunity for direct contact with governmental proceedings has been greatly enhanced. If the opportunity is intelligently exploited, our democracy will be strongly reinforced.

**Needed: Freeway From the Holland Tunnel to the Bayonne Naval Base—
Defense Department and State of New Jersey Could Amortize the Cost**

**EXTENSION OF REMARKS
OF**

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. SIEMINSKI. Mr. Speaker, it was my intention to introduce an amendment on the floor of the House today to H. R. 4914, a bill to authorize certain construction at military and naval installations, and for other purposes.

My amendment was to provide about four million dollars for the construction of a desperately needed freeway from the Jersey side of the Holland Tunnel to the Bayonne Naval Base, a magnificent and vital Defense Department installation.

While the House sat in Committee I discussed the proposition with several of my distinguished colleagues who so ably serve on the Armed Services Committee. It was while the gentleman from Georgia [Mr. VINSON], its distinguished chairman, so forcefully drove home the merits of H. R. 4914 and the justification for the funds to be appropriated.

I deferred presenting my amendment when I was advised that it was not within the purview of the bill under consideration. There seems to be no provision today, as there was in World War II, which would allow the Federal Government to pay for a road serving as ingress or egress to a Defense Department installation, not even to the vital and critically situated Bayonne Naval Base at Bayonne, N. J. Consequently the modest and hard-working people of Bayonne and Jersey City must continue to pay to upkeep the totally inadequate roads leading to and from the base. If they should rebel and seal off the roads, no doubt the Bayonne airlift would come into play. But that is no solution.

Mr. Speaker, the proposition my amendment proposes is merited. It has been researched and studied for many years. The night before Pearl Harbor naval officials were ready to move on phases of the project. Pearl Harbor embarrassed them. They dropped it.

I am happy to report that all are alert to the situation and the needs involved. The Navy is cooperating. An Army engineer was in my office last week. We discussed the freeway and its relation to the defense set-up.

Mr. Speaker, the above is a thumb-nail run-down. I intend to bring the State of New Jersey into the picture with the Department of Defense on this glaring injustice. I trust it will not be too far distant when the freeway from the Jersey side of the Holland Tunnel to the Bayonne Naval Base will become a reality.

**The United States State Department and
American Policy in the Far East**

**EXTENSION OF REMARKS
OF**

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, August 10, 1951

Mr. BUTLER of Maryland. Mr. President, at the invitation of the American Legion, Department of Maryland, I attended an address by Mr. Alfred Kohlberg at the Baltimore Polytechnic Institute. The meeting was sponsored by American Legion, Department of Maryland; American Legion Auxiliary; Catholic War Veterans of Maryland; Jewish War Veterans of Maryland; Baltimore Kiwanis Club; International Federation of Catholic Alumnae; the Military Order of the Purple Heart; the Minute Women of Maryland; the Civitan Club; the Knights of Columbus; the Maryland Committee for Constitutional Government; and the Maryland Action Guild.

The senior Senator from Maryland [Mr. O'CONNOR] was also present. At the meeting Mr. Kohlberg made certain allegations and charges against one man in the Government of the United States and against another man who is being considered for appointment to high office in Japan. Those charges to me were so serious that I requested that a transcript of the speech be sent to me, so that I could place it in the Appendix of the CONGRESSIONAL RECORD. I have received an estimate of the cost of printing the address, and I am advised that the cost will be \$389.50. I request unanimous consent that the speech be incorporated in the Appendix of the RECORD.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

(The address is as follows:)

Judge Smith, Mr. Burkhardt, the senior Senator from Maryland, and the junior Senator from Maryland, the officers and members of the committees of the patriotic organizations that sponsored this meeting, ladies, and gentlemen, it is a great honor, and I greatly appreciate the privilege of appearing before you tonight. I have long—although I was originally a Californian and have lived for 35 years in New York—I have long had an attachment to the Free State of Maryland. My father was born here in Annapolis, although taken to California as a boy, many, many years ago, of course.

Coming down here I noticed the signs on the parkways leading out of New York—great big signs, at least 10 feet high, reading, "In case of enemy attack on New York City this parkway will be closed to all except civil defense and military vehicles." That is what we have up now at the entrance to our greatest city, 6 years after unconditional victory in every part of the world, in the Atlantic, the Pacific, in Europe, in Asia, and in Africa. Something surely has gone wrong that we have come to that.

Last month, flying from Northolt Airport, outside London, to Ireland, the driver who drove us out to the airport called my attention to a monument, a marble shaft, recent-

ly erected, he said, and on it was the inscription: "In memory of the Poles who died in the service of the RAF, 1941-45." That inscription and that shaft are, I think, a measure of the moral sickness that pervades the world today, the moral sickness which has gone to the depths of a pride in depravity. For remember those years, 1941 to 1945 and what Britain, and we with her, did to Poland. In 1943 at Tehran two-fifths of Poland was turned over to Stalin. In February 1945, the rest of Poland was sold out. It was sold out secretly in both cases; and the public statement in the first case said nothing about it, and in the second case it called for democratic elections which Poland has had—Soviet style. And, while that sell-out was going on, the Poles fought in the RAF and they fought at Monte Cassino with our boys.

The history of the past has been full of betrayals, but this is something new in betrayals. Betrayals are old, but pride in betrayals is something new. Even Machiavelli told how to betray your allies when it paid, but to cover it over, a sort of letting them fall, but don't let it look as though they were pushed. [Applause.] Remember that Polish betrayal was a joint American and British venture. The agreements at both Tehran and Yalta were signed "Churchill, Roosevelt, Stalin"—in that order. Maybe you remember that little special incident with regard to Poland.

I am taking Poland first, because of the monument, and because it set the picture early, as early as 1943. The story of the 16 leaders of the Polish underground in 1945; in March or April 1945, just before VE-day. Those 16 leaders were urged by us and Great Britain to make themselves known to the Russian Army in Poland so that they could negotiate a so-called coalition government. They had made themselves known, on our advice, and they had disappeared, and at the U. N. conference in San Francisco in April 1945 somebody brought the question up and we were bothered as to what had happened to these 16, and Mr. Molotov didn't know. But, finally, the word came out of Moscow; they were in jail in Moscow, and so then we went ahead with the conference. And, one of those men has since escaped, I believe, and told the story, the story of what happened to them, how they were taken, but of course we went ahead and signed up with Stalin in San Francisco.

Well, we don't have time to go into all the betrayals—it is such a common story now, but China was the worst of all the betrayals, because unfortunately, it was almost a 100-percent American job. We didn't get much aid from Britain in the betrayal out there. I can't say they didn't go along, but they just didn't have the power or authority to help out very much. And having betrayed China to the Communists in a long series of steps, some of which I will come to later on, we are now preparing to finish China, to turn over the guerrillas and the forces of the Republic of China on Formosa, and in order to do that, we will also have to betray Korea, and betray our own dead in Korea.

That may not be so easy. I think Americans, like you, will make that difficult, as you more and more come to realize it and as the picture becomes clearer, as it will become clearer, in the year or maybe the 6 months or the year and a half ahead of us. And our Government will have to do it very slowly, step by step, but I have the utmost confidence in the men who have bamboozled and fooled and misled our leaders that they will succeed in accomplishing their end, as they have in the past. In fact, I believe that whatever it is that's going to come out of this deal in Korea, and out of the fighting

in Korea, and out of the gradual betrayal of Formosa, and what remains of Free China, I think it must already be agreed to, and I wouldn't be surprised if it was already in writing. I'll come back to that with the evidence that we have that that is the case a little later.

But I first want to go back and look at the past and see how we got here.

Now, I am going to say things that should be shocking to an American audience, and I am going to say nothing that isn't so; if I only think it is so—I will point out that it is only an opinion. And this kind of criticism, I know, shocks Americans, it should be shocking to have to have such criticism presented to you, but I would like to go back to a great Democratic President, Woodrow Wilson, who said, "There should not be less criticism in time of war, but more. Honesty and competence require no shield of secrecy." Spoken as a true American.

I wonder how many of you can take your memories all the way back to the Atlantic Charter? It's been pretty well forgotten, but we all knew about it only a few years ago. That was what we fought for, you remember, in World War II. It was signed in August 1941, but it was signed again, more officially, on January 1, 1942, by 26 allied nations, including the U. S. S. R. And then it was signed later by all the other united nations as they came into the United Nations, I think a total of 55 in the end. The terms of the Atlantic Charter, the principal terms were three—first they pledged themselves to seek no aggrandizement—territorial or other; the second was: no territorial changes except by the freely expressed wishes of the people concerned, and thirdly, the right of all people to choose their own form of government. That was what we fought for, and as I say, all the United Nations, including Russia, signed it.

At the end of the war fought for those principles, we were unconditionally victorious. We had at that time the largest Air Force and the largest Navy in the history of the world, and the most powerful, if not the largest, Army in the history of the world. Our military allies at that time numbered 1,760,000,000 people, of whom only 190,000,000 owed allegiance to the Kremlin. Nearly 1,600,000,000 made up our free allies. By right and by force, we should have been able to impose our will, which was the Atlantic Charter, on the world, but there was something rotten somewhere inside.

We had already destroyed the Atlantic Charter before the end of the war, at Tehran and at Yalta, and when Harry Truman became President on April 11, 1945, though we were at the height of our military power, something was wrong inside with our Government; we had made pledges secretly to Stalin which broke the public pledges of the Atlantic Charter. The ailing President Roosevelt, surrounded by Hiss and Harriman and Hopkins and Marshall had been too weak to resist the demands of Stalin.

But Truman was not bound by those secret agreements of Roosevelt, though they were in writing. They were secret; he was bound by the public pledges of the Atlantic Charter. For some reason or other he chose to live up to those secret agreements and abandon the public pledges. There was no reason for it—it wasn't force—we had the force.

Russia was a shell at the end of the war. Half of European Russia was destroyed—20,000,000 Russians were dead, that is, both troops and civilians, and remember, after all, there are only 100,000,000 Russians in the whole world. The population of the Soviet Union is double that, but only half of them are Russians. Nobody was afraid of

Russia then, although Russia had long since proclaimed her aims of conquest to the world and we giving in to it. Nobody at that time was afraid of Russia. Any statements that may be made now that we had to give in to Russia because of fear, you all know are untrue, because if you think back to 1945, you know that not only was no one afraid of Russia, but it was perfectly ridiculous to tell any American that we had to worry about Russia at that time. And darn few Americans did worry about her at that time.

But today, who is afraid of Russia? Well, we know that General Marshall and General Bradley are afraid of Russia. [Laughter and applause.] And I say that not in a humorous vein, because they are competent military men. They told us in their testimony that they were afraid to do this and that, to back up our boys in Korea, when they were in the extremities of last December, because they were afraid that Russia might come in.

And we know that Secretary Acheson and President Truman are afraid of Russia. And I say that, not knowing their reasons. Military reasons are those of General Marshall and General Bradley. But again I say there are only 100,000,000 Russians in the whole world—we surely aren't afraid of 100,000,000 Russians, there is something else we are afraid of. And, of course, General MacArthur put his finger on that when he said our enemy is not Russia, our enemy is world communism. [Applause.]

Last December an intelligence officer of one of our armed services, whom I have never seen before or since, was sent to interview me by his superiors about an article I had written several years ago, telling about a secret agreement of Potsdam, which is still secret, by the way, and the terms of which I still do not know. And he read that article and he thought I must have known more than I put in the article. But I always know so little, that I put it all in, I didn't know any more and I couldn't tell him any more than what was in the article. [Laughter.] Well, he said, we thought you might know more, we thought you might have the key to what is puzzling us. He said, we can't figure out why this Government, and why our military commander, General MacArthur, does not take the obvious military countermeasures in Korea, in China, and so on. And I said, what are those countermeasures that are obvious, that he should take out there?

Well, he said, arm the guerrillas, start a fire in back of the Chinese Communists who are attacking us in Korea, give some more arms to the Nationalists and let them get ashore in China, and start more trouble. Blockade China, stop the tin and the copper and the rubber and the cotton and all the other things, machine tools, even, going in at that time. Bomb installations that are serving them, both in North Korea, some of which we have never yet been permitted to bomb, and Manchuria, and wherever else it would count.

I said, well, I don't know the answer to that one, but I think the President has stated that, you don't need to come to me, in his statement of June 27, 2 days after the war started. He said that we would not extend the war; he said we would prevent Chiang Kai-shek from attacking the China coast; he said we would stop the blockade of the China coast. "Oh, I know he said that, but he can change his mind, there must be something more binding than that, something that keeps us from taking these obvious military countermeasures."

Well, I couldn't help him any more; but how did we get to this? There is some reason in back of it, the answer to which I do not know, and that reason did not come

out in the MacArthur hearings, because it can't be the fear of Russia that stopped us from taking those measures; I just don't believe that. Remember that Russia today, the Kremlin, rules 800,000,000 people, but still only 100,000,000 of them are Russians. Five hundred million of them are Chinese, or 475,000,000, they say. It took a lot of help from somewhere for the Soviet Union to be able to take over those 600,000,000 people, since the end of the war.

Somebody stopped General Patton from taking Prague, and General Keating from taking Berlin, just before the end of the war, and somebody issued the orders which were relayed by General Eisenhower, drawing back our forces, in some cases over 100 miles, from areas we already occupied, after VE-day, which areas we then turned over to the Russians. And in that area, from which we drew back, was part of Saxony and part of Thuringia, and all of the province of Jachymov in Czechoslovakia, and in those three areas are the Erzgebirge, the ore mountains, the area in which Russia is now mining its uranium. Who caused us to draw back and turn over that uranium area to Russia? Those are things we do not know.

We cannot blame it on the generals, they have to follow orders, or else, as we have now learned. [Applause.] And we can't blame it on the United Nations, because that was an American order, even though at the very time the United Nations was sitting at San Francisco with Alger Hiss as Secretary General, and Julian Henry Wadleigh as Director of Research of our own American delegation to the U. N. So if Alger Hiss didn't know the answers, when the Senators and college presidents and commanders from the Pacific wanted to know the answers, why Alger referred them to Julian Henry, who had the answers in his Research Department. The answers were the same in any case, anyway.

Now, the United Nations was set up by those people, much smarter than Mr. Acheson. Mr. Acheson isn't as smart as you all give him credit for—he's just their lawyer. [Laughter and applause.] And I think he's a good lawyer. But he isn't the man that has the ideas; they have to dig it up for him, as he said, when he was before the committee. The U. N. was set up by those same people, Alger Hiss was Secretary General of our delegation to the U. N. at Dumbarton Oaks, and right at Dumbarton Oaks it was fixed.

The only thing that was added later, really, was the veto and that isn't of the utmost importance—all the rest of it is full of—what is it they call them in the airplane industry?—bugs.

Remember, the Russians are tough, as diplomats—they are tough as conspirators, as diplomats they are tough for Russia—they never give in until the last gasp. Our diplomats are not that tough, they are not that tough for us, anyway and, therefore, they have had the worst of it all the way through, and then they have discovered afterward that down somewhere in the line of command, there have been some of our diplomats that were tough, but they were also tough for Russia.

Now the China story is a long one, and I won't try to go into the details of all the different things that were done, but I would like to touch a couple of high spots. I would like to call your attention to a book that is easy to read, is on the best sellers' list, and gives a great deal of the details, but gives it interestingly, and that's the book recently issued by Freda Utley called *The China Story*. [Applause.] She makes clear in there, as was the fact, that at the end of the war in the Pacific, our prestige was tops.

I was there a little more than a month after VJ-day. I traveled through west and south China and along the coast, and I saw that. The Chinese, every one of them down to the little boys in the streets, knew who had won the war in the Pacific; they knew who defeated the Japs, and they knew they hadn't done it. They knew they had held on for 8 years, and held on and held on, but that the victory was an American victory.

They knew that the Russians had come in at the end; they knew that the British and the Anzacs had small forces, but there was no doubt in the mind of any of the Chinese in China at that time that we had won the war and any ticket that we had wanted to write at that time, we could have written. We had the force; we had the prestige, both.

Now, at that time, just after VJ-day, a report was sent from China by our top man there—I am not going to mention his name tonight because he will be out of the Government almost any day now—our top man sent this report, and he recommended the following: Remember, he was still foolish enough to think we were obligated to the Atlantic Charter. He recommended that the United States guarantee the personal safety of the Communist leaders, and guarantee their right to carry on throughout China as a political party, but on condition that they surrender their arms. And he gave reports on the number of troops they had—they had about 125,000 to 250,000 tough guerrilla fighters, very badly armed—and this man had under his command 4,000,000 Chinese troops and an American Air Force and service of supply.

And he said, if the Communists will not accept this, I recommend that I disarm them by force, surround and disarm them, and that we then guarantee the personal safety of their leaders and their right to carry on as a disarmed political party. Well, that was exactly what the Atlantic Charter called for. Elections to be held, he said, when China had been thoroughly pacified under U. N. or United States auspices.

Well, what was wrong with that? Nobody knows what was wrong because it was never answered. Many men in Washington have seen that report at that time, in the State Department and in the various intelligence services. The report was never answered; he was never given a yes or no. After General Hurley resigned General Marshall was sent out there to force a coalition, if possible, on the Chinese Government without disarming the Communists. Fortunately, he failed; had he succeeded there wouldn't be any Chinese left on our side today.

As I said, I can't go into all the things that were done to destroy the Nationalists and help the Communists in China. We destroyed the reserve ammunition of the Nationalists which lay in India at the end of the war. That story has all been written up, and you will find it in Freda's book.

We also, as you probably mostly know, put an embargo—General Marshall put an embargo—on ammunition and arms to Nationalist China, so they couldn't even buy any ammunition to replace the other. We had armed 39 Chinese divisions during or just at the end of the war, but we left them with almost—well, we left them without reserves of ammunition. At the time that General Marshall put an embargo on any further ammunition or arms, he told a friend of mine. "As Chief of Staff, I armed over 30 Chinese divisions; by a stroke of the pen I have disarmed them."

But that sell-out is still continuing; what we started in China we are still continuing to do. Last November one shipload of supplies for Formosa left San Francisco, allocated to them by General MacArthur. In December two shiploads went. The total of the three shiploads was nearly 30,000 tons. In December the State Department learned

about it; they hadn't known about it, because General MacArthur had done it right through the supply office in San Francisco. So the State Department said this must be regularized. So they negotiated an agreement with Chiang Kai-shek's government, which was signed on February 9. They told the Chinese that we expect to send you \$50,000,000 of supplies in the first half of 1951—150,000,000 from July 1, 1951, to July 1, 1952, and 150,000,000 in the next fiscal year.

But after this agreement was signed—they didn't say that in the agreement—then they said, well, we will have to send a military mission out there to study your needs. Although MacArthur had a mission there, they sent a new mission headed by General Chase, and General Chase is out there now. There are about 1,200 Americans with him; they had promised the Chinese at that time a total training force of 2,000. I don't know what General Chase has reported; I don't know what the ideas of Washington are; I don't know what they intend to do in the future, but I can tell you that not one pound of supplies has left the United States for Formosa since December. Whether by ineptitude or by intention, they stopped the flow that MacArthur started, and that flow has not restarted yet. And that is the kind of thing, again and again, as you will see in Freda Utley's book, that caused China to fall to Communists.

Just take a broad look at it—in less than 6 years, during which General Marshall, Secretary Acheson, and President Truman have been in complete control of our China policy, they have succeeded in turning 475,000,000 friends and allies into 475,000,000 enemies, willing or unwilling. In those same 6 years, or a little less, another American, General MacArthur, succeeded in turning 80,000,000 Japanese enemies into 80,000,000 friends. [Applause.] And now a part of the picture, that fits all of the rest of the picture, is that as a result of that situation we fired MacArthur and keep the others. [Laughter.]

Why talk about China so much? Of course, they only make up a fifth of the manpower of the world, and very little industry, it's true. But if we ever get in a real war with the Soviet Empire, what we are going to need is manpower; we can supply the matériel. And there the manpower is available, if we can get it back again, if we have the means to get in. Americans of standing in the past have again and again said that China is the key to the world, not only the key to Asia. That it is the key to Asia I think is clear to nearly everybody. There is no real native force in Asia, other than China. I mean in east Asia.

John Hay, Secretary of State, in 1899, at the time of the proclamation of the open-door policy, said, "He who understands China, religiously, politically, and economically, has the key to history for the next 500 years." Well only 50 years have gone by, but it's beginning to look as though John Hay was right. And another great man in his way made a statement very similar to that. His name was Lenin, and he said, "When the millions of Asia join the banner of the revolution its success will be assured."

Because American lives have been sacrificed by our stupidity, that may be treason, and because they will be sacrificed in the years to come, it seems almost sacrilegious to talk just of money. But money, I think, must be considered, because if we run out of money, that means out of resources, and if we run out of resources, we will have to lose more lives. This year our President is asking for \$8,500,000,000 for Europe, I think \$6,500,000,000 of it for arms. And we will have to pay the taxes for it. Now why? Well, one of the reasons is that we destroyed our surplus in Europe, we destroyed it in Asia, we destroyed it in the Pacific islands.

The Hoover report, written in 1948, reported that we had 89 divisions fully armed at the end of World War II, and when that report was written we only had the arms left for 18 divisions. What happened to the arms of the 71 divisions? Well, many of you men here tonight must have seen some of that destruction going on in Europe—I saw it going on in India. It went on even in China. We blew up some of our stuff there so the Chinese couldn't have it, and now we have to manufacture it all over again. More money and more taxes, and higher cost to do it now.

Now, let's go back to Korea, where we came in.

The stated United Nations objective in Korea was to bring about an independent and unified Korea. That was stated when they authorized General MacArthur to go above the thirty-eighth parallel. Now, that objective is gone, like our objective of the Atlantic Charter. In fact, on March 15, according to the testimony before the Senate committee, the Joint Chiefs of Staff and the State Department had a meeting, and the Joint Chiefs of Staff asked the State Department for a statement of our objectives in Korea. What was that? Ten months after the war had started in Korea the Joint Chiefs of Staff were still trying to get a statement of our objectives. And what happened at that meeting, according to the testimony before the Senate committee, it was laid over, the matter was laid over, and if there has ever been a statement of our objectives presented to the Joint Chiefs of Staff, it still remains not public.

But what's cooking now? Well, I'm not sure, but I think an informed guess may very well be made, and it would be something like this: The cease-fire deal that is being worked out in Korea, between the generals, is only a sort of shadow-boxing. The real agreement was probably made in Paris by Mr. Jessup and Mr. Gromyko. In other words, I think the political terms are more or less in agreement already, and the cease-fire, which is going to be nonpolitical, is just a matter of form to make us think maybe we are getting somewhere. Now, Mr. Jessup is a student of Professor Lattimore of your city—he was his student for many years. But I even saw—I cannot believe—that our \$250,000,000-a-year State Department would turn over the matter of the settlement of this war in Korea to a general. I don't think they leave that authority to a general—I think they tell the generals, as they always have in the past. The generals are only sent in to get the humiliation of going in with a white flag of truce among armed Chinese Communists. The generals follow orders; the State Department tells them what to do, so we must presume that whatever is going to be done has already been worked out by the State Department, and they aren't going to court a failure, so they must have an agreement with Russia, and where that could have been made, other than Paris, I am not sure.

I'd like to say that I don't consider all that \$250,000,000 we spend on the State Department as waste. There is a little of it that I consider not waste. That is that small part of it that goes to pay the salaries of the good Americans in there, whom I call the pro-American underground, who pass on information of what is going on. [Applause.] As I said before, I will tell you when I am guessing—what I am telling you now is only an informed guess, but it's important to watch. What I told you previously are facts; this I'm not sure of.

It's important to watch what develops, and not be fooled by the patter of the magicians who are putting the rabbit in the hat, that they are going to take out afterward. Let's watch them put the rabbit in the hat if they do it.

No arms to the Nationalists, remember, and none to the Koreans, since the war started, except those that we took into our own forces, I understand. General MacArthur asked for arms for the Koreans and they offered him 150,000 1903-type Springfields and some machine guns. He couldn't send men into battle—the Koreans aren't any too good anyway—either North or South—as fighters, and he couldn't send them into battle armed that way, so he said that would be fine for the Japanese police. And so the 150,000 Springfields were sent to Japan, and they are there now, but they are not being given to the police. They are in storage by somebody's order or other. At present, they still remain in storage in Japan.

Now, I said there was some evidence to back what I thought was going on in Korea. James Reston, of the New York Times, on July 1, who is recognized as a State Department leak—trial balloon fellow. He said that day that the prospects for democratic unification of Korea are not good. Korea, he said, is very likely to take on the coloration of its two big neighbors—Red China and Soviet Russia. They both border on Korea. Now I quote: "The prospects for unification and democratization of Korea are frankly not good." And then he said, "Even if the Korean people give up the good fight and go Communist, it cannot be said that the Korean war is a failure." Now, that's a fine thing to tell the fathers and mothers of the boys who have died or been wounded out there. And yet that's Mr. Reston's leak.

Now, another one, yesterday. Mr. Hamilton, the New York Times correspondent at the U N, said that the final communization of Korea is inevitable. We're getting ready for it; you see, they're preparing us. Just think of it; we didn't have the courage to back our boys to the hilt; to bomb their enemies, to blockade them; we were afraid to go quite that far and now we're going to desert their graves, if these statements are correct. Now, how are they going to make the Koreans like communism? Well, that's very easy—you make them like communism the way the Chinese like it, the way the Russians like it, the way the Poles like it—of course, with a gun or the secret police.

But let's look at some of the characters who have brought this about. One of them is a man with whom I used to be acquainted—Owen Lattimore. Now, according to the testimony of Louis Budenz, former managing editor of the Daily Worker, and a man who finally saw the error of his ways, and made such atonement as a man can make, who has done what a Communist has done, by going to our authorities and telling them what he knew. He testified under oath that Lattimore had a direct line to Moscow.

Last year—I have a photostat of it here—I wrote a letter and sent it to quite a number of papers. This one is from the Christian Science Monitor. And from this letter, I will just read one short paragraph. It says: "March 18, 1947, I published the statement that Mr. Lattimore 'maintains liaison with heads of Communist parties; reportedly operative for Soviet military intelligence in Far East.' On May 23 of this year I repeated the above. I am financially responsible, yet Mr. Lattimore doesn't sue me." The rest of the letter I don't need to read.

Right now, Mr. Lattimore may have reformed; I only know about his past. [Laughter.] If so, he has kept this reformation secret; unlike Mr. Budenz he hasn't gone to the authorities and told them all he knew. In 1943, Mr. Lattimore, on returning from China, published a statement in a book about Chiang Kai-shek. Well, I have to find that one, but he hasn't been back in China since, except for 2 weeks with Henry Wallace in 1944, and 4 days with Ed Pauley in 1946. In other words, all his own knowledge of China is prior to 1943. In 1943, in this book,

in other words, his own knowledge—on-the-spot knowledge ending at that time, he said—the book, by the way, in case you want to get it, is published by Claremont Colleges, Claremont, Calif., called America and Asia, by Owen Lattimore—now quoting: "Many people talk of the danger of civil war in China at the end of this war, but I think that the danger of civil war in China is probably less than the danger of civil war in many countries in Europe." If you will remember what I told you about the general's recommendations for preventing a civil war in China, I think Lattimore was right, in 1943, when he said there didn't need to be a civil war in China, and of course if there hadn't been a civil war in China there wouldn't have been any war in Korea. Because there wouldn't have been any Communist China to start it.

Now I quote again the rest of Lattimore's paragraph: "One reason is that we have in Asia a world statesman, a real genius in Chiang Kai-shek. What may be called the functional test of the historical importance of Chiang Kai-shek is the fact that throughout an already long political career, he has grown steadily greater and greater." Now, that's not what Mr. Lattimore is saying now and he hasn't been there since. There is a reason for it, and the only reason I can see for it is that the Communist line agreed with that in 1943 and agrees with what he says now.

But I want to go on to another matter that concerns him, I think, and that is the question of the ORO. The Operations Research Office of the Department of the Army which since last year has been operated by Johns Hopkins University under contract. I have their letterhead, which states that on the letterhead. So I had our magazine, the Freeman, write them and ask for a copy of that contract, and the answer from the ORO was that the contract with Johns Hopkins is classified, therefore we may not have a copy. Now, what is the ORO—I didn't know when I first saw that letterhead, so I inquired, and the ORO is a research division that studies the effect of weapons before they are used—the probable effects, not like the weapons evaluation which studies them after they are used. So the ORO gets all the information on the secret weapons that we are developing before they are even in the stage of being actually put together—when they are being planned, projected. They get the information, and then they make studies, psychological and others—of what the effect of the weapon would be—would it scare the enemy population or the Army, or would it only make them madder—what would it be likely to destroy, and so on. Now, that contract, I understand, and I haven't seen the contract, the contract with Johns Hopkins is being carried out, that I know, but I understand that it is being carried out by the Page School of International Studies. Now, I don't know what personnel of the Page School are carrying out that contract; that's all secret. But it's the Page School, and I don't think that that's the kind of contract that I would let out to the Page School of International Studies until I knew a lot more about Owen Lattimore than those people seem to know.

I would like to say one more thing about Professor Lattimore—two more, in fact. One of them is that he poses as a scholar. Now, I do not hold against him the fact that he never attended a university, but I do hold against him on that pose the fact that he is a propagandist. A scholar and a propagandist can't mix. You can be one; I am one. He also is the same as I am. I am not a scholar, and he is not.

The other thing I would like to say before leaving him is a bit about his book, Ordeal by Slander. I feel duly grateful to him for putting me in that book so much. People who never heard of me before seem to now know that I am around, at least. I am

going to give you a 1-minute review of the book. You may not think it is very erudite, but I make no such pretenses.

When the book starts in, Professor Lattimore is in Afghanistan, finding out how we can give away some extra millions of dollars to the dear old Afghans. And then while he is there, he hears the terrible news that a terrible fellow by the name of McCarthy, whom he didn't even know was in the Senate, had denounced him. And he got some telegrams and he decided, frankly, to hell with the Afghans; he was going to come home and look into that. [Laughter.] So he came home via London and was met there by one of the editors of the Sun, who advised him how to meet that situation. And he came back and he found this was simply terrible—this so-and-so in the Senate had charged him with being the agent of a foreign government, to wit, the Soviet Union.

And then, according to the rest of the book, he went on, and he really made mincemeat out of the Senator, according to the book, and furthermore, it turned out, according to his book, the Senator didn't even know what he was talking about, because all he was doing was mouthing the long-since discredited charges of a fellow by the name of Kohlberg. [Laughter.] And then, to make it complete, he discovered that this guy Kohlberg looked to be an agent of a foreign government, to wit, the Chinese Government, so the circle was then complete—McCarthy shouldn't have charged Lattimore with anything at all, he should have charged Kohlberg with being a foreign agent of a foreign government, and yet poor old Kohlberg, somehow or other, hadn't suffered any ordeal such as Lattimore went through. I don't know why—I must have a very thick skin. [Laughter.]

Now, I would like to say, as long as I have mentioned the Sun, that I have a high regard for the Sun, it always has been known as one of the outstanding papers of America. And I have a high regard for people who have a fundamental and abiding faith in human nature. And I see that the Sun has that; they had that in the case of Alger Hiss, they had it in the case of Owen Lattimore. [Laughter and applause.] In looking through Lattimore's Ordeal by—what was that—Ordeal by Slander a few days ago I saw a letter in there from a professor from my town, at Bronxville, Westchester County, N. Y. This professor teaches at Sarah Lawrence College, which makes all the other colleges you might have in mind look very pale by comparison. And this letter was written to Mr. Lattimore, and he put it in the book and it is 100 percent for Lattimore.

Now, I know that professor. I went to one seminar of hers—a seminar on Karl Marx—a very interesting subject these days, and this professor said that Karl Marx's outstanding quality was his belief in the perfectability of human nature. And so when I saw how the Sun kept to that belief in human nature, I thought, now, there, that is truly Marxist. [Laughter and applause.] And I only wish that that quality would continue and not grow so thin when they get around to the China lobby, but maybe they will get around to us, too. [Applause.]

Secretary Acheson told the Senate Committee that he never favored recognizing the Chinese Communists, and I don't think anybody took him up on that one. But here is an interview in the Pathfinder magazine of September 21, 1949—it is an interview with Philip Jessup, although it doesn't say directly that it is an interview, but it has his picture and at the time I inquired in the Pathfinder, and found it was an interview. And it is headed "Why We'll Recognize Red China"—and remember, Philip Jessup at that time was the head of a three-man committee making our far eastern policy.

But Mr. Acheson is on record, prior to that, in the spring of 1949, Jessup was just echoing him. He sent two identical notes, or nearly identical, one to the American Consul-General in Nanking. (Our Ambassador had run away by that time—the Communists had Nanking then) and a duplicate note to Colonel Barrett, our military attaché in Peiping. And these notes, Barrett was to present to the military and the Consul-General to the civilian Communist authorities. These notes offered to recognize Communist China and give them financial assistance on two conditions; if they would agree to these two conditions. The first condition was that they would recognize the validity of the commercial treaty that we have with China—and the second was that they would not tie their policy too closely to the U. S. S. R. Now, these were secret notes—but the Communists you never can figure.

The Communists answered them; and they answered them in the newspapers out there. [Laughter.] They said as to No. 1, about the commercial treaty, we can discuss that later. Then they said as to No. 2, Red China's relation with any third power are not subject for discussion with the United States. That told us off. Now, those notes are available, of course, from the State Department, but I haven't seen them, not the text, but the substance of them was published in China.

Now here is a Communist Party in the State of New York reproduction of a mimeographed statement sent out to their sections. It says, "To all sections and counties, Dear Comrade." Well, I'm not one of the Comrades, but I got this, and it says this is a program for action on China—March 1, 1949—prior to these notes, and it gives three demands. No. 1, demand congressional investigation of the Chinese lobby in Washington. Well, the Government is awfully slow getting around to that one. No. 2, demand a new China policy—an end to all forms of American intervention in China. I am now just reading the beginning of each sentence; "Preparation by our Government to recognize the government which the people of China are now establishing, and planning now by our authorities for genuine and self-respecting cooperation"—you know, financial aid, mentioned in the note. [Laughter.] That was the Communist policy March 1. The others that I read to you were a little later, after the Communists already had Nanking, maybe in the summer of 1949, and now Senators Morse and McMAHON are just getting around to the China lobby, more than 2 years late. Now Secretary Acheson said something which I would like to take up for a moment, if I may go on for a little longer, about a young man known to many of you people here in Baltimore, Lt. Irving Short. [Applause.]

This is before the Senate Committee. I will read what Acheson says: "I have read all of this material yesterday afternoon"—that was about the China Lobby—" . . . and with one exception to which I shall revert in a moment, these are all hearsay statements. The exception to that is an alleged attempt to violate the law against recruiting in the United States for foreign armies. On that point, however, the file ends up with the fact that the person who was engaged in this allegedly illegal activity died, and that brought an end to that particular effort." Now, I think a number of you know that Lieutenant Short played with that idea of enlisting Americans to fight the Communists in China under Chiang Kai-shek. He never got any further than the thought, and I still think it is no crime to have a thought, particularly as Communists and Nationalists Spain, Great Britain in the early years before we were in the war, both the Israelis and the Arabs

and other nations have enlisted Americans who wanted to fight for them, and Acheson and the State Department said nothing about it. But this man didn't enlist anybody; he only thought about it. He went out to Formosa, he hitch-hiked out on a plane that carried some correspondents, and after the war started in Korea, in August, he went up to Tokyo to reenlist in our Army. When they sent him for his physical there in Tokyo, they found he had a fever and thought it was malaria, and stuck him in the Army hospital in Tokyo, and he died 3 days later of polio. Now, there's a fine young American, smeared by the Secretary of State, who says he has the facts. I don't like that sort of thing in Baltimore, Washington or anywhere else.

Another character worth looking at is John Paton Davies. He is the far eastern member of the Policy and Planning Board of the State Department, a very important position. In 1949, I think it was in October, he called in the Central Intelligence Agency, two men high in the Central Intelligence Agency, and he suggested they should have a top-secret committee to advise them on China. He said it shouldn't be set up in Washington, but in New York, or Boston, and nobody in the CIA should know about it, except the head of the CIA and one contact, and he said I recommend six people of top competence to you. The six he recommended were Prof. and Mrs. John K. Fairbank, of Harvard; Edgar Snow, Agnes Smedley, Anna Louise Strong, and Dr. Benjamin Schwartz, of Harvard.

Now, I don't know anything about Dr. Benjamin Schwartz, I have never run into him. I know about all the rest. And you may know about some, and the strange part of it is that at the time he made that recommendation it was 8 months after the MacArthur report had been made public revealing that Agnes Smedley had been a Soviet Intelligence Agent in China and Japan both.

Now, another one—John K. Emerson—who was in the papers a little while ago. They said he was being considered as civilian head of Japan, under Ridgway—that Ridgway was so busy with the war that he couldn't carry on as both civilian and military head. John K. Emerson is the man who took United States staff cars, he was on SCAP, and he went to Sugama Prison and brought out the Communist leaders, as soon as General MacArthur signed their release. He brought them out to Tokyo, where they had 100,000 people to cheer them. He drove them up to that Communist meeting in American staff cars. But that just shows where his heart is—but in 1945, January 1945, he wrote a report from China to the State Department recommending that when our Army landed in Japan, that we set up a civilian government and that civilian government be made up only of Communists, because, he said, all the other parties in Japan are Fascist. The Communists are the only democratic party so we must be careful to use only the Communists for the civilian government of Japan.

Now, let's take another one—remember, these are not somebody down at the level of clerks—these people are high, making policy, telling Mr. Acheson what to do, because he is no authority on China.

J. Donald Kingsley—he's not in the State Department, he was assistant to Oscar Ewing, Deputy Administrator of the Federal Security Agency in 1949. But, from 1942 to 1949, first the Civil Service Commission and then the President's Loyalty Review Board could not clear him. His case was constantly sent back for more information, and, finally, the information became so much that in 1949, he resigned. And the matter was closed when the President's Loyalty Review Board put

up a flag against him so that if he was ever considered by any agency in the Federal Government, they would be warned that his was a case that couldn't be passed. Where is he now? He is the Director of the United Nations Rehabilitation Commission—I don't know the exact name of it—he's the fellow who is going to have—or has already—no; I think he's getting—\$250,000,000 from the United Nations for the rehabilitation of Korea. Of course, the United States is only going to put up \$163,000,000 of that \$250,000,000, which is a real break for us. [Laughter.] But Mr. Kingsley is going to have it.

The guy against whom the flag still stands in every Federal agency; he's going to put his people in there; he's going to say which Koreans get what and which don't. His past has a lot of things; I won't go into his whole record; it is much too long.

Now, maybe none of these people are Communists today—I don't know. Maybe Mr. Davies isn't, maybe Mr. Kingsley, maybe Mr. Emerson, maybe Mr. Lattimore, maybe Mr. Jessup, I'm not saying they're Communists today, I don't have inside information, but if they are not Communists, at least they're all prisoners of their associations, and of their past, and of their illusions. They are not the kind of people—they're the people we should have gotten rid of instead of MacArthur. [Applause.]

Remember, with these people running our affairs, Americans were shipping and American ships were carrying oil, rubber, steel, machine tools, and all sorts of things to our enemies right while we were fighting in Korea, until Senator HERBERT O'CONNOR raised a fuss and stopped it. [Applause.] And some of our so-called allies are still carrying that stuff in, almost openly, or openly, and a considerable amount, as you may know, Senator, is going in clandestinely from Hongkong. There is a very funny case in Hongkong—there is a law suit by a Communist trading firm that bought gasoline, which is prohibited export to Communist China, bought it in Hongkong, smuggled it out on junks, and when they got it into Communist China, they found it wasn't gasoline—it was just water in gasoline tins. [Laughter.] And now they are suing the Chinese fellow in Hongkong, so you don't have to guess that it is going on.

Now, as I said, in all of Asia, all of East Asia, the only anti-Communist native forces are the forces of Chiang Kai-shek on Formosa, the guerrillas in China, and the Filipinos. There are no other native forces in East Asia who are anti-Communists; and, of course, the Koreans. Now, we are not giving them arms. We stopped the arms flow to Chiang Kai-shek; none are going to the guerrillas; the Filipinos are getting little or nothing. As a matter of fact, I think it's being seen to that we won't be able to give them any, if we change our policy, because we aren't making the kind of light arms they need.

Yet, in the Philippines they have a rebellion. There are at least 60,000 Communist guerrillas in the hills there.

And when we leave Japan under this treaty, what's going to happen? If all the rest of Asia is Communist, they will have to go, because they have to eat. And they have to do business with Asia to eat. They don't raise enough food to feed themselves. And if Japan goes, Asia is gone, and if Asia goes, Europe becomes our permanent pensioner. Without the oil of the Middle East, without the rubber and tin of southeast Asia, without the markets of Asia, why, we've got Europe to support forever.

The Europeans look east. I just came back from Europe. The Europeans look east, and they see a big, tough power—the Soviet Empire, with plans to conquer the world, and no fooling. And they look west

to us and they see a big power, too, but not tough—just big and soft, with no plans, no plans to counter that—just some plans to meet it where it hits—but no plans to counter. It is a terrible picture to them—you can't really blame the Europeans for wishing they could stay neutral somehow or other when the real show comes, although I don't think they can.

But we don't have any plans, we don't even have military plans. Back in December in 1947, Mr. Forrestal ordered plans drawn up—two sets of plans—one in the case of immediate emergency, and one a long-range military plan. Believe it or not—how long ago is that? 3½ years?—those plans are still not drawn, or at least not approved. No plans have been approved. Who stopped it? I don't know exactly. Now, what plans do we have? Well, we've been told that we have a plan of containment, although that isn't spoken of much anymore. It was proposed 2 or 3 years ago by a Mr. X in *Foreign Affairs Quarterly*—Mr. X turned out to be Mr. George Kennan, a very able man. But, that's being dropped.

After all, it's 18,000 miles around the borders of the Soviet Union. There are too many Koreans and Irans all around there—we can't go in and fight every time they step out in any one of those. But let's remember, that while it is 18,000 miles around, and we can't garrison those 18,000 miles, there are not enough Americans—the Soviets can't garrison those 18,000 miles, either. It's just as far for them as it is for us, and there are many places in those 18,000 miles where they have enemies—enemies that want to fight, and will fight, with American material and American direction.

The Koreans, the Chinese Nationalists, the Chinese guerrillas, the Turks, and many of the people behind the iron curtain—the Poles, the Bulgarians, the Hungarians, we can reach some of them, they will fight. We can make that border a border of weakness for them, instead of weakness for us. And if we did that, we would be using that which we can spare—material, instead of that which we will run short first if a real war comes—and that's Americans.

Now, the future course of history is clear. There are two alternatives ahead of us in the long future. Peaceful agreement between the East and the West, between the slave world and the free world, is out. That is not going to be one alternative.

The Communists have always proclaimed that—we're beginning to learn it. They have said that the two alternatives are that either they will gradually take over the rest of the world, as they have been gradually taking it over in the past 6 years, and in the course of that take over there will be several wars—indecisive wars. That in the course of those wars, we will get weaker. Because, of course, they're not getting any weaker in the Korean war—there are not even any Russians in there. We will get weaker, and a half-destroyed world that will come out of it is the breeding ground for communism. It's a kind of setting they like. That is one prospect.

The other prospect is that we will overthrow that Communist dictatorship, not kill the Russian people, not destroy the 800,000,000 people behind the iron curtain, but aid them to destroy the tyranny that rules over them. We must take one of those courses. There is no other choice. Our present attempt to find a means of agreement for a world half-free, half-slave, is out. But, our first task, and that's the only task we need concentrate on now, is to clean our own house. [Applause.]

We must stop betraying our own friends—friends who are fighting on our own side. We can't betray any more. We shouldn't have betrayed those we did. Let's stop now.

We must separate the traitors in our midst from their dupes and the well-meaning people who don't know what it's all about. [Applause.] To do that, we need a congressional resolution declaring world communism and all its satellites and subsidiaries the enemies of the United States under article 3, section 3 of the Constitution. [Applause.] That will give the dupes and the sympathizers and the foolish a cut-off date to separate themselves from the hard core of traitors that make up the hard shell of the Communist Party, both the open and the hidden party.

We don't need any more point 4 or ECA or Voice of America, or any more allies to invite for a free lunch. All we need to do is be Americans again. [Applause.] We don't need Denmark or Holland or Belgium or France or England or China. They need us. [Applause.] And when they know where we stand and that we are to be relied on, they'll be bombarding us. We won't have to try to buy them, because you can't buy them, anyway.

The night before Trenton, on the day before the attack on Trenton, Gen. George Washington issued an Order of the Day, which read: "Put none but Americans on guard tonight." [Applause.] That's our task. Party doesn't matter. Herbert O'Connor [applause], Pat McCarran, Bill Knowland, Douglas MacArthur [applause] party doesn't matter. And those who went along, both Republicans and Democrats who went along in the so-called bipartisan steps to our disaster, we can't use anymore. They are tied to the past. [Applause.] It doesn't matter how good their intentions have been. They have failed. We need other Americans there. [Applause.] And in getting rid of those men, again it doesn't matter whether they're Democrats or Republicans—whether their name is Austin, or Dulles or Dewey or Vandenberg, or Tydings or McMahon or Connally. They have failed for whatever cause. We can't use them any longer. [Applause.]

We need Americans of vision, of understanding and stature, and above all, of courage, and honesty and truthfulness. We've had enough double-talk. And in spite of our infiltrated colleges, press, radio and Government, the vast majority of Americans are sound, even if confused. And when we put sound unconfused Americans on guard in Washington, Americans will be united—we won't longer have a disunited country. That's the way to get unity, because we will then have a plan. The timid, the weak, the fellow-travelers, the beggars, the cowards, wherever they are abroad, in whatever government, we can't use. So, let's stop worrying about how to please them or how to make them love us; let's appeal to the men of strength and courage abroad. They will be on our side when we exhibit those qualities.

Now, I'm going to close with two sentences from a great American, Robert Lansing, Secretary of State to Woodrow Wilson. He sent this letter to Henry Cabot Lodge, the grandfather of the present Senator, who was then chairman of the Senate Foreign Relations Committee. He prepared a study of the intentions of the Bolshevik Government—this was in October 1919, 32 years ago. And this is what he said, he summed up: "The study which has been made of the Bolshevik movement, some of the results of which are furnished herewith, show conclusively that the purpose of the Bolsheviks is to subvert the existing principles of government and society the world over, including those countries in which democratic institutions are already established. They have built up a political machine, which by the concentration of power in the hands of a few and the ruthlessness of its methods, suggests the Asiatic despotism of the early czars."

Now, every man—this is official State Department gospel based on documents. It has never been changed. There have been later studies; they have all agreed with it. Every man who posed as an authority on Russia or on communism, or any man in our State Department who told us anything that was different from this, was either a faker or a secret Communist, and it is the job of the Senate and the House to find which are which and have them both out. [Prolonged applause.]

Extension of Interstate Oil Compact

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. HESELTON. Mr. Speaker, this morning the House Committee on Interstate and Foreign Commerce reported favorably Senate Joint Resolution 42, which would give the consent of Congress to the extension of the Interstate Oil Compact.

I offered an amendment which was not adopted. However, I believe the purposes of that amendment will be a matter of considerable interest to many of my colleagues. While there will be a minority report filed, I want to take this opportunity to insert the text of my amendment in the RECORD and to discuss the reasons why I will offer it again when the legislation comes before the House. The amendment would insert a new section at page 16 of the resolution after line 18 and is as follows:

SEC. 2. The Attorney General of the United States shall make a continuing study of action taken under the compact set forth in section 1 of this act, with particular reference to whether any such action is inconsistent with the purposes of, or contrary to the limitations and restrictions contained in, such compact. The Attorney General shall report to the Congress from time to time, but not less often than once each year, the results of such study.

And on page 16, line 19, renumber section 2 accordingly.

The history of the Commission dates back to June 15, 1934, when the Interstate and Foreign Commerce Committee was authorized and directed to make a thorough investigation of the petroleum industry. That investigation was conducted with the assistance of an able staff of experts and included hearings in the following principal oil-producing States: California, Colorado, Illinois, Indiana, Kansas, Michigan, New York, Ohio, Oklahoma, Pennsylvania, Texas, West Virginia, and Wyoming.

A comprehensive report was made on January 2, 1935. It did not recommend legislation for a number of reasons, there being two important ones. First, there were two cases pending before the Supreme Court of the United States involving the adoption of the petroleum code under the National Industrial Recovery Act. Second, efforts were then

being made by the governors of the oil-producing States to effect an interstate compact.

It is important to note that the report referred to a recommendation of the Federal Oil Conservation Board in 1932 that producers of petroleum be relieved of Federal antitrust legislation, to aid in voluntary cooperation in endeavors to limit production of crude oil in the United States and also to a proposal for voluntary unit development or cooperation voluntarily among all the owners of an oil field for its economic operation by a Federal law lessening the restraints of the antitrust laws.

So at the very outset a solution of the problem of waste became clearly involved in the possibility of actions which would violate the antitrust laws.

The report included a paragraph which now, 16 years later, is most pertinent in considering the necessity of the proposed amendment:

We are convinced that not sufficient attention is being paid to the interest of consumers of petroleum products. Settlements of so-called price wars, which result in some cases in an increase of 100 percent in the cost of gasoline, strain the credulity of the observer on the theory that they just happened without prearrangement in view of the fact that the Sherman Antitrust Act is still the law of the land, except insofar as temporarily it may be suspended by the operation of the National Industrial Recovery Act, we think that the fixing of gasoline prices is a matter worthy of close and constant scrutiny by the Department of Justice.

Subsequently the Supreme Court of the United States found that section 7-C of the National Recovery Act was unconstitutional.

On July 14, 1935, the Committee on Interstate and Foreign Commerce reported favorably H. R. 9053, which would have regulated interstate and foreign commerce in petroleum and its products, established the Petroleum Administration Board, and ratified the interstate compact which had been entered into by a number of States.

One of the important reasons given for the creation of the Board was that it was to be "the agency of the entire country and not the agency of the producing States alone."

However, this bill did not become law. Rather, Public Resolution No. 64, Seventy-fourth Congress, was enacted on August 27, 1935, in substantially the same form as Senate Joint Resolution 42, now reported to the House.

Article V of the compact was then and is now identical. It reads as follows:

ARTICLE V

It is not the purpose of this compact to authorize the States joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations.

Certainly one can be in entire agreement with the specific purpose of the compact as expressed in article II: "To conserve oil and gas by prevention of

physical waste thereof from any cause." This is entirely laudable and in the interest not only of the producers but of the consumers of petroleum and petroleum products and of our national defense.

Nevertheless, this clear limitation under article V of the compact itself recognizes the obvious possibility that actions could be taken, quite beyond the purpose of conservation, which would be both in violation of existing laws and very detrimental to the best interests of the consuming public and of our national security.

When hearings were held by the committee on the pending resolution, a letter from the Department of Justice to the chairman, dated April 25, 1951, was submitted to the committee. It recited briefly the purpose of the resolution, the fact that 20 States are participating and the statement that the compact has been considered generally as a necessary arrangement among oil-producing States to conserve the Nation's crude-oil reserves. The letter then included the following sentence:

Whether the joint resolutions should be enacted involves a question of policy concerning which this Department prefers not to make any recommendation.

Because of this sentence, members of the committee requested that a representative of the Department should be a witness before the hearings were concluded. On June 12, Hon. H. Graham Morison, Assistant Attorney General, and head of the Antitrust Division, testified. His testimony appears in the hearings from page 77 to page 107, and I am certain that a reading of the questions asked him and of his replies should be most convincing as to the wisdom and necessity of adopting the above amendment when the bill comes to the floor of the House.

At this time I shall only include excerpts which I believe will demonstrate the importance of favorable consideration of the amendment.

The following excerpt covers Mr. Morison's further explanation of the sentence contained in the letter:

Mr. HARRIS. You are familiar with the letter that was written to the committee about this legislation.

Mr. MORISON. I am not, sir. I have read it since I understood the committee was interested in having me testify. I have seen it.

Mr. HARRIS. As I recall, the letter says that this is a matter of policy for the Congress, and that the Department of Justice therefore does not make any recommendation on that.

Mr. MORISON. That is correct.

Mr. HARRIS. What is the meaning of that?

Mr. MORISON. We feel, Mr. Congressman, that this is a matter of legislative policy; that it raises no question, insofar as the Department is concerned, as to which we feel requires any comment from us. The history of this thing, I believe, is stated. The Department, at the time the Interstate Oil Compact first came up for congressional approval, took the same position. Since that time, there have been almost 15 years of operation. So far as we are concerned, so far as any advice that has come to us, no facts have been given to us to justify our belief that we have any objection to its operation.

Mr. HARRIS. You mean you have no objection to the compact, then?

Mr. MORISON. No, sir. I want to state again that our position is that we are taking no position for or against it. We feel it is nothing that concerns the Department which requires any position. We think it is purely a matter of legislative policy. If the Congress feels in its judgment this is proper and appropriate legislation—

The following excerpts address themselves to the interest of members of the committee in the consideration which has been given to the operations under the compact since its inception in 1935:

Mr. HALE. Then all the people in the Department are in favor of a strictly hands-off policy; is that right?

Mr. MORISON. No, Mr. HALE; on the contrary; I speak, of course, only for officials. We do not control the thoughts and opinions of individual employees. There may be someone who does not agree with this. But, so far as those charged with the official responsibility are concerned, I know of no one who disagrees with the position which is the Department's position.

Mr. HALE. The Department's position is not to have a position?

Mr. MORISON. Mr. Congressman, I might say, with reference to well over 40 percent of the bills submitted to the Department by the Congress for comment, that is our position: that it is a matter of legislative discretion in which we have no position. Obviously, that would have to be so.

Mr. HALE. We have thousands and thousands of bills which do not by any stretch of the imagination involve monopolies or restraints of trade, but this is a bill that involves monopolies and restraints of trade right on the nose. Article V of the compact says:

"It is not the purpose of this compact to authorize the States joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations."

That is the recital of self-righteousness.

Mr. MORISON. Mr. HALE. I will have to say that, so far as the bill is concerned, the bill properly says it is limited. If what you are inferring is that it goes beyond this, and that this is a cover for a conspiracy and if you are saying that, in the guise of conservation, major oil companies are really subverting State officials charged by law of their several States to carry out the laws of their States with reference to honest conservation, then that is something else.

I might say, if that were established, so far as the Department of Justice is concerned, we would not be inhibited in the slightest from bringing an antitrust suit based upon those facts and findings. And, I might say, I think we would win it.

Mr. HALE. Yes. But you would bring the antitrust suit against the oil companies and not against the several States.

Mr. MORISON. I am assuming that is what you are inferring. If you are inferring something else, I have a little difficulty with it, because you would have to infer that State officials are corrupt.

Mr. HALE. I am not suggesting anything of the sort. But this is not a compact between private corporations; it is a compact between sovereign States.

Mr. MORISON. That is right, sir.

Mr. HALE. I presume—I do not know about this because I have never given it any thought—that sovereign States who conspire in violation of the Sherman Act would be treated just the same as individuals. Is not that true?

Mr. MORISON. That is a pretty tough constitutional question, Mr. HALE. I would like

you to forgive me for not answering, because it would take a little thinking on my part to think it to the end.

Mr. HALE. I do not know, but I would suppose so.

Mr. MORISON. Mr. HALE, I might say this: that anything that this committee conceives, if this is a genuine problem and you have facts which have been adduced before the committee that would indicate, through the conspiracy of major oil companies and their effect upon regulatory bodies of the States, that in the name of conservation that is a cloak for price fixing, then I think possibly that the committee might want to consider tightening this compact and putting limitations upon it. I have no objection to that.

Mr. HALE. If I entered into a contract with Mr. HESLTON and Mr. DOLLIVER for restraining trade, and I put a provision in the contract that what we were going to do was really very nice, and we did not intend to infringe against the Sherman Act, the Department of Justice would not be particularly influenced or impressed by that recital; would it?

A mere recital in the contract that the parties to the contract are not intending to do any harm is not a matter which would influence the Department of Justice in any degree; is it?

Mr. MORISON. No, sir. I think I see what you mean, Mr. HALE, I think the choice you are saying here that we have is that you recognize on the one side oil States who have in oil their greatest natural wealth, involving the employment of hundreds of people in their States, and the States' desire to conserve and not permit the physical wastage of that tremendous asset; that is a legitimate thing which Congress would not want to prevent. On the other side, what you are saying is that the effect of conservation inevitably, even if it is honest, is going to have an effect upon the commerce in oil because, to the extent that you prevent the competitive withdrawal of oil, you diminish the supply of oil which goes into commerce. I think that is a balancing of national interest, and again I have no position in that. I just feel I cannot.

Mr. HALE. I want it very clearly understood that I am not intimating or implying by anything I said any corruption or any lack of sincerity on the part of any representative of any State.

Mr. HESLTON. Mr. Morison, you are familiar with the final report of the Special Committee To Study the Problems of American Small Business in the Senate, which was filed January 31, 1949; are you not?

Mr. MORISON. I read that last evening, I must confess, Mr. HESLTON. You must remember I am a little new to this trust-busting. I have only been in office about 3½ months. But I read that very hurriedly last night. That was in the Eightieth Congress, I believe.

Mr. HESLTON. That is right. That is an official report of a congressional committee.

Mr. MORISON. Yes, sir.

Mr. HESLTON. As such, I assume it is a matter of some interest to the Department?

Mr. MORISON. Yes, sir.

Mr. HESLTON. I wish you would comment specifically on certain of the language in that report. Referring to the legislation which is now in existence, and which this bill would continue, it says that it "authorized States producing oil to enter into a compact for the sole purpose of studying co-operation between the various oil- and gas-producing States and recommending conservation measures that will better conserve oil." Then it sets out article IV, which is article V in the bill, and then it says:

"Despite this provision the executive secretary of the compact testified that the purpose of State proration laws was to 'prorate

to market demand' and that, when you limit to market demand, 'of course you affect price.'"

Is that a matter of some interest to the Department of Justice?

Mr. MORISON. Yes.

Mr. HESLTON. In view of that language you say that the Department has no opinion to express on this pending proposal one way or another?

Mr. MORISON. No. Let me make myself clear again. Our interest in anything that goes beyond the intent to effect conservation will be continuing, and we will certainly take action if we find that to be so.

Mr. HESLTON. If you found that to be so, would you be here recommending this legislation?

Mr. MORISON. Mr. Congressman, again let me try to give you the dilemma I am struggling with. Here is an act that the record shows has been in operation 15 years. The Secretary of the Interior, I understand, has testified, and a great many private people, that this has worked well for conservation.

Mr. HESLTON. You are not going to rest your case on the opinion of another department; are you?

Mr. MORISON. No, sir. I was trying to explain to you the kind of dilemma you put me in, because I do not believe I can honestly answer your question, because it would assume, as I have tried to point out, that we must oppose this because either on the one side, as Mr. HALE says, regardless of all interests, it in effect reduces the amount of oil to be withdrawn and, therefore, is a restraint of trade, or, second, as you are suggesting here, it might be utilized for an illegal purpose. I am just in an awful dilemma to take an honest position.

I want to help you in any way I can, to be frank with you, but I hope you share my dilemma.

Mr. HESLTON, I might say this: That if the committee, having heard a great many witnesses—and I assume you have—if you have made an inquiry, and if you have found or do find that the actual operation of this has been that in the name of conservation it has merely been a device by which they only withdraw what the market demand is—in other words, if withdrawal of oil is only set to market demand—then I think that it might well be a danger.

Going back to the intent that these States say—that the purpose of this bill is for conservation—and then to make this relate to conservation and not to market demand, that would be perfectly appropriate, I think, for the committee to consider.

Mr. HESLTON. Do you know major companies themselves or the purchasers of oil present to the several State boards their anticipated purchases?

Mr. MORISON. Yes, sir.

Mr. HESLTON. And then the allowables are fixed in some degree related to that.

Mr. HARRIS. Now, Mr. Chairman, I will have to object to that, because it is not a matter of fact, when the operation of these commissions is well known. I raise this question because the facts are well known that these allowables are usually set by bottom-hole pressure of wells and other factors to produce oil at a degree that the best conservation of withdrawals can be utilized.

Mr. HESLTON. Mr. Chairman, I am only paraphrasing what has appeared in testimony before the Senate committee repeatedly. I am not asserting that it is a fact. I will rephrase the question if my colleague objects to it.

Mr. HARRIS. The only thing I hope you understand that I am objecting to is what I believe may be construed by some to mean any effort to read a lot of things into the hearing that are not actual facts and to try to get the Department of Justice to give

different answers which they have stated very definitely they cannot give.

Mr. HESLTON. I would like to utilize the facts as they exist on these three points; so, strike the question from the record.

As a matter of fact, if allowables are related historically during the operation of this compact so that it appears that there is a definite relation between the amounts that the companies state that they will purchase and the amount that is finally fixed as an allowable, would that create in your mind some question as to whether there was in fact more than just conservation involved, or rather a device of fixing price or stabilizing price or doing some other thing? Like Mr. HALE, I do not want anybody to interpret this as meaning that I assert that any agency of the States is consciously doing this thing. But I do submit that the Department has a very real responsibility in a field which may affect not only the oil producers but the oil users. I think the oil users have a right to ask the Department to look into it.

Now, in terms of that in the Mother Hubbard case, the sixty-seventh allegation is:

"67. The operation of the present structure of the oil industry has resulted in the production of crude oil, necessary for the safety of the Nation, not on true conservation principles but on the principle of price maintenance."

What possible interpretation can anybody place upon that language except that the Department of Justice felt uneasy in 1940 and made it a part of a case of record that that was actually the condition that existed in the oil-producing picture. Do you not see what sort of dilemma you leave us in when you come in here and say "We have no opinion one way or another"?

Mr. MORISON. Mr. Congressman, let me reaffirm what I have said before. I am a lawyer, mind you, and I know what it takes as a matter of evidence to prove your point in court.

Mr. HESLTON. Most of us are lawyers, too.

Mr. MORISON. Yes, sir; I know that. I am just pointing that out again. If, as a matter of evidence, I can find that oil companies have conspired through whatever means—conservation or whatever method used—to fix prices, I promise you that you will have a lawsuit mighty quickly. The proof of that pudding is that, in the case we are now prosecuting on the west coast against Standard of California, that is a basic allegation. But we have yet, other than the inference you suggest here—and that I submit, Mr. Congressman, is really a matter, in view of your enthusiasm for the point and undoubtedly your knowledge and information and learning about it—that this committee ought to thoroughly consider. But we have not received to this date, as to the operation of the Interstate Oil Compact, any such proof that could stand up in court.

Mr. HESLTON. Let me refer to another committee of Congress, and point out a recommendation that has been part of the public records since January 31, 1945, the committee consisting of 12 members of the other body. So far as is indicated in the report, this is a unanimous recommendation. [Reading:]

"It seems to the committee that the Interstate Oil Compact Commission has gone far beyond the laudatory purposes cited in its compact, the basis upon which the Congress acted in approving same. Hence, it is recommended that the appropriate committees of the Congress look into the operation of the compact with a view to either repealing the authority or the enactment of proper amendments to safeguard the public interest."

Do you not think, as a matter of fact, that constitutes just as much a warning to the Department of Justice as it does to this

committee or any other committee of Congress?

Mr. MORISON. We do not need a warning, because we are constantly in every phase of American industry wherever we find monopoly practiced or indicated.

Mr. MORISON. The point I want to make which I think will answer your question is this: You are quite right if, on the basis of that report and on the basis of the testimony adduced here, you feel that the provisions of this act do not pin it down to what you call "honest conservation." I think it would be quite appropriate for the committee to do that, but I am in an impossible situation.

Mr. HESLTON. I say to you that this committee has a legislative responsibility and will try to discharge it as it has in the past. But the executive department has a responsibility and a very large one to enforce the laws Congress has passed, including the Sherman Act and any other antitrust act.

Mr. MORISON. That is right.

Mr. HESLTON. And when a committee of Congress says to the public and to you that this program has appeared to go further than the Congress intended it to go, why should not the Department of Justice address itself to that immediately?

Mr. MORISON. Because, Mr. Congressman, as I pointed out to you before, we have not one scintilla of evidence and we have worked the oil industry constantly, and we are continuing to do it in segment suits in every aspect of the oil industry. We have not any evidence beyond what you have read from the report of the Small Business Committee of the Senate.

Mr. HESLTON. And the press release of the Attorney General.

Mr. MORISON. That did not relate to the Interstate Oil Compact.

Mr. WOLVERTON. What, if any, consideration was given by the Department of Justice to the purpose of this bill? Has it been a matter of consideration?

Mr. MORISON. Yes, Mr. Congressman. The bill before us was submitted in somewhat similar form as early, I believe, as 1935, and it has been renewed and extended, and each time has been referred in due course to the Department of Justice, and this is the consistent position that we have taken on every occasion.

Mr. WOLVERTON. Does legislation of this type carry any implications with respect to consumer interest or the public interest?

Mr. MORISON. I do not believe I understand you, Mr. Congressman.

Mr. WOLVERTON. Do you see in legislation of this type the possibility of the public interest being avoided?

Mr. MORISON. No, sir; I cannot see that. If you are speaking again, as I was talking to Congressman HESLTON—

Mr. WOLVERTON. I have in mind this particular thought, which was a part of my remarks when this bill was before the House originally in 1935:

"We must never overlook the fact in considering any legislation that has for its purpose the control or limitation of production that the price to the consumer is thereby affected, and if there is no governmental supervision or control, the price will be an increased price to the consumer. Whenever the available supply of any commodity is reduced or limited, the direct result is an increased price to the consumer. This is particularly true when applied to any natural resource, such as oil."

That is what I have in mind when I ask the question whether this type of legislation in your judgment could adversely affect the public interest.

Mr. MORISON. I do not believe I can answer that, Mr. Congressman. I will tell you

why. Certainly it is true, it is simple economics, that a commodity in general demand and use, a natural commodity which is limited artificially or by regulation from supply, is going to be affected as to price as long as the rule of supply and demand is in effect. But the reason for my dilemma is this, that I think this committee recognizes that inevitably in this, as for instance in farm legislation, there must always be a balancing of interest. There is no true black and white. I think if honest conservation measures are to be engaged in by States, I think it is a matter that is legitimate, and one that Congress can consider, and unless it finds it unreasonably affects the people of the United States, it will probably approve it.

Mr. WOLVERTON. Have you made for your Department any study of the effect of this act, since its original enactment?

Mr. MORISON. No, sir; we have not made one directed at this particular aspect. We have constantly been examining the whole oil industry in its various ramifications.

Mr. WOLVERTON. Do you think that the reduction of production could adversely affect the public interest by reason of the resulting rise in price? Do you not think that is a matter that should have constant supervision?

Mr. MORISON. Yes, sir; I agree with you. I do not think that is wholly within my bailiwick. I have got to have a little bit of help on that. First, I am not a geologist or oil man myself. I would say in the executive departments there would be many who could give better light on such aspects than I could. For instance, I think that in the Department of the Interior, which has to do generally with the conservation of our natural resources of all kinds, is a group of people who might have a lot more information and advice than I would about it.

I think there is no better evidence of the imperative necessity of directing the Attorney General to make a continuing study of action taken under the compact and submitting regular reports to Congress than the response to the question of the gentleman from New Jersey [Mr. WOLVERTON]:

Have you made for your Department any study of the effect of this act, since its original enactment?

Mr. Morison's reply was:

No, sir; we have not made one directed at this particular aspect. We have been constantly examining the whole oil industry in its various ramifications.

Such a general examination certainly does not constitute an adequate study of the operation of the Interstate Oil Compact Commission to determine specifically if any action has been taken which is inconsistent with the purposes of or contrary to the limitations and restrictions contained in the compact.

Finally, the following excerpt deals with the problem of the responsibility in the Federal Government to make certain that the limitation contained in article 5 of the compact is carried out and not violated:

Mr. WOLVERTON. Mr. Chairman, I have two questions I would like to ask of the witness.

Directing your attention to article V of this proposed legislation, which sets forth, "It is not the purpose of this compact to authorize the States joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the

purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations," whose duty is it in the Government to observe whether that provision is carried out and not violated?

Mr. MORISON. I will tell you what I conceive, Mr. Congressman, to be my responsibility of the Department of Justice Antitrust Division, and that would be, as I have stated before, that if this article V should be violated by participating oil companies in these various States, and we could find such evidence, either upon complaint of a citizen or upon our own investigation, it would be my duty to bring a suit based on those facts.

Mr. WOLVERTON. I fully appreciate that. But I am asking who is the watchdog as to the effect of that section and whether it is carried out? Is there any governmental agency that has the direct duty of doing so?

Mr. MORISON. I would assume that my division, Mr. Congressman, would have the greatest responsibility for that. There may be others. I do not know. I keep speaking about the Interior Department, because I think of them in terms of this kind of project that they would have a continuing interest to watch this. I may be wrong.

Mr. WOLVERTON. That section was put in the bill originally for the very purpose I tried to emphasize: for the protection of the public interest. The very fact that it makes reference to monopoly and regimentation, and all the other elements that enter into Antitrust Act provisions indicates to me that the responsibility was upon the Attorney General. If there is any doubt about it, would you have any objection to an amendment being made to this bill that would make that clear?

Mr. MORISON. No, sir; I have no objection whatever if, in the wisdom of the committee and Congress, it is desired.

With the Department of Justice admitting its general responsibility in this field, the fact that it has not made any survey or study of the effect of the compact legislation since its original enactment, and offering no objection to an amendment placing such a responsibility unequivocally upon the Attorney General, it is difficult to understand the opposition to such an amendment. I hope that it will appeal to a substantial majority of the House as a sound proposal in the public interest.

Africa in Our Defense System

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, Brig. Gen. Bonner Fellers, retired, has been making valuable contributions in the press, magazines, and on the radio wherein he sets forth his views in the light of his experience on our national defense program. In the current issue of the Freeman, General Fellers again points out the importance of Africa as a strategic base for operations. Under leave to extend my remarks, I am including this article and

I commend it to the attention of all House Members:

AFRICA AND OUR SECURITY
(By Bonner Fellers)

The Iranian-British oil dispute is sinister. Nationalism, fanned by Communist agitators, is sweeping the Middle East. Under State Department guidance we are alined with the British whom we grant primary interest in this area and whose policy we have followed blindly. It is to be hoped that the Harriman mission may succeed and thus mark our first deviation.

The Arabian-American oil arrangements have been so satisfactory that it would be logical if the Iranians, who lack technicians and oil know-how, turned to American oil operators to find the experts they urgently need. But the British anticipated this. And our State Department, contrary to America's best interests, let it be known to our oilmen that they should extend no help to the Iranians. The Iranians have asked for West German oil technicians. But here also the British can and doubtless will prevent this aid by insisting that the allied powers refuse exit visas.

The explosiveness of the oil dispute is magnified by the fact that a British token-force intervention might also prompt the Red Army to move. Once in the Middle East, Soviet forces would be inclined to remain, for there lies an estimated 50 percent of the world's known oil reserves. The annual production is 60,000,000 tons.

WORLD COUNTERTEST FOR OIL

Europe's economy is dependent upon oil from the Middle East. If this were denied to Europe, we would be sure to supply the deficit. Last year the United States consumed 300,000,000 tons of oil, some two-thirds of the world's production. The Western Hemisphere can meet our peacetime oil demands, but if we were compelled to supply the oil for Europe, rationing would be necessary. And in time of war, oil from the Western Hemisphere alone could not meet the needs of ourselves and our allies.

Russia's oil position is more precarious than that of the United States. So far as can be determined, her annual production, including that of satellite Rumania, totals about 36,000,000 tons; by restricting civilian consumption, she could meet her wartime requirement.

While both the East and the West could fight a war without oil from the Middle East, it is to the best interest of each to see that the other is denied this rich prize.

Oil is the lifeblood of modern war. It would be naive for us to expect that Russia does not have a program to seize the oil fields of the Middle East either on the pretext of preserving peace or as the initial act of hostilities. It is to be hoped that the State Department will not permit the British-Iranian dispute to develop into a deadlock which would invite the participation of the Soviet Union.

Our problem therefore—in peace or war—is to prevent Russian seizure of the Middle East with its great oil resources, its freedom-seeking people, and its vital lines of communication. We must seek closer relationships with this strategic area. At present administration leaders seem to entertain a pious hope that our allies, or possibly just fate, will do this job for us.

SAFEGUARDING THE MIDDLE EAST

Some argue that a heavily armed Turkey—whose eastern frontier juts halfway along Caucasasia's southern border—could threaten Russia's supply line south through the heart of the oil lands. The fallacy of this lies in the fact that, if Russia strikes, Turkey's forces could be destroyed or paralyzed by the Red air force.

Others hold that our Mediterranean or Red Sea fleets, with carrier-borne aircraft,

could destroy Russia's rail transportation or pipelines leading from the oil fields. It is also suggested that Marines could be landed to hold oil installations for our own use. But in World War II, because of enemy air action, Britain was unable to use the Mediterranean supply route for her desert campaigns. On May 22, 1941, the German Luftwaffe struck the British eastern Mediterranean fleet and all but destroyed it. On the basis of this experience we cannot count on effective Allied fleet operations in the Mediterranean or the Red Sea until the Soviet Air Force is defeated.

Should Russia strike Europe, the Red Army, with strong air support, would be able to attack in such overwhelming numbers that it is doubtful whether European air bases could be held for any appreciable time. Such United Nations air forces as were based in Europe when the war started would be largely tactical and engaged in supporting our ground forces. Thus they would be unable to intervene in the Middle East.

There are some who argue that from air bases in England, strategic air forces could deny Middle Eastern oil to Russia by striking oil installations. But England would be subject to heavy attack by the Red Air Force V-1's and V-2's (new version) and possibly even to airborne invasion. There is always the possibility that, to save her population centers from atomic assaults, England understandably may be forced into a position of neutrality.

Sound military planning cannot place complete reliance upon bases in England and Europe. The vital principle of flexibility in planning demands we make extensive use of bases in Africa.

In relation to the Middle East, Russia enjoys a decided military and geographic advantage. With her primary trust in a vast land army, Russia's technique is to expand her borders by means of Red army tanks and bayonets supported by a tactical air force. Red army forces in Caucasasia can move quickly toward the adjacent oil fields of the Middle East; there are and there will be no Allied ground forces sufficient to stop them.

Air power offers the only effective countermeasure against Russian occupation of the Middle East. The deeper the Red army moves into this priceless strategic area, the more its supply lines can be disrupted by air strikes. In addition, air power can deny the oil of the Middle East to Russia by destroying the refineries, pumping stations, and storage tanks, by breaking pipe lines, and by disrupting any rail or truck transportation that might be attempted.

Until full-scale, intercontinental air warfare develops into a reality, overseas air bases are essential. It would be terribly costly, if not impossible, to hold air bases on the continent of Europe. Our ground forces, along with those of our Allies, would have to be expended in an effort to stop the full weight of the Red army, and there is every indication that such a sacrifice would prove to be futile.

AFRICA'S NATURAL BARRIERS

It is much easier to hold bases which have the protection of natural barriers—bodies of water, mountain ranges, or deserts, or combinations of these barriers. Relatively small ground forces can hold these naturally protected bases because only a fraction of the Red army could be thrown against them. Bases protected by bodies of water would force the Red army into airborne or overseas operations. Bases protected by deserts or mountains make supply difficult for the enemy, and the terrain limits the size of his forces which can be transported over or across the barrier.

A small, highly trained and mobile ground force, with adequate air protection and support, can defend air bases in Africa. The

Mediterranean and the Red Sea, joined by the Suez Canal, are formidable barriers against land invasion of Africa. Russia is inexperienced and ill-equipped for amphibious operations. If we can achieve air supremacy, no large expeditions across the Mediterranean or the Red Sea could reach the coasts of Africa intact.

Crossing of the Suez Canal by a land army could be effected, but the isthmus of Suez is so narrow and exposed that concentrations highly vulnerable to air attack would be necessary. The supply route from Russia for such a force would lead across hundreds of miles of desert. Air power could find and destroy vehicles in this bright and open terrain with very little difficulty.

Our own air supremacy—if we were to have it—and small ground forces defending African bases, could defeat enemy airborne invasions. Our fighters could shoot down most of the troop-transport craft. Those which did not get through would be highly vulnerable to antiaircraft fire in the vicinity of our bases. Paratroopers could be disposed of by small ground forces, especially trained and equipped for mobile warfare across the open desert.

Nor would the Russian occupation of Europe necessarily threaten our African bases. Advocates of the ground defense of Western Europe often claim that we must hold Europe to secure Africa. There is a fallacy in this reasoning. The Russian forces are prepared to expand on the land mass of Eurasia. Their best avenue of approach to Africa leads directly from Russia into the Middle East, not to Africa via Europe.

Even if all Europe were to fall to the Red army, the natural barriers which protect Africa would remain. Russia's possession of Europe would improve her chances for success in an airborne invasion of Africa, but airborne invasions are never possible against a strong air force.

LAND INVASION UNLIKELY

If we control the air over Africa there is little likelihood that Russia would attempt land invasion of that continent. We are now planning a series of bases from Morocco along the north coast of Africa, to include the Suez Canal and Bagdad. Engineer troops have been assigned to putting these bases in readiness to serve air combat units. But France is reluctant to permit American ground defense forces to be stationed on the bases. If war comes, and France is forced to become neutral, our best North African bases might also be neutralized. The south fringe of the Mediterranean could be reached by Russian light bombers as the Red army moved into Europe. But such bases would be very useful for strategic and tactical missions at the outbreak of hostilities and in winning the battle for air supremacy. It is in the direct defense of these bases that our own meager ground forces should be employed.

In a war against Russia we would do well to consider Africa as a vast north and south corridor offering bases from which air power could strike and destroy Russia's war potential and prevent the consolidation of Soviet strength in Europe. An air route with limited facilities already exists from Takaradi on the Gold Coast to Khartoum on the Upper Nile. This route is some 2,000 miles south of the nearest base Russia might acquire in Europe and is therefore relatively safe from fighter and medium bomber attack. Only Russia's best strategic bombers—unescorted—could strike this line of bases. Although air supply through these bases would be feasible, it might be possible to build a railway from the Gold Coast to Khartoum. Such a line would have enormous commercial value.

Sea communications from the United States to the Gold Coast will be much safer

from submarine attack than routes to European bases. Soviet submarine bases initially will be in the Baltic—a round trip distance of some 12,000 miles from the Gold Coast.

As the line of air bases is advanced north down the Nile, the Red air force might be compelled to strike. If we have built air supremacy—as we must if we are to keep the peace or win the war—the battle of the air might be won in African skies. Once we win the battle of the air from bases in Africa, a shield of protection can be extended over the people of the Middle East and Europe, and a Red attempt to occupy and exploit these areas would be doomed.

From these African bases, our bombers can reach the Baltic. Across the area from the Baltic to the Black Sea are four main rail routes leading from Russia into Europe. It is these lines of transportation on which the Red army must rely if the invasion of Europe is attempted. They could be readily severed and kept severed—by air strikes from African bases. With American air supremacy established in Africa, it is most doubtful whether Russia would dare to attempt the invasion of Europe. If she did attempt it, her entire Red army could be cut off from its home base.

From African bases, if we build air supremacy, a war against Russia can be won.

EUROPEAN RELUCTANCE

Force of circumstances may compel us to turn to Africa for our most effective overseas air bases. In Europe there is reluctance, if not outright opposition toward preparation for war. Many Europeans admit willingness to do almost anything to keep out of world war III. Nor can we really blame them. The lessons of Korea are still vivid. Collective security failed to save the South Koreans. In spite of our good intentions and 150,000 American casualties, Korea has been destroyed. Can the U. N. in ground combat do better against the Red army of Russia than against the Red Chinese? Why should European cities and populations be ground to destruction by Russia's vast land army, if Allied air supremacy can prevent it?

France has hesitated to make air-base sites available to us. She also has refused to allow American troops, sent to protect her frontiers, to be stationed within her borders. For political reasons we have refused until recently to seek bases in Spain and made no effort to take advantage of Spain's spiritual and geographic strength. Greece and Turkey offer base sites so far forward that even if any aircraft could be held on the ground, they would suffer heavy losses from Red air force strikes.

OUR DIPLOMATIC BLUNDERS

With the most extensive and defensible air-base sites lying in Africa, the United States unfortunately has done nothing to make its forces welcome there. On the contrary, we have short-sightedly supported European imperialism which has turned the local populations against us. This bitterness arises largely because we deal with north African and middle-eastern peoples through the French and British rather than directly.

In Morocco we have enjoyed friendly relations for a century. Both France and the United States, under the Protectorate Treaty of 1912, have recognized the sovereignty and independence of the Sultan and the territorial integrity of Morocco. But in arranging for American air bases in Morocco, obviously to enhance France's prestige locally, we have dealt with the French and bypassed the Sultan. Unless the Sultan signs the agreement giving us the use of these bases, in the eyes of the Arabs we are committing aggression.

The situation in Egypt—a sovereign power—is somewhat similar. Here the occupation of the Suez Canal area by British troops, and the stationing of foreign troops

in the Egyptian Sudan, causes mounting bitterness among the people. We have made arrangements with the British to use the Suez air base without asking the consent of the Egyptian Government. As a sovereign power, friendly to the United States, Egypt deeply resents this.

In Bagdad also we have dealt with the British and put the Government of Iraq second in matters affecting the security and welfare of Iraq and its people.

The creation of the State of Israel, which resulted in nearly a million Arab refugees, has added to the turbulence. Fear that economic considerations may compel Israel to expand her tiny borders by force aggravates this complex problem, for which the Arabs hold the United States considerably to blame.

Communist propagandists make the most of the trying Palestine situation, disseminating such slogans as "American aggression through Israel," "The coming war for oil," "More United States dollars for Israel—more trouble for the Arabs."

To all this our representatives in the Middle East make little or no reply. Our Government cannot be unaware of this problem, for our official and business representatives in the Middle East have clearly and fully reported these Arab-Moslem sentiments. But no adequate remedial action has been taken.

Saudi Arabia is one happy exception. There our Government has dealt directly with the local government. There American oil companies have made mutually beneficial business arrangements. There we have the important Dhahran air base. There Communist penetration has failed. This situation could be duplicated elsewhere in the Middle East were we to establish the same forthright relationships.

If war is thrust upon us, to secure American aircraft from the sabotage of hostile local populations near our bases would require more ground forces than we can spare. Yet all we need to do to insure the friendship of the Arab and Moslem peoples is to revert to our traditional American attitude toward peoples who, like ourselves, love freedom.

The Arab world would normally turn toward the United States. Its religion rejects communism. The Moslem faith is founded partially upon the teachings of Christ. It teaches freedom, individual moral responsibility, sacredness of private property, and an abiding conviction that in all things the Divine Spirit knows best.

Yet, as communism makes heavy inroads in the Middle East, we make no attempt to use these spiritual values in the struggle. Rather, we try to combat communism only with dollars and other material assistance. While we rely upon the indirect approach through European colonialism, Russia fans the flames of nationalism as she furthers her own imperialistic expansion. The Communist leaders are too clever to preach communism. They have gained their hold on the people by offering to help them achieve freedom from imperialistic domination and economic exploitation.

AFRICA'S HIDDEN RESOURCES

The solution is simple. Merely by recognizing the political independence of the various Arab States of Africa and the Middle East, we can reestablish a firm and lasting friendship. What these people want is not the ECA give-away program. Their good will cannot be bought. They want political equality. Economic aid alone will not satisfy; they welcome help which will help them to help themselves. Unless we recognize national aspiration, the Middle East and Africa will be lost to the free world.

The economic development of Africa and an increasing flow of oil from the middle east are essential ingredients to a flourishing European economy. Africa's population of 100,000,000 is, and will be for generations, predominantly agricultural. Thus raw materials of Africa complement the manufactured goods of industrial Europe.

Under free enterprise development, both Africa and Europe can be made to thrive.

It is high time that the Europeans took themselves off the American dole. They can help to unlock Africa's hidden treasures to the mutual benefit of themselves, the Africans, and the American taxpayers. The advent of refrigeration, of air conditioning, of air transportation, and man's victory over tropical diseases, all help to make Africa ripe for development.

The best air force in the world based in a friendly Africa can be the key to peace. It would be neither provocative nor vulnerable. It would be a constant and dependable deterrent to any aggressive move by Russia.

But Africa must be regarded as more than a military opportunity. A friendly, open-handed and direct approach to the peoples of Africa and the middle east can make possible the development of long-neglected human and natural resources for the benefit of all mankind.

Closing of Veterans' Administration Offices

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and Journal of the Massachusetts House of Representatives:

THE COMMONWEALTH OF MASSACHUSETTS,
HOUSE OF REPRESENTATIVES,
Boston, August 8, 1951.
Hon. EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.

DEAR Mrs. ROGERS: The Massachusetts House acted unanimously on my petition in re closing VA office (district) today.

In addition to the hardship on widows and minor children, this move would cost our State plenty. The veterans' services of the Commonwealth would have to take up slack while this so-called economy move is taking place. Then, again, the service from Philadelphia would never be adequate.

The legislature was much interested in the increased cost to us, and I succeeded in getting their ear on that point alone.

Best wishes,

FRANK TANNER.

JOURNAL OF THE HOUSE

TUESDAY, JULY 31, 1951.

Met according to adjournment, at 11 o'clock a. m.

Prayer was offered by the chaplain, as follows:

"Almighty and Eternal God, our Heavenly Father, once again we ask Thy blessing upon the Speaker and the members of this house of representatives, and all who are associated with them in their important work as legislators for our Commonwealth.

"Endow all of us with the moral integrity and courage to play the game of life in a big, manly way.

"Help us to think clearly and to act courageously, conscious of no fear except the fear of failing to do our very best. We thank Thee for the many sincere and honest men and women, who are giving so generously of themselves to the public service of the people of our State and Nation, and who make the standard of their actions adher-

ence to truth and righteousness. In a word, O Lord, help all of us to be faithful to the trust placed in us by Thee and by the people whom we are privileged to serve.

"These blessings, we ask in the name of Christ Jesus, our Lord. Amen."

SPECIAL REPORTS

Special report of the department of mental health authorized (under ch. 23 of the resolves of 1951) to continue its study of the advisability of making psychiatric service available to the district courts, received July 30, was referred, under rule 28, to the committee on public welfare. Sent up for concurrence.

Special report of the metropolitan district commission (under sec. 12 of ch. 306 of the acts of 1949) relative to the progress of work done by said commission in connection with the accelerated highway program, received this day, was sent to the senate for its information.

PETITIONS

Petitions severally were presented and referred as follows:

By Mr. Tanner, of Reading, petition (subject to joint rule 12) of Frank D. Tanner that Congress be memorialized to take the necessary steps to prevent the closing of the district office of the Veterans' Administration in Boston and the removal thereof to Philadelphia.

By Mr. Canavan, of Revere, petition (subject to joint rule 12) of Harold W. Canavan and another for an investigation by a special commission (including members of the general court) relative to premium charges used and charged by insurance companies for all forms of motor-vehicle insurance.

By Mr. Chadwick, of Winchester, petition (subject to joint rule 12) of Harrison Chadwick for increasing the scope of the investigation by the commission established to examine the structure of State government by including therein a survey of the salaries of officers and employees of the Commonwealth holding unclassified positions.

Severally, under rule 28, to the committee on rules.

PAPERS FROM THE SENATE

The house resolve providing for an investigation by a special commission relative to the elimination of traffic hazards and congestion at the Middlesex Street crossing in Lowell (house, No. 778, changed and amended) came down passed to be engrossed, in concurrence, with an amendment inserting after the word "sums", in line 15 (as changed), the words "not exceeding in the aggregate, one thousand dollars," and the amendment was referred, under rule 46, to the committee on ways and means.

A report of the committee on cities asking to be discharged from further consideration of the petition (accompanied by bill, house No. 2687) of Philip A. Chapman relative to increasing the salaries of the assessors and deputy assessors of the city of Boston, and recommending that the same be referred to the committee on municipal finance—accepted by the senate, was considered forthwith, under rule 57; and it was accepted, in concurrence.

A petition (accompanied by bill) of John B. Hynes, mayor of Boston, John F. Collins and members of the house of representatives for legislation relative to the transfer of certain parcels of land on Tremont Street, in the Roxbury district of said city, came down referred, under suspension of joint rule 12, to the committee on cities; and it was referred, under rule 38, to the committee on rules.

REPORTS OF COMMITTEES

By Mr. Toomey, of Cambridge, for the committee on ways and means, that the order relative to authorizing the committee on counties to sit during the recess of the general court for the purpose of studying relative to defining the law relating to justices of district courts (house, No. 2664) ought to

be adopted. Referred, under joint rule 29, to the committees on rules of the two branches, acting concurrently.

By Mr. Toomey, of Cambridge, for the committee on ways and means, that the resolve reviving and further continuing the special commission established for the purpose of erecting a war memorial in the city of Westfield (house No. 87) ought to pass.

By Mr. Wood, of Easton, for the same committee, that the bill providing for the construction and operation of an emergency floating boom across the Chelsea River between the cities of Boston and Chelsea (senate No. 569, amended) ought to pass.

By Mr. Giles, of Methuen, for the same committee, that the bill relative to motor vehicles and trailers operated or propelled under plates issued to manufacturers, repairmen, or dealers and to the excise thereon (house No. 2669) ought to pass.

Severally placed in the orders of the day for the next sitting for a second reading.

By Mr. Tilden, of Scituate, for the committee on ways and means, that the bill providing that certain former employees of the Commonwealth, and its political subdivisions, who have been retired, may waive their rights to certain increases in the annual amounts of the pensions, retirement allowances, annuities, or other benefits payable to them and persons claiming under them (house No. 2628) ought to pass with an amendment. Placed in the orders of the day for the next sitting for a second reading, with the amendment pending.

By Mr. Toomey, of Cambridge, for the committee on ways and means, that the house should concur with the senate in its amendment of the house bill relative to the compensation of the chairman of the State planning board (house No. 2656).

By Mr. Tilden, of Scituate, for the same committee, that the house should concur with the senate in its amendments of the house bill relative to the amount of State aid for public schools in certain towns (house No. 2655).

Severally placed in the orders of the day for the next sitting, the question, in each instance, being on concurrence.

By Mr. Skerry, of Medford, for the committee on municipal finance, reference to the next annual session (under joint rule 10), on the petition (accompanied by bill, house No. 1408) of the Massachusetts Federation of Taxpayers Associations, Inc., for legislation relative to limits of indebtedness in cities and towns.

By the same member, for the same committee, reference to the next annual session (under joint rule 10), on the petition (accompanied by bill, house No. 2031) of John B. Hynes (mayor of Boston) relative to the salary of the chairman of the board of real estate commissioners of the city of Boston, the compensation and duties of the auctioneer of said board and of public auction sales of property of said city.

By the same member, for the same committee, reference to the next annual session (under joint rule 10), on the petition (accompanied by bill, house No. 2581) of James P. Meehan (mayor) that the city of Lawrence be authorized to borrow money for school purposes.

By the same member, for the same committee, reference to the next annual session (under joint rule 10), on the petition (accompanied by bill, house No. 2640) of Robert C. Boudreau and others (selectmen) that the time be extended within which the town of Ware may borrow money for school purposes and increasing the amount which may be so borrowed.

By the same member, for the same committee, reference to the next annual session (under joint rule 10), on the petition (accompanied by bill, house No. 2841) of Isaac A. Hodgen and others (selectmen) that the time be extended within which the town of Belchertown may borrow for school pur-

poses and increasing the amount which may be borrowed.

By Mr. Wondolowski, of Worcester, for the committee on public service, reference to the next annual session (under joint rule 10), on the special report of the commissioner of administration (under authority of sec. 7 of ch. 7 of the general laws, as amended by ch. 610 of the acts of 1948) recommending legislation to establish the salaries of said commissioner, the comptroller, the budget commissioner, and the State purchasing agent in the commission on administration and finance (house No. 2657).

Severally placed in the orders of the day for the next sitting, the question, in each instance, being on acceptance.

ENGROSSED BILLS

The engrossed bill making certain changes in the law relative to veterans' benefits (which originated in the house), in respect to which the senate had concurred in adoption of the emergency preamble, was passed to be enacted; and it was signed by the speaker and sent to the senate.

Engrossed bills—

Further defining the term "trailer", as used in the motor vehicle law (which originated in the senate); and

Authorizing the town of Randolph to pay a pension to Adolph O. Christiansen, a former superintendent of schools in said town (which originated in the house);

Severally reported by the committee on engrossed bills to be rightly and truly engrossed, were passed to be enacted; and they were signed by the speaker and sent to the senate.

ORDERS OF THE DAY

The house bill relative to the pardoning of felonies (house No. 2282), reported by the committee on bills in the third reading to be correctly drawn, was read a third time; and it was passed to be engrossed. Sent up for concurrence. Rule 15 was suspended, on motion of Mr. Ayers, of Weston.

The house bill making it unlawful for certain persons to operate or cause or permit the operation of a motor vehicle or semi-trailer unit the weight of which exceeds the limit provided by law or the registered weight (house No. 2698), reported by the committee on bills in the third reading to be correctly drawn, was read a third time; and it was passed to be engrossed. Sent up for concurrence.

At 26 minutes after 11 o'clock a. m. the speaker declared a recess, there being no objection; and at 21 minutes after 1 o'clock the house was called to order.

The house bill increasing the salaries of justices in certain district courts (house No. 2675, amended) was read a third time.

Pending the question on passing the bill to be engrossed, further consideration thereof was postponed, on motion of Mr. Plunkett, of Lowell, until after disposition of the remaining matters in the orders of the day.

Subsequently, the remaining matters having been disposed of, the bill was considered further.

The committee on bills in the third reading reported, recommending that the bill be amended by substitution of a bill increasing the salaries of the justices, clerks, and assistant clerks of certain district courts (house No. 2703), which was read.

After remarks Mr. Plunkett moved that the amendment be amended in section 3 by striking out the words "district court of Peabody," and by inserting after the word "dollars", in the last line thereof, the words "the salary of the justice of the district court of Peabody shall be \$4,000"; and these amendments were adopted.

Mr. White of Lynn then moved that the amendment be further amended by inserting after section 3 the following new section: "Section 3A. Said chapter 218 is hereby further amended by striking out section 80, as most recently amended by chapter 799 of the acts of 1949, and inserting in place thereof

the following: Section 80. In courts in which the salaries of clerks are established by section 79, the salaries of first assistant clerks shall be equal to 75 percent, and the salaries of all other assistant clerks shall be equal to 70 percent, of the salaries of the clerks of their respective courts."

After debate this amendment was adopted.

Mr. Glaser, of Malden, then moved that the amendment be further amended in section 2 by striking out the third and fourth sentences and inserting in place thereof the following: "The salaries of the clerks of said district courts shall be equal to 75 percent of the justice of their respective courts, except the clerk and assistant clerks of the central district court of Worcester. The salaries of the first assistant clerks of said courts shall be equal to 75 percent, and the salaries of the second and third assistant clerks of said courts shall be equal to 60 percent, of the salaries of the clerks of their respective courts."

After remarks on the question on adoption of the amendment moved by Mr. Glaser, Mr. Telford, of Plainville, moved that further consideration of the bill be postponed until Monday next; and after debate the motion was negatived.

The amendment moved by Mr. Glaser then was adopted.

The amendment recommended by the committee on bills in the third reading, as amended, then also was adopted. The substituted bill (see House, No. 2703, printed as amended) then was passed to be engrossed. Sent up for concurrence. Rule 15 was suspended, on motion of Mr. Glaser, of Malden.

Mr. Chadwick, of Winchester, asked unanimous consent to withdraw the motion made by him on Thursday last—for suspension of rule 28 (3) so that he might offer, from the floor, the petition (subject to joint rule 12) of Harrison Chadwick for increasing the scope of the investigation by the commission established to examine the structure of State government by including therein a survey of the salaries of officers and employees of the Commonwealth holding unclassified positions.

There being no objection, the motion was withdrawn.

The motion of Mr. Ayers, of Weston, that rule 28 (3) be suspended with reference to the petition (subject to joint rule 12) of J. Robert Ayres, Christian A. Herter, Jr., William P. Constantino, and Philip F. Whitmore for a legislative amendment to the constitution providing a limitation on the time of sessions of the general court, was considered.

After debate on the question on suspension of rule 28 (3), Mr. Ayres moved that rule 102 be suspended in order that debate on the pending motion might be unlimited; and after further debate this motion was negatived.

The house then refused, by a vote of 62 to 62, to suspend rule 28 (3).

The house bill relative to the duties of the assistant commissioner of State airport management (house, No. 1682) was read a second time.

Pending the question on ordering the bill to a third reading, Mr. Glosky, of Beverly, moved that it be amended in section 1 by inserting after the word "commissioner", in line 12, the words "and shall serve in a dual capacity as legal counsel and assistant commissioner without additional compensation."

After debate the amendment was adopted, and the bill, as amended, was ordered to a third reading.

Under suspension of the rules, on motion of Mr. Chapman, of Boston, the bill (reported by the committee on bills in the third reading to be correctly drawn) was read a third time forthwith; and it was passed to be engrossed. Sent up for concurrence. Rule 15 also was suspended, on further motion of the same member.

The recommended house bill placing, the office or position of secretary, State racing

commission, and of chief accountant and supervising racing inspector of the State racing commission under civil-service laws (house, No. 2191) was considered.

Pending the question on ordering the bill to a third reading, Mr. Richter, of Brookline, moved that it be referred to the next annual session; and after remarks on this motion, further consideration thereof was postponed, on motion of Mr. Harrington, of Everett, until after disposition of the remaining matters in the orders of the day.

Subsequently, the remaining matters having been disposed of, the bill was considered further.

After debate on the question on referring the bill to the next annual session, 67 members voted in the affirmative and 27 in the negative.

The sense of the house then was taken by yeas and nays, at the request of Mr. Walsh, of Lynn; and on the roll call 139 members voted in the affirmative and 86 in the negative, as follows:

Yeas: Allen, Frank H.; Anthony, Charles H.; Armstrong, John A.; Asiat, John George; Aspero, Joseph A.; Ayers, J. Robert; Babcock, Josiah; Bacheller, Everett B.; Baker, Clifton H.; Barnes, Cyrus; Bayley, James C.; Beach, Raymond H.; Bessette, G. Yeas 139, nays 86. Therefore the bill was referred to the next annual session.

Mr. Walsh, of Lynn, then moved that the house adjourn; and the motion prevailed. Accordingly, without further consideration of the remaining matters in the orders of the day, at 10 minutes after 3 o'clock, the house adjourned, to meet tomorrow at 11 o'clock a. m.

Shall Spain Be in the Western Alliance?

EXTENSION OF REMARKS OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, August 13, 1951

Mr. SMITH of New Jersey. Mr. President, on the 29th of July the senior Senator from Washington [Mr. MAGNUSON] and I participated in the CBS radio program known as the People's Platform, at which time we discussed the question, Should Spain Be in the Western Alliance?

As I believe this discussion may be helpful in connection with our consideration of the Western Europe collective security situation, with the approval of the Senator from Washington, I ask unanimous consent that a transcript of the program be incorporated in the Appendix of the Record.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

ANNOUNCER. The Columbia Radio Network invites you to another session of People's Platform with Stuart Novins. Our question today "Should Spain be in the Western Alliance?" Our guests Senator WARREN G. MAGNUSON, Democrat, of Washington, and member of the Interstate and Foreign Commerce Committee, and Senator H. ALEXANDER SMITH, Republican of New Jersey, and member of the Foreign Relations Committee. This broadcast was recorded in the Senate

radio gallery, and here to open the discussion is Chairman Stuart Novins.

Mr. Novins. These past few weeks Spain and Franco has popped prominently into the news again. The late Admiral Sherman, the great, highly honored American, went to Madrid to discuss with Franco the possibility of certain commitments to the anti-Communist bloc. These past 2 weeks also, congressional committees have been to Europe to examine conditions there in relation to our western defense pattern.

Senator SMITH, you were in Europe with your committee, watched closely the developments concerning Franco. I think you have spent some time with Franco. I wonder if you would give us your opinion—what do you think the United States position should be regarding Spain and our western defense strategy.

Senator SMITH. Let me just say briefly that I was a member of the Foreign Relations Committee that just had a 2-week trip to Europe, where we covered France, England, Spain, Greece, Turkey, Rome, Germany, and back to France. The picture of Spain at the western end of the Mediterranean was one of the most important pictures that we saw. We had the privilege of talking with Mr. Franco, himself, to get an idea of what his feelings were about the matter. I got an idea in France and England about the feeling of those countries toward Franco's participation and, of course, being in Spain, itself, we felt the full significance of that Iberian Peninsula and the whole picture, especially the Mediterranean area. I can say that my feeling is that it is most important for us in our whole Atlantic Pact set-up to work up some program whereby the manpower of Spain, the location of Spain, and Spain, in general, should be a part of our North Atlantic defense, and especially a part of the Mediterranean picture.

Mr. Novins. All right, thank you, sir; now let's turn to Senator Magnuson and find out what his opinions are.

Senator MAGNUSON. Thank you, Mr. Novins, but I somewhat disagree with my distinguished friend from New Jersey. I think before we embark upon aid to Spain we ought to divide the basic problem into two parts—one, whether or not Spain will be of any military aid to us in our over-all fight against communism in Europe and elsewhere, and the other whether or not we are going to embark upon a program of aid to Spain for the rehabilitation of Spain itself. The second question, of course, poses many political problems, whereas the first question, of course, is a military question. Now I'm just wondering whether Senator Smith could tell me—for I'm sure the Joint Chiefs of Staff haven't told the Congress—just what military aid Spain can be to us.

Senator SMITH. Well, I can give you a little light, I think, on both the economic and military. Of course, economically Spain is all shot to pieces. She needs economic help, and Franco—Mr. Franco was wondering why, when we were helping these other countries, we didn't talk in terms of the economic condition Spain was in and didn't consider Spain in connection with the Marshall plan, for example. Now, the military aspect, it seems to me, would be simply this: the location of Spain, and the Pyrenees Mountains, and the whole set-up on the western end of the Mediterranean indicates that Spain is a natural as part of the North Atlantic defense. And, of course, the possibilities of air bases in Spain is one of the things we have all been thinking about, but most important, irrespective of Spain's manpower, that second, the air-base problem, is one that we are all very much concerned with, and, I think, although I can't speak for Admiral Sherman, who, in my judgment, was one of the outstanding men in our military set-up—Admiral Sherman, I'm sure, was there discussing the base problem. And it was that prob-

lem that we were all particularly interested in. I might add, however, Senator, that Franco told us that he had available, if the proper arrangements could be made, a manpower that might total 2,000,000 men, but they'd need equipment. We would have to do something about it. In answer to a question from me he said he would be willing if those men should move outside of Spain, in common defense, provided a treaty arrangement could be made. [Simultaneous talking.]

Senator MAGNUSON. Well I was going to ask that question whether or not they would move outside. Of course, we are thinking now in terms of the four major Mediterranean countries—the four powers, namely Spain, Greece, Turkey, and Yugoslavia, but whether or not—

Senator SMITH. Don't forget Italy.

Senator MAGNUSON. Italy—whether or not—well our treaty sort of holds that down a little bit, which ought to be revised, incidentally. But, whether or not Spain would move out her 2,000,000—they have a conscription in Spain that starts at the age of 21, and the trained military manpower according to Harrison Baldwin, of the New York Times, they claim to be 2,057,000. I suppose that's the figure that Franco gave you.

Senator SMITH. The round figure of 2,000,000.

Senator MAGNUSON. But he says that many observers estimate that 400,000, including about 25,000 officers, of this number are now under arms, so that would mean that Spain's military is more potential than actual. Now, if we are going to rely on Spain geographically and go behind the Pyrenees Mountains, that would mean that all of Europe would be lost. I don't know what good Spain would be if Europe is all gone.

Mr. Novins. I wonder if I might ask a question about that gentlemen, and before I do I want to explain that bell we just heard in the radio gallery is not an alarm clock, but a call for a vote downstairs. In connection with using Spain for a geographical value I'm wondering about the effect on France, on England, and Western Germany also—are they going to feel there that what we are doing is retreating behind the Pyrenees and that we are going to let the rest of the Continent be run over.

Senator SMITH. The suggestion of retreating behind the Pyrenees—I don't think that's ever been in the picture of any discussions I've heard. The feeling was that Spain, located as it is, is an ideal place for bases—that's the principal thing discussed in the military discussions I heard. Then the question came up whether Spain would defend that area—in case you want to defend those bases—and secondly, whether Franco would be willing to have his troops move out and join the European divisions, in case of an invasion by Russia of Western Europe. And, he said he would be willing to do that provided he could get arrangements with the other countries that would be satisfactory to Spain. Of course, it is a big if—you might never get to any agreement.

Senator MAGNUSON. Let me ask this question of the Senator from New Jersey: Is this predicated upon pure military aid to Spain—that he would move his troops out, if necessary, or does he want to tie the string of economic aid to Spain along with it?

Senator SMITH. We didn't develop any details whatever because we didn't have any time to. We didn't go there with the idea of negotiation; we were simply trying to see from him what his attitude about it was. There is no doubt in my mind that what he said was that he would like to be associated with the Western Powers. There was no doubt in my mind that he did not want to be neutral in case of an invasion of Europe by Russia. He was afraid of Russia and he wanted to be allied with those who were opposing Russian communism. But, he said,

he realized he couldn't be in the Atlantic Pact because England and France wouldn't let him; and I wouldn't advocate his being in the Atlantic Pact. I would advocate the approach to Spain in sort of a Mediterranean set-up with Turkey.

Mr. Novins. Of the four or five countries.

Senator SMITH. Well, I figured Spain on the one end, Greece and Turkey at the other end; possibly Iran. Of course, Turkey thinks Iran ought to be brought into the thing; north Africa, certainly Spanish Morocco, French Morocco, and so on; Italy, certainly; possibly France might come in some part of a set-up of that kind, although France wouldn't want Spain in the Atlantic Pact, which is supposed to be limited to democratic and free countries, and they say, of course, that Spain isn't a democratic and free country. I think, if you had two different set-ups brought together through the joint membership by the United States in both groups, the Atlantic Pact in this group, and a formula could be worked out, or the alternative a bilateral arrangement between the United States and Spain, where we would have access to bases there for the Air Force to help to develop in order to have that big deterrent to Russia making this attack.

Senator MAGNUSON. Well, of course, that approach might be somewhat different—put a different light on the military aspects of our relations with Spain. But the trouble with all this has been—even the discussions on the Spanish loan in the Senate here last year—that based upon the fact that there is a suggestion that Spain ought to be a part of the North Atlantic Military Pact. Well that naturally presupposes that we expect to go behind the Pyrenees Mountains. Now I don't know what good military Spain would be then because that would mean that all Europe would be gone. Now, if we are going to have another Mediterranean pact—or a Middle East pact—then possibly we might consider this situation.

I've heard no suggestion of a Middle East Pact—but the suggestion I've heard which makes me very dubious about military aid to Spain is to get Spain—get Greece and get Turkey into the so-called North Atlantic Pact of Nations.

Mr. Novins. What would be the position of Tito's Yugoslavia on such a pact?

Senator MAGNUSON. Well, I don't know what the military position would be; of course, if they both had a common enemy why—somewhat similar to our situation now with Japan—we have a common enemy in the Far East, but surely politically there would be nothing but a clash [speaking simultaneously].

I think two dictator countries—one of them a nationalist communistic country and the other one a pure Fascist country—both of them run by dictators. I—

Mr. Novins. I want to explain, Senator, that the only reason I raise the question is because I would like to get your opinions on the political implications of working with Franco apart from the military value. Do we face a problem in some of the other nations—

Senator SMITH. We certainly do, because you probably can't get all the nations of the Atlantic Pact, and it requires unanimity to bring in any other nation, you can't get them to vote "aye," if they won't vote "aye." I'm against raising the issue. I simply want to raise a question of whether in light of the European situation we don't want to use all the forces we can get in such way as we can get them to resist the great threat of Russian communism. Now, the Greeks and the Turks want to be in the Atlantic Pact, they think they are left out of the family, and I am very sympathetic with them. I'm in favor of Greece and Turkey being in the Atlantic Pact. It may be wiser, however, to keep the Mediterranean by itself. We just sounded out the Italians, a little bit on this idea, and the Italians seemed to

be favorable to us considering it. That wasn't official, it was just informal conversations. But, I can conceive of a Mediterranean pact, there wouldn't be any question of retiring behind the Pyrenees, nobody is thinking in terms of that; it is a question of whether you have behind the Pyrenees areas where you can have a "jumping-off" place for the main thing that will deter Russia which is our air power and the use of the atomic bomb, and the use of Spanish bases is a most important thing in the minds of the military people I have talked with abroad. I didn't hear a single person suggest we wanted a place to retreat to; nobody wants to retreat, we want to move out in case this terrible thing comes.

Senator MAGNUSON. Why not use then the bases that we have in other European countries? I don't know why Spain down there is so important—the only time it might become important is if we were forced behind the Pyrenees—or second, if we wanted to use Spain in reverse, so it wouldn't get in communistic hands. In other words, we'd aid Spain only to keep it Spain.

And we don't want Spain to be neutral either; we want Spain to be on the job, if an attack comes. Of course, the history of Spain has in the last war been that we couldn't rely upon that Government at all. Mr. NOVINS. Well, has that situation changed?

Senator MAGNUSON. I don't know; that's what I'm worried about.

Senator SMITH. Mr. Novins, we just have a call for a vote; could we retire for a few moments and then continue this discussion.

Mr. NOVINS. Yes; I'm sure we can, Senator, let's call an adjournment. We are back in the Senate radio gallery again, and our gentlemen, our participants for this afternoon have come back from voting on the floor. This is rather unusual procedure, but I'm delighted that you could get down there and get in the battle, and then come back and pick up our discussion again on Franco.

I wonder, Senator MAGNUSON, you suggested that this problem, in your opinion, breaks down to two points—first, the military side; purely what is the military value of aiding Franco; and, secondly, are we going to get into a program of economic aid, and now the question I raise is, How can you divide those things? If there is military assistance in the form of armaments or money for armaments isn't that, in effect, strengthening the Franco regime?

Senator MAGNUSON. Well, I don't think so, it probably would; you can divide it because Spain is in such a desperate economic state, that any money we send over there, of course, might be swallowed up in some way indirectly to aid her economically, but I think we have to divide it, because the only justification anyone has given in this whole picture of aid to Spain is based on the purely military basis. In other words, they say we have to do this sort of thing because Spain is valuable to us in a military way. Now, I am sure, regardless of what my colleague Senator SMITH thinks about Franco, I am sure that Franco's visions and the Spanish Government's visions are, if they are going to participate in the military way, particularly, say that they will take their men out of Spain—that there is going to be a nice long string attached—"You've got to help us otherwise in some other ways, too"—and I don't think that we can get away from that and that might involve us in much more than we are thinking about in the way of aid, and the only justification that anyone has ever espoused for aid to Spain, has been the military justification, but I don't think that's Spanish thinking. Spain wants to get in on the pact—and maybe we should as a military reason—but economically I'm afraid we are going to get into pretty deep waters.

Mr. NOVINS. I wonder, Senator, if you would tell us if you would support military aid to France if it could be demonstrated that that aid was effective?

Senator MAGNUSON. I would support it, if the Joint Chiefs of Staff could point out to me that they would be militarily valuable—I still can't see that now.

Mr. NOVINS. Would you go beyond that to some kind of economic aid?

Senator MAGNUSON. I won't go beyond it—right now, under present circumstances, with the Spanish Government as it is because I think it would involve much more political trouble and do much more harm in the putting together of the free nations of Europe, than it would do good.

Senator SMITH. I don't want to be misunderstood on that—I think I agree with that last statement of Senator MAGNUSON that there is no doubt that support now for Spain would look like a backing up of the Franco regime and it not only is unpopular in England and France and other countries, but also Spain, itself. There is a large element in Spain that would resent our aiding the Franco government, as such—on the other hand, there is great suffering in Spain today—and perhaps I'm too easy on those things—just like I felt like giving aid to Yugoslavia because of the suffering there and the starvation there—wheat to India, and my instinct—I feel today the Spanish people are distinguished from the Government whatever the Government may be and have been friendly to the United States, since the Spanish War. We have had very fine relations—I have many friends in Spain, as I am very fond of the Spanish people in this country, and I don't see any reason why we should throw over and ignore the suffering of the Spanish peoples because of this political difficulty with Mr. Franco. I admit the difficulties in it, and I admit that we have a long way to go in negotiation before we get at a destination that would be satisfactory, but I do feel that we shouldn't turn our back on people who are suffering, if there is any way we can aid them without overstraining our economy, but I do think entirely aside from the question of manpower and whether you cross the Pyrenees or not—this base question is very fundamental.

You've got Gibraltar, you've got the whole area on the southern end of Spain there right into the Mediterranean that can't be ignored in any effective set-up if we are going to stop this terrible Russian communism.

Senator MAGNUSON. Granting, allowing all the power we can get, if we can do it legitimately, and I think we should be thinking in those terms.

Mr. NOVINS. Senator SMITH, I think it was while you were in Europe we got reports back here in the United States about some proposed changes in the Franco government; did you get any information on that while you were there?

Senator MAGNUSON. Well, he made the change while you were there; didn't he?

Senator SMITH. He made one change that was very unpopular. He appointed in his defense department a man who had been mixed up with Hitler during the war and decorated by Hitler, been the leader, I think, of the so-called Blue Legion or something where Hitler's—

Mr. NOVINS. Blue Division, I believe.

Senator SMITH. That irritated the French people no end. I'll say this for the French people that I've talked to—prominent Frenchmen—that their feeling is against Mr. Franco not against the Spanish people. They would like to renew friendly relations with the Spanish people. They said that to me.

Mr. NOVINS. Well, how do—

Senator SMITH. I think it is the same in England. The feeling is against Franco and

his dictatorial regime and the things that he has done that they resent.

Mr. NOVINS. If I'm not mistaken, we tried to carry on a campaign throughout the world of increasing our friendly relations with the peoples of the countries even though we didn't particularly approve of the governments involved.

Senator MAGNUSON. Even offering friendship to the Russian peoples like [speaking simultaneously].

Mr. NOVINS. Now, if you translate that into terms of Spain and Franco, how can we best handle ourselves in order to reach the Spanish people?

Senator SMITH. That's one of the puzzles we have to face—I haven't got the answers to them. All I'm saying is—it seems to me you've got a situation there that can't be ignored—just because of this difficulty with Franco, we oughtn't to say we are bankrupt in ideas—we are bankrupt in diplomacy—or bankrupt in thinking through what's the best way to do it. Now, let me say a word for Mr. Griffith, our Ambassador. He has come—after being there 6 months—to the conclusion that we should have Franco—he thinks that it can be done, that we can have a good influence on Franco and help him, and we can improve some of these conditions. I'm bound to say on the other side that some members in our organization here—our own State Department set-up are very doubtful about it. There isn't agreement all the way through. I'm talking out of school a little bit on this, but there isn't agreement all the way through as to how the best way to do this thing or whether we should do it at all.

Senator MAGNUSON. I think it is obvious of course, there isn't an agreement on this—and the whole thing, the whole subject has been broached because of the one thing we need—certain parts of Spain for bases and for military purposes.

Senator SMITH. And that's—

Senator MAGNUSON. That's precipitated the whole thing. Now, if that is correct and if the military men say that we need it—and show the Congress that a base in Spain is much better than a base in France or a base down in north Africa, while well and good, let's go over and ask Spain how much she wants for that piece of land and rent it just like we do in lots of other places in the world, and then we won't get mixed up with this political controversy. Because, in the meantime—

Senator SMITH. You want a coldblooded [speaking simultaneously].

I've no objections to that as a start—I'm just arguing that with the whole situation and, I think, the whole committee felt the same way, there must be some way to bring the asset of the Iberian Peninsula with its geographical location and with its manpower, if you will, into this picture and capitalize it in connection with our collective security program for Western Europe.

Senator MAGNUSON. We had better start on a Mediterranean pact—rather than that—I'm afraid you are not going to get the North Atlantic Pact countries.

Senator SMITH. I said that I prefer it, I think it is more practical. A Mediterranean pact—between us and Spain for the bases, but I think a Mediterranean pact, which would include Greece and Turkey—the east end as well as the west end, as a Mediterranean proposition and not base it on democratic, freedom-loving countries and all the preambles we have in the Atlantic Pact—don't argue about the Atlantic Pact, don't try to get them into the Atlantic Pact. But get them in, as a beginner, in the Mediterranean pact for mutual security.

Mr. NOVINS. Gentlemen, what effect would any aid that we gave to Franco have on the peoples to whom we are trying to sell the idea that we are a democratic country.

Senator SMITH. You have a backfire resentment. I get in my mail the fact that—I've simply suggested that we should do something about this—it brought me lots of letters from people in my own State—that I'm sympathetic with them. They just think that it is perfectly terrible we should even think in terms of this terrible man, but I say this—that having met Mr. Franco, having talked with him, I didn't find a swash-buckling, boastful fellow, I found a fellow who said—please ask me questions because I want to tell you what my problems are. He said you people talk about freedom, I agree with them, but we've had revolution and revolution and revolution and chaos and destruction and brothers killing brothers and sisters killing sisters here—we've had to have a strong hand to deal with this thing and before you can give all those freedoms here—you are talking about—freedom of the press and so forth that we were chiding him about—he made a pretty good case out for the chaos—that sometimes ensues when you have to have somebody, like a man on horseback, for a time at least. I said to him when this period is over are you willing to take a position right now that you will put back into Spain those freedoms that we believe in—in the western countries? He said of course I will, I'm doing this just because of the emergency. Now, this might be window dressing—it might have been just a great big bluff—I'm not necessarily saying that I believe what he said because his record is pretty bad as far as dictatorship—

Senator MAGNUSON. I was just going to suggest that he has been at it a long time, and I don't know of any reforms that have shown up just yet.

Senator SMITH. Griffiths pointed out to me that some of the charges against him—for example, in some of the areas where Protestants cannot bury their dead in daylight; those kind of religious charges. Those aren't true; there are isolated cases where there was some wrongdoing by some curae or something in his particular district, but, generally speaking, he says the Catholic Church hasn't been nearly as bad as the stories that have been gotten out about it. And I'm inclined to feel that that is right. I think Griffiths is very fair about it.

Mr. NOVINS. Gentlemen, we are talking about aid, and I'm wondering if you would care to guess how much aid.

Senator SMITH. Well, of course, when you speak of over-all figures, he had a grandiose idea that if they had a little matter of \$500,000,000 they could put up their water power, develop transportation, and so on. We heard those stories. But what we have done, I think, is authorize a \$62,000,000 loan, export—

Senator MAGNUSON. Export-Import Bank. Senator SMITH. They have made loans up to \$17,000,000.

Mr. NOVINS. That's not the military angle. Senator SMITH. No; that's just economic. Mr. NOVINS. What about military aid.

Senator SMITH. I saw no figures at all of what it would cost—I haven't heard it even discussed—the military end of it.

Senator MAGNUSON. Well, it would probably cost into the hundreds of millions to get the 22 divisions—or the 2,000,000 potential—that Spain has and it would take a long time to train them. I think what we'd better do, if we need bases in Spain is just to go over and negotiate with the Spanish Government to have the bases, and pay them rental.

Senator SMITH. I have no objection to that as a first step in a reapproachment, I might say, I don't see any reason to go in there and equip an army at the present time, I don't think that we've gotten that far.

Mr. NOVINS. Senator SMITH, if we went in and simply on a straight business deal said we wanted to buy so many square miles for air bases and so forth—and we will give you

so much money in rentals—would that have any immediate effect on the political side, would that be easier for some of these other democratic countries to take?

Senator SMITH. I don't think—in the long run—that either England or France would object to our making arrangements with Spain whereby we would have the use of those bases; we might put some money into fixing up the bases and make runways for our big bombers and so forth. I think Britain and France both would not object to that, but I heard, although in the papers they came out with objection when it was rumored that that was what Sherman was going to do when he went there.

Mr. NOVINS. I wonder how much of the British objection, Senator SMITH in your opinion is due to their own political situation at home. How far can the Labor Party go in—

Senator SMITH. Very, very much is due to it because, as you know, the labor groups all over the world are opposed to doing anything for Spain, and the British Labor Government would be very much embarrassed if they did anything, and the French Labor Unions would be against it.

Mr. NOVINS. Well, that isn't the basis of the French objection.

Senator SMITH. Our labor unions here—I think both the AFL and the CIO. No, it isn't entirely the basis, but it is there. There are some strong labor unions in France that are opposed to the recognition of Franco.

Senator MAGNUSON. Well, I think that the Senator from New Jersey will agree with me that right now—with all these factors involved—if the military really believes sincerely that this is going to be some help to us in a military way, that probably what we'd better do is not deal with Franco or Spain except to go over there and negotiate for the use of those bases—pay 'em whatever they are worth, and that would give Spain some American dollars which, in effect, would trickle through its own economy and help it somewhat. We would have the bases for military purposes and we would be able to stay out of these terrific political complexes that are involved.

Senator SMITH. Well, I think that the Senator from Washington has expressed the line of thinking that has been going on in the minds of people who are starting something in this direction—that's probably the way to start.

Mr. NOVINS. I wonder if you would venture a political guess—what kind of a bill do you think will come out of this, and when is any action likely to be taken?

Senator SMITH. I don't think there is any contemplated bill on Spain. I think that this leeway in the present legislation, with 10-percent clause for shifting around in dangerous areas that would permit us to put some of the funds in this \$8,500,000,000 bill into the Spanish situation, if there was a crisis calling, for example, to put some money into a base there for sudden use. I think we've got leeway in this bill.

Senator MAGNUSON. Ten percent would be about as much as if you directly appropriated over-all as a whole for the Spanish situation.

Senator SMITH. The leeway is there. If our Joint Chiefs felt—suppose Russia attacks through Germany and our Joint Chiefs felt we needed a base there suddenly—to do some backfire that we could use that 10-percent leeway in this bill without mentioning Spain in the bill at all.

Mr. NOVINS. Senator, this is a little bit apart from Franco—Senator SMITH—but in your trip over to Europe you had an opportunity that you pointed out earlier to look at some other countries—what is your general impression of the defense situation over there?

Senator SMITH. Well, I'm very glad to say this. I was there a year ago and I was

very much depressed when I was there a year ago. I think that in the last year two things have changed the spirit of the people to a very large extent—one is the realization of the reality of the Korean incident that irrespective of how that comes out, they see a real something there that is a very grave threat to the world peace. They also see that the United Nations action there and no matter how it comes out, it was prompt action to resist aggression.

Mr. NOVINS. Do you agree, Senator, that General Eisenhower is an indispensable man in Europe.

Senator SMITH. I don't agree with the implications that have been going on about that statement because I feel that General Eisenhower is doing a first-class job in Europe, but I want to say right here that I would lean over backward to keep any political discussions out of our relationship with General Eisenhower.

Mr. NOVINS. [Laughing.] That was an unfair question.

Senator SMITH. Whether he is indispensable in Europe or not he might be indispensable here. He will have to decide himself where he could be the greatest—

Senator MAGNUSON. Some Republicans think he is indispensable over here.

Mr. NOVINS. Thank you very much gentlemen, for coming in and talking about this problem on "What should we do about Spain."

ANNOUNCER. From the Senate Radio Gallery, you have just heard the six hundred and fifty-ninth broadcast of People's Platform with Stuart Novins. Our question today, Should Spain be in the western alliance?

Joining Mr. Novins were Senator WARREN G. MAGNUSON, Democrat, of Washington, and member of the Interstate and Foreign Commerce Committees, and Senator H. ALEXANDER SMITH, Republican, of New Jersey, and member of the Senate Foreign Relations Committee.

Oath of Loyalty to the United States

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, August 13, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a summary of remarks I made last Friday morning before the annual convention of the American Legion, Department of Pennsylvania, at Pittsburgh, on the subject of the taking of oaths of loyalty by American citizens.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

"I cannot understand why any American who is true to the principles of our country should hesitate for one moment to take an oath of loyalty," Senator MARTIN said.

"Every real American should be proud to proclaim his Americanism, especially in these crucial times when our ideals and our way of life are under attack from those who would destroy freedom in every part of the world where freemen enjoy the blessings of liberty.

"I cannot understand why any real American should refuse to stand up and declare publicly that he is not associated, and would never be associated, with any Communist

group or any other organization that advocates the overthrow of our Government by violence.

"Above all, the teachers to whom the youth of our land are entrusted, should show by example that they are 100 percent in loyalty, 100 percent in patriotism, and 100 percent in support of the American concept of free Government.

"The Legion was the first to propose that the teachers in our colleges take an oath of loyalty.

"In my mind there is no question about the loyalty of an overwhelming majority of the teachers.

"But we must not close our eyes to the increasing spread of Communist doctrine upon the campuses of many of our institutions of higher learning.

"We must not ignore the menace of subversive teachings which are shaking the faith of our young people in the principles of our Republic.

"That is why I was shocked and sorely disappointed when the heads of some of the largest educational institutions in Pennsylvania announced that they were not in agreement with the proposal of the American Legion.

"I want to say now that the Legion was right and the college presidents were wrong.

"Loyalty is a fundamental in the preservation of our freedom. I firmly believe that a public declaration and an oath of loyalty would be a great forward step toward the suppression of subversive teachings on the college campus."

Senator MARTIN gave high praise to the Legion's Americanism campaign as an effective weapon in combating the activities of Communist propagandists among young people. He asked the Legion to work with increased effort for more thorough teachings of American history in every school and college.

"The real meaning of America can be understood and appreciated only through the study of our history and by learning of the sacrifices through which the United States reached greatness among the nations of the earth," Senator MARTIN said.

"We have made substantial progress since we were shocked to learn that history was being neglected in many of our schools. Nevertheless, we must work harder than ever to make American history a basic course of instruction all over America, from the small country schoolhouse to the great colleges and universities."

Senator MARTIN also appealed to the Legion membership to take leadership in the fight for clean, decent citizenship without which, he declared, we cannot have sound or honest government.

"The American Legion has always been vigorous and outspoken in its demands for a strong national defense," Senator MARTIN continued.

"It has been in the forefront of those who saw danger to our country in the neglect of our defensive strength.

"I do not think of national defense in terms of military preparation alone.

"The American Legion can help build America's defense by spearheading a crusade for a moral and spiritual America that will obey and respect the laws of God and man and will battle against corruption wherever it may exist.

"The American Legion can help build America's defense by opposition to waste and extravagance in Government and by fighting for policies that will preserve the solvency of our country.

"You are a great and powerful organization. You have the spirit and the will to fight for America.

"You have led the fight for patriotic Americanism. Now I appeal to you to take leader-

ship in the fight for a solvent, dynamic, spiritual America that will have the power and the strength for victory to bring peace, freedom, and justice to all the world."

Communism

EXTENSION OF REMARKS OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 13, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials; one entitled "Hand Wringers and Sleeve Tuggers," the second entitled "Aid for Formosa," both dealing with the subject of our attitude toward communism, which appeared in the Pittsburgh Press of August 9, 1951.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

HAND WRINGERS AND SLEEVE TUGGERS

Under its present leadership, the State Department's basic policy is to go slow, play cautious, and be nice.

That's the way it has been trying to deal with the Moscow gangsters and their stooges in Communist-controlled countries. That's the way it has been handling the Oatis case. And that's why William N. Oatis, an American newspaperman, is still in a Czechoslovakian prison.

Congress is assumed to speak for public opinion. But when Congress, reflecting public opinion, sets out to pass a tough, hard-hitting resolution in the Oatis case, it finds the State Department lobbyists tugging at its sleeve and saying "go easy."

The Department says it has been taking feasible steps to obtain the release of Mr. Oatis.

It has made polite overtures to the Communist hoodlums in Czechoslovakia and received snarling, impudent rebuffs.

It has cried "shame" and "outrage" at the Czech Communists—protests which sounded good for home consumption, but were ignored by the Czechs.

It has moved to erase the preferential tariff on Czechoslovakian goods sold here. But that doesn't stop the flow of American dollars to the puppet state, dollars which are used to help build up the Moscow war machine.

The steps taken by the State Department haven't hurt the Czech Communists. Cutting off trade and breaking diplomatic relations would hurt.

But the Department's lobbyists tell Congress our embassy in Prague is valuable as a listening post and as a symbol.

Our ambassador in Prague is a virtual prisoner. The Communists let him hear what they want him to hear and no more. They have forced him to cut his staff to the point of uselessness. He is a symbol, all right—a symbol of the futility of trying to do business on a decent basis with Communists.

Ambassador Briggs hasn't been permitted to see Mr. Oatis before or since his trial, or even to send him the little comforts the worst criminals are entitled to receive in any United States penitentiary.

All the feasible steps the State Department keeps saying it has taken have failed. They have not even produced a reasonable or polite reply from the Czech Communists.

Mr. Oatis is still in jail.

Hand wringing and plaintive protests won't get him out.

And the State Department, which ought to be soliciting the strongest kind of public and congressional support, instead is lobbying against the very help Mr. Oatis needs the most,

AID FOR FORMOSA

If the United States intends to take a firm stand against communism anywhere in Asia, then President Truman is right in asking for a modest-aid program for the Chinese Nationalist forces on Formosa.

The appropriation requesting \$307,000,000 is less than we are spending on some countries which do not have anything like Formosa's potentialities.

There is little point in giving arms to a country until it has troops to use them. Chiang Kai-shek has at least 400,000 troops in need of equipment. This is the largest anti-Communist military force in Asia.

The policy of waiting until an area is under attack before going to its rescue is exhausting and self-defeating. Americans can't do all the fighting. They should not be doing any fighting at all when there are natives willing to fight in their own defense if given the weapons.

We waited until it was too late adequately to arm the South Koreans, and have paid for that mistake by a fearful toll in American blood. The mistake should not be repeated in Formosa.

Russia is on the march and the West is on the defensive. This permits the Soviets to seek out the soft spots and limit their adventures to areas where they are most likely to succeed. This situation will prevail as long as we are content merely to repel aggression. And wars aren't won that way.

The Communists will retain the initiative in the present struggle until the free nations are strong enough not only to challenge communism anywhere and everywhere, but to move against it if that becomes necessary.

Communism will begin to lose its dynamic force when it can no longer advance. All its successes have been achieved by force or intimidation and it has shown little capacity to consolidate its gains by winning popular support.

Once the Reds have been checked, revolts can be expected in their rear, because the areas under their control are seething with discontent. The constant purges are evidence of that.

If Formosa is armed, it can defend itself against a Communist attack. It also can be in readiness to support revolts against the Communists which may occur on the mainland.

That threat should tend to lessen pressure on other areas. Aggression will not be so inviting when it is confronted by the prospect of a strong counterattack.

National Security Resources Board Chairman

EXTENSION OF REMARKS OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, August 13, 1951

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "NSRB Chairman," which appeared in the Washington Post of August 11, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NSRB CHAIRMAN

Release of the new National Security Resources Board pamphlet on industrial dispersion, *Is Your Plant a Target?* is evidence that the NSRB has not been idle despite its lack of a Chairman in the formal sense. The long-range planning agency has been without a Chairman since W. Stuart Symington was appointed to the Reconstruction Finance Corporation in mid-April. There is an important distinction, however, between the present status of the NSRB and the damaging hiatus of 15 months that occurred before Mr. Symington's appointment in April of 1950. Upon Mr. Symington's departure his functions were assumed by the former executive officer, Jack Gorrie. Mr. Gorrie appears to be doing a competent job of supplying leadership and rescuing the NSRB from the sort of overconcentration on current operations into which Mr. Symington led it.

President Truman was wise, in our opinion, not to go through with his earlier reported plan to make W. Averell Harriman the new NSRB Chairman in addition to his other job as Foreign Relations Coordinator. NSRB is too big to be slighted with half-time attention; it also requires a particular type of staff work, anonymous and unglamorous, which can peer into long-range future needs and advise the President. Actually, for all practical purposes Mr. Gorrie is the Chairman, with merely the prefix of "acting" before his name. In a sense NSRB functions dovetail with the more immediate planning duties of Defense Mobilizer Wilson, with the NSRB taking up where Mr. Wilson leaves off. Continuity is provided by the fact that both Mr. Wilson and Mr. Gorrie attend meetings of the National Security Council. The important thing, of course, is to make sure that all facets of planning are covered, and so long as they are who holds what title does not particularly matter.

The China Policy and Freda Utley's Book, the China Story

**EXTENSION OF REMARKS
OF**

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, August 13, 1951

Mr. BREWSTER. Mr. President, on June 5 last I made an address in the Senate dealing with our China policy and with Freda Utley's book entitled "The China Story." This address set in motion a correspondence between Mr. Lester Markel, Sunday editor of the New York Times, and myself.

In justice to all concerned, and to the possible public interest involved, I ask unanimous consent to have printed in the Appendix of the RECORD the correspondence.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. BREWSTER. Mr. President, first in order is Mr. Markel's first letter to me, dated June 18, 1951. The letter is as follows:

THE NEW YORK TIMES,
Times Square, June 18, 1951.

HON. OWEN BREWSTER,
The United States Senate,
Washington, D. C.

DEAR SENATOR BREWSTER: I have been abroad and on my return I find the CON-

GRESSIONAL RECORD of June 5, in which is reported a speech by you on March 17 referring to the New York Times Book Review.

There are statements made in that speech and implications that are both inaccurate and distinctly unfair. The charges made by Miss Utley in her book are not new, nor is this campaign a new one. As a matter of fact, this attack was made, in its most comprehensive and most vicious form, in the American Legion Magazine for February. In connection with that article, we prepared a memorandum, a copy of which is attached, in which the charges are fully answered.

The New York Times does not employ Communists, has never employed them, and, as I need not tell you, has been opposed to all totalitarian movements from the very beginning. This policy, of course, holds for the Book Review. We would not knowingly print a review by a Communist or by anyone who sympathizes with Communists.

It is unfortunate that these charges have been given additional distribution by you, and I feel strongly that you owe us a correction. If there are any questions you care to put to me in connection with these statements, I shall be more than glad to answer them.

Yours sincerely,

LESTER MARKEL,
Sunday Editor.

Second, I present Mr. Markel's memorandum. This memorandum purports to deal with an article in the American Legion magazine. I refused to discuss the memorandum with Mr. Markel since it concerned something I knew nothing about.

The memorandum is as follows:

MEMORANDUM ON THE IRENE KUHN ARTICLE

The basic charge made by Irene Kuhn in her article in the American Legion magazine is, in substance, this: that the New York Times Book Review is favorable to books sympathetic to communism and unsympathetic to books of an anti-Communist character. We believe that anyone who is a regular reader of the Time Book Review will refuse to take this charge seriously.

Mrs. Kuhn has tried to build a case on less than a dozen reviews selected from the New York Times Book Review in the last 5 years and has ignored countless others which would disprove her argument.

For example, in 1950 the book review covered 52 books dealing with Russia, communism and allied subjects. The majority of these were, broadly speaking, anti-Communist books. It is significant that Mrs. Kuhn selected for discussion only 3 of these 52 books. It seems fair to assume that her silence about the other 49 indicates that she has little or no complaint about the reviews of these books.

Most of Mrs. Kuhn's examples are taken from reviews printed several years ago and most of them deal with China. The views held about China today differ widely from the views held when these books were first written, as do also the views about Russia (although the view of the Times has not changed: from the beginning we have condemned the Russian regime as a brutal dictatorship).

The point of view expressed in the books on China attacked by Mrs. Kuhn was, in reality, shared by an overwhelming majority of Americans in China. Mrs. Kuhn implies that the authors of these books or the reviewers were Communists or Communist inspired, but she offers no proof of her charge.

Mrs. Kuhn pays particular attention to two books—*Seeds of Treason* and *Ordeal by Slander*. Both of these were reviewed by members of the New York Times staff. It is the firm policy of the Times that no Communist shall be a member of its news or editorial staff. If Mrs. Kuhn has evidence

that this policy is being circumvented, she has failed thus far to produce it.

Mrs. Kuhn's article contains such sweeping statements as these: "Books have become transmission belts for insidious propaganda for treason," and "Communists spot their agents or sympathizers among the reviewers." Mrs. Kuhn does not name a single reviewer as a Communist agent or sympathizer and she does not designate a single book as insidious propaganda for treason. Presumably the laws of libel have something to do with Mrs. Kuhn's failure to be specific.

Mrs. Kuhn seems to assume that all anti-Communist books are per se good books and should be praised. But the fact is that like other books, they vary in quality and we deem it the function of the reviewer in these cases, as well as in all others, to distinguish between the good and the bad.

One other point in the American Legion magazine presentation deserves attention. There appeared as a panel illustration for the article reproductions of the jackets of 10 books. The caption for this illustration was title: "The Commies have done their best to keep these books out of your hands. . . ." Except for *Seeds of Treason* and a passing reference to *Assignment in Utopia*, none of these books are mentioned in the article. All but 1 of these 10 books were quite favorably reviewed by the Times.

Our responsibility in the book review, as we see it, is to select honest, qualified reviewers and to let them have their say. Certainly, under that definition of our aim, any Communist would be ruled out. That has been and continues to be our policy.

LESTER MARKEL,
Sunday Editor.

On June 28, 1951, I sent this reply to Mr. Markel's first letter:

JUNE 28, 1951.

Mr. LESTER MARKEL,
Sunday Editor, New York Times,
New York, N. Y.

DEAR Mr. MARKEL: I have your letter of June 18 referring to my Senate speech on June 5 which dealt with the China policy, Miss Utley's book, *The China Story*, and a survey of book reviews in the years 1945-50.

You speak in your letter of an article in the American Legion magazine of February. I have never read the article and so am not able to discuss it.

In referring to my speech you say: "There are statements made in that speech and implications that are both inaccurate and distinctly unfair."

Please tell me what statements are inaccurate and what implications are unfair.

Cordially yours,

OWEN BREWSTER,
United States Senate.

Mr. Markel, on July 17, 1951, replied to my request for particulars as follows:

THE NEW YORK TIMES,
Times Square, July 17, 1951.

HON. OWEN BREWSTER,
The United States Senate,
Washington, D. C.

DEAR SENATOR BREWSTER: You ask "what statements are inaccurate and what implications are unfair" in your speech of June 5.

In the first place, the tables which you inserted in the RECORD and which appear on pages 6145 and 6146 carrying the following heading: "Nonfiction books on China published in the United States and reviewed in the New York Times Book Review, 1945-50, inclusive." Only that half of the list appearing on the left-hand side of the page correctly refers to the New York Times.

You allege that "often they (writers on China) reviewed one another's books." That statement is not true. It would be more accurate to say they "seldom reviewed one another's books." Among the 35 books on China listed in your chart, only two books

were so handled—Annalee Jacoby reviewed John K. Fairbank's book, and Professor Fairbank reviewed the Jacoby and White books. During this 6-year period 18 different reviewers appraised the 35 books on China covered in the Sunday Times Book Review.

You make this statement: "The tables demonstrate the remarkable success of this effort to explain in glowing terms the Chinese Communist cause." As proof of this statement, so far as the New York Times is concerned, you cite only a review by Nathaniel Peffer of a book by Gunther Stein published in 1945. In that connection there is a quotation from the China Story by Freda Utley—a book and writer you highly endorse. On page 143 of the China Story Miss Utley refers to Tillman Durdin, then and now correspondent of the New York Times in China, as "politically one of the best-informed correspondents" (incidentally, Mr. Durdin has written both book reviews and magazine articles for the Sunday Times). Miss Utley says, "It was also Durdin who gave me what is probably the fundamental reason why so many American correspondents in China fell under the Communist spell during World War II. 'You must understand,' he said, 'how easy it was to believe in the Communists. It was so utterly hopeless in Free China. The graft, the misery, the lack of will to fight any more. Even I felt that it could not be worse, and must be better in Communist China!'"

The implications of your remarks seem to me obvious—that those in charge of the New York Times Book Review during this period were either fellow travelers or dupes. That was the charge made in extenso in the Kuhn article in the American Legion magazine—an article endorsed, by footnote, in the Utley book. That is why the memorandum I sent you is pertinent.

The New York Times does not employ Communists, has never knowingly employed them, and has been opposed to all totalitarian movements from the very beginning. This policy holds and has always held for the book review.

In sum, I think your charges, and more their implications, are distinctly unfair and unfortunate and that they should be corrected. I believe the facts warrant that this correction should be made in the CONGRESSIONAL RECORD in a position of prominence equal to that of the original allegations.

Yours sincerely,

LESTER MARKEL,
Sunday Editor.

Finally, Mr. President, I present my detailed rejoinder to Mr. Markel. In this letter I say that since he insists that the points he raises be given space in the RECORD I have taken this means of satisfying his contention.

My reply, as of August 13, 1951, is as follows:

MR. LESTER MARKEL,
Sunday Editor, New York Times,
New York City, N. Y.

DEAR MR. MARKEL: I have your letter of July 17 with its continued comment on my Senate speech of June 5 which dealt with the China policy, Miss Utley's book The China Story and a survey of book reviews in the Sunday Times and Sunday Herald Tribune in the years 1945-50 inclusive.

You are correct in your reference to the misplaced tables in the CONGRESSIONAL RECORD for June 5, 1951 (pp. 6145, 6146). This was a printer's error and on June 7, 1951, long before your original letter of June 18, request was made from the Senate floor that the tables be corrected. This was done.

The tables were corrected, as shown in the attached reprint of the speech, and will so appear in the RECORD.

You refer once again to the memorandum which you issued concerning an article in

the American Legion magazine. As I said before, the memorandum is meaningless, so far as my speech is concerned, for I have never read the article referred to and so cannot discuss it.

Now, before I take up your other charges, I would like to make some general statements.

I have been a Member of Congress for 18 years and a Senator since 1941. In those years I have had to deal repeatedly, in one way or another, with questions involved in Far East policy. In line of duty I have been out to China myself. It is not a situation in which I, and other Senators, have had to act for the first time.

The conduct of the United States foreign policy in the Far East has long been a matter of intense worry and concern in the Congress. If you do not already know it, I may tell you now that one of the reasons for the anxiety has been the long standing practice of the administration generally and the State Department in particular, to withhold from Congress information of what they were doing in China. The Marzani case, the Hiss case, the Wadleigh confessions, the Amerasia case and numerous others deepened suspicion and reacted upon the congressional anxiety over the China policy.

The abrupt dismissal of General MacArthur precipitated the Senate investigation, with which, no doubt, you are familiar. Almost coincidentally with the MacArthur dismissal came the publication of Miss Utley's book, The China Story. I read it and was more than impressed by it.

To me the book was of unusual value because it assembled and made available to the public for the first time a mass of information about the China policy hitherto scattered or—to the public—unknown. I determined to call this to the attention of the Senate and did so in my speech of June 5, 1951.

In the course of reading Miss Utley's book I was much struck with the section on the book reviews. I have been a tolerably constant reader of both the Sunday New York Times and Herald Tribune for many years and the passages in the Utley book referred to crystallized an uneasy feeling which I had had for a long time. This feeling derived not from someone else's opinions but from my own more or less casual reading of book reviews over the past 5 years or so. It had seemed to me that somehow the dice were being loaded.

Once I had read this section of Miss Utley's book, I determined to have a look at the record myself. With that in mind I inspected the reviews of books on China as they appeared in the New York Times and New York Herald Tribune Sunday book reviews for the years 1945 to 1950, inclusive. What I discovered more than confirmed what Miss Utley had said and what my uneasy feelings had suggested long before. Upon what I found I wrote my Senate speech.

You spoke in your original letter of a "Campaign." I may say that my remarks were a part of no campaign whatever. They were based upon my own experience as detailed above.

Now for your charges.

You say: "You allege that 'often they (writers on China) reviewed one another's books'." That statement is not true. It would be more accurate to say they 'seldom reviewed one another's books'. Among the 35 books on China listed in your chart, only two books were so handled—Annalee Jacoby reviewed John K. Fairbank's book and Professor Fairbank reviewed the Jacoby and White books."

Your statement is hair splitting. In my address I dealt specifically with the trend of the book reviews in both papers and said so repeatedly. Turn to both tables in the reprint and see for yourself. If you insist upon the Times table alone, look at this

group of authors, reviewed in the Times; Owen Lattimore, John K. Fairbank, Annalee Jacoby, Harold Isaacs, and Robert Payne. Now look at this list of reviewers: Owen Lattimore, John K. Fairbank, Annalee Jacoby, Harold Isaacs, and Robert Payne.

Why do you drag Mr. Tillman Durdin into this discussion and say that he has written book reviews for the Sunday Times? My speech covered specifically the years 1945 to 1950, inclusive. Show me the place in the table, which covers those years, where Mr. Durdin had a book published or reviewed one for the Sunday Times.

You quote me as saying "The tables demonstrate the remarkable success of this effort to explain in glowing terms the Chinese Communist cause." Then you yourself say: "As proof of this statement, so far as the New York Times is concerned, you cite only a review by Nathaniel Peffer of a book by Gunther Stein published in 1945."

Very well, let us look at the record.

Let us also begin with the original reference to Peffer's review of Gunther Stein's The Challenge of Red China (New York Times, Sunday, October 28, 1945.)

Says Peffer: "There is something in Communist China that captures the imagination of all sorts and conditions of men. * * * It must be emphasized that Mr. Stein is a competent reporter and that he documents his facts."

In my speech, after quoting Peffer's review, I then referred to the fact that when the Army published a report prepared by General MacArthur's staff in which it was stated that Stein, according to records discovered in Japan, had been a member of a Russian Communist spy ring in Asia, Stein fled this country within 24 hours. So far as I know, he has never dared to return.

The Times published Peffer's warrant of Stein's "competence." Has Peffer revised his judgment and has the Times ever published such revision, if any?

Let us proceed.

In my speech I said, referring to the foreign service officers and the book writers, "Here, in this heterogeneous group the germ of the fatal coalition idea which subsequently became the basis of United States China policy was cultivated and promoted."

Observe a quotation from Edgar Snow's review of Owen Lattimore's book Solution in Asia in the Times for February 25, 1945. After citing Lattimore's eminence as an expert, Mr. Snow goes on, partly quoting from and partly commenting on the Lattimore book itself:

"The Communists control a territory with 80,000,000 people; they have expanded 'not because they subdue people by armed force but because the people support them'; basic economic conditions under Communist rule are better than under Kuomintang rule; many non-Communists live peacefully in their areas and support the regime, and 'the political structure under the Communists is more nearly democratic than under the Kuomintang.' At the same time Lattimore stresses at considerable length Chiang Kai-shek's role as something which rises above the limitations of one party rule. He does not consider the Generalissimo a dictator so much as the focus of a coalition of political forces representing the different economic and regional forces inside the country. * * * Lattimore thinks he (Chiang Kai-shek) need not fear losing his authority in a government in which party differences with the Communists could be reconciled by democratic processes."

Mr. Markel, where, in this review is there any warning from the Great Lattimore and/or Snow of the disaster to the United States which a Communist success in China would represent? And how effective were those "democratic processes" in reconciling Chiang's differences with the Communists?

Chiang balked at the coalition, our Government, and State Department did their best to ram it down his throat. How do you like the prospect as of now, Mr. Markel?

One further comment on this review. Mr. Snow says:

"This book brilliantly illuminates the main questions of our time in Asia, and how they could be answered by an intelligent, vertebrate policy. In the opinion of this reviewer, however, in order to win acceptance for such measures we need a new philosophy in Congress, which in turn (and alone) could impose it on the State Department."

The sardonic implications of this passage are sublime. For your information, Mr. Markel, I may say that I believe in the period covered there has been no limit to which the State Department would not go in suppressing, distorting, and concealing from Congress what it was doing in China.

Let us proceed.

Here is a passage from Edgar Snow's review of Harrison Forman's report from Red China, as it appeared in the New York Times for March 11, 1945. For a devious, insidious propaganda job I think it would be difficult to beat.

"Within this year, we shall be obliged to make a decision in our policy toward the forces locked in this dispute, for it concerns the operation of our military plans to recover North China and Manchuria. We shall have to choose, before then, whether to continue to give all military aid and economic cooperation to the Generalissimo's anti-Communist government at Chungking, even if his troops begin to try to move into areas in the northern Provinces now already freed of Japanese by the Chinese partisans (which have political administrations of their own) or whether to aid both groups impartially. This problem is likely to become much more complex, rather than less so, as we approach the day when Soviet arms must surely intervene to hasten the end of the war in Manchuria and Mongolia.

"Harrison Forman's report from Red China, with its fresh vivid and comprehensive account of the battle for life and freedom under China's partisans (that is, the Communists) is therefore an extraordinarily timely book and of considerable historic as well as contemporary value."

Let us proceed.

Here is Annalee Jacoby, reviewing John B. Powell's *My 25 Years in China* in the New York Times for December 16, 1945:

"He (Mr. Powell) is, of course, perfectly entitled to his view of a presently controversial situation. But he makes the serious error of allowing it to distort his interpretation of history by dragging the Red Menace by the scruff of the neck into situations where it hardly seems at home."

Mr. Markel, wouldn't you say that Miss Jacoby was doing her best to soft-pedal "the Red Menace" in the passage cited?

Let us proceed.

Here is John K. Fairbank reviewing *Thunder Out of China* by Theodore White and Annalee Jacoby in the New York Times for October 27, 1946.

Did the Times give the reader any warning about Fairbank? On the contrary he was represented as an authority. At the end of the review, the Times identifies Fairbank as follows: "John K. Fairbank, Associate Professor of History at Harvard, began his studies of Chinese language and history at Oxford as a Rhodes scholar. Since 1932 he has spent nearly half his time in China, during the war in government service at Chungking and more recently, as head of the Department of State's cultural program."

I suppose you might contend that identifying Fairbank as head of the Department of State's cultural program constitutes a

warning to the reader, but I will not debate that.

Let us have the passage from Fairbank's review of the White-Jacoby book. The Times typographical arrangement does not always make it clear when Fairbank is quoting the book or talking for himself. You must be the judge. Nevertheless look at this passage:

"Equally striking is the picture of the Communists, who worked with history as if it were a tool and with peasants as if they were raw material; they reached down into the darkness of each village and summoned from it . . . such (word omitted by the Times) the Kuomintang nor Japan imagined could exist . . . if you take a peasant who has been swindled, beaten and kicked about for all his waking days and . . . treat him like a man, ask his opinion, let him vote for a local government, let him organize his own police and gendarmes, decide on his own taxes and vote himself a reduction in rent and interest—if you do all that, the peasant becomes a man."

Mr. Markel, do you get a warning of the dangers of communism out of this passage? Mr. Fairbank says of the authors that "their grasp of the facts cannot be questioned nor their passionate Americanism." In my judgment the passage quoted is admirably designed to give the reader the impression that the Chinese Communists are noble liberators. I leave it to you to judge the quality of the White-Jacoby passionate Americanism.

Let us proceed.

Here is a passage from Annalee Jacoby's review of Holger Cahill's *Look South* to the Polar Star as it appeared in the New York Times for February 9, 1947. Miss Jacoby is talking now, not Mr. Cahill:

"The Chinese Communist program of local democracy was gathering ragged groups who for the first time believed promises worth fighting for, and fought Japanese, puppets and government troops. Already—though not many saw it then—the Chungking government was beginning to dissolve into corruption and oppression."

Mr. Markel, in my speech I said:

"In general, though not in every detail these books assumed a common pattern arguing two fundamental points:

"First. The government of Chiang Kai-shek is vicious, corrupt, decadent and tyrannical.

"Second. The Chinese Communist movement is healthy, vigorous and, in most respects, an admirable effort to attain justice and liberation."

Does not the passage from Miss Jacoby's review illustrate exactly the attitude I was trying to illustrate?

Let us proceed.

Here is a passage from Owen Lattimore's review of Israel Epstein's book *The Unfinished Revolution in China* as it appeared in the New York Times for June 22, 1947:

"In the last 10 years American writers have taken the lead over all others in raising the level of description and analysis in writing about China. From Edgar Snow's *Red Star Over China* to Theodore White and Annalee Jacoby's *Thunder Out of China* the list of names is distinguished—and most of these writers won their distinction solely or primarily by what they had to say about China. Israel Epstein has without question established a place for himself in this distinguished company. . . . It is noteworthy that the recent and current trend of good books about China, well documented and well written, has been well to the left of center. The writers either throw their weight into criticism of the Kuomintang, like Mr. White and Mr. (sic) Jacoby, or into outspoken support of the Chinese Communists, like Mr. Epstein. . . . There is no question about Mr. Epstein's partisanship. He not only justifies Chinese Communist policy but he justifies it and Russian

policy in relation to each other and in relation to American policy. But the over-all American interest in China has moved beyond partisanship. We need to be able to tell whether an author is partisan or impartial; but we also have a right to demand that he present enough facts for us to be able to form our own opinion. Mr. Epstein has presented enough facts for this reviewer, at least, to form an opinion."

I shall not comment on this passage beyond saying that I believe it bears out, utterly, the argument I made in my speech.

Let us proceed.

Here is a passage from Robert Shaplen's review of Robert Payne's *The Revolt of Asia* as it appeared in the New York Times for September 28, 1947:

"He has a convincing triumvirate of heroes, . . . Shjarir, the diminutive former head of the Indonesian Government; . . . Nehru, of India, and Mao Tse-tung, of Communist China. His chief villains are Chiang Kai-shek and the Kuomintang . . . he believes implicitly in . . . the best features of reform in Communist China. . . . The Revolt of Asia . . . stands with Harold Isaac's recent *No Peace for Asia* as a useful and well-written study of the East in turmoil."

Mr. Markel, do you not think that this passage bears out what I said in my speech?

Let us proceed.

We have had Fairbank quoting glowing passages about the Chinese Communists from Miss Jacoby as cited above. Now we have Miss Jacoby telling all and sundry how superb a character Mr. Fairbank is in her review of Fairbank's *The United States and China* in the New York Times for July 11, 1948:

"Only a foolish man or a remarkably learned one will write a book about China for the next few years. After *The United States and China*, there's not much left to say. I can't remember another volume which holds, packed so tightly, as much scholarly information about a single subject. . . . Fairbank probably knows as much about China as any other American. He went to that country in 1932 after studying at the University of Wisconsin, Harvard, and Oxford; he came back an authority on western imperialisms and their impact on oriental societies. He taught Chinese history at Harvard, where he set up one of the most comprehensive China programs in our country. His is not a pale and bookish China, nor a country remembered from calmer pre-war days. He understands the mess it's in today; he returned only recently from a tour of duty as director of the United States Information Service in China. . . . Fairbank believes that China's economic system is probably heading toward socialism rather than capitalism. What form of socialism will depend, of course, upon the kind of government which controls it. He believes that no matter what the outcome of the civil war, this will be an authoritarian bureaucracy. . . ."

In my speech, Mr. Markel, I said, "The praise was glowing, but a spoonful of criticism was often put in to give the right tint of impartiality. A master propagandist could not have done a better job."

When Miss Jacoby says "He (Fairbank) believes that no matter what the outcome of the civil war, this will be an authoritarian bureaucracy . . ." she isn't putting in a spoonful of criticism. She is subtly trying to pin a fig leaf on Mr. Fairbank—just in case.

You do not think so? Then turn to Fairbank's review of Gerald Winfield's *China's Struggle for Survival* as it appeared in the New York Times for December 12, 1948.

Says Fairbank:

"Now that the bankruptcy of our made-in-Congress aid-to-China policy has proved

again that American arms shipped abroad do not necessarily protect the American way of life, we can try to construct a new China policy."

Did you read this passage before the Times put it in type, Mr. Markel? It strikes me as outrageous. It is most certainly true that Congress did its utmost to aid China and who frustrated the effort? The very administration which, the Times book review said, Mr. Fairbank represented in Chungking and whose State Department cultural program your paper says he headed.

There was, among other things, an embargo clamped on arms shipments to China and it wasn't Congress that laid that embargo. It was done by the State Department in their effort to force Chiang to adopt the coalition policy. I wish you would read the second chapter in Miss Utley's book called *Too Little Too Late—The Facts About Aid to China*.

Let us proceed.

You have had great regard, it seems, for Annalee Jacoby's talents. Here is a passage from her review of General Chennault's *Way of a Fighter* as it appeared in the New York Times for January 30, 1949:

"He (Chennault) adds that this same dictator (Chiang Kai-shek) 'thoroughly understood the Communist motives and techniques and knew that a Communist minority in a coalition government would actually result in complete Communist domination of China.' Perhaps, but how could a man so wise fail to see that this was preferable to complete Communist victory in the field?"

I shall abstain from comment on this propagandist gem and let the exhibit stand for itself.

In my speech, Mr. Markel, I said:

"It is not to be supposed, Mr. President, that this trusty band could hit the bull's eye every time. A score of 100 percent was perfection not quite to be achieved.

"For example, in the course of 6 years, in the Herald Tribune Weekly Book Review, two volumes on China are reviewed by the reliable Arch Steele, the far eastern correspondent. Similarly in the New York Times we can discern some skepticism in three reviews by Stuart Lillico. Other examples might be given.

"But, by and large, Mr. President, the boys and girls who, in the old-time phrase, were determined to carry the message to Garcia, scored a triumph. On the whole it was as successful a selling job for communism as has ever been done here."

Not the sentence "Other examples might be given."

I will now, to sum up this lengthy reply, cite for you one of these examples, a passage from Robert A. Smith's review of Hollington Tong's *Dateline: China* as it appeared in the New York Times for April 22, 1950:

"There are two aspects of this book that make it important at this time.

"First, it recalls, points up and illustrates what many Americans often forget: that China was fighting for her life a long time before Pearl Harbor. Much of the talk of the 'ineptitude' of the Chinese Government (some of it official) bypasses the days in which China fought alone."

This was a point heavily underscored in Miss Utley's book and in my speech, a point which most of your reviewers carefully ignored. To continue with the quote of this particular review:

"Dr. Tong makes a calm appraisal of why the Chinese Government got a 'bad press' in 1944 and 1945 and why the Chinese Communists got such a good one. Basic was the conflict between the majority of the correspondents and Chiang Kai-shek over the nature of the Communists.

"Many of the correspondents insisted that the Communists were just another political party in the strictly American sense. They thought Yen-an should have as good a chance as the Republicans, or at least as Norman Thomas would have in this country. Chiang regarded the Communists as a conspiratorial fifth column whose aim was the overthrow of China. Subsequent events have proved that Chiang was right."

I submit, Mr. Markel, that Mr. Tong and Mr. Smith and myself are right. And I submit that your contentions will not hold water.

You say in your letter "The implications of your remarks seem to me obvious—that those in charge of the New York Times Book Review during this period were either fellow travelers or dupes."

I never said anything of the kind. Here is what I actually said.

"In some way or other—I do not pretend to know how it was done—the authors of these books managed to endorse each other's wares with remarkable success. Often they reviewed one another's books. It was all very skillful * * *"

"And where this crowd really went to town was when they swung the hatchet on the few authors and journalists who tried to warn Americans of the Communist peril."

But I now say this: On the basis of the record it seems very clear that some more than casual effort, some peculiar and deliberate intent, was working somewhere. On the basis of the record I believe that some investigation, some heart searching, and some admissions are due from the Times rather than the sort of protest shown in your correspondence with me.

In the last paragraph of your letter you say:

"I think your charges, and more their implications, are distinctly unfair and unfortunate and that they should be corrected. I believe the facts warrant that this correction should be made in the CONGRESSIONAL RECORD in a position of prominence equal to that of the original allegations"

I do not make any concession whatever to your charges (save for the printer's error cited and for which, as I say, provision was made for correction before you ever raised your voice) but I do admit that our exchange of views should most certainly appear in the CONGRESSIONAL RECORD.

With that in my mind I shall insert this entire correspondence, including my reply, in the CONGRESSIONAL RECORD. In this way not only you, but the public, will have available every exhibit in the exchange.

Cordially yours,

Industrial Dispersion

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, August 13, 1951

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from this morning's Washington Post entitled "Industrial Dispersion," together with a release of the National Security Resources Board under date of August 10 on the same subject.

The Post editorial comments favorably upon the announcement of the National Security Resources Board that Government programs for the expansion of national defense will be used to encourage industrial dispersal.

I desire to recall the fact that a report prepared by the staff of the Joint Committee on the Economic Report, dated June 30, 1951, set forth the basic economic and military justification for a dispersal program. This document has been one of the most popular of committee publications. We have already distributed 3,000 copies on request, and our supply became exhausted. The resolution adopted by the Senate on August 9 made the report a Senate document (S. Doc. 55) and copies may be obtained from the Superintendent of Documents at 30 cents each.

There being no objection, the editorial and release were ordered to be printed in the RECORD, as follows:

[From the Washington Post of August 13, 1951]

INDUSTRIAL DISPERSION

The refusal of Congress to attach a dispersal amendment to the Defense Production Act does not necessarily imply, as Representative MARTIN charges, that the President's own plan for encouraging industrial decentralization flouts the will of Congress. Certainly there are no legal obstacles to carrying out the Presidential orders. As a matter of administrative discretion, he has instructed Government agencies (1) to grant certificates of necessity providing for accelerated tax amortization to the greatest extent practicable to facilities which meet executive dispersal standards, (2) to give primary consideration to dispersal factors in locating facilities built by the Federal Government, and (3) to award defense contracts in such a manner as to make maximum use of such facilities.

Assurance is given that the President's plan would not cripple established industries or entail any extensive shifting of existing plants. But it would discourage new construction in already congested areas, in disregard not only of considerations of military security but also of the economic consequences of trying to get more production from such areas. In a study prepared for the Joint Committee on the Economic Report, *The Need for Industrial Dispersal*, it was pointed out that cities often become inadequate or inefficient for modern production methods. Owing to housing shortages, workers may have to travel long distances to reach the office or the factory. Moreover, the cost of policing and servicing overcrowded municipalities is increased by plant expansion. Construction costs and taxes are also higher than in less congested areas. In short, excessive concentration would add greatly to the cost of the defense program, as well as to the vulnerability of industry to enemy assaults.

By establishing new plants in underdeveloped areas with adequate potential labor supplies and transport facilities opportunities will be afforded smaller businesses and industries to participate more directly in the defense effort and add to the Nation's productive capacity. We conclude that the President should be commended for his initiative in launching a program that aims to achieve greater military security along with fuller utilization of our reserves of manpower and other productive resources.

EXECUTIVE OFFICE OF THE PRESIDENT,
NATIONAL SECURITY RESOURCES BOARD,
August 10, 1951.

An illustrated booklet entitled "Is Your Plant a Target?" explaining a new program for industrial dispersion designed to minimize the effects of any atomic bombing attack on the United States, was issued today by the National Security Resources Board.

The Government called upon local groups to draw up their own voluntary plans for locating new industry away from present concentrations, and said the distance need not be great—as little as 10 to 20 miles, and on rugged terrain even less.

Jack Gorrie, Acting Chairman of the Resources Board, said in a foreword to the booklet, "The risk of an all-out atomic attack on the United States grows greater each day, since we are no longer the sole possessor of the secret of the atomic bomb. This means that no industrial area in the Nation can be considered safe from attack."

"The protection of industrial production is essential to survival in case of war. Increased and sustained production is the backbone of national security."

The brochure emphasizes that industry can qualify for Federal incentives by locating new plants within local marketing areas. It contains nothing, however, to discourage construction of new defense industry in areas far remote from the larger centers.

The Federal incentives available are: certificates of necessity for accelerated tax amortization, allocation of critical materials for construction, defense loans, and defense contracts.

In providing these aids, which have been in use since the start of the defense mobilization program, the Federal Government is to consider satisfactory dispersion to the greatest extent practicable.

The pamphlet shows in detail how dispersion can be accomplished entirely within local marketing areas anywhere in the country by selective use of space on a relatively small scale.

The booklet was based on a pilot operation conducted in Seattle, Wash., by representatives of industry, labor, and local government. Gorrie outlined this four-point program to accomplish industrial dispersion:

"1 It is designed to disperse new industry and expanding industry—not to move established industry.

"2 No region of the country is to be built up at the expense of another.

"3 Industrial dispersion can be carried out if such deployment is confined to each local marketing area.

"4 State and local governments, in cooperation with private enterprise, are called upon to take the initiative in this defense objective. The Federal Government will provide encouragement and technical guidance."

Gorrie said, "Industrial dispersion is the employment of the simple military measure of using space for defense against attack. Space is employed on the battlefield to protect men and supplies. This creates a multiplicity of targets and thus reduces the vulnerability of any one concentration."

"These recommendations are flexible guides for doing an industrial dispersion job. They can be adapted for the varying industrial dispersion problems in all sections of the Nation. Above all, the recommendations for industrial dispersion presented in this booklet recognize that the job can best be done by private enterprise with cooperation and guidance of national, State, and local governments."

The booklet points out the potential role of local committees in taking the initiative for deployment of industry in their own

areas. It tells what kind of area is suitable for small groups of plants, and points out step by step how local committees can get a dispersion program on its way.

As the first step in local procedure, the booklet suggests the organization of a task force through the leading civic association, to include representatives of industry and labor, the professions, and government—"men who are public spirited, realistic, experienced in dealing with problems affecting all groups and interests."

Copies of the booklet can be obtained from the Superintendent of Documents, United States Government Printing Office, Washington, D. C., for 25 cents each.

NATIONAL INDUSTRIAL DISPERSION POLICY

The strength of our national defense and in fact of our continued existence as a free nation depend largely upon our industrial capacity. The core of this capacity, so essential to our survival, lies within a relatively few densely built up centers.

Since 1945, we have experienced a period of unprecedented industrial expansion, but, except for a few examples, there has been no pronounced trend away from these concentrations. Some \$18,000,000,000 in new plants and equipment were spent annually during the past 4 years, largely in areas already highly industrialized.

Although we are increasing our defense efforts, the danger of atomic attack grows and demands that new and more positive policies be put into effect to obtain added security for our industrial establishment without jeopardizing its productive efficiency.

In September 1948, the Government, through the National Security Resources Board, issued a report, National Security Factors in Industrial Location. The report stressed the fact that dense agglomerations of industrial plants were inviting targets for the enemy and that plants separated in space would better survive atomic attack.

These general conclusions are as sound today as they were 3 years ago. On these first principles of security our basic policy still must rest.

Since publication of this report, several factors have added to the urgency of the problem:

1. The evidence that Russia had a successful atomic explosion.

2. The probability that a strong enemy air attack could penetrate any defenses.

3. The outbreak of hostilities in Asia as an indication of the semi-peace conditions under which we are living.

Obviously, in the light of the above, what was, in 1948, a set of desirable objectives, is today a subject of major concern and one vital to our national security.

It is recognized that the major centers of industrial production have become highly integrated and that a part of their efficiency is due to their concentration.

A dispersion policy to be effective and realistic must not be allowed to cripple the efficiency and productivity of our established industries, lest the remedy become worse than the ill.

Our policy, therefore, must be directed mainly toward the dispersal of new and expanding industries.

Sites which meet dispersion-security standards can be found in local marketing areas adjacent to industrial or metropolitan districts in all sections of the country.

Thus, this policy can be made to fit the economic and social pattern of any part of the country.

The fullest cooperation of industry, labor, and local and State governments, together with all of the measures which the Federal

Government can take, will be needed to alleviate the present situation. With the necessary technical guidance, as well as the positive inducements which we will give, much can be accomplished.

All departments and agencies of the Government concerned with this problem will be called upon in carrying out a coordinated policy leading to effective industrial dispersal within the concepts described above.

To this effect, the following measures will be taken:

1 To the greatest extent practicable, certificates of necessity, allocations of critical materials for construction purposes, and emergency loans growing out of defense production will be confined to facilities which meet satisfactory standards of dispersal.

2 Primary consideration to dispersal factors will be given in locating facilities built by the Federal Government.

3 Defense contracts will be awarded, and planning under Department of Defense production-allocation programs will be conducted in such a manner as to make maximum use of facilities located in dispersed sites.

William N. Oatis

REMARKS

OF

HON. O. K. ARMSTRONG

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. ARMSTRONG. Mr. Speaker, a dispatch from Mr. Ray Brock, noted journalist, now in Istanbul, Turkey, indicates that William N. Oatis, an American citizen and Associated Press correspondent in Prague, recently tried and convicted by Communist leaders of the Czechoslovak Government, is getting the "full treatment" of confinement and torture in his prison. The dispatch informs us that every brutal, cunning method of inquisition known to the dread Russian MVD—the secret police—is being used to bring Mr. Oatis to the point of death. He is being subjected to solitary confinement in a small cell. There are endless questionings under blinding floodlights, periodic beatings, the use of drugs, starvation, and unspeakable indignities.

While the State Department carries on feeble "negotiations" on the subject of Mr. Oatis' release, it is possible that Mr. Oatis' life may soon be ended and there will be nothing further to negotiate about.

The rights of a free press and of press correspondents everywhere are on trial in this matter. The whole free world should rise in righteous indignation and take steps both to secure the immediate release of Mr. Oatis and to insure that American citizens are not subjected to such Communist "drumhead" trials and imprisonments in the future. The dispatch follows:

WILLIAM N. OATIS AND COMMUNIST CRUELTY
(By Ray Brock)

A Slovak underground agent, a former assistant military attaché in a nearby Balkan

capital, slipped into Turkey with first-hand information on Oatis' confinement, his condition, and positive assurances that Oatis will be dead of malnutrition, shock, and sheer brutalization, unless he is released from his vile prison cell within a matter of weeks. The Soviet press may then be expected to issue the usual communique that Oatis was killed while "trying to escape" or that he died of some vague disease.

"Gun-boat diplomacy" is perhaps out of date, and even the British sat out the sentences and imprisonments of a group of British engineers who were hurled into the notorious Ljubianka prison in Moscow in 1933, for alleged sabotage. But the case of William N. Oatis is an outrage meriting something more than the platitudes of Dean Gooderham Acheson. The impotence of the American State Department, the United States Congress, and the President, himself, to do anything—even to communicate with Oatis—is typical of the low prestige, influence, and power of the West in Central Europe, the Balkans, and Middle East today.

Bill Oatis has been sentenced to 10 years of the vilest imprisonment, with the attendant tortures, privations, and inquisitions peculiar to Soviet methods, for having done nothing more than perform the routine duties of an American foreign correspondent. According to my Slovak informant, Oatis is being subjected to day-and-night, around-the-clock, inquisition. He is denied anything but a slim bread ration and gruel—enough to keep him, temporarily, alive—and is subjected to beatings, druggings, and sleepless hours of repetitious questioning designed to break his will, his morale, his health, and elicit the usual "confession" of espionage, sabotage, and acts against the Czech Communist Government and the Soviet Union.

This correspondent is personally familiar with the efforts and intervention of Secretary Acheson on the behalf of another celebrated political prisoner and, as far as I am concerned, I'd rather be dead. The previous prisoner was Gen. Draja Mihailovich, Commander in Chief of the Serbian Chetniks, who, callously abandoned by the OWI, the OSS, and the misinformed western press as an Axis "collaborationist," was run down, ultimately, by Tito's Communist partisans.

Half dead of typhus, ravaged by the hunger and privation of his years of guerrilla warfare against the Germans, Italians, the Croatian Fascist Ustashi, Mihailovich was subjected to intolerable tortures, drugged, beaten to insensibility, revived, and tried before a Communist court in Belgrade. The Serbian general then confessed, almost inaudibly, to alleged accommodation with—Winston Churchill's phrase—the Axis enemy. Mihailovich was taken to the subbasement of Belgrade prison and riddled with sub-machine-gun fire, riddled so as to make the body unrecognizable. Then the mangled corpse was tossed into a hidden grave, to prevent Serb Loyalists from retrieving it for honorable burial.

Before and during the trial of Draja Mihailovich, this correspondent headed a mission to Washington to intervene on the general's behalf with the State Department and the President. This mission included on its roster such responsible and liberal figures as Dorothy Thompson, Edgar Ansel Mower, international journalists of undisputed renown; Christopher Emmet, a recognized free-rights crusading journalist; David Martin, journalist, writer, and author of *Ally Betrayed*, a documented history of Mihailovich's campaign; and 37 United States wartime pilots, bombardiers, navigators, and gunners who had parachuted into Mihailovich-led Yugoslav territory, had been saved, protected, and repatriated to the

Allied lines. The fliers chartered a plane at Chicago, foregathered from their scattered home cities, and flew to Washington to join me. We approached the State Department and the White House for a hearing—with affidavits from all the fliers who, parachuting from disabled bombers into Mihailovich territory, had eye-witnessed his campaign against the Axis enemy, and who had been flown out to Allied air bases in Italy from a clandestine field constructed by the Chetniks.

But the pro-Soviet influence was still in the ascendancy in official Washington in the early summer of 1946. Acting Secretary Acheson, counseled by Alger Hiss, flatly refused to see the fliers or any members of the Mihailovich mission. The worried President was advised by Hiss to give the American airmen the brush-off. He did so. This correspondent, at a Presidential press conference, was told that the President had turned the matter over to his military aide (General Vaughan) and that was as far as it would go. It went further, however.

Warned by the then Near Eastern Desk Chief of the State Department, Wallace Barbour, that the American airmen were preparing to make a public statement on the issue, Dean Acheson relented. He agreed to a 5-minute conference. The head of the fliers' delegation, David Martin, and I, stayed for 45 minutes. We laid the affidavits before Acheson. We pointed out, with documents and unimpeachable proof, that Mihailovich stood in peril of political murder for nothing more than defense of his homeland—on orders from the Yugoslav Government in exile in, first Cairo, then London—against the Axis and later Communist depredations by the pillaging partisans of the Communist terrorist Tito. Acheson then, as now, was aware that the State Department, the OWI, and OSS were honeycombed with Communist and pro-Soviet employees.

Dean Gooderham Acheson, at the end of the 45-minute conference, firmly assured this correspondent, David Martin, and the designate head of the United States airmen's mission, that "everything possible will be done to insure that General Mihailovich will be liberated."

Mihailovich was machine-gunned to death, after his mock trial, a scant few weeks later. Research discloses that the extent of Acheson's intervention was a weakly worded aide-memoire—very similar to the notes relating to William N. Oatis.

Much more than the fate of William N. Oatis is at stake presently, although the life of a working foreign correspondent should be enough to stir the State Department to action. The sworn affidavits of 37 United States airmen, representing more than 600 allied fliers, American, Scots, British, and Australians, attesting Mihailovich's loyalty, fell on completely deaf ears at the State Department.

Despite the eloquent appeals and outraged editorials of leading American newspapers, the State Department and the White House have apparently done nothing but issue routine protests and threats of futile economic sanctions against, of all people, the Czechs.

William N. Oatis, Associated Press correspondent, is a tortured prisoner of the Soviet Union. Seized by the MVD, tortured by their skilled and brutal agents, flung into solitary, beaten, drugged, and forced to a typical Soviet confession—this American citizen and newspaperman is nearing exhaustion and death today in a prison cell in Communist Czechoslovakia.

This correspondent is, admittedly, no Tom Paine. But we could use a Tom Paine right now, if we had one.

The Arizona Water Grab

EXTENSION OF REMARKS

OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. YORTY. Mr. Speaker, I should like to call attention of the Members of the House to an excellent editorial on the fantastic central Arizona project, which appeared in the Los Angeles Sentinel on August 2, 1951:

THE ARIZONA WATER GRAB

Too few Californians have bothered to study the implications of the long-contested central Arizona project—and the effect the fantastic proposal will have on California economy.

What is the central Arizona project? It is a so-called reclamation project to take Colorado River water to land in the central part of Arizona, near Phoenix. Proponents of the project claim it's construction is to provide a rescue supply of Colorado River water to 226,000 acres of war-born land in Arizona.

According to an official estimate of Secretary of the Interior Oscar L. Chapman the project's total cost to the Nation as a whole would be \$2,075,729,000. Based on the provisions of the central Arizona project bill S. 75, and on the following specified conditions: Construction cost estimate of \$708,000,000; an interest rate of 2½ percent; an 8-year construction period; and a 75-year financing period.

Principal features of this proposed project are: (1) Bridge Canyon Dam on the Colorado River, above Hoover Dam; (2) Parker Dam pump lift, to raise irrigation water a total height of 985 feet; (3) Aqueducts and canals to transport water a distance of 315 miles to grow ordinary field crops.

We object to Arizona's efforts to secure an unprecedented hand-out of public funds for private gain. Consider this:

The citizens of California face a heavy new Federal tax burden which would be imposed upon them to subsidize private-land owners in Arizona.

The average subsidy for the 420 largest Arizona land owners involved would be \$5,550,000 each.

As a Federal taxpayer, you would be expected to contribute to an irrigation scheme that would spend \$1,838 an acre to put water on land worth only \$300 an acre.

Landowners in Arizona would pay less than 1 percent on the interest cost of the project, while the residents of the 47 other States, who will receive none of the benefits, would pay 99 percent.

This speculator's dream would consume more than 500,000 tons of steel and vast quantities of other critical materials needed for ships, tanks, and other vital elements in the Nation's defense program. Building this costly project would injure—not aid—our country's defense effort.

Why are Californians so concerned over the outcome of the project? Because Arizona wants an increased supply of Colorado River water to use on 226,000 acres of privately owned land. The only way Arizona can get this new water supply is by taking it away from the people of California. And to do that, we feel it is worth repeating, an additional tax burden of some \$2,000,000,000 would have to be saddled on the already overloaded taxpayers of all States. The Colorado River water Arizona wants would serve

more than 5,000,000 people in California, where no Federal subsidy would be required. The people of California own this water by virtue of long-standing contracts with the United States Government.

In short, the fantastically expensive Arizona reclamation project is not truly a reclamation project at all—it's a speculator's windfall.

Great To Be Crazy

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. BROWN of Ohio. Mr. Speaker, I believe the editorial, Great To Be Crazy, by Wilbur D. Matson, editor of the Morgan County Herald, McConnelville, Ohio, is worth the reading by every Member of Congress and the public generally, and for that reason I insert it in the CONGRESSIONAL RECORD:

GREAT TO BE CRAZY

The other morning we arrived at the Herald office in conformity with a third of a century's custom. We were cogitating over an article we had read in Collier's the night before by David E. Lillenthal, which said India and Pakistan are on the edge of war, about which shall possess Kashmir. Mr. Lillenthal, the author, said the issue is whether the historic region of Kashmir and Jammu shall be a portion of India or of Pakistan.

The dispute may involve 360,000,000 and, as we are up to our neck in the U. N., the outbreak of war would, undoubtedly, put the United States into another and even bigger and better war than Korea. We felt uneasy over the situation. Sure, if anyone wants to fight, anywhere on the round globe, we must get in on one side or the other, but whether we are for Pakistan or whether we are for India, aye, there's the rub. We need more wars. There's no doubt on that score. Two World Wars and Mr. Truman's police action in Korea are not enough for one generation. If we have the misfortune to get peace in Korea, a dispute between Pakistan and India affords a much better opportunity to call out the five-star generals and a few more millions of good American boys for the slaughter, and everyone will have a good job and enjoy more employment, fulfilling the Truman promises of prosperity for all, especially the bureaucrats and five percenters.

After all, the U. N. must engage in constant wars to keep world peace and it is our manifest American destiny to bankrupt ourselves and supply the men and the money for policing the round globe from Timbuktu to Greenland's icy mountains which, by the way, we need for an airfield to help maintain peace for dear old England and the U. N. By the way, where is Pakistan?

In a confused mood, we decided to go to the post office and see whether a heavy dew on Federal Creek had shut off the morning mail from Athens. En route we met a matron of the village with a hometown Herald. "I'm sending it to my boy in Austria. He's helping keep the peace for the U. N. in the old kingdom of Franz Joseph. How glad I am that he can fight and die for dear old Austria. Isn't it a lovely day?" We replied dully

that it was. Next stop was near the post office where we noted a number of young men, in the main, at the armory, applying for unemployment compensation in a time when wars and public doles have sent the wheels of industry spinning at a furious rate and anyone who will work and is not entirely incapacitated, mentally and physically, can obtain employment.

Then we met a boy from an Army camp who told us he was home on leave and, in a few days, would be sent to an unknown destination on one of the oceans. "We've got to defend the thirty-eighth parallel," he said. "If we don't get it, the Communists will beat us to it." "Sure," we assented with enthusiasm. "We've got to have the thirty-eighth parallel." Anyway, you can't have a police action without a line to dispute over. Again, as Woodrow Wilson said when we failed to join the League of Nations, we broke the heart of the world. It's up to us now to gather up the pieces and put them together. Do I hear voices in the air? And it's my hope that we wind up the thirty-eighth parallel on a spool and put it in the national museum as a memorial to the great sagacity of Mr. Acheson's State Department which successfully gets you into war and makes business, thus reversing the policies of such old fogies as John Hay and James G. Blaine, who tried to make friends and keep the Nation at peace.

By then, we had arrived at the post office and, although our eyesight is not what it used to be, noted a panorama of legs among four young girls in shorts, apparently suffering from the heat. When a young fellow, we had to pay a quarter to see a similar exhibition at what in that crude era was called a leg show. We, undoubtedly, are making progress in dress.

Somewhat groggy and bewildered and feeling as though on a roller coaster for the first time, we came back to the office in time to sell some Heralds, just off the press. A customer who wanted an ad dropped in and stopped to chat. "You know," he said, "the neighbors out our way tell of a man who has a fine farm, all the latest machinery, and plenty of stock, whom they swear gets welfare checks. Don't say anything about it. It's ag'in the Federal law to hurt anyone's feelings who is a relief client." A Malta friend arrived by that time and was philosophically summing up the national situation. After a few sarcastic remarks on the "mores" of this strange period, his summation and final conclusion was that "everybody is as crazy as hell and, maybe, I'm crazy, too." En route to dinner, as we passed "Deac" Ralston, sitting out in front of his home, we told him of our Malta friend's analysis and he laughed and replied, "Has he just found that out? I've known that since they elected Roosevelt for a fourth term and followed up with Truman. I thought everybody was on to that by this time." It's great to be crazy and, peace, it's wonderful.

facts are brought to light about which the public would not be informed were it not for newspaper editorials and press notices. Recently Gov. Thomas E. Dewey, of New York, has been in the limelight not because of any outstanding or specific performance in his own State but because of the interest that he has manifested in the coming national campaign. In fact, Tom Dewey has been issuing statements supposedly for the benefit of the Republican Party. He has declared his preference for candidates and made emphatic statements about what such candidates must stand for. A thorough analysis of Governor Dewey's record is contained in an editorial published in the Chicago Daily Tribune under date of August 10, 1951. The editorial should receive as much and as wide publicity as it is possible to give to it. It contains some enlightening as well as startling disclosures about the past and present performances of the twice-defeated Republican candidate for President.

Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I also include an editorial. The editorial is entitled "Tom Thumb Up to Date," and herewith follows:

TOM THUMB UP TO DATE

Gov. Thomas E. Dewey, twice defeated as Republican candidate for President, continues to haunt the party. He has been declaring a preference for General Eisenhower as the party's nominee in 1952. This amounts to an acknowledgment that, so far as his personal prospects go, he is washed up as a candidate in his own right. The people tried to make that clear enough to him in 1944, but his vanity was such that he could not be convinced until they had repeated their expression of distaste at the polls in 1948.

Dewey started off like a rocket as the boy gang buster, and he looked plausible as a candidate in 1940, when he was opposing Roosevelt's designs to put the Nation into war. He got a lesson in the Republican convention that year when the late Thomas A. Lamont, of the house of Morgan, pulled the wires to get the nomination for Wendell Willkie, once a Democrat. Willkie was as much of an interventionist as Roosevelt, and the big idea of the wealthy Anglophiles in the East was to deny the people the right to vote for somebody who intended to stick by his word that the United States would not be taken into war. They knew where Roosevelt stood, and they knew Willkie was just as hot for getting into war as he was. So Dewey was shunted aside.

He got the idea after that experience. The illumination required that he discard his principles and become as foreign minded as the rest of the New Deal Republicans who won acceptance from the international bankers and like-minded world savers. The transformation was complete about the time that the Republican conference was held at Mackinac in 1943. He said there that "we have had a de facto military alliance with Great Britain practically ever since the War of 1812" and went on to urge a post-war alliance with England.

Dewey did not allow history to trouble him, conveniently overlooking the Oregon boundary dispute, the British designs in Texas and California, the British role in the Civil War, and the Venezuela boundary controversy. He knew what the England firsters in Wall Street wanted of him, and he

The Political Activities of Gov. Tom Dewey

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. JONAS. Mr. Speaker, it frequently happens that through the arduous and indefatigable efforts of the press

gave it to them. His reward was the Republican nomination in 1944.

Dewey distinguished himself in that campaign by the "me, too" tactics upon which he subsequently took out a copyright. He pledged himself not to make an issue of Pearl Harbor, although he knew that the administration had cracked the Japanese code before the country was taken to war and that the Roosevelt administration's account of how hostilities began was spurious. As the Germans had informed Japan in 1941 that there were reasonable grounds for suspecting that America had broken the Japanese code, the information was not vital to military security, but it was important to Roosevelt's political security.

Dewey thought it was a moral victory to lose to Roosevelt by "only" 3½ million votes, but he failed to acknowledge that most of the votes he received were anti-Roosevelt, anti-New Deal, anti-fourth term, anti-Communist, anti-Sidney Hillman, and anti-PAC.

When 1948 rolled around, the Republicans disregarded the party tradition that no defeated candidate should be renominated. Dewey grabbed the nomination from better men and then proceeded to reenact the fatal strategy of 1944.

Harry Truman looked like a pushover and should have been. His popularity had reached the vanishing point when the nominating convention gathered, and even Paul Douglas, Jake Arvey, and the Roosevelt boys wanted to dump him for Eisenhower. But he got the nomination by default and came out of his corner throwing everything convenient to hand, while Dewey pursued what he mistakenly conceived to be a high-level campaign with a total absence of content. Again millions of Americans who wanted someone or something to vote for stayed home on election day and Dewey lost his sure thing.

It didn't cure him. In a Lincoln Day speech in 1949, he had the temerity to advise anyone who differed with his tactics of yessing the New Deal to get out of the party and counseled those who thought that his twice-tested formula for defeat was stupid and craven to "go out and try to get elected in a typical American community and see what happens to them." A good many candidates dedicated to fighting Trumanism, root and branch, did just that in the congressional elections of 1950. Unlike Dewey in his Presidential waltzes, they won.

The fact was that in his losing campaign of 1948 Dewey ran substantially behind the Republican congressional candidates in a majority of districts, even though Truman had based his campaign on slanders directed against the previous Republican Congress. The little man from Albany he almost wholly ignored.

Yet, Dewey persisted in his mistaken notions so that, in a speech at Princeton University early in 1950, he decried the epithet "me, too," and predicted that to listen to "the croaking voices of reaction or isolation"—i. e., to those who thought that the way to beat Trumanism was to offer an alternative to foreign intermeddling and to the whole spendthrift socialism of the opposition—was to invite defeat at election time. He said that if such views were to prevail, the Democrats would win every time. What had they been doing in the four succeeding elections?

When Truman embarked on the Korean lunacy, Dewey was all in favor of it. He cautioned Republicans last December that this was not the time for further criticism of the administration's foreign policy. When, with Dewey, is it ever the time? He was for everything that Truman did, but for more of it. He wanted an Army of 100 divisions raised overnight at astronomical

cost. He wanted everyone, man or woman, registered to be conscripted for national service. He was, indeed, a valiant enemy of communism every time the waiters started to gather up the dessert plates at a public banquet.

But he was not so heroic a warrior when Soviet officials in the United States kidnaped a runaway Russian school teacher named Oksana Kosenkina, who didn't want to be sent home to Russia, and held her prisoner in the Soviet consulate in New York. When a writ of habeas corpus was sought for her release, the Russian Embassy in Washington protested to the State Department and the State Department prevailed on Dewey to urge the courts to withhold issuance of the writ. The delay was sufficient to cause the despairing Mrs. Kosenkina to cast herself from a third-floor window in the New York consulate. She was gravely injured, although she subsequently recovered. If Dewey had had the spunk to tell the State Department that nobody, constitutionally, could withhold the issuance of the writ, the teacher would have been liberated and the tragedy averted. But, as usual, his knees wobbled in the clutch.

There was general relief last year when Dewey announced he would not run for a third term as governor. At the eleventh hour, following a meeting with Winthrop Aldrich, of the Chase National Bank, who wears two British decorations, Dewey changed his mind. Aldrich apparently convinced Dewey that England and the Chase National needed him. Besides, the banker said, there would be no campaign contributions for Joe Hanley, Dewey's lieutenant governor, who had the inside track for the Republican nomination for governor.

In a celebrated letter written by the heart-broken Hanley, who was fobbed off to run and lose against HERBERT LEHMAN for Senator after Dewey supplanted him in the race for governor, Dewey's lieutenant told how his boss had told him he must stand aside, sugaring the order with the promise of a fat State job if he should lose to LEHMAN. Later gossip held that the Wall Streeters had rigged a deal whereby the New Deal would put up a nonentity against Dewey for governor in return for running Hanley against LEHMAN. Dewey and LEHMAN were both internationalists, and their Wall Street supporters wanted both to have a cinch race.

That's the way it worked out. Hanley was rewarded with a State sinecure which, together with his pension rights and other perquisites, gives him an income of about \$22,000 a year. There is a criminal statute covering bribes and promises to win nomination for office, but no one had invoked it. Equally unsavory was the story brought out by the Senate Crime Committee of how gambling at Saratoga has run wide open under Dewey although his State police drew up reports showing the extent of this illegal activity.

Dewey's record bears out the celebrated judgment of Mrs. Kenneth Simpson, widow of the former Republican Congressman and Republican National Committeeman from New York State, who said, "You have got to know him to dislike him." The voters know him sufficiently well to want no part of him, and that's why he's for Eisenhower.

What that support means will be made more clear when the New York delegation to the 1952 Republican National Convention establishes its position. It will be well advised to follow the course of the rest of the public and tell Dewey that he speaks only for himself. It should be clearer to politicians than to men of other trades that there is no percentage in accepting orders from a dying duck.

Right to Tidelands

EXTENSION OF REMARKS OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Muskegon Chronicle, Muskegon, Mich., August 8, 1951:

RIGHT TO TIDELANDS

Fortunately, the real fight over ownership of offshore lands where rich oil deposits have been found will come in the Senate, where a bipartisan effort will be made to retain Federal ownership and to earmark Federal revenues obtained from oil leases on these lands for the Nation's schools.

This time the fight was a pushover in the House, whose Members voted 265 to 109 to give States a quitclaim title to these much disputed offshore lands. The battle in the House was fought largely on States' rights, which is at best a great oversimplification of the issue.

The bill which has now gone to the Senate confirms and establishes "the titles of the States to lands beneath the navigable waters within State boundaries and to the national resources within such waters and lands" and provides for "the control, exploration, development and conservation of certain resources of the continental shelf lying outside State boundaries."

There never has been any question, and is none now, of the right of States to ownership and use of lands beneath navigable waters within State boundaries, nor to lands adjacent to States under inland waters. The long dispute involves only what are known as the marginal ocean coastal area and the continental shelf lying outside of coastal State boundaries.

The Supreme Court has ruled twice in recent years that these marginal areas are under Federal jurisdiction. Thus the House action, stripped of its confusions, is primarily an attempt by legislation to reverse the Supreme Court.

Representative GEORGE MEADER, of Ann Arbor, the only Michigan Republican Member of the House to vote against the States' rights appeal, likewise was the only Michigan Member to present a thoroughgoing analysis of his vote. "From a legal point of view," Mr. MEADER said, "the bill must be one of two things: (1) An effort to reverse the Supreme Court, or (2) a donation of Federal lands to the States."

On the first point Mr. MEADER makes the logical claim that while Congress is justified in changing its own acts to reverse the effect of a court decision, it is a violation of the separation of judicial and legislative powers to reverse the Court in a situation involving not a statute but an interpretation of the Constitution.

On the second point Mr. MEADER says sensibly that he "cannot find justification for transferring the natural resources which belong to all the people of the United States to any limited group, whether they be the citizens of States or other segments of the population."

Proponents of this transfer to States have always called their legislation the "tidelands bill," which is itself a complete misnomer. Tidelands constitute the area that is alternately covered and uncovered by the tides, and the Supreme Court has repeatedly held

that the States have clear title to such lands, together with the beds of their own inland navigable waters.

It is important to bear in mind that the lands in dispute, despite all the clever subterfuge, are not tidelands at all. They begin at the lower water mark where the tidelands end, and there has never in our history been any decision of the Supreme Court dealing with such submerged lands which held that jurisdiction of them lies elsewhere than with the Federal Government.

There is no possibility of a parallel situation in the Great Lakes, and thus the talk of the "dangerous precedent of national control for the future, if not now," is pretty far-fetched. The House action is a gift to the three States of Texas, Louisiana, and California, where rich oil lease rights extend beyond the tideland area, the revenue from which those States quite naturally want for themselves.

Possibly in their desire to be anti-Truman—who vetoed a similar bill 2 years ago—this time more House Members than ever have joined the questionable tidelands pressure group. They have filled both counts in Representative MEADER's indictment. They have tried to set up the judicial branch as secondary to the legislative and have voted to give away to three States important ocean property rights the benefits of which belong to all the people and which in the past have never been held to be anything but federally controlled.

If such action were taken by State legislatures, it would be understandable. In the Congress of the United States, however, the Nation's rights ought to be considered paramount.

Soap-Box Derby

EXTENSION OF REMARKS OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. AYRES. Mr. Speaker, yesterday was a great day for Akron, Ohio. It was a greater day for the Nation. For the fourteenth annual Soap-Box Derby was run at Derby Downs at Akron, Ohio.

With the world in a turmoil, it was truly an inspiration to see the youth of America perform. Scandals and corruption rising from sporting events had been disheartening. The annual Soap-Box Derby is one sport that will never be subjected to "fixing." You cannot destroy the integrity of youth. These young red-blooded Americans, who build their own little racers, put sportsmanship, honesty, and fairness above everything else.

Only one young man could win first place in the field of 141 contestants. The 140 who did not win put forth their best effort, and in the true American tradition extended their hearty congratulations to the winner, Darwin Cooper, of Williamsport, Pa.

We need not be fearful of our future if our boys can be given the opportunity to appreciate competition and incentive.

Next year I would like to see as many Members of Congress accompany the contestants from their districts to the fifteenth annual Soap-Box Derby, to be

held in Akron, Ohio. It will be an inspiration to the Members to witness the American way of life in action. Our future is in the hands of our youth. They deserve our support.

An Affirmative Foreign Policy

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. MEADER. Mr. Speaker, I intend to offer an amendment to the foreign-aid bill which is expected to come before the House of Representatives this week.

My amendment will have the same essential purpose as H. R. 3798, which I introduced April 23, 1951, to create a Commission on Aid to Underdeveloped Areas. This bipartisan commission would have the task of studying the obstacles and barriers presently limiting private investment in foreign areas and recommending ways and means of eliminating or minimizing such barriers.

Today I received a statement from Mr. Howard S. Piquet, senior specialist on international economics, Legislative Reference Service, Library of Congress. This statement consists of analytical comment on H. R. 3798. I wish to make this analysis available to the Members of Congress to assist them in their consideration of the amendment I intend to offer.

For the purpose of acquainting the Members of the House with the background and experience of Mr. Piquet, I precede his analysis of my bill by an excerpt from Who's Who in America:

Piquet, Howard S., economist; b, Brooklyn, N. Y., July 4, 1903, s. Samuel D. and Laura E. (Mann) P.; B S., New York U., 1924; M. A., U. of Calif., 1926, Ph. D., Princeton, 1930; m. Dorothy Virginia Burke, Dec. 23, 1930; children—Dorothy Vanna, Howard S., Barbara. Instructor, Princeton, 1928-32; asst. prof. econ., New York U., 1932-34; economist, U. S. Tariff Comm., 1934-37, chief of econ. div., 1937-43, Secretary Section on Distribution, United Nations Conference on Food and Agriculture, Hot Springs, Va., 1943; exec. sec. and dir. of investigation United Nations Interim Commn. on Food and Agr. 1943-45; adjunct prof. economic theory, Grad. Sch. of Am. U., Washington, D. C., since 1934. Special Adviser, Office of War Mobilization and Reconversion, 1945-46, exec. sec. Inter-agency policy com. on rubber, 1945-46, senior specialist on internat. economics, Legis. Ref. Service, Library of Congress, since 1946; mem. prof. staff com. on Fgn. Affairs, Ho. of Reps. (deputy staff dir. Ho. Select Com. on Foreign Aid). Mem. Am. Econ. Assn., Phi Beta Kappa, Zeta Psi. Author: Building and Loan Associations in New Jersey, 1930, Outline of the New Deal Legislation, 1933; Functional International Organization in Annals Am. Acad. Polit. and Social Sci., 1945; the International Charter in Proc. of 1948 Econ. Inst. U. S. C. of C.; numerous articles on tariffs and internat. orgn. Home: 2209 Yorktown Road NW, Washington, D. C. (Who's Who in America, 1950 51.)

COMMENTS ON PROPOSAL OF REPRESENTATIVE MEADER

There is much that can be said in favor of the proposal that a special commission along the lines of the Hoover Commission be created to plan, and later on to advise the administration of, the point 4 program. There is constant danger of pouring out millions of dollars too quickly in the form of well-intentioned, but poorly conceived, foreign aid. The granting of aid of the developmental type is more of a psychological than an administrative problem. The Representative's interpretation of the objectives of the point 4 program is quite apt, particularly his concept of vacuum areas and his desire to shift our policy from the negativism of containment to a positive psychological offensive. The big problem in connection with the point 4 program is knowing what it is that we want to do. In final analysis our objective is freedom, the immediate problem is to define it in practical terms.

The principal points made by the Congressman are listed below together with a few comments on each:

1. The commission which he proposes would be a study group rather than an operating body.

This is desirable since the essence of the job is imaginative planning rather than push-button operation. Some people might be disposed to say that the point 4 program has already been discussed to death. The trouble, however, with present arrangements is that actual planning and administration are being carried on by the administration. With the two parties so evenly balanced in Congress and with the bipartisan foreign policy already a thing of the past there is some doubt whether the point 4 program can be administered along present lines on anything other than a political basis. Whether or not this is true, the fact remains that there will be doubt in the minds of many which is almost as bad as if it actually were so. Consequently, if a bipartisan or nonpartisan commission were to be set up it might have the effect of rendering the program less political.

2. The Commission would be bipartisan.

As stated above, this is all to the good, but how practical is bipartisanship in the field of foreign policy right now with the 1952 election campaign so close at hand?

3. The Commission is to be endowed with fact-finding powers.

It is true, of course, that the existing point 4 organization has the power to make fact-finding studies. It is free to make such studies and investigations as it wishes. The proposed Commission, however, would have the power of subpoena. Whether this power would add anything to the powers the administration now has to secure facts is an open question.

One minor question might be raised regarding section 2 (b) of the proposed bill. This is the section that has to do with membership on the Commission. It requires that of each class of members not more than one-half shall be from each of the two major political parties. This could be interpreted as requiring that there be at least one-half Republicans and one-half Democrats on the Commission. Might it not be better, and not in conflict with the ideals of bipartisanship, if it were to be required that not more than one-half should be from any one political party? This would make it possible for some of the appointees to be unaffiliated with any political party. It would seem that what is really aimed at here is a nonpolitical or nonpartisan approach to the problem rather than a narrowly conceived bipartisan approach.

If a commission along the lines proposed were to be created, it would have the further advantage of keeping the point 4 program

separate from other foreign-aid programs. One of the criticisms that has been leveled against the new foreign-aid bill (now under discussion in Congress) is that it would lump together all foreign aid including, according to some plans, military aid. Aid of the ECA type, military aid, and point 4 development aid are all quite different and since point 4 aid in terms of money cost is so much smaller than the others, there is danger that if it were to be combined with the others, it might be submerged and lost sight of. One of the important aspects of the development program is its psychological effect on foreign peoples. The Rockefeller report (issued last March) in certain respects lost sight of this fact. It would combine the acquisition of strategic raw materials with the point 4 program. If the inhabitants of foreign countries get the idea that we are interested exclusively in our own preservation militarily and interested in their development only in a collateral way, they might well feel resentful of anything that we might do.

The point 4 program is a long-run program. Units of time with which it is concerned are not days, months, or years, but decades or even generations. In fact, it probably should not be called a program at all. It is, rather, a frame of mind, an evidence of willingness and desire on the part of the people of the United States to lend a helping hand to their fellow beings in less fortunate lands. It is a program which would help other people to help themselves; it is not charity. To confuse it with more short-lived programs such as the military assistance program might be to defeat the purpose of the program itself. This might be one of the strongest reasons for setting up a commission along the lines proposed by the Representative.

Mr. Speaker, I also desire to call the attention of the House of Representatives to the testimony I gave before House Foreign Affairs Committee, as well as that in support of my bill offered by the Detroit Board of Commerce.

This testimony appears on pages 777-831 of the hearings on the mutual-security program, printed copies of which were first available today.

Aid for Formosa

EXTENSION OF REMARKS OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. BAKER. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD the following editorial published in the Knoxville (Tenn.) News-Stentinel under the date of August 9 entitled "Aid for Formosa":

AID FOR FORMOSA

If the United States intends to take a firm stand against communism anywhere in Asia, then President Truman is right in asking for a modest aid program for the Chinese Nationalist forces on Formosa.

The appropriation requested, \$307,000,000, is less than we are spending on some countries which do not have anything like Formosa's potentialities.

There is little point in giving arms to a country until it has troops to use them. Chiang Kai-shek has at least 400,000 troops

in need of equipment. This is the largest anti-Communist military force in Asia.

The policy of waiting until an area is under attack before going to its rescue is exhausting and self-defeating. Americans can't do all of the fighting. They should not be doing any fighting at all when there are natives willing to fight in their own defense if given the weapons.

We waited until it was too late adequately to arm the South Koreans, and have paid for that mistake by a fearful toll in American blood. The mistake should not be repeated in Formosa.

If Formosa is armed, it can defend itself against a Communist attack. It also can be in readiness to support revolts against the Communists which may occur on the mainland.

If There's Any Let Down, It's Not From the Public

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shelbyville (Ind.) News of August 8, 1951:

If There's Any Let Down, It's Not From THE PUBLIC

For some weeks now, we have been listening to scolding speeches by high Federal Government officials—from President Truman on down the line—indicating that there has been a let-down on the part of the American public in the matter of military defense efforts.

As far as we can find, there has been no let-down of any kind anywhere along the line as far as the American people are concerned. Government and military officials very likely know this, but they fear that the public will cry for cut-backs in defense expenditures. There has been no such demand of any consequence, and appropriations for defense still are being voted by Congress.

About the only thing that the public has demanded is a sensible reduction in non-essential expenditures. It appears that the public has demanded this kind of cut-back with the knowledge that the Nation can't very well go ahead with outsize domestic and military spending at the same time.

We believe that the big need is a greater unity between the people and the Nation's leaders. This cannot be achieved unless and until the public is given more facts regarding actual national and international conditions and more honesty on the part of leaders who have assumed too much of the attitude that the people, after all, are largely a pack of morons and would be better off if kept in ignorance.

We know of no time in this Nation's history when the people at large ever underwent a let-down in a time of national crisis. The United States, while a peace-loving Nation, has been remarkable for its ability to face and to overcome the greatest of obstacles.

In this present period of strife, the American people are doing and will continue to do all in their power for the welfare of the country. Their leaders could help by keeping their big mouths shut except when they are ready to give the people some facts, and to do it with honesty and sincerity.

Cicero, Take Notice

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. MULTER. Mr. Speaker, Brooklynites are always proud of the example they set to the rest of the world.

An example of true brotherly love occurred last week. It should not go unnoticed.

The following news item from the Brooklyn Daily Eagle of August 9, 1951, preaches a sermon that bears repetition. Need I say more?

WHITE NEIGHBORHOOD MOURNS FOR LITTLE NEGRO BOY IT LOVED—"DOESN'T SEEM RIGHT WITHOUT HIM," MANY SAY AT RITES FOR "CAMPY," 7, DROWNED AT PICNIC

(By Leslie Hanscom and Ken Johnston)

A brokenhearted Brooklyn neighborhood turned out en masse today to pay its last tribute of affection to a little 7-year-old boy who had won his way into the hearts of all.

Most of the mourners, including more than 100 boys and girls, were white, though the lad they mourned, little Gerald (Campy) Rice, was a Negro.

Youngsters and grownups alike, interviewed as they made their way to the Church of God to attend services for the boy, agreed he had been the most popular kid on the Emerson Place block between DeKalb and Lafayette Avenues.

"It just doesn't seem right around here without him," said a mother, her eyes moist with memories.

DANCED IN STREET

"Everybody in the neighborhood liked him—not a person didn't like him," said another mother.

"He ran errands for all the neighbors—he'd do anything anyone asked him," said Mike Carboni, 14, of 352 Lafayette Avenue.

"He used to dance in the street and he danced so fast you could hardly see his feet," said Frankie Mariono, 8, of 247 Emerson Place.

Campy lived with his parents, Joseph and Geneva Rice, at 253 Emerson Place, in the middle of the block occupied predominantly by white families. And he was the best-loved youngster on the block.

Patrick Wrenn, 8, who lives at 255 Emerson Place, said Campy "could beat me up if he wanted, but I liked him just the same. We used to have great times together."

DROWNED ON PICNIC

Campy was drowned Sunday while on a community picnic. Wading in Jamaica Bay near the Canarsie Pier, he stepped into a hole and disappeared. His body was recovered and police worked 2 hours trying to revive him.

He won his nickname, Campy, from his prowess in street ball games. "He could throw a ball like this," said Al Addonizio, 8, of 249 Emerson Place, demonstrating with a quick snap of the wrist, "and it would go over the roof—just like a clout off the bat of Roy Campanella of the Dodgers."

The scores of children and parents attended services at the church, Lafayette Avenue and Taaffe Place, conducted by the Rev. Norman T. Garrison, assisted by the Rev. C. Christian.

They went back to the Emerson Place block afterward. The kids were quiet, like their parents.

No one danced in the street today.

Abdication of State Powers Inexcusable

EXTENSION OF REMARKS
OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include a statement I made public August 10, 1951, relative to an apparent abdication of State powers by a representative of the Michigan Public Service Commission. This action seems particularly indefensible in view of steps taken by the Congress to maintain State authority over use of natural gas.

My statement is as follows:

There are all too abundant grounds for complaints regarding actual and attempted Federal usurpation of State rights and powers. But it should never be forgotten that these rights and powers may as readily and irretrievably be lost through abdication of the rights and authority by State officials.

I have just been advised that a representative of the Michigan Public Service Commission has this week notified officials of the Petroleum Administration for Defense of the Department of the Interior that the State of Michigan is waiving its authority to control and restrict use of natural gas in favor of the Federal agency. This abdication of power, heretofore exercised competently and adequately by the Michigan Public Service Commission, has apparently been made in the face of specific action by the Congress reserving such authority to the States.

My information is that Mr. Jack Cushing, chief engineer for the Michigan Public Service Commission, on Thursday of this week, attended a conference of representatives of various States with PAD in Washington, and at that time notified the Federal agency that Michigan is "happy to comply" with the recent order of the Secretary of the Interior restricting use of natural gas and restricting installation of natural gas equipment. I am advised that Mr. Cushing likewise notified the Federal agency that Michigan would not elect to certify that the State agency is exercising regulatory control over natural gas usage and distribution.

This action spurns the provision written into the National Production Act (H. R. 3871) under the sponsorship of Congressman FRANK T. Bow, of Ohio, with the specific view of preventing Federal usurpation of State rights, duplication of adequate State regulatory agencies and powers, and centralization of controls in Washington. The Bow amendment provides:

"No rule, regulation, or order issued under this act which restricts the use of natural gas (either directly, or by restricting the use of facilities for the consumption of natural gas, or in any other manner) shall apply in any State in which a public regulatory agency has authority to restrict the use of natural gas and certifies to the President that it is exercising that authority to the extent necessary to accomplish the objectives of that act."

It is my understanding that Michigan is one of only two States which is declining to make such certification—in other words abdicating the State right and authority which Congress took pains to safeguard.

I am very curious to know whether this action was taken with the authority of the Michigan Public Service Commission. I wonder whether it was taken with the knowledge, or on the orders of the Governor of Michigan. And I wonder whether the

people of Michigan, including, particularly, natural-gas users, approve of this needless delegation of authority to Washington by State officials in the face of congressional efforts to protect and maintain State control and State authority.

It is a somewhat novel form of frustration to me, as an elected Representative from Michigan, to experience this sort of rejection by State officials of congressional effort to preserve and maintain State rights and authority. In view of hundreds of communications which I have received in recent months demanding curtailment of the powers of the executive branch, I am doubtful whether the people of Michigan will be pleased with this abdication, apparently engineered from Lansing.

The Small Farmer

EXTENSION OF REMARKS
OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD two newspaper items—one which appeared in the Houston Post, and one which appeared in a paper in Augusta, Ga.:

[From the Houston Post of July 30, 1951]

ALLOTMENT EVILS

LINDLEY BECKWORTH, the industrious Congressman from Gladewater, is apprehensive of the renewal of evils of cotton allotments, which were lifted after last year's fiasco. He doesn't seem particularly enthusiastic for this form of government control. And the evidence he presented on 16 pages of the July 10 CONGRESSIONAL RECORD, the results of a comprehensive study, abundantly support his position.

He cited many glaring inequities in allotments to counties in his district, reported in letters from farmers and county secretaries of the Production and Marketing Administration. Some farmers were cut down to less than an acre for cotton; some veteran cotton growers were not allowed to plant any at all because they raised none during the test period from 1946 through 1948. Some correspondents said the small allotments had forced them off the farm.

A few brief excerpts:

Dan C. Owen, Tyler: "It is estimated that at least 500 will be forced off of farms due to insufficient cotton acreage."

Roy E. Barnett, Quillman: "The number of farmers that received 5 acres of cotton or less was 1,248. Each (new) producer received 1 acre to 1.1 acres."

T. C. Mewborne, Eustace, Tex.: "They said I owed them \$108.50 for growing a bale of cotton in 1950, because I did not sign a contract. My allotment is 3.8 acres. My tax is so high * * * everybody left the farm and went to town to work."

Dave Fuller, Wills Point, Tex.: "In 1949 D. L., Jr., and I ginned 74 bales of cotton; in 1950 we ginned 37 bales, 14,000 pounds of vetch, 600 bushels of corn. After expenses were paid we paid no income tax—expenses got it all."

T. L. Vincent, Carthage, administrative officer, PMA: "I hesitate to estimate the number of tenants that will be without homes as a result of the small allotments in this country. * * *

Along with these and other letters, Representative BECKWORTH inserted in the Record

one from C. J. McCormick, Under Secretary of Agriculture, including this sentence:

"Secretary Brannan and I feel strongly the need for all farm organizations and public institutions concerned with agriculture to unite in a definite, vigorous program to strengthen family farming in America."

He can say that again. But family farming will not be strengthened by a system of scarcity which forces thousands off the farm because they cannot make a living on the acreage allotted them—and at a time when the price of cotton is peak high. The appalling testimony cited gives compelling force to Mr. BECKWORTH's statement that if and when the cotton-allotment program is revived it should have "more fairness and more justice and more equity."

LINDLEY BECKWORTH SAYS, "CROWDING OUT SMALL FARMER THROUGH ALLOTMENT PROGRAM"

The plight of the small farmer in the South in the matter of acreage allotments was described vividly in Congress recently by Representative LINDLEY BECKWORTH, of Texas.

The Representative from Texas, whose father was a native Georgian, and who has relatives in Augusta and Wrens, Ga., has long been a champion of the small farmer, who he says is being crowded out through the allotment practices being used under the farm control plan.

In his address before Congress on July 10 Representative BECKWORTH cited figures to show that the refusal of allotments to small farmers in 1950 large enough to make cotton farming profitable for them resulted in small harvest inadequate to the demand.

Now these allotments have been removed and Secretary of Agriculture Brannan is urging cotton planters to plant more and more cotton with the result that a crop of from 16,000,000 to 17,000,000 bales is forecast for this year, he said.

This large crop will result in the imposition of more controls and the small farmer will be left out in the cold again unless provisions are made to protect them, he pointed out.

He pointed to the fact that not only are the small farmers militated against, but that the lion's share of allotments go to some counties while other counties are left with little or no cotton from which to derive their livelihood.

Representative BECKWORTH was speaking primarily of Texas, but it was brought out by Representative WILLIAM J. BRYAN DORN, of South Carolina, during the discussion, that the same conditions apply in South Carolina, where last year people had to plow up some of the acreage planted only to find themselves being begged to plant the staple this year.

Citing the disparity of allotments in various States and counties he cited figures, for instance, Jefferson County in Georgia had 1,149 allotments on 28,714 acres in 1950 for an average value per allotment of \$1,591 while down in Mississippi Coahoma County had only 928 allotments on 109,076 acres to produce 93,660 bales for a value of \$18,166 per allotment.

Citing the disparity between allotment values in counties where large landowners or absentee owners of large tracts hold sway figures for Calhoun County in Mississippi revealed that 1,843 allotments on 20,262 acres produced 8,543 bales at a value of only \$730 per allotment.

In Texas the same condition prevailed with Anderson County, for instance, having 2,574 allotments on 17,455 acres producing only 2,030 bales for an average allotment value of only \$141, while King County, with only 82 allotments on 11,523 acres, produced 5,057 bales for an average allotment value of \$11,100.

He also cited figures to show that while the price of cotton has been fixed at a ceiling of 45 cents a pound in the United States, it is selling for 85 cents a pound just across the Texas border in Mexico.

The whole allotment is out of kilter not only in cotton but in peanuts, cattle, and other farm products, with the small farmer being left the leavings or nothing at all, he pointed out.

The Congressman from Texas is waging a battle to end this disparity and to make the allotments more equitable if they are to be imposed.

Extension of Interstate Oil and Gas Compact

EXTENSION OF REMARKS OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. HESELTON. Mr. Speaker, a minority report has been filed this afternoon in connection with Senate Joint Resolution 42. Since it will not be available immediately in printed form and since it is probable that this bill will come up for action some time during the week, I am including the text of that report for the information of the Members of the House.

It will be noted that the amendment suggested does not affect the language of the compact in any respect. Rather, it seeks to establish a clear responsibility in the Department of Justice to make certain that in the operation of the compact there are no violations of existing laws. In that respect, it is no more than a specific implementation of article V of the compact. The Department of Justice admits its own general responsibility in this field. In his testimony, its representative stated that during the nearly 16 years of the compact's existence it had made no study of the effect of the law. He stated that he would have no objection whatever to an amendment that would make this responsibility clear. Under these circumstances, the adoption of the amendment would be in the clear public interest.

The text of the minority report is as follows:

The undersigned support the extension of the Interstate Oil and Gas Compact, but with the following amendment:

"Page 16, after line 18, insert the following new section:

"Sec. 2. The Attorney General of the United States shall make a continuing study of action taken under the compact set forth in section I of this Act, with particular reference to whether any such action is inconsistent with the purposes of, or contrary to the limitations and restrictions contained in, such compact. The Attorney General shall report to the Congress from time to time, but not less often than once each year, the results of such study."

"And on page 16, line 19, renumber section 2 accordingly."

We are in entire agreement that the express purpose of the compact as expressed in article II, "to conserve oil and gas by the prevention of physical waste thereof from any cause" is entirely laudable and in the

interest not only of the producers but of the consumers and our National defense.

However, we wish to point out that within the compact itself, article V gives clear recognition to the possibility of actions quite beyond that purpose, which could be both in violation of existing law and most detrimental to the best interests of the consuming public and of our National security. The text of that article is as follows: "It is not the purpose of this compact to authorize the states joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations."

In connection with the consideration of this question, the committee had before it the following letter from the Department of Justice:

DEPARTMENT OF JUSTICE,
Washington, April 25, 1951.

HON. ROBERT CROSSLER,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D. C.

MY DEAR MR. CHAIRMAN: This is in response to your request for the views of the Department of Justice concerning the joint resolutions (H. J. Res. 206 and H. J. Res. 211) consenting to an interstate compact to conserve oil and gas.

The resolutions would give the consent of the Congress to the extension and renewal for a period of 4 years of the Interstate Compact To Conserve Oil and Gas, originally entered into in 1935 by the States of New Mexico, Kansas, Oklahoma, Illinois, Colorado, and Texas. The compact has since been extended and renewed five times with the consent of the Congress and, unless again renewed, will expire on September 1, 1951. The number of participating States has increased from 6 to 20, including Alabama, Arkansas, Florida, Indiana, Kentucky, Louisiana, Michigan, Mississippi, Montana, New York, Ohio, Pennsylvania, Tennessee, and West Virginia. The compact has been considered generally as a necessary arrangement among oil-producing States to conserve the Nation's crude-oil reserves.

Whether the joint resolutions should be enacted involves a question of policy concerning which this Department prefers not to make any recommendation.

The Director of the Bureau of the Budget has advised that there is no objection to the submission of this report.

Yours sincerely,

PEYTON FORD,
Deputy Attorney General.

Because of the sentence "Whether the joint resolutions should be enacted involves a question of policy concerning which this Department prefers not to make any recommendation" members of the committee requested that a representative of the Department of Justice be called to testify further and on June 12 Hon. H. Graham Morrison, Assistant Attorney General, Antitrust Division, came before the committee.

In explanation of the Department's position, he said: "We feel, Mr. Congressman, that this is a matter of legislative policy; that it raises no question, insofar as the Department is concerned, as to which we feel requires any comment from us. The history of this thing, I believe, is stated. The Department, at the time the Interstate Oil Compact first came up for congressional approval, took the same position. Since that time, there have been almost 15 years of operation. So far as we are concerned, so far as any advice that has come to us, no facts have been given to us to justify our belief that we have any objection to its operation."

Thereafter the witness was questioned at some length by the committee as to the attention given to the operation of the compact since it was first agreed to in 1935. This testimony will be found from page 78 to page 107 of the hearings. While the witness told the committee that the Department of Justice had a definite and continuing interest "in anything that goes beyond the intent to effect conservation" and would certainly take action if the facts justified it, when he was asked the following question, "Have you made for your Department any study of the effect of this act since its original enactment?" he made the following significant reply: "No, sir; we have not made one directed at this particular aspect. We have constantly been examining the whole oil industry in its various ramifications."

Later his attention was directed to article V of the compact and he was asked whose duty it was in the Government to observe whether that provision is carried out and not violated. The following excerpt from the hearings constitutes full justification for the necessity in the public interest of the adoption of the amendment which is to be submitted:

"Mr. MORISON. I will tell you what I conceive, Mr. Congressman, to be my responsibility of the Department of Justice Antitrust Division, and that would be, as I have stated before, that if this article V should be violated by participating oil companies in these various States, and we could find such evidence, either upon complaint of a citizen or upon our own investigation, it would be my duty to bring a suit based on those facts."

"Mr. WOLVERTON. I fully appreciate that. But I am asking who is the watchdog as to the effect of that section and whether it is carried out? Is there any governmental agency that has the direct duty of doing so?"

"Mr. MORISON. I would assume that my division, Mr. Congressman, would have the greatest responsibility for that. There may be others. I do not know. I keep speaking about the Interior Department, because I think of them in terms of this kind of project that they would have a continuing interest to watch this. I may be wrong."

"Mr. WOLVERTON. That section was put in the bill originally for the very purpose I tried to emphasize—for the protection of the public interest. The very fact that it makes reference to monopoly and regimentation, and all the other elements that enter into Antitrust Act provisions, indicates to me that the responsibility was upon the Attorney General. If there is any doubt about it, would you have any objection to an amendment being made to this bill that would make that clear?"

"Mr. MORISON. No, sir; I have no objection whatever if, in the wisdom of the committee and Congress, it is desired."

There is no disposition on the part of those who sign this report to assert that there is clear evidence of any violations of existing law. However, there is no question but that there is no representative in the Commission charged solely with the responsibility of expressing the point of view of the consuming public and urging consideration of that point of view. When the Congress first passed the legislation consenting to the compact and at the time of each renewal, it was clearly indicated that in the operation of the compact there was the possibility of going further than conserving oil and gas and preventing avoidable waste, with the result of either stabilizing or fixing prices, creating or perpetuating monopolies, and even permitting regimentation. It is equally clear that the Department of Justice has not made any report to the Congress as to the operation of the Commission since its creation. Our efforts are directed solely to providing a specific and immediate means of guaranteeing to the Congress and to the public that the full facts will be developed and

that, if there are any violations of existing law, they will be reported promptly to the Congress.

CHAS. A. WOLVERTON.

Diplomacy's Duty

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following editorial from the August 11, 1951, issue of the Saturday Evening Post:

DIPLOMACY'S DUTY IS THE DEFENSE OF OUR OWN INTEREST

Castlereags, Palmerston, John Hay, Queen Elizabeth, Bismarck, and any of the great diplomatists of the past would have laughed their heads off at the idea that a distinguished scholar should take time to defend the thesis expounded by Dr. Hans J. Morgenthau, of the University of Chicago, in a book called *In Defense of the National Interest* (Knopf), that "it is not only a political necessity but a moral duty for a nation to follow in its dealings with other nations but one guiding star, one standard for thought, one rule for action: The national interest."

That would have seemed commonplace to John Quincy Adams as it does to Winston Churchill. Many of our American ills come from our having forgotten it so completely that one seldom hears national interest mentioned even when we engage in wars. The spread of democracy, the defeat of fascism, the improvement of the global standard of living, the creation of collective security—all these are cited, and all are important. Nevertheless, none of them is a legitimate objective for America unless it has some relation to the basic interest of this country. Whatever the differences in interpretation, Secretary Acheson recognizes this principle as surely as does Senator TAFT.

This theme as ably advanced by Dr. Morgenthau might well be used to inform our diplomats. His main thesis—namely, that our policy both for Europe and for Asia should not be ideological, theological, or sentimental, but should promote the security and interest of the United States—is incontestable. To our way of thinking, he is rather too trusting in regarding Chinese Communists as leaders of a genuine revolution. And his specific suggestion that we should attempt to reach some kind of agreement with Russia—since it is in the interest of both countries to avoid atomic war—is speculative. The question here is whether a settlement is possible with a regime which is committed to revolutionary conquest. And American national interest would hardly be promoted by an agreement which formalized recognition of Soviet conquest.

Translating his theories into terms of American experience, particularly during and after World War II, Dr. Morgenthau explains that national interest guided our policy through the difficult times after the Revolution, when Washington resolutely refused to embroil the country in the ideological struggle between Great Britain and revolutionary France. Even the Wilsonian pref-

erence for stating national aims in idealistic terms did not mean that we acted contrary to national interest in World War I. Our intention was to protect the European balance of power, in which our interest was very real.

The same can be said for our intervention in World War II, but certainly not for our part in ending it. Because we permitted our chauvinistic emotions to lead us to accept unconditional surrender, as a legitimate war aim, and because we ignored our real interest in a balance of power, both in Europe and in Asia, we now stand in serious danger of the catastrophe that can happen to nations which, as de Tocqueville put it, "abandon mature design for the gratification of a momentary passion." We not only forgot that we had national interests worth protecting, we forgot that other countries had interests that they were certain to defend with all the power at their command. Consequently, when the chips are down we are astounded to find that other countries do not rush into battle to defend a concept, an ideology, or free elections somewhere, but only when their vital interests are at stake. Isn't it time we grew up?

All this undoubtedly puts a big question mark after the United Nations. Dr. Morgenthau finds that organization futile as a body before which the peace-loving, law-abiding nations summon the criminal aggressors, and where the latter veto the former with monotonous regularity. He believes that the United Nations has its uses, especially in settling conflicts among small nations, but when threats of major conflicts arise, the arena is no longer the U. N. but an old-fashioned diplomatic conference where negotiation in smoke-filled rooms is possible on the basis of power and interest.

Perhaps the best quotation with which to end a piece like this one is from that master of the art of politics, Winston Churchill: "The human race cannot make progress without idealism, but idealism at other people's expense and without regard to the consequence of ruin and slaughter which fall upon millions of humble homes cannot be considered as its highest or noblest form." In other words, it is idiotic to talk about defense of morality if that means stripping ourselves, by aimless dispersions of power, of the ability to defend anything.

Merl Young Sells House That Government "Jack" Built

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. HILLINGS. Mr. Speaker, the following advertisement appeared in Washington newspapers yesterday:

Purchasers of Kenwood property have social privileges at the Kenwood Golf and Country Club. This residence is of stone and brick, one of the handsomest in this area of large homes. Living room 34 by 17, dining room 20 by 17, butler's pantry, a beautiful large kitchen with two refrigerators, separate breakfast room with imported tile floor, also tile powder room; large screened porch with awnings. Upstairs the master bedroom is 34 by 17 with private bath including tub and separate glass-door shower. Two more large bedrooms, another bath, sundeck, storage attic. Maid's room and tub bath. Two car garage. Wall to wall carpet on both

floors and handsome window draperies also included. We invite your inspection.

According to news articles describing this advertisement, the owner of the property is Mr. Merl Young, who figured recently in the scandal surrounding the granting of RFC loans and the use of White House connections in obtaining such loans. It will be recalled that Mr. Young's wife, a former White House secretary, received a mink coat as a result of these transactions.

In reading over the many favorable features of this property, I note several omissions which no doubt will greatly impair salability of the swank mansion. I am sure that would-be purchasers of real estate here in Washington will be disappointed to note that the ad does not indicate the amount of storage space available for mink coats. I am also confident that no 5-percenter's home would be complete without deep-freeze facilities. It is highly probable that the lack of these facilities influenced Mr. Young's decision to dispose of the "house that Government jack built."

Tighe Woods and the Office of the Housing Expediter

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. BARTLETT. Mr. Speaker, passage of the Defense Production Act amendments of 1951 also signaled the end of a small but justly famous agency, the Office of the Housing Expediter.

The rent-control functions formerly handled by OHE are now entrusted to a new agency, the Office of Rent Stabilization, with former Housing Expediter Tighe E. Woods serving as Rent Stabilizer.

I want to pay tribute in passing to the now defunct Office of the Housing Expediter and particularly during the time it was administered by Mr. Woods.

Mr. Woods took an agency which was beaten and battered and in which the employee morale was reduced to an all-time low.

He brought that agency to a position of respect and esteem and he restored confidence in the hearts of the agency employees so that they once again carried out the tradition of the Government servant and gave the public, regardless of race, religion, political affiliations, the courteous and efficient service which was the tradition in the Federal service as I have known it for many years.

Mr. Woods taught those bureaucrats—as they are called today—to have respect for themselves and to have respect for their fellow men. He repaired the damage done to their self-respect by those people in our midst who delight to malign and criticize and condemn their fellow men because of the hatred which is in their hearts.

In addition to this singular public service, Mr. Woods was responsible for a new department in Government administration, through a program of community participation in the administration of rent control. Mr. Woods set up local volunteer committees which were representative of the affected interests under rent control and he invited these local committees to inspect the rent-control operation and make any suggestions for streamlining operations and improving service to the public. These local committees also acted as local boards of directors and assured their neighbors of fair and understandable administration of a Federal program in their community.

Mr. Woods deserves great credit for the bold and forward-looking innovation in Government administration, an innovation which brings the strength and vigor and vitality of our democratic way of life into the administration of a Federal program with great benefit to everyone concerned.

Letter From a Soldier in Germany

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. DAVIS of Wisconsin. Mr. Speaker, too often the news we get from abroad, even from areas under American control where foreign censorship does not prevail, is either sugar-coated or distorted to create something sensational so as to increase circulation.

The portion of a letter which, under unanimous consent, I insert herewith, is neither sugar-coated nor sensational. It is, rather, a simple, direct narration by a young soldier to his parents in Oconomowoc, Wis. This young man's mother forwarded the excerpt to me because she thought I would be interested. Indeed I was, both because of the contents of the excerpt and because of my personal acquaintance with the young soldier. I believe my colleagues will be interested, too, and I believe they will find the excerpt thought provoking:

JULY 26, 1951.

Yesterday I went up to Heidelberg with the laundry truck and it turned out to be some trip. In miles the distance isn't far, but when you go on these poor roads that are in Germany it takes a while to get there. We had to wait 2 hours to unload because of the many trucks that were in line and while we waited we got to talking with the girl that counts our bundles and keeps the records on what we turn in. She had a very surprising story to tell. We all know that the Germans aren't happy about the Americans being here, but it was amazing to hear her say the things she said since she is hired by the United States Government. She told us that for sure the Germans would rise up and defeat the American Army; she said that we were completely the fault for the Russian power of today; also, that Americans were so yellow they wouldn't attack the Germans until they were down on their knees and she also

said that the next war would start in Iran. She sure was bitter. I asked her why the people would turn on us after we had done so much for them since the end of the war, such as to give them food, keep clothes on their backs, and get fuel for their homes in these cold winters. She only said that that showed how stupid the Americans were and that the Germans would stab us in the back as soon as they could. Her main idea seemed to be that we should keep our nose in our own business.

He Should Be Secretary of State

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, I have read and reread, with fullest approbation, the address on foreign policy and the global propaganda war against communism, delivered a week ago today by the distinguished Member of the other body, the senior Senator from Nevada [Mr. McCARRAN].

I regard this address as one of the most significant and constructive statements of a genuinely American foreign policy that has been offered since that unhappy day in November 1933, when the Roosevelt administration disregarded precedent established by both Democratic and Republican administrations and extended diplomatic recognition to Soviet Russia.

If there are any Members of this House who have failed to read the full text of that address, I earnestly commend it to their thoughtful consideration. It is found on page 9486 of the RECORD of August 6.

In this speech the senior Senator from Nevada, who is performing a magnificent service to the Nation as chairman of the Appropriations Subcommittee on State, Justice, Commerce, and the Judiciary, urges the breaking of diplomatic and commercial relations with all Communist countries. This is a step which I have repeatedly advocated for more than 5 years.

In addition to this proposed action, the distinguished Member of the other body outlines a program of fundamental American principles and procedures, for seizing the initiative in foreign policy, in behalf of American interests and in behalf of justice and human freedom in the areas of oppression throughout the world. And he proposes complete and official repudiation of past diplomatic blunders which violated those principles.

So far as I am concerned, the reading and rereading of the address by the senior Senator from Nevada has left one dominant reaction—a profound wish that this able and outspoken American might be the Secretary of State of the United States, with the opportunity to translate into reality the genuinely American foreign policy he so ably and eloquently advocates.

It is, I fear, too much to expect the present administration to turn its back on the present feeble policies and incompetent leadership in the field of foreign affairs.

The Kansas-Missouri Floods

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the Appendix to the RECORD, I wish to submit editorials from the Kansas City Star, of date August 8, 1951, and from the Kansas City Times, of date August 9, 1951, giving their views in regard to the importance of immediate action for the protection of this great section of the United States for protection from floods in the future, as follows:

[From the Kansas City Star of August 8, 1951]

START FLOOD CONTROL NOW

This Congress can restore hope to the flooded thousands and flooded industries by a full-scale start on flood control. It can act on the whole program in Kansas and Missouri—do everything that can be done this year—and still the cost will be small. All the money that could be spent intelligently this year would probably be little more than the cost of the 1951 flood to Manhattan, Kans., alone.

There is real hope of action in the interest shown by Congress. Within the last week the members of the key House subcommittee on flood control and other members of the Public Works Committee came out to see for themselves. We have had other visits by influential Senators and House Members. Most Members of Congress from both Kansas and Missouri are genuinely aroused. If there is to be any action this is the time.

Except for a very few projects, we are starting from general paper plans that haven't even been authorized by Congress. The desperate need of the flooded valleys is definite action on flood control which means both reservoirs and levees. Recently the people who wait for action have heard a lot of theoretical argument over labels for the plan. Some call for Pick-Sloan, some for MVA and some for the Hoover report.

The only plans that are anywhere near the action stage are those that have been drawn for specific locations. Roll them together and give the plan a new label, if you like. We would be glad to settle for the name of emergency flood-control program or anything else. We can argue later about labels or methods of administration.

Here are the things that can be done this year:

At this end of Kansas the two projects that have been authorized and studied are the Tuttle Creek Dam on the Blue River and the Toronto Dam on the Neosho. Farther west several dams planned by the Bureau of Reclamation have been authorized. So have floodway plans for Wichita and Hutchinson. All these could get under way this year. The preliminary work that can be done the first year is comparatively inexpensive.

The greater number of proposed dams affecting the flooded areas of Kansas and Missouri have never been authorized. This Congress can start action by authorizing all of

them and appropriating the money for the detail engineering studies. At best none of these would be ready to use any construction money until next year.

Probably the experience of this biggest flood will show the need for addition of some dams that don't even exist on paper. Some of the smaller rivers have caused damage on a scale to justify major protection. There should be an over-all study for future guidance.

The rivers of this area—the Kaw system, the Marais des Cygnes-Osage, and the Arkansas system—have served an ultimatum with the demonstrated power of their floods. The cost of reasonable protection is only a fraction of the price of the damage in one terrible year. And these building costs could not reach their peak for several years.

This part of the United States looks to Congress for the kind of action that says it shall not happen again.

[From the Kansas City Times of August 9, 1951]

UNITING AGAINST FLOODS

From the devastation of flood the people of this area are rising with a greater show of unity than we have ever seen before. Of course they still hold their own ideas on methods behind the labels of MVA or Pick-Sloan. A large share of the farmers put first emphasis on a bigger soil conservation program that includes many little retention dams on the creeks. Others directly exposed in the city or farm areas of the valleys are likely to think first of big dams.

Whatever the approach or belief in theory the main goal is the same. It is a goal of a better and more prosperous country with its floodwaters harnessed to become the servant instead of the enemy of man. And right now the call is for action.

This week the Missouri Farmers Association threw its powerful influence on the side of action and thereby set an example for unity. As the representative of thousands of farmers the association has put its emphasis on stepped-up soil conservation with direct flood control starting from the small creeks. For flood-control management it takes the MVA approach. But it is also calling for a quick start on dams and levees that are far enough along in the planning stage to be started soon. A similar approach has been taken by Howard A. Cowden, president of the Consumers Cooperative Association. "Floods call for common action," he said in a signed editorial in the association's publication.

In Missouri the CIO holds firm to its stand for an MVA, but it has gone on record for action on the dams and levees that can be started or authorized now. It reserves its right to work for its own views on administration while the construction is under way.

These organizations are setting the pattern of unity for a flood-control program—one that can start now with an excellent chance of winning the race with the next big flood.

Between the sincere soil conservation and big dam advocates the principal argument is on emphasis. The future of this part of the country calls for both. We must do everything possible to control the floods all the way from the little creeks to the big reservoirs. And we must save the land. As the MFA resolution pointed out this flood's devastation to the land may be more costly in the long run, than the damage to all other property. Once washed away the land is gone.

The Department of Agriculture's soil conservation and retention dam program has been accepted and supported by the Missouri basin but it still waits on action by Congress. It goes hand-in-hand with the plan for reservoirs and levees. Speaking before the MFA convention Secretary Charles F. Brannan gave an excellent outline of the

possibilities in stepped-up soil conservation.

When the structures of flood control are rising in the valleys the management problem can be solved along practical lines. The first point of the MVA advocates is management here in the basin and that isn't particularly controversial. The Pick-Sloan supporters have recognized the fact that a completed flood control system serving various purposes will require management on the ground. They think in the general direction of a legalized interagency committee with power to act. We see nothing here that can't be handled by a reasonable spirit of compromise and common sense. As the program moves along practical consideration will probably influence the final decisions.

In the meantime the believers in flood control and soil conservation are rallying for a program starting where it can start this year. That is the powerful basis for unity and out of unity should come action. Straight ahead lies the goal of subdued flood waters turned to the service of man.

The Gentleman From South Carolina: A Great Legislator

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD an article on the gentleman from South Carolina, the Honorable JAMES P. RICHARDS, written by Robert K. Walsh and carried in the Washington Evening Star of August 13, 1951.

Mr. Walsh is to be commended for writing a good article about a good man. Quiet and unassuming though he is, Chairman RICHARDS has qualities of steel and a character above reproach. His fairness and understanding have won for him the respect of not only the Foreign Affairs Committee but the membership of the House of Representatives and the Senate as well.

South Carolina is to be congratulated that one of her sons has made such a magnificent reputation and the United States is extremely fortunate that, in times like the present, it has DICK RICHARDS as chairman of one of the great committees of the Congress.

LEGISLATOR WHO LEGISLATES QUIETLY

(By Robert K. Walsh)

Genial JAMES PRIOLEAU RICHARDS is a good reason why the House Foreign Affairs Committee is making more than a ripple in international waters usually churned by its mightier congressional counterpart, the Senate Foreign Relations Committee.

Precedents can be cited for his part in gaining more recognition for the House group of which he became chairman last May. But his methods and progress are certainly unusual under the circumstances.

This likable, good-looking, 56-year-old South Carolina lawyer, a Democratic Member of the House since 1933, is an avowed middle-grounder. He dislikes shouting and demanding and viewing with alarm. And he fights shy of being colorful.

Representative RICHARDS, nevertheless, has done some highly important speaking and recommending and forward-looking in recent

weeks. His outwardly easy-going manner does not hide qualities of energy and determination as well as tact and a degree of independence from partisan or sectional pressures.

As for color, it is true he won't let the homespun wear too thin. Behind his engaging grin there was something of a hurt look when he pleasantly protested recently against news stories describing him as a "tobacco-chewing chairman." He moved to strike out the words tobacco-chewing as being neither accurate nor germane.

When Mr. RICHARDS came to Washington from Lancaster, S. C., where he had been probate judge, he probably was the last to suspect that one day he would sit at the head of the long table in the House Foreign Affairs Committee room.

His overseas contacts had been mainly military. In 1917, a few days after the United States went into World War I, he also went in as a private. He came out in 1919 as a lieutenant who had served with a trench mortar battalion in France.

While his principal legislative pursuits centered on measures to extend farm mortgages and rescue farms lost in the depression, he showed interest in international affairs at a time when domestic difficulties were the big concern of Congress. He was put on the Foreign Affairs Committee in 1935.

Comparatively little known to the general public or to some otherwise supposedly very important people here, Mr. RICHARDS—for all his unobtrusiveness—caused some wonder when he moved up to the chairmanship.

Was he a Dixiecrat? Was he a down-the-line Truman man? What did he think of the State Department and what did the State Department think of him? How did such labels as "internationalist" or "interventionist" fit him? How would he handle the Foreign Affairs Committee? It includes such diverse personalities as Representatives FRANKLIN D. ROOSEVELT, JR., WALTER JUDD, FINCHES BOLTON, MIKE MANSFIELD, CHRISTIAN A. HERTZ, the venerable CHARLES A. EATON, who had been Republican chairman of the committee, and B. CARROLL REECE, who had been Republican National Chairman.

For all his addiction to hard work, Mr. RICHARDS seldom seems to be in a hurry or to want to hurry anyone else. At hearings on the mutual-security program, he let the questioning of witnesses go round and round. He also called frequent night sessions.

So far as the record and observation show, he has never lost his temper. His questioning of Secretary Acheson, for instance, has been pointed at times but always pleasant. The committee, in general, has followed that example with most witnesses.

It hasn't been all talk and no action. His sponsorship of the grain-for-india bill, which he changed from a grant to a loan provision, his handling of legislation to end the state of war with Germany, and his stand for a resolution on the imprisonment of Associated Press reporter William Oatis, carefully avoided what he considered extremes.

The bill he personally introduced to cut \$700,000,000 from the \$8,500,000,000 foreign-military and economic-aid program sought by the President is another example of the way he works. It also will offer a major test of his influence.

Mr. RICHARDS insists that the cuts he suggests won't harm the program which he unqualifiedly supports. But his quiet move may have taken the steam out of Republican efforts to cut the program by many more millions. It also seems to have taken the sting out of any complaints that he kow-towed to the State Department.

The odds are that most southern Democrats, however unfriendly to the administration and to huge foreign outlays, will

side with Mr. RICHARDS instead of with the Republicans. Perhaps some Republicans will, too.

That is what Mr. RICHARDS means when he says he is a middle grounder.

The St. Lawrence Story—I

EXTENSION OF REMARKS OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the first of a series of articles entitled "The St. Lawrence Story" which appeared in the August 7 edition of the Minneapolis Star. This article deals with some of the aspects of the St. Lawrence seaway and power project which make its construction necessary in the interests of the American people. I suggest that this article be read by every Member of Congress.

THE ST. LAWRENCE STORY—CENTURY'S DREAM OF DEEP SEAWAY NEARER REALIZATION

(By Leo Sonderegger)

Some day a heavy cargo ship with the taste of Atlantic salt on her bow will follow the long meander of the St. Lawrence seaway up through the Great Lakes to drop anchor in Duluth Harbor.

Some day a long ship laden with iron ore from Labrador will steam a thousand miles inland to dock at Ashtabula on Lake Erie.

The long Sault Rapids of the St. Lawrence will plunge in harness, some day, and send out an expanding circle of power and light in the Northeast.

These things will come, probably in our generation, and with their coming one of the big dreams of this Nation will be fulfilled. It is the dream of a deep-water channel from the Atlantic Ocean to the heart of America.

The dream has touched the imagination of Americans for more than 100 years. It has loomed and faded, until many men no longer pay attention to it.

CANADA MAY BUILD SEAWAY ALONE

The how and why of the dream have long been answered. Only one real question remains: When?

Those who champion the seaway believe that its coming is inevitable, even though it has been scuttled repeatedly in Congress. If this country fails to go ahead with the project, they say, then Canada will do the work on her own—2 years from now, maybe 5 years, but relatively soon.

Those who have fought the seaway do not admit, for the record, that it is bound to come. They have stalled its development for years and say that they can keep on stalling it.

But even some of the chief opponents acknowledge privately that completion of the project envisioned a century ago is a matter of time, and that time is running out.

"We know it's coming," one of them said recently. "We're only putting off the evil day."

TWO-WAY FLOW OF TRADE

When she drops anchor, the ship reaching Duluth Harbor will have voyaged perhaps 5,500 statute miles from her home port—more than 3,000 across the open Atlantic, and another 2,300 to the center of this continent.

She will be fat with a cargo from foreign countries, ready to unload it and return with whatever the Midwest provides.

The ship's burden will be a droplet in a stream of freight whose tonnage eventually will be measured in tens and scores of millions. The stream will flow two ways, from the Plains country to eastern markets and the sea, and from the East to the Midwest.

The great mass of it will be cargo shipped in bulk—wheat, petroleum, iron ore, coal. But this ship in the harbor of Duluth is a symbol.

When she weighs anchor, she will go down the Lakes—down Superior, down Huron, down Erie, and Ontario. There she will begin to feel the pulse of the St. Lawrence on her hull. She will nose into the steady flow of the river as many ships before her have done.

But when she reaches Chimney Point at Ogdensburg, N. Y., now the outer limit of deep-water navigation from the Lakes, she will only speak the shore and steam ahead down river.

Where the little ships that carry a meager two or three thousand tons have edged a tortuous way past the rapids in 14-foot canals, she will navigate 30-foot locks and go on down to Montreal and the widening Gulf of St. Lawrence and the open sea.

A man-made channel past the Long Sault rapids will take the ship within sight of a powerhouse thrust across the river from Barnhart Island to the Canadian shore.

Men aboard her will hear the generators humming with electrical energy drawn from the leaping current at the rate of 2,200,000 horsepower annually.

These things are the practical stuff of the dream: A deep roadway for ships; plentiful, cheap power for the northeast and Ontario.

Most of the ship channel already has been gouged out by nature, with some assistance from man. The bulk of the remaining work lies within a 114-mile stretch of the St. Lawrence from Ogdensburg down to Montreal.

When that is finished, there will be a water lane at least 27 feet in depth from the gulf to the head of the Lakes.

CHANNEL CAN CARRY MOST CARGO VESSELS

None of the great ocean liners could negotiate a channel of that depth. The battleship *Missouri* would come a cropper as she did on the mud in Chesapeake Bay. But 27 feet is enough water to handle a substantial majority of the world's cargo vessels with pay loads.

Thirty feet would obviously be better, the marine engineers say, 35 feet better still. But a 27-foot channel would be a practical fulfillment of the dream.

That kind of a channel would place the upper Midwest at one end of a long sea arm extending to the world. It would provide cheap transportation for the products of an area more richly endowed with natural resources than almost any other on earth.

It would give that broad region easy access to goods from overseas. Millions of people would reap direct benefits, and the entire Nation would ultimately be strengthened.

Those are well-honed arguments that men have used for more than a generation. Within the last year or two the champions of the seaway have been hammering the opposition with a new argument. In some ways, it is the most powerful they have ever had.

The new argument goes like this:

The readily accessible iron-ore reserves of the Mesabi Range are dwindling under heavy war and domestic pressure. Our steel needs are swiftly rising, and we will require many millions of tons of foreign iron ore from the rich deposits in Liberia, Venezuela, and Labrador.

Although the first two of these sources will be helpful in peacetime, if war comes, the

thin line of ore ships could be snipped on the high seas by enemy submarines.

WORK COULD BEGIN WITHIN 90 DAYS

But with the seaway, Labrador ore could be brought directly up the protected inland route of the St. Lawrence to the Great Lakes iron ports.

Physically, the project is ready to go. Detailed plans and specifications have been prepared, Maj. Gen. Lewis A. Pick, Chief of Army Engineers, says the work could begin within 90 days and be completed in 5 years or less.

The Governments of both countries stand ready to proceed with construction of the seaway. Their readiness has been clearly stated in writing for two decades. But Congress, for reasons that will be brought out in succeeding articles, has repeatedly shied away from action.

The behavior of Congress has run true to form at this session. Although the seaway proposal did come closer to approval than at any time since 1941, when the chips were down the House Public Works Committee tabled the measure late in July.

Even so, proponents insist that this year's battle is not yet finished. There is a thin chance that they may still get a spaw bill out onto the floor of the House or Senate.

Canada is watching all this with interest and growing impatience. Her eagerness to get on with the job has been sustained at high pitch for more than two decades.

But the Canadians are getting tired of waiting. Various officials have said, more or less bluntly, that if the United States will not go ahead, maybe Canada ought to do it on her own.

Our neighbors to the north have hinted at such a possibility before. This time they may mean business.

Toll Highways

EXTENSION OF REMARKS OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. BEALL. Mr. Speaker, under unanimous consent to have my own remarks inserted in the RECORD, I include therein an editorial from the *Elkins Inter-Mountain* of Elkins, W. Va.:

TOLL HIGHWAYS

"Realistic road planners all over the country are coming to the conclusion that the only solution of the problem of high cost of construction and maintenance is the toll road," said the *Charleston Gazette* in an editorial yesterday.

The *Gazette's* comment is of interest in this area which is presently deeply concerned in the projected east-west transcontinental Crozet superhighway. This road would be financed with tolls.

The *Charleston* paper continued:

"It is particularly pleasing to us that West Virginia is in the vanguard in this sort of forward-looking planning. The Princeton-Fairplain road, upon which considerable engineering has already been done, is a departure from the original north-south highway idea but does not by any means rule the latter out.

"Since 1933 highways in many parts of the United States have been wearing out faster than they can be adequately repaired or reconstructed. Everyone knows that West Virginia is confronted with this problem which seems practically insurmountable."

able because of the high cost of construction and the lack of sufficient public funds.

"That the toll road is the only apparent answer is realized by 28 States that have under consideration building toll roads and 18 have some sort of toll-road legislation in effect. Among the latter is our own State that has shown admirable foresight in providing a law that at least at this time seems adequate.

"Since the completion several years ago of the Pennsylvania Turnpike that immediately proved successful beyond the fondest expectations large financing institutions have been showing a friendly and cooperative attitude toward the matter of providing the money to build this new type of road system. Their engineering organizations make intricate surveys relative to costs and probable volume of traffic and when they give the go signal to a State road department on a project it is practically in the bag if the road department is ready.

"The theory that those who use the highways ought to be willing to pay for them has met with approbation by a surprisingly large number of travelers. Instead of going out of their way to avoid the mileage cost, many do the reverse and travel farther in order to get on a toll road. They figure that the saving of time and gasoline and the increased safety is more than worth it.

"The toll-road idea is in its infancy but it is a rapidly growing baby. There are now more than 424 miles of main toll routes in the Nation, 350 miles are under construction and more than 1,200 miles are being authorized or planned. It has been found that in States where the faith of the State is placed behind the bonds for construction, great savings in interest costs are possible.

"Almost every mile of a modern toll road is a scenic route. Rights-of-way are sufficiently wide to preclude the possibility of unsightly restaurants, filling stations, and other buildings encroaching. Only such facilities are allowed near the highway as are constructed according to rigid specifications as to appearance, service, and operation. Rentals for the areas they occupy are additional revenue producers. Landscaping goes with the job.

"The inadequacy of road systems all over the country, the high cost of construction, and the increasing number of accidents caused by bad roads, poorly planned and worn-out, is a problem that must be met and without delay.

"The only solution yet found is the toll road."

The toll roads which have been completed or are in the planning state are all of the super variety. They offer the motorist special service for his toll dollar. The idea is not entirely foreign to our present method of financing highway construction. In West Virginia, for example, motor-vehicle license fees and gasoline taxes are supposed to be earmarked for highway construction and maintenance and the user in reality pays for the privilege of using the roads. The toll road therefore is only an elaboration of the existing system.

An easy out—not trying hard because it seems hard and trying.

The Seaway Story—II

EXTENSION OF REMARKS OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the second of a series of articles entitled "The St. Lawrence Story" which appeared in the August 8 edition of the Minneapolis Star. This article deals with the navigation aspects of the St. Lawrence seaway and power project.

THE ST. LAWRENCE STORY—SEAWAY PLAN
WOULD STRAIGHTEN, WIDEN 114-MILE "COW-
PATH"

(Second of a series)

(By Leo Sonderegger)

The road a ship follows on the long inland voyage from Duluth to the Atlantic Ocean is 2,200 miles of broad highway and 114 miles of cowpath.

The basic idea of the St. Lawrence seaway project is to straighten out the cowpath, widen it, pave it with a 27-foot channel that the big freighters can navigate.

There are some other things to be done, but that is the nub of it.

The cowpath section is a reach of the St. Lawrence that surges in a mighty turbulence, except where the river widens now and again, from Ogdensburg, N. Y., to Montreal. The cargo ships cannot run its white water. They crawl past in a series of canals only 14 feet deep.

The little ones crawl past, that is, the canallers and the vessels with shallow draft and a relative handful of cargo in their holds. The long ships and freighters that handle iron ore and wheat on the lakes do not venture beyond Ogdensburg.

By the same token, deep-draft vessels that cross the Atlantic are stopped by shallow water at the other end of the rapids. The deep channel from the sea extends only to Montreal.

CANALS DATE BACK TO MULE POWER

The little 14-foot canals that bypass the rapids were dug by Canada on her side of the river more than 50 years ago. They date back to the days of the towpath and the mule-drawn barge and have not been materially changed since then.

The locks on these shallow canals are only 250 feet long. They were built to take grain ships with a normal load of less than 30,000 bushels.

But by 1910 the grain men were loading 200,000 bushels into one vessel and the locks were already out of date. They are toys compared with the giant Soo locks that gulp a 600-foot-long ship from Lake Superior and ease it down onto Huron.

After the seaway has been cut through they will continue to be useful, but only to canallers and the little ships that lug two or three thousand tons of freight.

The seaway is not a virgin project. A good deal of work already has been done. A notable part of this is the Welland Canal and its eight locks that enable ships to surmount the mighty escarpment of Niagara Falls.

WELLAND CANAL WORTH THREE HUNDRED AND FIFTY MILLIONS

Canadian engineers figure that duplicating the canal and locks would cost something like \$350,000,000 today. Canada also has spent a lot of money, and intends to spend more, on deepening the channel to 35 feet from Montreal a thousand miles downstream to the sea.

The United States has done some work on deepening of channels. We also built the huge MacArthur locks at Sault Ste. Marie as an emergency project early in World War II.

This is what remains to be done:

Sixty-eight miles of the cowpath section, from Montreal upstream to St. Regis, N. Y., lies entirely within Canada. She will provide a 27-foot shipway and the necessary locks.

Working upstream from Montreal in the Lachine section of the river, the Canadians

will construct a 10-mile canal and two 800-foot locks, thence a channel dredged in the open waters of Lake St. Louis. That lake and Lake St. Francis, a few miles upstream, are both really wide places in the river.

In the Soulanges section between them Canada will finish deepening the canal that bypasses the existing Beauharnois powerhouse. There also will be two 800-foot twin locks in this area. The channel will be continued by dredging in shallow St. Francis Lake, which extends about 30 miles up to St. Regis.

It is above St. Regis in the International Rapids section that the major navigation and hydroelectric works of the seaway project remain to be accomplished. There, the boundary line cuts directly through the river for 46 miles.

TO SUBMERGE TOWNS ON 30-MILE STRETCH

The work to be done jointly by the two governments will change the whole aspect of this section. The river will be widened—a mile in some places, 3 or 4 in others. Towns on both sides for a distance of 30 miles will be submerged.

Most of the flooding will be caused by a dam across the Long Sault rapids, and by the powerhouse extending from Barnhart Island to the Canadian shore.

There also will be another dam at Iroquois Point near the upstream end of the International Rapids. A system of dikes will be constructed.

The navigation channel, partly in the river and partly in land cuts, will have three big locks. Each one will be 800 feet long, 80 feet wide, 30 feet deep. The land cuts will bypass the Long Sault and the Iroquois Dam.

When that work has been completed there will not be much left to do. In the Thousand Islands section running down from Lake Ontario to Ogdensburg, removal of a few scattered rock shoals will complete work done jointly by Canada and the United States between 1929 and 1933.

Canada will increase to 27 feet the channel depth of the Welland Canal, whose locks are 30 feet over the sill.

The United States will be responsible for deepening the channels connecting Lakes Superior, Michigan, and Huron.

This country also has agreed to deepen the Huron-Erie connecting channels that run down the St. Clair River, Lake St. Clair and the Detroit River. The channels are now generally 25 feet down-bound and 21 feet up-bound.

EXPECT TOLLS TO PAY COST IN 50 YEARS

One primary source of controversy has been the cost of all this work. The present estimate calls for expenditure of \$818,063,000, of which Canada would pay \$251,269,000 and the United States \$566,794,000.

In the eyes of many observers, although the cost is high, it does not seem out of line with anticipated benefits.

The Department of Commerce figures that potential traffic will range from 57,000,000 to 84,000,000 tons annually. Tolls are expected to pay for the project in about 50 years.

Canada has agreed to the principle of tolls, although actual figures have not yet been fixed.

Experts in the Department of Commerce estimate that by far the biggest freight item on the seaway will be iron ore. Thirty to thirty-seven and one-half million tons of ore a year will move up the channel to Lake Erie when shipments hit their peak, the House Public Works Committee was told.

The Commerce Department estimates also include 6,000,000 to 20,000,000 tons of petroleum, 6,500,000 to 11,500,000 tons of grain, 4,000,000 tons of coal, about 11,000,000 tons of general cargo, and 25,500,000 to 42,000,000 tons of ballast shipping.

Once the seaway channel is put through, the long ships that handle Mesabi ore on the

Lakes will also carry Labrador ore up the St. Lawrence. Even with the toll, the ore will make the long run more cheaply than by rail from Montreal.

It is also foreseen that some of the ore ships will take on a cargo of grain for the trip back down the St. Lawrence. Both Canadian and United States grain moves down the channel now, but in quantity limited by capacity of the little canals.

SEE GREATER WORLD MARKET FOR WHEAT

The Commerce Department people are rather cautious when they talk about grain shipment. They think the tonnage is likely to be nearer the minimum figure of 6,500,000 tons than the 11,500,000-ton maximum.

Some other proponents of the seaway are more optimistic. They believe that American and Canadian wheat will find an increasing world market under the combined influence of increased production and cheap seaway transportation.

These men, the ones caught in the dream of the seaway, are inclined not to think much in terms of tonnage estimates and toll revenue. They believe that seaway traffic will eventually exceed the most optimistic estimates now being made.

The pattern of their thinking is the shuttle pattern the ships weave on a great inland shipway, bearing ore and coal and grain and the things men create by their labor.

They envision many ships moving inland with cargoes of goods from abroad. They see the ships going back with the products of the great American hinterland.

It is the stream of ships they think of. They believe that it will come to pass.

Flood Control

EXTENSION OF REMARKS OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. ANGELL. Mr. Speaker, pursuant to leave granted, I am including as part of these remarks the lead editorial from the Oregon Daily Journal in its issues of August 6, 1951, entitled "Flood Control":

FLOOD CONTROL

The St. Louis Post-Dispatch, which is generally admired by American editors for its vigor and independence, gets completely off the beam in commenting on the Missouri Basin flood.

It takes the Corps of Engineers to task for its failure to prevent or reduce the appalling flood damage which now approaches \$1,000,000,000. It calls the comprehensive Pick-Sloan plan for Missouri Basin States a makeshift substitute for a Missouri Valley Authority. It suggests that things would have been different under an MVA. It talks of politics and boondoggling. It recommends a thoroughgoing investigation by the Congress.

We disagree on all counts.

First, the Corps of Engineers, prior to the development of the Pick-Sloan plan, was responsible for navigation and flood-controlling levee work along the Big Muddy. It was not responsible for the reclamation, irrigation, storage reservoir, or soil-erosion programs which, under the Pick-Sloan plan, are delegated to the Bureau of Reclamation and the Department of Agriculture.

Second, by the Post-Dispatch's own figures, the Army engineers had spent only \$300,000,000 on the Missouri River system up to 1945

and has had only \$600,000,000 for navigation and flood-control work up to last year. Its share of the three-department Pick-Sloan program is approximately \$1,300,000,000, or approximately one-fourth of the estimated cost of the Missouri Basin project.

It is obviously unfair, therefore, to charge the Corps of Engineers with full responsibility for controlling Missouri Valley floods. It takes scores of storage dams on upstream tributaries, thousands of ponds and small reservoirs on farms and ranches to prevent quick runoffs and provide irrigation water. It takes soil-saving stock ponds, the planting of moisture-holding grasses, terracing, diversion ditches, and small-stream improvements to make an effective soil-conservation program. None of this is the responsibility of the engineers.

As for the efficacy of another valley authority, on the TVA pattern, as contrasted with a coordinated interagency basin program, we'll take the coordinated interagency program. If TVA is the test, such a program costs less money and does not become involved in competitive businesses and does not endanger basic water rights or civil liberties. If river and harbor work, flood control and reclamation work involve politics and boondoggling, as the Post-Dispatch charges, the felony would be compounded under a valley authority with arbitrary power and a capacity for capricious action without local controls.

Finally, asking the Congress for an investigation of the Army engineers and of flood-control work on the Missouri is asking Congress to investigate itself. After all, the Congress has been directly responsible for the snail's pace at which the Pick-Sloan plan has been put into action. For example, the House cut also \$200,000,000 from flood control and navigation requests for the current fiscal year. But the Senate, jolted into realization of Missouri Valley needs, is now considering the restoration of the full amount.

Senator FRANK CARLSON, Kansas Republican, points out that a \$115,000,000 appropriation for three key projects—Tuttle Creek, Milford, and Perry Dams—would have reduced materially the \$1,000,000,000 property damage charged to the floods. Yet the Congress has failed to provide funds for any of them.

Perhaps the Post-Dispatch should consult the 13 Senators who have just surveyed the flood-damaged Missouri Basin. Deeply shocked, they have vowed to speed up the comprehensive flood control-reclamation program. The Pick-Sloan plan, if you please. And Representative Brooks of Louisiana adds: "A little money timely spent might have saved this great section of the Middle West from some of this appalling loss of life and property."

Maybe we're learning—albeit the hard way.

The MacArthur I Know

EXTENSION OF REMARKS OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. DORN. Mr. Speaker, Gen. George C. Kenny is one of the greatest air commanders the world has yet produced. As the commander of our Air Force in the Pacific war, his record of accomplishments was phenomenal, particularly when we consider the obstacles he had to overcome. It was with his leadership that our airmen destroyed the air power of Japan. After the war he became

commander of the Strategic Air Command of the United States. His last assignment was to command the Air University.

His most recent accomplishment has been the writing of a book entitled "The MacArthur I Know." Gen. George C. Kenny is better able to appraise the character, leadership, and patriotism of Gen. Douglas MacArthur than any Member of this Congress, the President or any of his Cabinet, or any of the high Pentagon commanders. The smear artists on Capitol Hill do not know General MacArthur.

Mr. Speaker, the following article is taken from General Kenny's book. It was written by the general who knows MacArthur and his work better than any other American except his wife, Jean. I recommend this entire book to the American people and to this Congress. Let us study the opinion of a man who knows the truth rather than the slander and abuse of the little characters in Washington and elsewhere who are masters at the art of tearing down great men. This article is the thirteenth chapter of General Kenny's book.

THE MACARTHUR I KNOW

(By Gen. George C. Kenney)

CHAPTER XIII

At the beginning of this book, I warned the reader that I was a MacArthur man. I also stated the belief that this did not jeopardize my ability to assess him objectively.

Some readers might question that last statement, but, in the final analysis, my conception of objectivity is based on fundamentals.

Has Douglas MacArthur served his country well?

My answer is "Yes," and I believe the record will support me.

Has Douglas MacArthur been motivated by personal ambitions or by patriotism?

To my mind, few men have been more selfless in service to their country regardless of the effect of their actions on their own personal fortunes.

It is interesting to note that the most severe critics of Douglas MacArthur seldom question his accomplishments, past or present.

Lacking anything concrete to work on, they base their objections to MacArthur upon trivialities and false impressions that attempt to portray a personality which actually does not exist. They make disparaging remarks about his rhetoric, his references to religion, his Philippine marshal's cap. They take great delight in telling and circulating stories reflecting upon his sincerity, his patriotism, and even his personal courage. The adjectives "bombastic," "flamboyant," and "egotistical" have become almost standardized in their reference to Douglas MacArthur. Few of his critics have ever seen MacArthur, still fewer have ever talked to him. None of them has ever been closely associated with him.

Few great men of our history have escaped this type of slander and abuse. Washington in the military field, and Lincoln in the political, are two examples. There are many others.

No apologies are needed for a record as broad in scope and as vast in achievement as that of MacArthur. That record speaks for itself: brilliant leadership and victory in two World Wars; amazingly successful administration of a conquered country after nearly 4 years of bitter warfare; unflinching defense of American ideals and principles in peace and war.

But I would like to add a final word, not of MacArthur the soldier or of MacArthur

the administrator. This word is of MacArthur the man.

He is as warm and as human in person as he is brilliant in leadership. He is as generous of his time, his talents, and his friendship as any man I have ever known. He has a grand sense of humor and a kindness in him that I have seldom seen matched.

He has a sincere and almost parental concern for those he calls his friends. I am fortunate enough to be one of those people. In that respect, it is difficult for me to be wholly objective.

To those who say, "Yes, but he has given his friendship to so few," I can only reply that I have never seen anyone—military or civilian—offer their loyalty and their friendship to MacArthur and not have it reciprocated many times over.

There are those who criticize his optimism and attribute it to egotism. Perhaps if they had been with us in the critical days at Port Moresby in late 1942—when his fate as a leader hung on a tenuous balance of supply that my pitifully small and overworked Air Force was barely able to maintain—they would not find optimism a character failing.

Optimism is axiomatic with leadership. And in those grave days and hours, four words from MacArthur meant as much to me as a new squadron of airplanes. Those words were

"George, we'll do it."

That attitude breeds victory and success—in wars and in the terribly critical struggles of today aimed toward the prevention of another world catastrophe.

Yet, I believe I shall continue to remember and admire and respect him as my friend just as much as I remember and admire and respect him as one of America's greatest leaders.

I shall also remember other things about MacArthur. The quick sympathy that frequently crosses his face, the sudden hurt when he would hear that one of my youngsters had been lost, the friendly and constant concern for the relatives of those fighting with him as comrades in arms, and for those comrades themselves.

No man ever sacrificed his meager command more sparingly nor grudgingly. To Douglas MacArthur, every American life—private to general, soldier or civilian—was something precious to be hoarded at all costs.

Those are fundamental characteristics of a great leader.

Today, as he has been for many years, Douglas MacArthur is still the subject of controversy and still one of the most important figures on the national and the international scene. It will probably always be so.

I do not expect every reader of this book to accept completely my evaluation of Douglas MacArthur. But they might be interested in an evaluation that was given me by a member of a friendly power in the United Nations several years ago:

"Thank God, Josef Stalin doesn't have men like Douglas MacArthur on his side."

Supreme Court Justices as Character Witnesses

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include

editorials from the Jacksonville (Fla.) Times-Union, the Ironwood (Mich.) Globe, and the New York (N. Y.) World-Telegram, commending my legislative suggestion to prohibit Supreme Court Justices from testifying as to matters of opinion.

I am convinced that this bill would fill a very real legal gap which became apparent during the Hiss case. The purpose of my bill is to prevent future instances of character endorsement by members of the high court and also to spare them the embarrassment of refusing to testify in behalf of acquaintances and/or friends, if they do not wish to do so.

The editorials follow:

[From the Jacksonville (Fla.) Times-Union of July 15, 1951]

FEDERAL JUDGES SHOULD BE EXEMPTED AS WITNESSES

Suppose some smart lawyer, as Representative KEATING, New York, Republican, expresses it, should subpoena most or all members of the Supreme Court as witnesses in a lower court trial, what could be done about the case if it were appealed to the highest court?

The answer is Nothing, for the Justices appearing in the case would thus be disqualified from passing on it.

That such would be the case was demonstrated in the Alger Hiss trial when Justice Reed was subpoenaed by the defense, and Justice Frankfurter appeared as a volunteer witness. They disqualified themselves when the conviction was appealed to the Supreme Court.

Representative KEATING is on solid ground, therefore, in introducing his bill barring Justices of the Supreme Court from testifying as character witnesses, or on matters of opinion.

The bill already has been endorsed by a subcommittee, and is scheduled for early consideration by the House Judiciary Committee, and it ought by all means to be enacted into law. It might also include members of the Cabinet, and thus save the country of such humiliating incidents as that of the Secretary of State appearing as a witness for questionable characters, as in the case of Dean Acheson for Hiss.

[From the Ironwood (Mich.) Globe of July 14, 1951]

JUDGES AS WITNESSES

Justices of the United States Supreme Court would be barred from testifying as character witnesses, or on matters of opinion, under a bill soon to be considered by the House Judiciary Committee and endorsed on July 9 by a subcommittee. Representative KEATING (Republican, New York), who introduced the bill, has declared that he was motivated by the appearances of Justices Frankfurter and Reed as character witnesses for Alger Hiss (in his first trial).

Justice Reed had been subpoenaed by the Hiss defense, Justice Frankfurter was a volunteer witness. Chief Judge Magruder of the United States court of appeals in the first district was also a character witness for Hiss.

An alternative bill, introduced by Representative SMITH (Republican, Wisconsin), would provide simply that no Federal judge could be compelled to testify as to character or to appear as a witness if similar testimony could be obtained from other witnesses.

Representative KEATING points to the possibility of some smart lawyer subpoenaing most or all members of the Supreme Court as witnesses in a lower court trial. Then the court would be unable to pass on an appeal in the case. Reed and Frankfurter both disqualified themselves in the Hiss appeal.

An earlier case, of 1905, has been unearthed in which two Supreme Court Justices appeared on the list of witnesses. There is no indication that they were actually called to the witness stand.

Prior to making its favorable report on the Keating bill the house subcommittee had received a letter from Chief Justice Vinson, declining comment on the measure. Vinson said he and the other justices felt that they should not go on record. Deputy Attorney General Ford had advised the subcommittee that the Justice Department also preferred to make no recommendation.

[From the New York (N. Y.) World-Telegram of July 12, 1951]

KEATING BILL SHOULD PASS

The Keating bill, which would forbid the appearance of United States Supreme Court Justices as character witnesses in Federal trials, has won the unanimous approval of a House Judiciary subcommittee. We hope this means speedy passage of the measure by Congress.

This bill, sponsored by Representative KENNETH B. KEATING, of New York, was a natural and proper result of public shock when Supreme Court Justices Felix Frankfurter and Stanley B. Reed took the stand as character witnesses in the first trial of Alger Hiss, whom a second trial convicted as a perjurer.

Even more than an obvious impairment of judicial propriety, prestige, and dignity was involved in this unprecedented appearance of high court judges as witnesses in a criminal trial.

Later, in fact, when the Hiss case went to the Supreme Court on appeal both these Justices, along with a third, were plainly disqualified, leaving only six of the Court's nine judges to decide its action.

We believe some of these Justices themselves might welcome a plain prohibitive law that would rid them once and for all of the slightest obligation to become character witnesses.

At least we are sure a vast majority of the public, after what it saw in the Hiss case, can heartily approve the purpose of the Keating bill. Congress should hasten to pass it.

International Peace Garden

EXTENSION OF REMARKS OF

HON. FRED G. AANDAHL

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. AANDAHL. Mr. Speaker, the following editorial is taken from the Jamestown Sun, published at Jamestown, N. Dak., and was written by Mrs. A. P. Haglund, of the Medina Homemakers Club.

In this period of international crisis, it is encouraging to know that people in local communities have confidence in an ultimate international relationship that will eliminate the constant threat of world-wide war. The long-time friendly relationship between the United States and Canada, symbolized by the International Peace Garden located along the northern border of North Dakota, helps to chart the way to the final objective.

INTERNATIONAL PEACE GARDEN

A great number of minds are concerned today with problems of peace, not only world problems but national and local problems as well. Their eyes are focused on a

seemingly distant objective, now somewhat distinct but oftentimes vague and "will-o-the-wispish". It permeates the thoughts and every way of life of millions throughout the world.

A much smaller number of persons have acquainted themselves through the printed word of the tangible results of similar peace efforts in the past, but an even lesser group has seen this peace pledge, namely the international peace garden which lies in the Turtle Mountains on the boundary line between Canada and the United States.

Dedicated on July 14, 1932, in the presence of over 50,000 persons, this peace garden is a solemn pledge of two great nations to continue forever the peace which had existed between them for then more than a century. Their fears and horrors of modern warfare are being only too vividly realized in today's conflict in Korea, and more than ever the ideals and principles embodied in the establishing of the International Peace Garden must be perpetuated at all costs.

The International Peace Garden comprises an area of about 2,200 acres, 888 of which are on the United States side, situated on the longest unfortified international boundary line in the world. The formal area comprising about 160 acres equally distributed on each side of the international boundary line is now partially developed. Plots in this area have been allotted to various organizations who are providing funds for the development and maintenance of such plots. An interesting cairn built of common field stones and standing equally on Canadian and American soil bears this inscription:

"To God in His glory. We two nations dedicate this garden and pledge ourselves that as long as men shall live, we will not take up arms against one another."

Upon viewing the garden, there comes to mind Henry Wardsworth Longfellow's lines:

"Where'er a noble deed is wrought,
Where'er is spoken a noble thought,
Our hearts in glad surprise
To higher levels rise."

It appears our Canadian friends have taken the lead in beautifying this garden. In addition to a profusion of flowers, many evergreen trees have been planted adjacent to the formal gardens, and along the highway on the Canadian side. The American citizen is equally eager to share in perpetuating a visible principle in such noble beauty.

What an opportunity for the Homemakers of America to take up this project! How much more firm the pledge of peace were a tree planted by the Homemakers one for each State in the Union, as well as the Hawaiian and Alaskan Homemakers: a voluntary consecration of American womanhood to bonds of peace and good will.

The poet, Lucy Larcom, expresses a beautiful thought in her poem, Plant a Tree, when she says

"He who plants a tree, plants a hope, a joy, love;
He who plants a tree, he plants peace."

MEDINA HOMEMAKERS CLUB,
MRS. A. P. HAGLUND.

Decentralize Our Cities

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, the problem of decentralizing our cities in the United States has be-

come an orphan in our defense program. No arm of the Government has seen fit to take any action on this problem. As long as we continue to have congested industrial areas we will have attractive targets for enemy bombs. During the debate on the Defense Production Act, the House Banking Committee offered an amendment which would have strongly encouraged the dispersal of new industries. Unfortunately, this amendment was defeated.

I believe there was a misconception among many of those who opposed this amendment in that they thought that their home States would lose some of their industries to other sections of the country. This would not be so. Adequate decentralization for the purpose of lessening damage from enemy bombing does not require that industrial plants be erected in the sparsely settled States or that they be moved from New England to the South.

All that is necessary is that any new proposed plants be about 15 or 25 miles outside of our large cities. Thus, New England, for instance, need not fear losing industry by a program of decentralization. All that is required is that any new plants erected in New England be distributed about so that they will not increase the potential damage from enemy bombing in an already congested area.

On June 20, 1951, I introduced H. R. 4529. This bill would amend the amortization provisions of the income-tax law. It would grant accelerated 5-year depreciation on new defense plants only when these plants are located in a secure area which is not likely to be subject to atomic attack.

A secure area is defined in the bill to be an area "relatively secure from direct attack by an enemy of the United States, by reason of absence of population concentration, industrial congestion, and strategic targets." The President or such officer as he may designate would make the determination as to secure areas.

I enclose herewith an article which appears in the Reporter of August 21, 1951, which presents a strong case for dispersion of industry:

OUR CROWDED TARGET AREAS—GOVERNMENT AND INDUSTRY, IGNORING THE LESSON OF NAGASAKI, HAVE NEGLECTED OUR BEST DEFENSE AGAINST THE A-BOMB: DISPERSION

(By Ralph E. Lapp)

American industry, greatly expanded during the Second World War and further enlarged in the postwar years, is now being fortified to the extent of over \$20,000,000,000 to meet the urgent demands of our present mobilization. Despite our industry's already dangerously high vulnerability to atomic attack, new war plants are still being located in critical target areas.

Last fall the National Security Resources Board was assigned responsibility for approving pieces of paper called certificates of necessity, which permit a company to write off, for purposes of tax saving, the cost of new plant construction over a period of 5 years rather than the usual 20 to 25. Subsequently the Defense Production Administration was made the certifying authority, and up to the present date more than \$8,000,000,000 worth of certificates have been approved. Roughly 40 percent of the dollar value of this new construction has

been slated for metropolitan areas. The enormity of this defiance of the simple rules of atomic common sense is only slightly lessened by the fact that some of the plants are not to be built right in the center of metropolitan areas (presumably because such areas are too heavily populated or have too high tax structures).

A House subcommittee investigating the granting of certificates of necessity has reported: "Under the present policy (of granting certificates of necessity) no effort is made by the Government to control the location of new facilities through certificates; the selection of the site is left entirely to the applicant." The report concludes "after studying all aspects of this matter . . . the failure on the part of administrators of the program to make any effort whatever to locate new industrial facilities with regard to military security is most illogical and unreasonable."

PRE-ATOMIC MOBILIZATION

It is especially paradoxical that NSRB should rubber-stamp certificates of necessity without considering the national security, because that very agency has shown in its brochure, National Security Factors in Industrial Location, that it understands dispersion of plants to be basic defense against A-bombs. This reads: "The whole problem of industrial dispersion boils down to a common-sense application of the old adage about not putting all of one's eggs in one basket . . . The job of dispersion is one that industry must assume, both for its own protection and that of national security."

The Office of Defense Mobilization has dodged the industrial dispersion issue, apparently because it considers it politically infeasible and because it prefers to concentrate on "getting the job done." Our present mobilization effort has thus become in this respect a postscript to the Second World War program. Industry, with ODM's blessing, is following the well-traveled but now dangerous road of preatomic mobilization. With but minor exceptions this road has been followed in our entire industrial development since VJ-day. Five years of unprecedented construction have witnessed an annual expenditure of about \$18,000,000,000, the bulk of which has been funneled into our largest metropolitan areas.

HOW FAR IS ENOUGH

Data compiled for 35 prime target areas, almost all of which are metropolitan, reveal that 58 percent of the Nation's industrial product by dollar value originates in these manufacturing centers. Chicago alone accounts for 7 percent of the total. Anyone who has looked down upon a large city from an airplane knows how plants are usually crowded within city limits. To be sure, some industry has moved out to the country, but not far enough out, and open space around the plant is soon filled with the outspread from the city.

Dispersing manufacturing facilities beyond city limits can be an effective defense measure if the dispersion distance is considerable and if permanent open space is maintained between the city and the plants. Just what is meant by a considerable distance? In some cases the dispersal distance should be as high as 20 miles, for example in the case of huge plants which necessarily attract other smaller industries. In other instances a few miles may be sufficient.

Since our industrial plants represent fixed investments of long duration in the sense of national security, their defense must be planned not just for the weapons of today but for those still below the technical horizon. In this connection, a New York industrialist told his colleagues: "Don't try to protect your plants. If you locate in the suburbs, 5 years from now the A-bomb will be so much bigger it will get you anyway." Such pessimism is not warranted, since every

weapon, even the H-bomb, can be combated with the proper use of space. In fact, unless industry goes underground (and this is generally regarded as impractical), our only defense weapon is space.

The combination of official secrecy and unrestrained guessing has discouraged many industrialists from any kind of action. When the Atomic Energy Commission detonated A-bombs near Las Vegas early this year, light flashes were visible from points 400 miles distant. These tests convinced many laymen that the H-bomb had been ushered into the world, even though the Atomic Energy Commission later denied it. Tersely worded official statements from Eniwetok about weapons several times more powerful than the Hiroshima-Nagasaki type" compounded the confusion.

Industry cannot be expected to erect defenses against unknown weapons. Nor can it safely proceed in its planning on the basis of information passed out over Washington dinner tables. The facts about the power of new weapons already have been brought out in testimony before a congressional committee considering the dispersal of Federal agencies. Top AEC officials were called upon to advise what would be judged to be a safe distance for establishing six new agency sites close to Washington, D. C. They stated that 12 miles would be adequate from the standpoint of the probable power of new atomic weapons and 20 miles for other possible weapons.

As long as the Government keeps data essential for sound industrial development secret, and until ODM changes its short-sighted policy of giving industry free rein in plant location, there will be further concentration of war plants in prime target areas.

THE PENTAGON'S ALOOFNESS

One might expect the military services to exert influence in safeguarding their future tanks, planes, and ships. The late Admiral Forrest P. Sherman, testifying before the Senate inquiry into the MacArthur ouster, commented on the reasons for Soviet hesitancy in plunging into a third world war: " . . . the deterrent to war with us is the realization of our technical and industrial potential, the forces we have, our ability to expand them, that there is the realization on the other side that if a general war comes they will be defeated." Yet the Military Establishment has never announced any policy on the security of the Nation's war plants. On the other hand, it seems to have gone out of its way to emphasize our vulnerability to air attack.

An exceptional instance in which the military intervened in plant location was in the transfer of the Boeing Aircraft Corp.'s B-47 production from Seattle, Wash., to Wichita, Kans. W. Stuart Symington, as Secretary of the Air Force, personally strong-armed this relocation. The case is worth discussing because Seattle reacted vigorously and constructively. Its chamber of commerce realized that the Boeing incident could well condemn the city as a site for future industrial growth. To counter this threat the chamber of commerce announced an approach to industrial mobilization in which dispersal of key industries plays an essential role. Certain areas judged to be out of bomb range have been designated for new manufacturing facilities. Time must elapse before the effectiveness of the Seattle plan can be assessed, but certainly the basic philosophy behind the scheme is heartening. Milwaukee is likewise adopting a progressive attitude toward industrialization, not because it suffered a Boeing incident but because it has an enlightened mayor, Frank P. Zeldner.

Any same program of dispersal must begin with a critical evaluation of the present vulnerability of existing war plants. In the

language of the war planners this means that there must be a target analysis of United States industry by men who look at our industrial concentrations through the eyes of Soviet strategists. Target analyses have already been made by the Air Force and by the National Security Resources Board, and only recently two new groups have set to work on the task—the Industry Evaluation Board in the Department of Commerce and the Facilities Protection Board of the National Security Council. NSRB itself has started a new attack upon the over-all problem and is currently formulating a national policy for industrial dispersion. Announcement of this policy is expected from the White House some time this summer.

BROODING YANKEES

Anticipating President Truman's policy statement, Representative JAMES T. PATTERSON, Republican, Connecticut, has taken issue with dispersal by quoting the Bridgeport Post "a scheme to fill up the empty spaces of the South and Southwest, not by enterprise, not by the long process of building up a place in industry through merit and competition, but simply by deliberate brutal Government action transferring established industry from one section of the country and planting it somewhere else through the manipulation of Government contracts." A group of Congressmen, for whom Representative PATTERSON is a spokesman, have been increasingly worried about the loss of industry from New England ever since the much-publicized uprooting of the Chance Vought Aircraft Co., from Stratford, Conn., near Bridgeport. The long-distance move, in this case to Texas, paralleled the Boeing case. Together they form the two big exceptions to the rule of nondispersal.

New England need have little fear that the administration plans to parcel northeastern industry out to the rest of country. But if the policies now being developed are put into effect, New England along with the rest of the Nation will find that it is no longer at liberty to select new plant sites without first considering national security. The Government has a number of powerful tools that can be used to persuade industry if the latter should disregard atomic vulnerability. One, already mentioned, is the certificate of necessity. Others are loan guarantees, direct loans, direct supply of equipment, allocation of critical materials, and preference in the awarding of military contracts. No new mechanisms have to be invented to put the pressure on industry, they exist but have not been put into effect.

Certain critical industries, evaluated as absolutely essential to war production, may have to be shifted to new locations. This does not mean they will be lifted bodily out of New England and set down in Kansas. More likely the Government's policy will be to recommend the relocation of plants somewhere within the same market area but well outside of bomb range. Such drastic action will be limited to relatively few plants, but as plants become obsolete the companies concerned will be encouraged to build elsewhere if the old location is vulnerable to attack. Many plants, especially those in the chemical field or where technological advancement is very rapid, go out of date in as little as 5 years.

THE PRICE

An argument frequently advanced to block dispersal is that it will cost too much. Although it is absurd to think of dispersing all industry, even this colossal task is not nearly so unattainable as it might seem. A rough estimate of the replacement cost for American plants, arrived at by adding up (in terms of 1950 dollars) the prewar United States industrial plant cost, the amount of wartime construction, and the very considerable additions to the total since the war,

puts the replacement cost at slightly more than \$300,000,000,000. Since we are spending an average of about \$18,000,000,000 per year on new construction and equipment, simple mathematics would indicate that we could replace our total industry in about two decades. The actual process is, of course, more involved than simple arithmetic, and the time required would be longer, but no one proposes that we demolish our present economy and completely replace it.

If we subtract plants that are not essential to war production, we eliminate about 60 percent of the total. Furthermore, since some of these plants are peripherally dispersed, are in small towns, or are not even in target areas, the amount of industry for hypothetical relocation would be further reduced. The dollar total thus involved would probably become about \$90 billion.

This figure drops further when one considers that equipment could be reinstalled in relocated plants. Since equipment costs usually outweigh direct plant-construction costs by a factor of between two and three, it may be deduced that with our present outlays for new construction we can replace our most vulnerable essential plants in about 10 years. It must be emphasized that this is selective dispersal applied only to critical plants which are judged to be in target areas. Selective relocation obviously should not and cannot take in such installations as breweries, soft-drink bottlers, department stores, or dry cleaners.

Six years ago in Nagasaki the Mitsubishi Steel Works and a score of other factories were, much like United States plants today, turning out war goods. Then came the fateful day when the atomic bomb was introduced to Japanese industry. Yet, judged by six postwar years of unrivaled construction and concentration of plants, United States industry has apparently not learned the lesson of the twisted girders and crumbled walls of factories built too close together.

THE UNWARY EAGLE

Businessmen point out in their own defense that they have not been encouraged to disperse and that the Government has announced no program for industrial relocation. They are, of course, correct, for it is a case of multiple negligence. The Pentagon says dispersal is not its responsibility. Put to the test, NSRB and ODM have both refused to come to grips with the problem until now. Only at this late date, with defense construction well under way, is NSRB valiantly trying to put teeth into a sound dispersal policy. Meanwhile the steady agglomeration of defense plants in overcrowded target areas keeps on adding to the country's vulnerability.

A Libyan fable chronicled by Aeschylus may well be pertinent to American industry. An eagle stricken with a dart said, when he saw the fashion of the shaft, "With our own feathers, not by others' hands are we now smitten." Perhaps the moral of the fable, the omen of Nagasaki, and the new drive within the NSRB may yet jog the lagging memory of United States industry.

West Point's Honor System Is as Broad as a Man's Life

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. ANGELL. Mr. Speaker, the Washington Star of August 12, 1951, published

an article written for the AP by Capt. John S. D. Eisenhower, son of General Eisenhower with reference to West Point's honor system. Captain Eisenhower, 29 and a 1944 graduate of West Point, is assistant professor of English at the Military Academy. His article is timely and deserving of a wide audience and I include it here as a part of these remarks:

WEST POINT'S HONOR SYSTEM IS AS BROAD AS A MAN'S LIFE

(By Capt. John S. D. Eisenhower)

(The following article was written for the AP by Capt. John S. D. Eisenhower, son of General Eisenhower. Captain Eisenhower, 29 years old and a 1944 graduate of West Point, is assistant professor of English at the Military Academy.)

WEST POINT, N. Y., August 11.—When the Superintendent of the United States Military Academy announced recently that approximately 90 cadets were being dismissed for cheating in academics, the result was a storm of publicity and, from some quarters, protests. Almost all Americans were apparently handicapped in their judgment of the matter by strong misconceptions.

Some writers regarded the system as cruel; some, as a means of preserving outworn traditions of chivalry and feudalism; some, as mysterious. Actually the West Point honor system is neither cruel, feudal, nor mysterious. Except for the wider scope which it embraces in a man's life, it is not fundamentally different from any other school's honor system—its purpose is simply to develop honest men, straightforward, and able to take responsibility for their action.

INDOCTRINATED EARLY

This development begins early. Upon entrance the new cadet has the principles of the system carefully explained to him, and he immediately begins to live by the practical application of these principles. Briefly, they mean that a cadet does not lie, cheat, or steal. His word and his signature are above question. He is honor bound to report any violations that come to his attention, for the honor system is above personal friendship. He knows that a single intentional violation of the code means that he will leave West Point.

In addition, the cadet learns of immense benefits which accrue to him through the honor system—not only the luxury of leaving valuables carelessly around the room but also the realization that he is living in a society where each man's word is his bond, whether it be the word of cadet to officer or officer to cadet.

ADMINISTERED BY CADETS

The cadet honor committee, comprising representatives elected by the cadets themselves, administers the system. The new plebe soon learns to come to a member of this highly respected body with any problem he has concerning honor.

The honor system is so much a way of life at West Point that the normal cadet soon accepts it as natural. The day never passes in which a cadet does not make some official statement, which, because of the system, is unquestioned. Many of the privileges accorded the Corps of Cadets are possible only because of the honor system. The application of the honor system to the academic arrangement at West Point is taken completely for granted. The cadet assumes that the honor system works.

MAJORITY ARE ADAMANT

The greatest teacher of the West Point honor system, overlooked by many of the recent comments on the subject, is the fact that it is administered and perpetuated almost entirely by the corps of cadets.

It is regrettable in the recent scandal that so much attention was paid to the testimony of a few offenders and so little attention was paid to the remainder of the corps who stood adamant against those who had broken their code. The honor system is vital to West Point. The ability to live by that system is a requisite for a man who is preparing to be an officer. If a man cannot understand and adhere to the code while he is a cadet, there seems a grave danger that he will not be able to adhere to it under the much greater stresses of his officer service—a service which may mean 40 years of increasing responsibility.

Red Chinese Continue Persecutions

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, I include herewith still more reports of the religious persecution which has been going on for a long time in China. These reports tell of the expulsion of the Jesuit missionaries and of a Maryknoll missionary's 5 months' imprisonment in a Communist prison. I include a news item from the Brooklyn Tablet of June 9, 1951, and one from the NCWC News Service of June 18, 1951:

[From the Brooklyn Tablet of June 9, 1951]
CHINA REDS EXPEL BISHOP, JESUITS—USUAL FAKE PRETEXT RESORTED TO BY COMMUNISTS

TOKYO, June 5.—Continuing its efforts to drive all foreign-born Catholic missionaries from China, the Communist regime has expelled 74-year-old Bishop Jean de Vienne from his see of Tientsin and ordered him to leave the country.

Furthermore, the Red regime has ordered during the past week the expulsion of eight other missionaries, including six American Jesuits, and organized mass meetings, which will probably be followed by new arrests and expulsions.

According to the Reds, the bishop admitted his "errors." Among the seven admissions alleged by the Communist papers are the fact that he had organized the Legion of Mary in his diocese; that he had opposed the regime-sponsored so-called reform movement for the church, and that he had distributed Catholic pamphlets which explained the Catholic position on communism and the "independent church movement."

The expulsion of six Jesuits of the California Province from Nanking followed months of propaganda attacks through the Communist press and public demonstrations which accused them of being "imperialists" and "cultural aggressors."

The expelled Jesuits are: Revs. Louis J. Dowd, Joseph B. Donohoe, Gerald J. Pope, Edward J. Murphy, and Philip J. Ollger, and Brother James Finnegan. Fathers Murphy, Pope, and Dowd had previously been imprisoned. The priests were formerly engaged in teaching at their school in Nanking but were forbidden last December to continue their work.

Two other missionaries expelled were Rev. Edward Moffett, of Newark, N. J., a Maryknoller, and Rev. Francois Duffay, of the Paris Foreign Mission Society. Father Moffett was first arrested last August while on a mission trip to a village and charged with being an "American agent" working with

counter-revolutionaries. Released after some weeks, he was again imprisoned last December. Father Duffay was accused of forbidding the use of his church for political meetings and of spreading rumors.

[From the NCWC News Service]

UNITED STATES PRIEST TELLS OF 5 MONTHS IN RED PRISON IN CHINA; SAW FRIEND TORTURED

HONG KONG, June 14. The harrowing details of 5 months in a Communist prison during which he was sentenced to be shot and was forced to watch the torture and execution of a friend were revealed here by a 29-year-old Maryknoll missionary from Newark, N. J., who has just been banished from Communist China.

The priest is the Reverend Edward J. Moffett, now at the Maryknoll Language School here, resting up from his imprisonment. Thin and pallid, he is nevertheless full of excellent spirits and more inclined to talk about the humorous details of his prison life than his own suffering.

"I was first arrested last July," Father Moffett said. "At that time I was on a mission trip to one of the country villages. The Communists accused me of meeting and associating with reactionaries, hiring reactionaries to teach in our school and traveling without a pass. I was held in various jails for 2 months before being released."

Father Moffett returned to his mission where he was kept confined to his house along with his pastor, the Reverend Russell Sprinkle, of Middletown, Ohio. On December 20, both priests were taken into custody and led off to jail.

"Father Sprinkle was arrested because as pastor he was considered responsible for my activities," Father Moffett declared. "This was the only charge leveled against him. I was charged with the same accusations made in my first arrest, and some new ones were added. The Reds accused me of giving money to the underground movement, of accepting bandits into the Catholic Church, of associating with vagabonds and idlers, of preaching in my sermons about the atomic bomb and airplanes in order to arouse the people against the government and of making secret visits to country villages."

"Also in jail with us was a friend, a young man, who had been arrested with me in July, and who had been held continuously. He served as one of our teachers. The Reds accused him of being a leader in the underground. He was anti-Communist and had fought against them in a peasant uprising in which more than 1,000 Communists were killed. But he was no leader in the movement."

"The part of my imprisonment that I want to forget the quickest was when I was forced to watch this poor farm boy being tortured. The Reds had strung him up by the thighs and brought me in to watch his sufferings. They used all kinds of tortures to force a confession from him. At last when he could stand no more pain, he agreed to sign any confession they desired. After this was done, he was executed."

Father Moffett said that the Communist tribunal also sentenced him to death. The priest was to be killed by a firing squad.

"The day I was to be executed found me well prepared to die," the young, blond priest said. "But the Reds didn't come for me. I prepared myself for death the next day, and the next. After a few days the strain of constant preparedness for death was too much. I went back to my ordinary prison routine, and my regular prayers."

"Those days of waiting to be shot taught me an important lesson. Real preparation for death doesn't consist of an emotional readiness. What is needed is a constant act of the will which unites ourselves to God under all circumstances."

During his entire imprisonment Father Moffett was able to say mass each day.

"In a way I cannot explain, some hosts and wine were sent to the prison with some food," Father Moffett explained. "I was able to get a little mass booklet with the essential ritual prayers that had been printed for just such occasions as the one we were in. Of course, I could not use vestments or a chalice.

"On Christmas Day Father Sprinkle and I said three masses each. The one who was saying mass would lie horizontal on the floor, pretending to be resting. The other would sit alongside blocking the guard's view, and pretending to be talking.

"I was even able to bring holy communion to other Catholic prisoners. I would hear confessions while pretending to talk to them. Because of our proximity to the public latrine, prisoners were allowed to go there without permission."

During his imprisonment Father Moffett could get little food brought in from the outside, because he had no money, and the Christians were poor. On feast days the Christians would send in bananas, a few eggs, and an occasional bit of tobacco.

During the early days of his arrest Father Moffett was confined to an old temple. He was held incommunicado. Father Moffett asked the old temple guardian if he had any tobacco. The old man offered to buy some in the market, but Father Moffett had no money. He did have a comb, so he asked the temple guardian to sell the comb in the market and buy a bit of tobacco. That night as Father Moffett was falling off to sleep on one of the temple doors that had been taken down to make a bed for him, he was awakened by shaking. It was his old friend. The man pressed some tobacco into the priest's hand, and then gave him his comb. The tobacco was a gift of the old man who didn't have enough money to support himself.

"On May 21 Father Sprinkle was released from prison," Father Moffett said.

(Father Sprinkle, according to the latest report, has returned to his mission at Kwel-ping in Wuchow diocese, Kwangsi Province. Known as the most bombed priest in China, Father Sprinkle was reported to have had 1,000 converts with Father Moffett last year. Going through numerous bombings, Father Sprinkle escaped serious injury until he suffered a fractured skull during a raid near the end of the Japanese war.)

"I expected that my death sentence was about to be carried out. Then on the Feast of Corpus Christi, May 24, the Reds told me that my sentence was commuted and that I was to be immediately expelled from the country. After my release I discovered that the people of my parish back home had ended a novena of prayers at the very time of my release. I think that their prayers played an important part in my freedom."

Father Moffett was taken under guard from the prison. The Reds took him to Wuchow by boat, where he was lodged in prison for 3 nights. He was not allowed to see anyone and could not get any information on other Maryknollers in jail there. Then he was taken to Canton, where he spent another night in jail; finally he was escorted to the Hong Kong border, where he was released.

"I am going back to the United States for a rest," Father Moffett concluded, "but I would much rather be going back to China. The Chinese people are a wonderful people. I hope the situation clears up soon so that we can get back to our missions. My prayers every day are for the Chinese people. I pray that this terrible curse of communism be taken from them."

Foreign Aid

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of August 10, 1951:

FOREIGN AID

The Brookings recommendations on the administration of foreign aid break away from one report after another which other private bodies have been making on the subject. It rejects division of authority over our foreign-economic aid in the executive branch. The State Department, it says, should ordinarily be the agency to administer foreign programs and should be responsible for interagency coordination of foreign affairs. This, it seems to us, should go without saying. Ideally, the State Department should become a series of interlocking units, and this is what the Brookings report seems to envisage. The suggestion is eventually that a sort of subdepartment of foreign-economic affairs within the State Department be created and that the State Department be reformed on the model of the present Department of Defense. Already the groundwork has been laid for such an evolution. For instance, the Technical Assistance Organization and the Institute of Inter-American Affairs have virtual autonomy in the State Department.

The Brookings study excepts from State Department rule only special-purpose agencies and military assistance. What is meant by special-purpose agencies is not spelled out in the summary. Presumably this is to allow for the completion of the emergency work of ECA. In this respect, however, the Brookings report recommends an enlargement of the functions of ECA. Technical assistance, for example, would be monopolized by ECA. If this means the incorporation of the Technical Assistance Organization (point 4) which is now in the State Department, we are against it. So are we opposed to the suggested transfer to ECA of export controls from the Department of Commerce. Here it seems to us that the Brookings report is trying to saddle upon an emergency agency permanent or semipermanent functions.

As to the administration of military assistance, the recommendations follow the present practice, whereby Defense, State, and ECA are represented on an interdepartmental committee. Here are united the functions of policy making, determination of needs and availability, and procurement. Members of the committee report back to their department heads, and over all is the National Security Council. This system seems to be working well enough, and it is difficult to think of another arrangement that would do better. No organization, however, is better than the men who compose it, and no organization is perfect as a piece of machinery; so that a premium, which the Brookings study stresses, is put upon the recruitment and training of first-class personnel.

The main lines of the Brookings report deserve close study by legislators whose animus against Secretary Acheson or the State Department are inclining them in the unrealistic direction of a separate and independent department for the administration of foreign aid. The fact is that those who

want a truly separate agency will never realize it, except on paper. Even a separate department would in the nature of things be compelled to consult the State Department on policy matters. There must be one source of responsibility for purposes of accounting to Congress. This is made amusingly plain in one of the bills which sets out a separation of powers and then nullifies that objective by saying that nothing in the provisions shall absolve the diplomatic arm of responsibility. The separatists cannot have it both ways, and, if their plan is put through, then we shall invite a pass-the-buck Government on the policy level and confusion and conflict in administration abroad.

Woe at West Point

EXTENSION OF REMARKS

OF

HON. WILLIAM E. McVEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. McVEY. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am including an editorial taken from the Daily Calumet, one of the Chicago newspapers, relative to the difficulties confronting many of our cadets at West Point. This editorial is an expression of opinion which I believe is worthy of the attention of the readers of the CONGRESSIONAL RECORD. While we cannot condone the action of the cadets, one must confess there are too many examples of wrongdoing on the part of officials on the national level, and if we are going to expect a high standard of morality among our young people, we should set the pattern from the top levels of executives in Government down. The editorial of the Daily Calumet of Tuesday, August 7, 1951, follows:

WOE AT WEST POINT

(By Col. H. F. Wolf)

The lives of 90 members of the United States Cadet Corps at the United States Military Academy have been altered materially by their mass expulsion from that historical institution on the grounds they cheated in examinations. For sheer sensation it ranks with the resignation of almost half of the cadets in 1861, who quit the campus high on the Hudson to fight against the Stars and Stripes.

Dismissals came last week after an exhaustive investigation lasting months. It was brought out that as long as 3 years ago cadets carried examination questions to their brother-in-arms. Exams are written in sections at West Point—the same set of questions obtaining for all taking the same course.

Official Washington was shocked, predicating statements on the "sullied honor of the cadet corps, the degeneration of the moral fiber of the youth of the country," and statements of like hue. It's all hokey.

Helping a pal with his examinations by slipping him a copy of the questions in advance is not to be condoned, per se. However, we fail to see how the foundations of security of this country has been shaken by the cadet's first-hand brush-up before the showdown hour in the classroom. The same thing, without question, goes on within the walls of almost every institution of learning.

West Point has made a mountain of a molehill

The accused embryo officers should not escape punitive measures. There are many ways in which to mete out retribution to students who crib, extracurricularly. Dismissal means disgrace. This is punishment far in excess of the charged irregularity.

Washington yells about honor. The Nation's Capital, seat of mink coat deals, deep freeze gifts, Reconstruction Finance Corporation scandals, accusations of treason in the State Department, high-handed political manipulations, and general intrigue of a high order, has set the pace of honor.

If the oldsters fail to set up a standard of decency and integrity, what can we expect from our citizens of tomorrow, who daily view the scene?

Who are the 90 discharged cadets? The public is entitled to know, since it foots the bills. More importantly, it is only fair to cadets who have been sent home because they flunked an examination, or for other honorable reasons. Suspicion, unjustly, will attach to them.

It is to be prayed the Congress will institute an investigation. When it does, it will find the examination scandal boiled to an undesirable infraction of the rules. It is our guess then the lawmakers will adopt resolutions to reinstate the naughty 90. Congress should

War

EXTENSION OF REMARKS

OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. RAMSAY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial.

"Since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be constructed." (UNESCO GIST editorial)

Those who get a close view at ports of embarkation of the ebb and flow of boys headed for the battlefields and of those returning—some without arms or legs, some without sight, some on stretchers never to walk again, some paralyzed never to move again—get a realistic, heart-rending picture of the horrors and sacrifices of war that should be seen by those who casually refer to troops as so many toy soldiers to be moved around in the international chess-game of power politics.

Instead our boys in uniform should be visualized as the cherished sons of loving mothers and proud fathers, as fond brothers, or as the husbands of adoring wives, or the fathers of little children who love and worship their dads as idols.

Some have said that statesmen who make decisions on peace or war, misery or happiness, plenty or famine, health or pestilence for millions of people, should visit veterans' hospitals frequently to get a more realistic picture of the human sacrifices to the god of war, and there to obtain fresh inspiration and determination to do their utmost to see that world problems are solved around the conference table instead of ultimately futile attempts to settle them on blood-soaked fields of battle, that the principles of Christianity govern in the affairs of men and not the rules of barbarism, and that God-made peace shall prevail instead of man-made war or hell. (Fred Burdick.)

Unrest Spreads Behind "Curtain"

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Drew Pearson, from today's Washington Post:

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

UNREST SPREADS BEHIND "CURTAIN"

(NOTE TO EDITORS.—Drew Pearson is on another tour of Europe, studying conditions there in this period of world tension and crisis. This is the first of his cabled dispatches from Central Europe.)

NEAR THE IRON CURTAIN, IN CENTRAL EUROPE—If there was ever a time when propaganda was needed to encourage and stimulate the people behind the iron curtain, now is it.

Already the people of the satellite countries and even many in Russia proper are torn by doubt, dissension, and distrust. Their restlessness has been churning for some time but now it's near the boiling point.

There have been reports in previous years of trouble behind the iron curtain, but never so many as now. Two hundred Communist leaders in Bulgaria are reported under arrest; 22 Soviet generals and high Soviet officials have died mysteriously in the last 7 months; 4 Czech generals have been arrested or committed suicide in 6 months; 9 of the highest officers in the Polish Army were tried for treason; 12 Polish seamen on a minesweeper mutilated, locked up their officers, and deserted to Sweden; four young Poles fled to Sweden in a stolen bullet-riddled airplane; three Lithuanians locked up other crew members on a Russian trawler and escaped.

Why people rebel

This throbbing unrest inside the iron curtain has been caused in part by Soviet war preparations which have been going on for some time. When a government takes too much of the necessities of life—food, fuel, consumer goods—away from its people they rebel. When a Polish miner who hates Russia anyway is ordered to work harder to produce war material for communism, he gets restless. To illustrate the seriousness of this situation and the importance of intensifying our propaganda, here is a brief summary of the best underground reports I can get of what is happening behind the curtain:

Czechoslovakia The Czechs have now recovered from the stunned apathy which followed the initial seizure of their country by Moscow and are beginning to get their courage back. A serious food shortage, blamed on the Russians, is partly responsible. On top of this the Voice of America, which predicted the arrest of Foreign Minister Vladimír Clementis and four other Czechs had its effect.

Poland: Resentment against Moscow is so serious that Vyacheslav Molotov, now the No. 2 man to Stalin and seldom seen in public, made a special trip to Warsaw to warn the Poles against following Tito.

Bulgaria: A peasant revolt has held up delivery of wheat to Russia and brought a battery of Soviet officials hurrying into Sofia. About 15,000 have been added to the 30,000 already in concentration camps, while treason trials have shown that the Agrarian (or peasant) Party, once the strongest in

Bulgaria, now operates a powerful underground.

Rumania: Minister of National Defense Emil Bodnarus has been arrested and there have been mass evacuations of those suspected of disloyalty to Moscow.

Hungary: Deportation of thousands of Hungarian peasants to concentration camps to face slavery and death have been recently denounced by United States Secretary of State Acheson. The leader of these mass arrests is Bela Szanto, Moscow-trained Hungarian especially sent to do the job. Szanto is a ruthless butcher who has already jailed 70,000 peasants because they have held back their grain or refused to collectivize their farms.

East Germany: Moscow's efforts to build a Communist German army have been partly frustrated by the desertion of officers of the People's Police to Western Germany. Three separate undergrounds operate among the Russians and Red army personnel inside Germany.

Golden Anniversary of the Gillette Safety Razor Co.

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. McCORMACK. Mr. Speaker, the history of the Gillette Safety Razor Co., which company I am proud to have located in my district, is one of courage and determination on the part of the late King C. Gillette who invented the safety razor, and an illustration of an outstanding example of able management as well as splendid relationship and cooperation existing between management and labor during the 50 years of this company's existence.

This company is celebrating its golden anniversary. From a small and unknown company in 1901, it has grown to the largest of its kind, and one of the largest of any kind, in the world, and its time-honored product, the Gillette Safety Razor, is known wherever the sun rises.

The inventive genius and original thinking of the late King C. Gillette, whose name is known throughout the civilized world, and the establishment and progress of this company, is typical of American initiative, American grit, and American achievement.

On May 2, 1951, at the 1951 Massachusetts Dinner of the Newcomen Society in North America held in Boston, Mass., the Gillette Safety Razor Co. was signally and properly selected to be recognized by this society, the broad purpose of which society is as stated by Charles Penrose, senior vice president for North America, the Newcomen Society of England:

Were American Newcomen to do naught else, our work is well done if we succeed in sharing with America a strengthened inspiration to continue the struggle toward a nobler civilization—through wider knowledge and understanding of the hopes, ambitions, and deeds of leaders in the past who have upheld civilization's material progress. As we look backward, let us look forward.

On the occasion of the dinner last May, Joseph P. Spang, Jr., the president of the Gillette Safety Razor Co. since 1938, one of our country's leading industrialists and an outstanding American, was the guest speaker.

Mr. Spang's address, which I herewith include in my remarks, is interesting and inspirational. It follows:

This year, the Gillette Safety Razor Co. is celebrating its golden anniversary. We are doubly proud, therefore, to be honored by this distinguished society on the occasion of our fiftieth year.

It is not enough, though, to be proud of merely having existed for a period of time. Age of itself is no recommendation. What we like to feel is that our company has grown up in the tradition of American industry. That it has made its contribution to the American system, that we are somewhat typical of hundreds of other American business firms.

Like hundreds of other firms, our company started out modestly in 1901; our company pioneered. It brought something new to the American, and to the world scene. It brought something to the consumer which contributed to the rise in our standard of living.

Our company started in the creative mind of one man—one man with an idea. Call it a dream—he did. But it is the American dream. Without such practical dreamers, without such men with the drive to translate their ideas into reality, to have them furthered by a succession of imaginative men, the progress of this great Nation of ours would have been at a much slower pace.

This was the dream: to invent a practical product, needed, welcomed, and bought by the American public—not as a fleeting fad—but as an indispensable part of its daily life—today and tomorrow.

It has been called the little man's American dream. But it is not. Little men do not have the power of projection required in the fulfillment of this idea. The dream must flow from an agile, unfettered brain. It must develop from a personality willing to realize: "I am, in name, Everyman. I know what he wants."

King C. Gillette had the dream. He had the idea and the personality. The quick inspiration was plucked when ripe; happily at a time when speed—an important part of his inspiration—was to become synonymous with America. After years of experimentation, the first Gillette Safety Razor was marketed. This was in October 1903, the year of the historic flight at Kitty Hawk.

King C. Gillette had his product—needed, certainly, by men plagued with the age-old problem of what to do about the beard. It was still to be welcomed, though, and bought not only in America but around the world.

The translation of that dream into a safety razor in every man's hand was the solution of a problem old as recorded history. Hair on man's face—or the need for removing it—had been the concern of kings and poets, of statesmen and generals.

Beards have been, depending upon the swing of history, a conclusive sign of manliness, a mark of dignity; a mortal danger to warriors, a stamp of uncouthness—even insanity. The clean-shaven face at other times through the centuries has signified extreme youth or effeminacy, or identified a man's occupation, or signaled his degree of civilization.

Alexander the Great, realistic commander that he was, considered the beard a downright menace to his Macedonian troops. He commanded them to nick off their whiskers because, he said, they would thereby remove the all-too convenient handle by which an enemy could seize them, preparatory to removing the head from the shoulders.

The Roman poet Ovid who lived 2,000 years ago was concerned about man's beard. In his *Lovers' Handbook*, his advice to young men in pursuit of their light of love was:

"Let exercise your body brown:

Don't slobber: see your teeth are clean:

Your hair well cut and brushed quite down:

Your cheeks close shaved with razor keen:

Your toga spotless, white and neat:

Your sandals fitting to your feet."

With the collapse of Roman civilization and the surge of barbarous peoples throughout Europe, the beard became a symbol of full-grown manhood, only boys and eunuchs went without one. Consequently, to be shaved was a terrible humiliation. Strong, warlike men, patriarchs and kings were bearded. The way to insult a man was to pull his beard. King John of England, when he visited Ireland in 1185, gave deadly offense to the Irish chieftains by plucking at their flowing chin lambrequins.

Yet, in Ireland the statute enacted by a parliament at Trim, in 1447, stated that no man—unless he wished to be taken for an Englishman—should have a beard above his mouth. The upper lip had to be shaved at least every fortnight or be of equal growth with the nether lip.

The razor—the straight razor—came into daily use in England during the Restoration (1660). Charles the Second was a personable man and a "dandy." Coming from the fashionable French Court, where he had been exiled, he had a strong influence upon men's fashions in England. He wore curls and was shaven except for a few hairs of a mustache. In imitation, young men began to wear ringletted wigs, and to shave their faces. But Charles' brother, who subsequently became James the Second, was without facial adornment of any kind. From that time beards disappeared until about the time of the Battle of Waterloo.

It is true that the second Lord Rokeby was wearing a beard in 1798, but as a consequence he was reckoned an eccentric, a writer of that time said of him that "he was the only peer and perhaps the only gentleman of either Great Britain or Ireland who was thus distinguished."

Peter the Great of Russia looked to western Europe for ideas to make his barbaric nobles more suave and civilized. He felt that an important step in this was to have them shave clean in the French and English manner. So, to accomplish this end, he taxed the whiskers of his subjects and shaved his own.

Byron, like Ovid, felt man's preoccupation with his beard worthy of poetic mention. It was the thinking of many in Byron's time that Adam wore the first beard, since he came into existence in the prime of life. Byron thought that the necessity for shaving was one of the questionable gifts passed on by Adam to his progeny. He wrote in *Don Juan*:

"That since this fall, man for his sin
Has had a beard entail'd on his chin."

Yet, it was on the written advice of a quite young lady that Abraham Lincoln grew a beard. The young lady, Grace Bedel, aged 11, writing in October 1862, just before the election, suggested to Abe that he would be more dignified with a beard. Further, she hinted that while some of her four brothers would vote for him anyway, the addition of the beard might sway the votes of the undecided remainder.

In Europe, until 30 or 40 years ago, to be smooth shaven was an indication that a man was an actor, a servant, or a priest. Footmen whose attire was the court dress—knee breeches and white silk stockings—had

to be clean shaven. Also butlers, coachmen, grooms, jockeys, and hunt whips had to be clean shaven. But the chauffeur, a newer type of servant with no tradition back of him, was allowed to be mustached.

Up to the advent of the safety razor men had resented any rule that tampered with their beards or whiskers. As an example, in 1907, there was a serious waiters' strike in Paris against the rule of hotels that waiters must be clean shaven.

Thus it can be readily seen that man's beard has played its role in our changing history. And though the problem of man's beard, and what to do with it, dates back thousands of years, it was not until 50 years ago that a slow, painful, even dangerous operation—shaving—was changed to one which could be performed with speed, ease, and comfort.

The man whose idea was destined to change the face of half the world's population was King C. Gillette, a traveling salesman and a good one. He was a big man physically. He was expansive. He loved to entertain. In the fashion of the day, his wavy black hair was carefully parted in the middle and complemented by a heavy mustache above the wing collar and the handsome stuck pin. This picture of the man is well known all around the world.

The character of the man was filled with contradictions. As a salesman he earned as high as \$6,000 a year before the turn of the century. That was high pay. But, although untrained mechanically, he was obsessed with the desire to invent something—preferably a ten people would use, throw away, and buy again. As a means of discovering such an item, Gillette systematically went through the alphabet listing every conceivable material need of man, always trying for that one big idea.

It came to him one morning in 1895. He was living in Brookline, Mass., United States of America, at the time. In his own somewhat flowery words, he described the conditions under which the idea came to him, as follows:

"On one particular morning when I started to shave, I found my razor dull, and it was not only dull, but it was beyond the point of successful stropping. It needed honing, too, for which it must be taken to a barber or to a cutler. As I stood there with the razor in my hand, my eye resting on it as lightly as a bird settling down on its nest—the Gillette razor was born. I saw it all in a moment, and in that same moment many unvoiced questions were asked and answered, more with the rapidity of a dream than by the slow process of reasoning.

"At that time, and in that moment, it seemed as though I could see the way the blade could be held in a holder; then came the idea of sharpening the two opposite edges on a thin piece of steel that was uniform in thickness throughout, thus doubling its service; and following, in sequence, came the clamping plates for the blade, with a handle equally disposed between the two edges of the blade. All this came more in a picture than in thought as though the razor were already a finished thing and held before my eyes. I stood there in a trance of joy at what I saw. Fool that I was, I knew little about razors and practically nothing about steel, and could not foresee the trials and tribulations that I was to pass through before the razor was a success. But I believed in it and joyed in it."

Immediately, Gillette wrote to his wife who was visiting in Ohio, and said: "I have got it; our fortune is made." But eleven long, and trying years were to pass before he got a single dollar in dividends.

A driving force in Gillette's obsession to invent was his strong belief in the necessity for devices which would save man's time,

increase his comfort, and give him more freedom for other activities. This thought was expressed time and time again in early Gillette advertisements. In one, printed in 1906, the theme was stressed in the copy, under a picture of George Washington. It read: "George Washington gave an era of liberty to the Colonies. The Gillette gives an era of personal liberty to all men." The advertisement continues with: "If the time, money, energy, and brain power which were wasted in the barber shops of America were applied in direct effort, the Panama Canal could be dug in 4 hours."

Just where Gillette got his statistics for this broad statement remains unknown.

Gillette was 40 years old when he conceived the idea for his safety razor. He was born in Fond du Lac, Wis., on July 5, 1855, the youngest of three sons and the fifth of seven children of George Wolcott Gillette and Fanny Lemira Camp, the authoress of the White House Cook Book. He was educated in the schools of Chicago, but destruction of his father's possessions in the Chicago Fire of 1871 forced him to shift for himself. He married Atlanta Ella Gaines, of Willoughby, Ohio, and had one son.

Once Gillette had hit upon the idea which he believed in and joyed in, he lost no time in translating his vision into reality. On the day of the razor's inception, the inventor went to Wilkinson's hardware store on Washington Street, Boston, and purchased pieces of brass, some steel ribbon used for clock spring, a small hand vise, and some files. With these he made the first crude model. He also made many sketches, some of which have been used in patent suits and were useful in establishing the time and to some extent the scope of the invention. Eight years were to elapse, however, between Gillette's conception of the safety razor and its introduction to the market, in October 1903. In those 8 years, Gillette's efforts to get expert technical advice and to interest financial backing met with the frustrations which inventors have experienced throughout the ages. He was advised by cutlery and toolmakers to drop his radical idea. His proposal did not appear to be within the bounds of reason, and his friends looked upon it as a joke. They often inquired laughingly: "Well, Gillette, how's the razor?"

Of this period, Gillette wrote: "If I had been technically trained, I would have quit."

Actually, 5 years were to pass before Gillette's razor was anything more than the crude model he himself made. Then, in 1900, through Edward J. Stewart and Jacob Hellborn who, with Gillette were the original incorporators of the Gillette Safety Razor Co. (on September 28, 1901), William E. Nickerson came into the picture. Nickerson was a graduate of the Massachusetts Institute of Technology and a very successful mechanic. It was his mechanical genius which really got Gillette's safety razor under way. True, the idea was Gillette's, but its development into a practical usable instrument was the work of Nickerson. Gillette himself stated this, writing in 1918:

"I believe Mr. Nickerson, by luck or by providential design, was the only man in the world who could have perfected the razor, and our factory today in its machines and mechanism is testimony of the mechanical genius and resourcefulness of this remarkable man in overcoming obstacles, in arriving at simplicity and efficiency. The most marvelous fact of this wonderful man is his ability to construct in thought an intricate mechanism with hundreds of parts and many accurately timed movements without drawing a line on paper until it is completed and operating in his mind, and when the machine materializes it works as he saw it in his mind's eye."

With the mechanical development of the razor in the capable hands of Nickerson, it became necessary to raise money for starting development work. It was decided that an effort should be made to raise \$5,000 by organizing a company with a capital stock of \$500,000 consisting of \$50,000 shares of \$10 each, to be sold in 20 blocks of 500 shares each. The 20 blocks were all taken up in a short time, but most of the purchasers bought more to please their friends than because they expected to receive any great return on their investments.

One of the blocks of stock was sold by Mr. Stewart to a Pittsburgh bottle manufacturer, who bought the block so that Stewart would purchase bottles from his company. The Pittsburgher paid \$250 for his block of 500 shares, which he considered of no value and presumably filed and forgot. Four years later, when Gillette had a pressing need for all the stock he could obtain, he paid the Pittsburgher \$62,500 case for the 500 shares.

The \$5,000 raised through the sales of the stock was soon spent and the company was \$12,000 in debt. It was at this time that John Joyce of the firm of Curran & Joyce, an investor who had amassed a considerable fortune as a wholesale and retail liquor dealer, came to the financial rescue of the company. He agreed to finance the company to the extent of \$60,000 and from that time on the company progressed rapidly. In 1903, the first razors were marketed. Sales were 51 razors and 168 blades. But, in 1904, sales leaped to 90,844 razors and 123,648 blades. The Gillette Safety Razor Co. was on its way.

The speed with which the Gillette safety razor and Gillette blades gained public acceptance and use was truly phenomenal. 1905 saw razor sales quadrupled over those of 1904, reaching 276,577 razors. Blades sales increased nearly tenfold to the startling figure of 1,186,908. This amazing rate of increase continued. By 1908, blade sales had passed the 13,000,000-per-year mark, and by 1917—just 14 years after introduction of the products—razor sales reached the million-plus mark, and blade sales were over 120,000,000 annually.

During these years, the international operations of Gillette kept pace. Factories were opened in England and Canada; branches and sales agencies were spreading to every major market in the world. The familiar picture of King C. Gillette was fast becoming one of the world's best-known trade-marks. The man with the heavy mustache, wing collar, stickpin, and wavy black hair was recognizable in the farthest reaches of civilization. And well it might be, since it is estimated that Gillette's picture, used on blade wrappers, has been printed more times—roughly 100,000,000,000—than any other businessman's in history.

On one of Gillette's many world trips he toured Egypt. He climbed on a camel to visit the pyramids. A crowd of natives gathered and began pointing at the visitor, scraping their faces with forefingers bent to simulate razors. That was how well known his picture had become.

Perhaps he planned it that way, for there's a rather interesting background story to the adoption of King Gillette's picture as a trade-mark. In considering what to use for a trade-mark, nothing was overlooked in attempting to get world-wide identification as quickly as possible. The suggestion was made—possibly by Gillette himself—that what was needed was a label or mark as internationally recognizable as a United States \$1 bill with the George Washington portrait on it. Then and there, it was decided to use the boss' picture. Indeed, until the early thirties, the wrappers were printed in

green ink, reminiscent of United States currency.

What Gillette could not foresee was the use of blades themselves as currency. Today, in some remote parts of the world, Gillette blades are used as a medium of exchange. And, as recently as 5 years ago, our blades were used as currency in Czechoslovakia and Italy, being exchanged for fruits and vegetables in barter arrangements. Before that, in the twenties, Gillette blades had a fixed currency rate in France and could be used for many purposes.

In a very few years, the home company had gone a long way from its first manufacturing space. This was a small room at 424 Atlantic Avenue in Boston, over a fish store and next to a wharf where city garbage was dumped into scows. It was in this highly perfumed atmosphere that the first Gillette razors and blades were made. It was on April 1, 1905, that the company moved into the first of the 11 interconnected buildings which now comprise the company's United States plant in South Boston.

As amazingly rapid as was Gillette's growth during the first 14 years of the company's operations, it was in 1918 that the company's products began to sell in quantities never dreamed of by its inventor.

On one fine morning late in 1917, King Gillette raced into his office with another one of his visionary ideas. It was this: give a Gillette razor to every soldier, sailor, and marine as he entered the Service. An excellent idea, said company officers, but one that could be improved upon. Instead of giving them to the servicemen, sell the razors, at cost, to the Government and let Uncle Sam do the presenting. This was done, with the Government buying 4,180,000 Gillette razors. It was really this wholesale sampling of millions of men just reaching shaving age that gave the self-shaving habit to the Nation. Cartoons of the day showing a man shaving, invariably showed the safety razor. Sinclair Lewis in his famous novel *Babbalanza* opened the book with his hero raking "his plump cheeks with a safety razor." That year, 1920, Gillette dividends reached \$3,000,000. The revolt against the straight razor was by now so complete that new pull-man cars had a slot in the men's washroom for used blades.

Sales of both razors and blades following the First World War continued at a rate more than double the immediate prewar years. But a storm was brewing; on November 15, 1921, Gillette's basic patents were to expire, leaving anyone free to make the razor and the blade. Manufacturers were preparing to flood the market with imitations. In a bonded warehouse in Chicago, tens of thousands of Japanese-made razors were actually waiting for the November 15 deadline. The company met this crisis and successfully passed it by bringing out new models, including one to sell for a dollar, 6 months before the expiration of its patents. Until this time the razors sold for \$5 and up. In the year following the expiration of its patents, the company made more money than in any preceding.

In 1926, on the company's twenty-fifth anniversary, King Gillette wrote: "I was a dreamer who continued in the path where wise ones feared to tread, and that is the reason, and the only reason, why there is a Gillette razor today. Of all the little things that have been invented it is one of the biggest little things ever issued from the United States Patent Office. Over 140,000,000 razors and 6,000,000,000 Gillette blades have been sold from the time of the company's incorporation in 1901. The future holds wonderful possibilities for increasing users."

Since 1925 the company has continued its amazing growth. In the late twenties and

early thirties, factories were opened in France, Germany, and Poland. We were making Gillette blades in Brazil as early as 1934, and opened a new Gillette plant there in 1943. A factory in the Argentine had been opened the year before, 1942. Our Swiss plant started production in 1946. The most recent addition to Gillette's foreign family is a factory opened in 1949 in Mexico City.

At one time in the history of our company we could proudly boast that distribution of our products was limited only by the boundaries of the earth. This was an accomplishment achieved in the first 25 years of the company's life. Today we can no longer make that same statement. An iron curtain has been drawn—an iron curtain that even our sharp blades cannot cut through.

We did, for many years, export our products to Russia, before and after the revolution. Even today in Soviet Russia the blades used are called Gillette, spelled phonetically in Russian letters, but believe me, they are most inferior—we know from having had some tested. We even have reason to believe that some honest-to-goodness Gillette-made Gillette blades are in use in Russia today—in very high places.

Our English associates inform us that at the Paris Peace Conference, there was a request to one of the Allied officials for Gillette blades, said for the personal use of M. Molotov. Prewar, the Russian Embassy in London used to order hundreds of blades at a time, and these, it was rumored, were for the chin of Stalin himself.

Our company's relations with the Soviet Union throughout the years have been, to say the least, somewhat guarded, particularly on our part. The Soviet has always wanted, even demanded a lot more than we felt even approximated a fair business arrangement. And when, after many years, they were unable to negotiate for what they wanted, they just plain came and took it.

Back in 1920—22 years ago—our company sent a commission to Russia at the invitation of the Soviet Government for the purpose of investigating the feasibility of establishing and operating a plant in that country. It is to the everlasting credit of the members of that commission that they saw how unpalatable working and business conditions were in Russia 22 years ago—a time when we were wooing the Soviet, a time just before the Russian Government was officially recognized by the United States of America. The commission quickly realized the sociological conditions and governmental philosophy could never be compatible with our own.

Other reasons cited by the commission as being factors unfavorable to our company manufacturing razors and blades in Russia were cold, hard business reasons. If the plant were established, we were to get out of Russia after 15 years of operation—get out completely, and turn the plant, machinery, and trained personnel over to the Soviets lock, stock, and barrel with no remuneration whatsoever. No wonder the commission balked. Here are some of the other reasons, sounding most up-to-date but set forth 22 years ago:

Profits cannot be exported for 7 years (leaving us 8 years just to get our bait back);

The present (Soviet) government exists because of the ignorance of the masses and the use of severe measures exercised by a minority;

The fundamental principle of communism is state ownership, and regardless of an agreement, our success would be limited by the desires of the Government.

That's enough, don't you think? A far cry from our healthy, competitive, free enterprise system.

But despite this, and despite the fact that Russia slammed an iron door in our face, the Soviet eventually did get Gillette equipment, in fact, they stripped an entire plant of ours.

During the closing days of the European phase of the Second World War, you will recall that it was touch and go as to whether Russian or American troops would enter Berlin first. It is also common knowledge that the Russians did get there first, by agreement. In Berlin, just across from Tempelhof Airport, stood Gillette's Berlin factory—considered one of the most modern factories in all of industrialized Germany. A strange thing is that with Tempelhof, a prime target for Allied bombers, every building within miles was razed except the Gillette factory, and it suffered almost no damage at all.

Tempelhof and our factory lie in the American Zone, but before we got there the Russians had entered our plant and taken out every bit of machinery—machinery which produced over 500,000 blades and 1,000,000 razors a year—and moved it into the Russian zone. That was quite a move, since that is heavy machinery.

What happened to that machinery? Is it now turning out Gillette blades for Stalin? No, it isn't. That machinery, worth hundreds of thousands of dollars, today is standing in the open in the Russian zone, rusting and rotting away.

Introduction of Gillette razors and blades throughout the world was accompanied always by unusual, even weird experiences. In India, for example, Gillette products were introduced in 1908. They were introduced by the firm of Muller & Phipps. It was Mr. Louis Phipps himself who pioneered the safety razor in that country, despite the fact that he was the proud possessor of a fine set of seven straight razors in a handsomely embossed case, one razor for each day in the week. He still has this set which he has preserved as an antique—or so he tells me.

But the story goes that before he could gain any acceptance of the safety razor, he had to abandon use of his straight razors and go out on the street corners himself and shave with a Gillette—thus convincing the street barbers that a Gillette razor was easier to use than the crude implements they employed in hacking off a customer's beard.

From South America, and not too long ago, we heard a story from one of our agents who penetrated far into the jungles—into territory where supposedly no white man had ever set foot. The natives in that section were unconquered, living in roving tribes, always keeping out of reach of civilized man. This agent came across one of these natives, and discovered him to be wearing a crudely strung necklace of Gillette blue blades. Where he had got them, and the fate of their former owner, are questions our agent was much too wise to ask.

During these years of world expansion in the twenties, every effort was made to get the Gillette razor in the hands of as many men as possible. The idea of making a profit on the razor became unimportant. The razor became a break-even product, sold at cost. The idea was to get it out; get it in use. The more razors out, the more blades used. For this reason, many and novel methods of distribution were employed.

That period might well be termed the "give away" years.

Many manufacturers whose product could absorb the cost of the razor were induced to give one away free with each unit purchase. Grocery stores in large numbers, particularly the chain stores, gave a razor free with the purchase of tea, coffee, spices, beverages, extracts, candy, and canned goods.

One dealer sold 100,000 boxes of marshmallows by giving a Gillette razor free with

each purchase. Another, 70,000 pounds of coffee—a razor free with each pound; another 2,000,000 tubes of a new shaving cream, just being offered for sale. An overall manufacturer put a Gillette razor in the pocket of each pair of overalls. Razors also were used to stimulate the sale of such varying products as pocket knives, canned meat, and ladies toilet goods. Wrigley took 1,000,000 Gillette razors to use as chewing-gum premiums.

In the 6 or 7 years immediately following the expiration of Gillette's patents, blade sales multiplied four times.

Those "give away" years are but a distant memory today, difficult of recollection when contrasted with the demand for our razors at present. Today, and for many years past, our razors have been sold as fast as we could manufacture them—sold at the rate of some 10,000,000 yearly.

The twenties were happy years for the company, just as they were for many other American companies. The events of the 1930's had not yet cast their ominous shadow.

The depression had begun its spread when, in 1930, Gillette merged with Auto-Strop. Despite the deep dip in the business cycle, our company built for the future. The entire process of manufacturing blades was changed—a major step forward in such trying times, but management knew that in the long run—and quite a run it was in those years—that the new process was bound to prove infinitely better; that blades of a higher quality would result.

Up until that time, all blades were sharpened individually, a slow process which tended to limit production. Our present method of making blades, known as the strip-sharpening process was then introduced. To visualize this process, think of a reel of motion-picture film. Enlarge the reel three or four times, and substitute blade-width steel ribbon for the film, and you will have the picture. These reels of steel ribbon, after undergoing many preliminary processes, such as hardening, etching, and lacquering, feed into huge sharpening units; and blades come out sharpened, cut, and stacked at the rate of about 450 per minute. The blades and the blade steel are never touched by hand during the entire sharpening process.

Throughout the thirties the company experienced some of the same problems confronting all American business. But it did not sit back and wait for better times. It continued its experimentations, always seeking for the better product. The one-piece razor was brought out, first radical change from the original Gillette razor. The company brought out an electric razor, and a good one. The manufacture of this razor was abandoned when it developed that the dry shaver was not to occupy too important a place in the shaving field. Management also decided that balancing a dry shaver on one shoulder and a safety razor on the other was somewhat inconsistent. Shaving creams were added to Gillette's line during this period.

The most important advertising event in the history of Gillette Safety Razor Co. during this period, came in 1939. That was the year which saw the beginnings of our "Cavalcade of Sports" broadcasts. We first broadcast the world series in 1939. Again, undertaking this promotion was a bold step. The cost of sponsoring that one event ate a large hole in our advertising appropriation. That it was a good move has proven itself, and today we are most happy that we have acquired the rights to this outstanding event for the next 6 years, both on radio and on television.

As you all know, we broadcast and telecast most of the major sports events in the Nation—football, boxing, and horse racing.

With the advent of the Second World War, our factories in South Boston, London, Paris, and throughout the world, were partially converted to the manufacture of war matériel. In Boston we made a fuel-control unit which was a part of a carburetor and was used on nearly all our military aircraft. We also made a highly secret device used on naval mines.

During the war years, our production of razors and blades was so small, comparatively speaking, that nearly all of this production went to the men in the armed services. The situation was similar to that of the First World War. Men in the services used over 12,500,000 Gillette razors and over 500,000,000 Gillette blades.

We also made a few blades and razors for our Cloak and Dagger boys—the OSS. We were asked to make German-type razors to such fine detail that they would pass for a made-in-Germany razor. This we did, and our secret agents, parachuted behind the lines into Germany, had in their toilet kits razors that could not be detected as anything but a German razor—made right in south Boston, United States of America.

Following the Second World War, Gillette business again increased with a tremendous surge. Where the First World War had taught millions of servicemen the self-shave habit, the Second World War taught additional millions the daily-shave habit.

Other product development continued. Gillette was first to come out with a blade dispenser, which permits the easy and quick loading of an unwrapped blade without its ever having to be handled by the shaver. Then followed a double-duty dispenser with a compartment for used blades.

And, having been successful over a period of nearly 50 years at shaving hair, we started waving it in 1948 with the purchase of the Toni Co.

Acquisition of Toni broadened the base of Gillette's operations. For the first time the company entered the woman's market. We expanded in a field already well known to us. Distribution channels for Toni are almost identical with those of Gillette. Basically, both Gillette and Toni products have to do with hair.

Toni's quick, successful rise has been one of the outstanding American business stories in recent years. Almost overnight, it seems, the leading question of the day became: "Which Twin Has the Toni?" That slogan and the Toni twins became internationally famous. When Toni products were introduced in England, six sets of twins were flown to London where they quickly became as well known as they are in this country. Home perms—as the English call them—are now given in the Scandinavian countries, in South Africa, Australia, New Zealand, and in some South American countries. Toni is extremely popular in Canada.

In a period of less than 5 years, the hair-waving practices of American women changed. Before Toni, nearly all waves were given in beauty parlors. Today, 50 percent of all permanent waves are given in the home. Toni continues its dominant position of leadership in this field.

This brings us pretty much up to date. King Gillette, the founder of our company, retired from active participation in 1918, and moved to California. He retained the title of president of the company until 1931, 1 year before his death.

This is our story. We like to think of it as typical of the American business success story. The company had its inception in a dream—the American dream. It began small, and grew steadily throughout the years to its present position. We are proud of our 50 years of progress; proud to be celebrating our golden anniversary this year. Proud to be honored by the Newcomen Society in North America.

We feel we have played a part in keeping with the tradition of American industry—to place on the market a needed product; to strive constantly to improve its quality; to produce it in tremendous quantities; and to sell it to the consumer at the lowest possible price consistent with a fair profit.

Representative Wilson D. Gillette, of Towanda, Dies

EXTENSION OF REMARKS

OF

HON. LOUIS E. GRAHAM

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks, I include the following article taken from the *Daily Review*, of Towanda, Pa., of August 8, 1951, concerning our late colleague, Wilson D. Gillette:

United States Representative Wilson Darwin Gillette, 71, one of Bradford County's most distinguished citizens, died at his home on York Avenue, Towanda, at 7:50 o'clock Tuesday morning and out of respect for him the House in Washington adjourned for the day.

Mr. Gillette's death was announced in Congress by Representative SIMPSON, Republican, Pennsylvania, who described the Towandian as one of the most stalwart Pennsylvania Members of Congress.

Although ill for many months the Congressman had appeared to be gaining when he was stricken with bronchial pneumonia a week ago. His condition soon became critical.

Mr. Gillette, a former State Representative, had represented this area in Washington since 1941 when it was still the time-honored Fifteenth District made famous by David Wilmot and Galuska Grow. In later years it has been the Fourteenth District, which for one term even included Lycoming County with its city of Williamsport.

Mr. Gillette was born in Sheshequin Township, Bradford County, July 1, 1880, a son of Burton J. and Flavia (Crotsley) Gillette. He received his early education in the Ulster schools and later was graduated from the famed old Susquehanna Collegiate Institute in Towanda.

After leaving school he worked for his father on the home farm in Sheshequin for about 4 years. It was while he was still there that Mahlon C. Cranmer, a native of Burlington, went to Sheshequin on a lumber job and boarded at the Gillette home. Mahlon and Wilson became close friends and decided to try their luck together.

IN LIVERY BUSINESS

Both accepted positions as clerks in Carners' general store in Athens where they were employed until 1908 when they decided to come to Towanda and go into the livery business. They opened an establishment on Bridge Street, continuing there for about 5 years. Then they decided that the automobile, not the horse, was the coming thing in transportation, so they opened a garage in the block at the northwest corner of Main and Elizabeth Streets. In 1913 they took over the Ford agency.

In 1914 the late James E. Meredith erected the stone block structure at the southeast corner of Main and Elizabeth Streets and the firm of Gillette & Cranmer moved in on a lease. In 1922 the business was incorporated under the name of Gillette & Co., and it

continued as such until Mr. Gillette went to Congress and the business subsequently was sold to Shores & Schmieg, the present owners.

In 1930 Republican leaders of the county were looking for the strongest possible candidate for State representative and settled on Mr. Gillette because of his outstanding reputation as a man of high character and business acumen. That their judgment was good was shown by the great popular support he received not only in the election that year but also in five subsequent elections. He became, at Harrisburg, a member of the appropriations, highways, motor vehicles committees of the house and under the Republican administration was chairman of the all-important highways committee. Because of his long term of service at the State capital he was one of the most influential members of the lower house of the legislature in determining the policy of the Republican organization.

Consequently it was only natural when Col. A. G. Rutherford, of Honesdale, then representing the Fifteenth District in Congress, died in 1941, that Mr. Gillette should be considered the logical man to succeed him.

On August 27, 1941, conferees from the eight counties of the district met at Hotel Jermyn, Scranton, and unanimously chose the Towandian as the Republican nominee for Congress. In the November election he easily defeated District Attorney George O. Wagner, of Danville, the Democratic candidate, and has represented the "horseshoe" district continuously since that time.

He was sworn into office in Washington, December 4, and his first vote was cast in favor of the declaration of war against Japan on December 9.

Five times he was reelected to Congress where he has served on a number of committees and for the last several years held an assignment to the important Interstate and Foreign Commerce Committee. As a member of that committee he made a trip a few years ago to England and Sweden to study the effects of socialized medicine.

Mr. Gillette was always a staunch Republican who could be depended upon to stick by the party through thick and thin. His loyalty never wavered and he made that quality count in getting results wanted by people of his home district.

Mr. Gillette was a member of Union Lodge, No. 108, F. & A. M., Union Chapter, No. 161, Royal Arch Masons, Northern Commandery, No. 16, Knights Templar; and Irem Temple, Mystic Shrine, Wilkes-Barre.

FAITHFUL CHURCHMAN

For many years he has been one of the most prominent and faithful members of the Towanda Methodist Church. For years he served not only as a member of the official board but also as trustee and a member of the important pastoral relations committee.

He was one of the early members of Towanda Rotary Club and also was one of the early backers of the Towanda Chamber of Commerce when it was getting established.

On August 20, 1902, he married Miss Winifred Vought who survives him. Other survivors are a sister, Mrs. William H. Ransom of Towanda; and three cousins, Mrs. Myra McClen of Towanda; Mrs. B. M. Ayers of Wilkes-Barre, and Mrs. Bert Johnson of Sayre.

The body will be taken to the Methodist Church Friday afternoon and will lie in state there from 1:30 to 2:45 o'clock. Funeral services will be held there at 3 o'clock with burial in Oak Hill cemetery where the Masons will have charge of the services at the grave.

PRaised IN CONGRESS

In Congress yesterday, many joined in praise of Mr. Gillette following the announcement by Representative SIMPSON, Represent-

ative GRAHAM, Republican, Pennsylvania, called him a "man of intense patriotism and strong spirit" while Representative WALTER, Democrat, Pennsylvania, described him as a "great patriot and great public servant". Representative GAVIN, Republican, Pennsylvania, said Mr. Gillette was strongly devoted to the interests of his people.

Other tributes came from Representatives V. N. ZANDT, Republican, Pennsylvania; PRIEST, Democrat, Tennessee; DAGUE, Republican, Pennsylvania; HALE, Republican, Maine; BROWN, Republican, Ohio; TACKETT, Democrat, Arkansas; FLOOD, Democrat, Pennsylvania, and EDWIN ARTHUR HALL, Republican, New York.

Before adjoining the House out of respect to Gillette, Speaker RAYBURN named the following 12 Members from Pennsylvania to represent the House at the funeral:

Representatives WALTER, Democrat; EBERHARTER, Democrat; SIMPSON, Republican; FENTON, Republican-Labor; GRAHAM, Republican; KELLEY, Democrat; GAVIN, Republican; MCCONNELL, Republican; MORGAN, Democrat; DAGUE, Republican; FLOOD, Democrat, and O'NEIL, Democrat.

Broadcasting to Eastern Europe

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Brutus Coste, formerly of the Rumanian Diplomatic Service:

BROADCASTING TO EASTERN EUROPE

(By Brutus Coste, formerly of the Rumanian Diplomatic Service)

Materially crushed, the peoples of Eastern Europe are far from being morally conquered. Their spirit is not yet broken. But there can be no doubt that it is slowly yielding to hopelessness and even to despair.

Rightly or wrongly, these peoples feel that they were betrayed and abandoned by the Western World, which appears to them to be almost exclusively concerned with its own salvation from the Communist flood. Their hopes for an early liberation were high in the first years of Communist domination. But as time went on they saw how the Communists ignored and even flouted the opinions, feelings, and reactions of the Western World, and how Soviet power was steadily gaining ground. As a result they became increasingly susceptible to Russian propaganda—not to all propaganda, but to one idea which is being constantly hammered into their minds; namely that the victory of the Soviet Union and of communism is inevitable.

This propaganda has been partly effective for the simple reason that the developments of the last years, as they have appeared to these disappointed peoples, have seemed to confirm it. Communist doctrine, Communist promises and particularly Communist achievements have not won the peoples of Eastern Europe to communism. They may influence the very young subjected to the most systematic and tenacious conditioning ever known. But in general the Communist myth only impresses people in countries where Soviet troops and Communist governments are a fairy tale picture, known

only from books and films. It is sterile in the countries which have actually experienced communism.

The peoples of Eastern Europe know from hard experience the relative merit of communism and democracy, however imperfect the latter. They do not have to be lectured on the value of freedom. As a letter from behind the iron curtain says: "When a man is hungry, you do not feed him on savory descriptions of choice food. If you can, you give him food. If you cannot, you hold out to him the hope that he will get food before he starves to death."

I have seen other letters saying that, whenever lectured on the merits of democracy versus communism, people feel that this is adding insult to injury. They have the impression that the Western World believes that they voluntarily chose communism, and that this was due to their ignorance. They, on the other hand, believe that they have fallen under Soviet-Communist domination because of the failure of the Western World to understand in time the real nature of communism and of Soviet imperialism.

I am far from advocating the elimination from propaganda addressed to Eastern Europe any discussion of the merits and problems of democracy. I simply want to stress that emphasis should not be placed upon it. The peoples of Eastern Europe are already sold on the idea of freedom. What they need is preparation for the day when they will be free again.

According to recent reports, there is a widespread impression in Eastern Europe, an impression which is also shared by many political exiles, that the Western World is inclined to believe that once enlightened by propaganda, once given the true facts, the eastern peoples will be able to take their fate into their own hands, and that, without any further support from the outside, they will one day be capable of overthrowing the present regimes.

From their own experience through the past years, the eastern peoples know that the sporadic resistance movements which can be organized on a small scale with local means can only have a nuisance value. They cannot achieve decisive results. The Communists have had enough time to reduce these peoples to what Burnham so aptly calls an "amorphous mass," leaderless and unorganized. All political leaders and most of the potential leaders are rotting in prisons. All the truly national organizations have long ago been suppressed or transformed beyond recognition. Economic power is concentrated in the hands of the governments to the point where no individual, except for members of the Communist elite, has more than is strictly necessary to sustain life. In consequence, there are no local sources of funds, without which large-scale subversive activity cannot be organized.

Under these conditions, the Soviet-enslaved peoples—scattered individuals facing an all-powerful, all-pervasive and totally unscrupulous police state—have a feeling of impotence. Propaganda must, therefore, aim at instilling not only hope, but faith and certainty in the eventual defeat of Soviet-Communism. It must promote a sense of moral unity and solidarity among the majorities in all these countries. It must instill in them a feeling of belonging to Europe, and the confidence that they will ultimately regain a place in the European community.

There is today an inarticulate awareness that purely national solutions cannot protect Eastern Europe against the recurrence of the tragedy which has been its lot not only in the past 10 years, but during the greater part of its history. This awareness has to be fostered and made more articulate.

It must be demonstrated that the nations of the free world appreciate that Eastern Europe is an integral and essential part of Europe, and that they recognize that no lasting solution of the political and economic problems of Western Europe is possible as long as the eastern half of the Continent remains enslaved. This would go far to convince the peoples that the West has powerful motives to work for their liberation and would refuse any deal implying the acceptance of Soviet domination over them.

To be fruitful, western propaganda must smash the idea that communism is the "wave of the future." News reports and commentaries should, therefore, avoid representing western policy in purely defensive terms. The fact that the Atlantic Pact has been discussed in such terms has had disheartening effects. In broadcasts addressed to Eastern Europe it is essential to represent the Atlantic policy only as a necessary first step in a global policy aimed at the establishment of a free world. The objective of such propaganda must be nothing less than substituting for the myth of the inevitability of Soviet-Communist victory, a burning and fighting faith in the inevitability of the victory of freedom and democracy. This is the only way to stave off the most immediate dangers—demoralization, hopelessness, and resignation.

I have tried to present an outline of what I would call Operation Morale. This is an essential preliminary to any action. Such an operation should be followed by the organization of passive resistance. For this, broadcasting will be the only means of giving advice and direction. The final operation, when the time comes, will, of course, be the organization of active revolt. (The Public Opinion Quarterly.)

Campaigners for Decency Need Help

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article taken from Our Sunday Visitor calling attention to the need for stronger laws to ban sale of indecent literature:

[From Our Sunday Visitor, Huntington, Ind., of August 5, 1951]

CAMPAIGNERS FOR DECENCY NEED HELP—WOULD AROUSE PUBLIC AGAINST LEWD LITERATURE—PASSAGE OF BILLS BY CONGRESS WOULD AID IN NATION-WIDE DRIVE

For 15 years the Catholic bishops and clergy and both Catholic and Protestant lay groups have been fighting the very worst evil prevalent in the United States, namely, indecent literature.

Canada, South America, and even pagan India have protested against the lewd literature sent into their countries from the United States, claiming that it had a demoralizing influence on their people.

For a long period of time nearly 100 magazines published in this country were denied admission into Canada.

It must be said to the credit of most Americans that whenever their attention was called to the seriousness of filthy printed matter, whether in regular periodicals, or

comics, or so-called pocketbooks, their reaction was an indignant one, and they always showed a willingness to get into an active campaign to clear the community of such filth, and thus make it more safe for youth.

However, the campaigns were never long-lived. The apostles for clean literature have assumed that if most sellers of magazines, comics, etc., once agreed to clean up, they had done so for good. However, that has not been true. Leave the sellers unmolested for a month or two, and many of the filthy magazines will be back.

Action has been taken by law to ban indecent literature in every State of the Union except one, but just like the law which deals with the sale of contraceptive devices, the laws passed against evil literature years ago are no longer enforced. Presently there are two bills before the Congress of the United States. These two bills, namely, Senate bills Nos. 27 and 34 have been passed by the Senate, and are now before the House Committee on the Judiciary. Great pressure is being brought by many organizations, and even by a number of newspapers (on the principle defending a "free press") to prevent their passage in the House of Representatives.

We cannot believe that anyone, whether an atheist, a Communist, a defender of the principle of "free press," would allow most of this literature to enter his own home and be read by his children. There is absolutely no reason for the publication of such vile and demoralizing printed matter except that of profit to the publisher.

There are plenty of morons in the United States, plenty of people who, misguided and misled earlier in life, have an appetite for stories and pictures and photographs dealing with sex perversion, and there are plenty of unscrupulous men who are ever ready to feed that urge.

Before World War I, there were no lewd magazines published in the United States. During the depression, when youth was unemployed and had lots of leisure time for reading, the first of the evil magazines came into being. They grew quite steadily until World War II when it was supposed that several million troops in many army camps might like that kind of mental pabulum, and then the worst of them all were started for circulation among our boys in service.

TWO SENATE BILLS

The Senate bill passed on January 29, 1951, reads:

"Whoever knowingly transports in interstate or foreign commerce for the purpose of sale or distribution any obscene, lewd, lascivious, or filthy book, pamphlet, picture, film, paper, letter, writing, print, silhouette, drawing, figure, image, cast, phonograph recording, electrical transcription, or other article capable of producing sound, or any other matter of indecent or immoral character, shall be fined not more than \$5,000 or imprisoned not more than 5 years or both.

"The transportation as aforesaid of two or more copies of any publication or two or more of any article of the character described above, or a combined total of five such publications and articles, shall create a presumption that such publications or articles are intended for sale or distribution, but such presumption shall be rebuttable.

"When any person is convicted of a violation of this act the court in its judgment of conviction may, in addition to the penalty prescribed, order the confiscation and disposal of such items described herein which were found in the possession or under the immediate control of such person at the time of his arrest."

Senate bill 34, passed on the same day, amends the first paragraph of section 1461 of title 18 of the United States Code as follows:

"Every obscene, lewd, lascivious, indecent, filthy, or vile article, matter, thing, device, or substance; and * * *

"Sec. 2. The fifth paragraph of section 1461 of title 18, United States Code, reading 'Every letter, packet, or package, or other mail matter containing any filthy, vile, or indecent thing, device, or substance; and,' is hereby repealed."

We have been dealing with this situation for 15 years, and have learned from our experience that the owners of the better magazines can be easily induced to "come clean" habitually. Occasionally even they have offended rather seriously, but it was because they wanted to satisfy themselves that their readers would want or would not want "over-sexy" stories.

Owners of a dozen or even of 20 magazines, some of which offended against the code of the National Organization for Decent Literature, have either discontinued the publication of the offensive ones or have so adjusted their contents to the NODL code that they create no more trouble for the national organization. In fact, the editors of several of them are on the most friendly terms with the head of the National Organization for Decent Literature and have thanked him over and over for helping them to produce better magazines.

The ones which protest most against interference are the ones who could not continue the publication of their periodicals if the second-class mail privilege was withdrawn from them. Recent Postmasters General have been quite cooperative with the NODL, and when it was pointed out to them that certain magazines were actually lewd either in reading matter or illustrations or advertisements, the second-class mail privilege was usually withdrawn.

OFFENDING COMICS

A few years ago one comic after another began to offend against the very reasonable moral code adopted for comics. You need not be told that these do harm to the minds and hearts of children at a time when the moral law should be deeply embedded in their lives. Today the National Organization for Decent Literature lists more than 90 comic magazines which are utterly unfit for anybody to read, and, therefore, has listed them as disapproved.

When it was discovered that many periodicals had, out of a sense of decency and in compliance with demands made by the readers, adjusted their contents to these demands, the so-called pocketbook came into being publishing the filthiest stories which reputable magazines refused to accept. Being smaller in size and cheaper in price, high school students became their chief patrons. They could not bring a regular size magazine home without their parents discovering it. But they could bring home these pocketbooks and we have learned from many sellers of such pocketbooks that the children pass them on to one another.

WHAT YOU SHOULD DO

We would like to have you write to your Congressman to vote for the passage of two bills which have already been adopted by the Senate, and then we would have you write a letter, or to call on the person in your own community from whom you have been buying magazines, requesting him not to handle any indecent periodical or print or comic or pocketbook.

In many cities of moderate size all these magazines are not procurable, but they can be found in some stores in all our large cities. In such places a real organization is needed. The city can be districted into small precincts and visited by people within that particular locality, who patronize, for instance, the druggist for other things. They

can, as patrons of the store, reasonably request that the filth be kept away not only from youth but from all. The druggist is very amenable to such solicitation because he observes every year a "Pure Drug Week." The principle he applies to drugs for the body should hold equally for drugs for the mind and soul.

If you would do a real turn for God, for morals, for your country, for our rising generation, then you should actually wish to get into this crusade. Do not depend on "George doing it for you." Let George do it for himself and you do it for yourself.

Their Place Is on the Bench

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include three editorials dealing with legislation to bar Supreme Court Justices from acting as character witnesses.

The editorials, which appeared in the San Diego (Calif.) Union, the Springfield (Mass.) Daily News, and the Harrisburg (Pa.) Evening News, follow:

[From the San Diego, (Calif.) Union of July 16, 1951]

JUDGES AS WITNESSES

An interesting aftermath of the Hiss case is the consideration of a bill by the House Judiciary Committee which would prohibit Judges of the Supreme Court appearing as character witnesses or witnesses on matters of opinion. During the trial of Alger Hiss, later convicted of perjury, it will be remembered, two Justices of the highest Court appeared to testify to his good character, Justice Frankfurter and Justice Reed. Justice Reed appeared on subpoena. Justice Frankfurter as a voluntary witness.

Representative KEATING, of New York, sponsor of the proposed law, argues that "some smart lawyer" might subpoena most or all of the highest Court Justices in a given case. Having served as witnesses, these Justices would automatically be disqualified for passing on an appeal. It may be recalled that, after their appearance in behalf of Hiss, Justices Reed and Frankfurter disqualified themselves when the appeal reached the Supreme Court. If all, or the majority of the Supreme Court Justices should serve as witnesses in any case, the situation would be absurd, to say the least.

The judicial attitude, of course, should be one of absolute impartiality. A proper conception of judicial ethics would dispense with the need for Representative KEATING's proposed measure.

[From the Springfield (Mass.) Daily News of July 24, 1951]

THEIR PLACE IS ON THE BENCH

Under a bill being considered by the House Judiciary Committee and previously endorsed by a subcommittee, justices of the United States Supreme Court would be barred from testifying as character witnesses, or on matters of opinion.

The sponsor of the bill, Representative KEATING, Republican, New York, says he was motivated by the appearances of Justice Felix Frankfurter and Stanley Reed as char-

acter witnesses for Alger Hiss during the latter's first trial.

Justice Reed had been subpoenaed by the Hiss defense, while Justice Frankfurter appeared voluntarily. Another character witness for Hiss was Chief Justice Magruder of the United States Circuit Court of Appeals.

Also pending is an alternative bill introduced by Representative SMITH, Republican, Wisconsin, which would provide simply that no Federal judge could be compelled to testify as to character, or to appear as a witness, if similar testimony could be obtained from other witnesses.

Representative KEATING points to the possibility of some smart lawyer subpoenaing most or all members of the Supreme Court as witnesses in a lower court trial, placing the court in the position of not being able to pass on an appeal in that particular case. Because they were character witnesses in the Hiss trial, Justices Reed and Frankfurter disqualified themselves to pass judgment on the appeal of the convicted spy.

The congressional subcommittee which has already endorsed the KEATING bill sought an expression of opinion from members of the Supreme Court, but Chief Justice Vinson, as spokesmen for the justices, said he and his colleagues felt that they should not go on record.

Likewise the Department of Justice also notified the subcommittee that it did not care to make any recommendation either for or against the proposed measure.

There can be no doubt but that legislation of the type sponsored by Representative KEATING has merit. However, the subject is of such importance that it should be studied from every angle before it comes up for final action.

[From the Harrisburg (Pa.) Evening News of July 14, 1951]

JUDGES AS WITNESSES

Supreme Court Justices would be barred from appearing as character witnesses or in testifying on matters of opinion in a bill now under consideration in Washington.

Representative KEATING, of New York, who introduced the bill, said he was motivated by the appearance of Justice Frankfurter and Reed as character witnesses for Alger Hiss, now resident at Lewisburg, Pa. The Congressman points out the possibility of some smart lawyers subpoenaing most or all of the Justices, thus making it impossible for them to pass on an appeal later.

Even though both Reed and Frankfurter disqualified themselves in the Hiss appeal, KEATING thinks that the danger is still present and wants to insure that it cannot recur.

If Supreme Court Justices could vote on the bill, Representative KEATING should have no trouble getting two loud "Yeas" from two very red-faced members of that Bench.

Alaska Defenses

EXTENSION OF REMARKS OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis R. Huber, which appeared in the August 7 issue of the Christian Science Monitor on a subject of vital concern to

the entire country, the defense of Alaska:

ANCHORAGE, ALASKA.—Alaskan defenses are growing steadily stronger. They will be completed in 3 or 4 years, and then our northland will be a strong bastion against transpolar aggression—and one from which we can expand as required.

Yet even when they have been perfected, our northern fortifications will contain certain weaknesses which only the liveliest vigilance will make strong. If, as Gen. "Billy" Mitchell so prophetically stated, "He who holds Alaska will hold the world," it must be remembered that strong muscles still must do the holding.

That is the impression this reporter gained from a 2-week tour of Alaskan bases, from talking to commanders in the Alaska field, and from flying over a large portion of the strategic north.

Those who are on guard today along the Arctic reaches of the continent have a keen awareness of weakness as well as strength; our northern soldiers, sailors, and airmen have a thoroughgoing conception of the potential enemy, and they are determined not to be caught napping.

RUSSIA'S STRENGTH

Russia's greatest strength lies in her land armies, and we know there are many thousands of Soviet troops well trained in Arctic warfare. They could move across the winter ice into Alaska. We are much more vulnerable from an army moving overland up here in winter than in summer," Lt. Gen. William E. Kepner, commanding general of the Alaskan Command, told me.

On the map, he pointed out, Alaska is a large land mass about one-fifth the size of the United States—"but don't let that fool you. Essentially the Northland is a collection of islands, sprinkled over a sea of tundra, separated by unscalable mountains, and faced on three sides by two oceans—one of them frozen—and a sea."

In summer the "islands" where man has scratched a foothold are connected tenuously by some 3,000 miles of highways, by 500 miles of railroad, by two long navigable rivers, and by seaways that thread along 26,000 miles of coastline.

A VAST WHITE LAND

In winter the southern seaways remain open, but northern Alaska freezes up. The tundra turns into a vast white land of silent and all-but-deserted frozen prairie, river valleys, rolling hills, and scattered forests.

Where you couldn't possibly walk in summer because of soggy tundra, thousands of lakes, and swift rivers, in winter the land becomes easily negotiable for him who is prepared.

Right now, unfortunately, we have too few fighting men who are prepared—hence the emphasis is on Arctic indoctrination. Each winter more and more men are trained to live and fight and survive in the intense cold that sweeps across interior Alaska.

This concept of Alaskan defense, by the way, centers on the vast bulk of central, northern, and western Alaska. The panhandle, or southeastern Alaska, is rugged, mountainous, and more easily defended.

The all-round tactical solution to Alaska's strange make-up consists of heavily fortifying the largest area. It is the belt which runs from the naval headquarters on Kodiak Island and Seward on the southern coast, along the Alaska Railroad through Anchorage and up to Fairbanks in the interior.

"If we hold this belt, where our air power can be concentrated, from here we'll hold all Alaska. But don't mistake me; we aim to keep aggressors away from all parts of Alaska, no matter where they may strike," said General Kepner.

He compared the defense of Alaska with the operation of a spider's web—the Kodiak-Anchorage-Fairbanks belt being the center of the web. Let an aggressor touch any outermost strand, and that aggressor will be stung almost immediately by a swiftly moving airborne spider.

Today there are few enough spiders, and the web is weak in some places. General Kepner admits this, and realizes the greatest calamity for the northland would be a let-down in the present program of increasing Alaskan defenses.

That calamity, by the way, according to Alaskans was occurring a little more than a year ago. It was stopped by the invasion of Korea and the determined, continual complaints of Alaskan civilians.

One of the operators of airlines across the north Pacific put it this way to the United States Senate "task force" which went north last October to investigate Alaska preparedness:

WITHDRAWAL ORDERED

"A 100-percent withdrawal of the Air Force was ordered from the bases of Shemya, Adak, Adak, Umnak, and Cold Bay on June 30, 1950. This would not only have crippled our north-Pacific air route, but would have left undefended five of the finest airfields in the world, costing hundreds of millions of dollars to build.

"It would have deprived us of weather forecasts from this area—the Aleutian islands—where all weather affecting North America originates."

Perhaps, said this individual, it was more than a coincidence that the Communists moved into Korea about the time some of the Aleutian airfields were supposed to have been closed.

Any traveler flying over Alaska is impressed with the all-embracing magnitude of the land, which is still mostly wilderness despite the expansion which has taken place since we bought it from Russia in 1867. The greatness of the land overshadows the tiny scratches man has made.

From 5,000 feet and a distance of 10 miles even Anchorage, along with nearby Elmendorf Air Force Base, Fort Richardson, and their combined population of around 35,000, seem puny. Yet they form the largest concentration in Alaska's total 130,000 population.

The Alaska Highway leading to Fairbanks from the Canadian border, the Richardson Highway running inland from Valdez on the coast, the Steese Highway north from Fairbanks, the Gie: n and Tok Highways connecting Anchorage with the Richardson and Alaska Highways, and the Haines Cut-off running southward to the Inside Passage—all these are insignificant yellow lines across the summer-green tundra.

Heavy supplies for the "strong belt" come up mainly by ocean steamer, of course. They travel the sheltered inside passage northward from Seattle for 1,000 miles and then cross the Gulf of Alaska to Seward and Whittier, where they are transferred to the Alaska Railroad.

GREATER SHIPMENTS

If war should come, this route would be the main artery of supply—though highways and airways would then carry greatly increased tonnages. The Gulf of Alaska segment of the ocean route admittedly is wide open to submarine attack. However:

"Germany presented quite a submarine problem too, and we solved it," says General Kepner.

For the past 6 months greater shipments have been hauled from the States to Alaska than were hauled during any similar period in World War II—and the tempo of these shipments will continue for a long time.

This will mean more fighter planes ready to take to the air on a moment's notice, more facilities for housing heavy and medium bombers which would fly north from the States should hostilities begin, and adequate living quarters for thousands of soldiers, sailors, and airmen yet to come north from the States.

Alaska's "belt of strength," for all its apparent insignificance to the casual observer, is being made constantly stronger. Eventually it should be so strong that—if we continue our vigilance—aggression against any part of Alaska just would not pay.

Why Asia Hates Us

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, Pearl S. Buck, Nobel prize winner and authority on Asia, has written a challenging article in Look magazine entitled "Why Asia Hates Us." This is an important subject and the people of the United States must recognize that China is going to play an important part in world affairs for the next hundred years. I include her article as part of my remarks:

WHY ASIA HATES US

(By Pearl S. Buck)

AFTER LOOKING UP TO US FOR YEARS AS THE SYMBOL OF FREEDOM, SAYS A NOTED OBSERVER, THE PEOPLE OF ASIA NOW FEEL WE ARE EMPIRE BUILDERS OURSELVES

Once the peoples of Asia were our friends. Now they are bewildered by us and wounded. They hate us. Harsh words are flung at us from everywhere in Asia.

Some of us cry out with indignation, "Look at what we have done for them. Look at the missionaries we have been sending for generations to China. We are always giving relief here and there and everywhere."

But anger and resentment are useless. Nor can we simply shrug our shoulders and not care whether we are liked or not. Asia is most of the world, the peoples of Asia are most of the world's peoples. And in our struggle against communism, it is of the greatest importance to us what they think of us.

Therefore, let us, in common sense and prudence, ask ourselves why we are hated.

WHEN ASIANS LOOKED TO US WITH FERVOR AND HOPE, WE TURNED AGAINST THEM

If I had to simply reason why we are so hated, I would say that it is because the Asians feel that we have deceived them. They feel we have taken sides against them. We have destroyed their ideal of us. There is nothing so necessary as an ideal, at least to an Asian; nothing so precious as the need to trust someone.

We were the trusted, we were the admired. To them we were the good, not really for what we had done, but for what we were.

Americans had once been colonials, too, subjects of the English, who not only held India and Malaya and Burma but also held great pieces of Chinese soil; whose ships sailed into their inland waters; whose hold was unshakeable upon the customs receipts and upon the Chinese ports; who had fought wars to force the sale of opium upon China.

OUR RECORD WAS GOOD

Americans had never done any of these things. We had no ports, we did not take the customs revenue, we never fought the Chinese. We had even kept other powers from dividing up China. More than that, in times of famine food came from the Americans as it did not from anywhere else, and American missionaries were kind and good.

But, above all, so far above all for the Asian peoples that it was almost the only significance, America was a republic, a place where people ruled themselves by choosing their own governors, and a place where there was plenty for everybody. It could be done. In Asia, therefore, it could be done. They would learn from America.

That all this is now changed, and that we have come to be hated, is not because we are really hateful. There is nothing in the essential American nature as it is found in the vast average of our people that should be hateful to the peoples of Asia. On the contrary, we are far more likeable to Asians than most of the peoples of Europe are. Our frankness, our humor, our generosity, our practicality, our ability to make friends anywhere, all are qualities that the Asian likes and understands.

It is true that, by the standards of the average Asian, we are vulgar. It is also true that the conduct of Americans in the Armed Forces did deeply shock the peoples of Asia. The drunkenness alone was repulsive. It was also a shock to the man of Asia to discover the venality of many Americans. Asians are used enough to corruption and bribery, but somehow they did not expect Americans to exhibit these evils. They were too idealistic about us. Nor were the Asians reassured when they saw our haggling over food for India.

But it is not over these things that the peoples of Asia have turned against us. Where we have deceived them, they feel, is in the ideal of freedom.

All the great good of America came, Asians used to say and believe, from the fact that we are a free nation. People must be free, they declared, before they could achieve that wonderful American way of life. As the end of World War II drew near, they looked to us with fervor, hope, and certainty.

One day when I picked up the morning newspaper, I saw instantly that we had struck the first blow for our own destruction.

The blow fell at the San Francisco conference. What happened was reported in the New York Times in an article carrying the headline: "United States will oppose colonial liberty—Americans indicate line up with Britain and France against an independence pledge."

Imagine, please, you who now read this, what it means to people who have hoped for one thing above all else, and this for generations; to have looked so long to one source only for help, then to have that one declare himself against such help. Imagine, if you can, the surge of bewilderment and despair that flooded into Asian hearts when they heard that we were on the side of old empire and therefore against them.

By a few sentences, spoken by an American official delegate in the congress of the peoples in San Francisco, we laid the way for all that has happened since.

Our delegates at San Francisco were good people, but none of them knew Asia. Few of them had ever read the history of Asia. But above this ignorance of our delegates, the tragedy is that we, the American people, did not know the events that were to be unleashed by the opposition of our delegates to colonial liberty.

What has happened since has been the inevitable consequence of an attitude of mind, a policy, which has denied again and again the true ideals of our people. Thus it was

made plain later that we would not join wholeheartedly in a plan for the administration of food on a world scale; a plan that could have put an end, once and for all, to that obsolete and inadequate relief work that wastes so much of our money. Instead, we declared to the world—that is, our representatives did—that we would use food as a political weapon, and so we have done.

WE HAVE UPHELD ONLY THOSE WILLING TO TAKE DIRECTION FROM US

We have proceeded in the most provincial and local-minded fashion to act everywhere in the world without reference to other peoples. We have upheld only those persons who were willing to take direction from us; usually persons rejected by their own people and who followed us for the most corrupt reasons of personal power and gain.

Communism is not important to any people in Asia. Freedom is of the first importance, for they are convinced that only with freedom have they the chance to build a better life. Freedom and the chance to build a better life, that is all they ask. If communism does not give them these two conditions, they will reject communism.

What a fearful loss it was when, in our blind localism, we threw away the peoples of Asia and thought that we could do without them! It was such an unnecessary loss; we could so easily have kept them with us, for we had their support, their faith, their love.

LOST OPPORTUNITY

We had, and we have, the ability to help them, and to help them is to help ourselves. We have thrown all that away and we have instead their hatred, their enmity, so that the incredible, monstrous fact is that the Chinese, who were never our enemies and are not our enemies today, have actually been at war with us, their sons killing ours and being killed by ours.

From the folly of San Francisco, when all Asia sat at our feet, has sprouted, like branches from a noxious tree, one folly after another.

It has been agony to those of us who know Asia, and who have watched helplessly; for there was no way to reach the ears, or minds, of those who were committing the follies. Final agony now is to travel among our own people, as I have done, and to find that our people themselves feel betrayed somehow by those who have been so foolish.

Our people are for the freedom of other peoples. Our people, by and large, are for organizing the distribution of food so that everybody has enough to eat. Scientists and food experts tell us that there is plenty of food in the world for all, and much more than could be grown on land and in the sea. None need be hungry. We have knowledge enough, too, to make people more healthy everywhere and to save the lives of children.

It would take little indeed to make the world a better place; little except organizing leadership. We could so easily provide this leadership toward peace, out of our own experience here at home, and in the doing communism would be defeated once and for all. The practical idealism that is really the genius of our American people could find its glorious expression and the whole world would benefit.

Yet, at a crucial moment on the life of the world's people, our course has lain in ignorance, and there now falls upon us the weight of past history in Asia.

ONLY OUR DEMOCRATIC WISDOM AND EXPERIENCE CAN WIN ASIA

The people of Asia are saying that Americans are no different from other white people. They are saying that it was only when we had no material need of empire that we did not attack them as the others

did. They think that we have now come to the point of such need and that we will try to make an empire in our time. All empire begins in trade, and so, the Asians fear, will begin our new empire.

It is easy, if one knows Asia's history, to see how the peoples over there would think that of us. It is their final despair.

I do not think it was communism that made the Chinese soldiers fight against us in Korea. They fought because they believed that we are the new empire builders and Communist propaganda seized upon their fear; the same old fear that made Japan our enemy.

They have fought, those Chinese, to keep us from the soil of Asia, which is their soil. Korea has always been a danger spot, a gate into Asia. No foreign western people will be tolerated there.

It would be one more folly on our part did we believe that we can ever establish in Korea a government favorable only to the United States. If that seems unreasonable to any American, let him imagine the Russians taking over Mexico and establishing there a government favorable only to the Soviet Union. We would not tolerate it. So is Korea joined to the very soil of Russia and to China's soil, and is separated from Japan by only a narrow strip of water.

Korea should be like a Switzerland in Asia. Neutrality must be the goal, a sternly guarded and constantly maintained neutrality. Only so can the Korean people be independent until the nations are ready to set up world government.

Let us prepare now, and let us have, ready and waiting a government set up under the guardianship of the United Nations, with Korean advisers but for the present no Korean administrative officials. Let the most active of those officials be men of other Asian countries.

LET US ACT NOW

Let us at the same time have ready and announce at once, continually and everywhere, plans for the reconstruction of Korea, with the funds provided and waiting. These plans should be basic, in housing, transportation, hydroelectric power and food supply.

What we do for Korea should then be the blueprint for the rest of Asia, except that other peoples do not need the guardianship of the U. N. Some of the smaller nations may ask for it as protection against greedy neighbors. The people of Formosa already want it. But all peoples will welcome and cooperate with plans that will help them to find for themselves freedom and economic betterment.

Let us not be deceived by the excuses of dead empire, which complained, for example, of the birth rate in India. The facts are that India's rate of increase is less than our own and India's density of population only one-third that of England's—yet no one suggests that England cut her birth rate. Twenty-three percent of India's soil could be and is not available for agriculture.

The situation of Asia's peoples is not complex. Those who talk about complexities are those who want to muddy the waters for their own ends.

And what next?

Only that we Americans must work entirely through and with the United Nations in the making of plans and in their execution.

We Americans are fortunate that there is now the United Nations. Anything we do alone, as Americans, will be suspect in Asia for a long time. We have to prove ourselves all over again. We have to demonstrate our ideals on a world scale.

This can be done through a sincere and wholehearted support of the United Nations, a support we have never yet given. We

must put aside our defensive behavior and act with integrity and moral, as well as practical leadership.

Let us do so without blame to others. I can bear with equanimity the rantings of Russians in public places, but I cannot endure the same behavior, I do not expect it, from our American representatives.

Long ago in China, my old Confucian tutor used to make me write every day this teaching of the wise man: "The superior man blames himself, the inferior man blames others."

Without more waste of time and life in blaming others, let us put to the use of all peoples the wisdom and the experience of our democratic way of life.

Here is our conquering weapon against communism. Here is the way to win Asia back. There is no other weapon, no other way.

Five Great Americans

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. HILL. Mr. President, those of us who were listening to the radio Sunday afternoon were privileged to hear a most interesting and inspiring address by the senior Senator from Illinois [Mr. DOUGLAS]. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In these days of denunciations and counterdenunciations, I thought it might be well tonight to speak about five Americans, who are in danger of being forgotten but who by their work and lives have helped to make us all better men and women.

The first is John Woolman, the Quaker tailor who was born early in the eighteenth century, lived a life of apparent obscurity but who was the spiritual fountainhead of the antislavery movement in America. Slowly it dawned on Woolman as a young man that slavery was a great moral wrong. Human beings were treated as property and frequently overworked and cruelly handled. The system brutalized both the slave and the master. But it was widespread and it was profitable. Almost no one questioned it and most men of means owned slaves. But Woolman's inner voice would not let him rest. It told him slavery was wrong and that he should bear testimony against it, so he quietly traveled over the country speaking at Quaker meetings and to individual Quakers, urging them to stand out against slavery.

One by one, the Quaker yearly meetings passed resolutions asking all their members to free their slaves. Woolman was then given one of the most disagreeable jobs a man could have. He was appointed to a visiting committee to call on Quaker slaveholders and get them to free their bondsmen. He did this for years with such gentleness and humility that few harsh words were ever spoken to him and by 1775 the Quakers had freed their slaves without a cent of compensation and were out from underneath the great curse of slavery. Freed from the profits of this institution, they furnished in the next three-quarters of a century the

spiritual shock troops of the antislavery movement.

How much better it would have been had others followed the example of Woolman and his associates? Had this been done, we need never have had the Civil War with all of its terrible loss of life, and the relations between the races and the sections would today be infinitely more friendly. But because the people would not follow John Woolman and the way of love, they had to take John Brown and the way of force, with Grant to boot.

The second man I want to speak about was a black-bearded German immigrant who fought in the Civil War, came to Chicago, practiced law, and in 1892 became Governor of Illinois. His name was John Peter Altgeld. At a time when women worked 12 hours a day or more in factories, he helped pass an 8-hour law—the first of its kind in this country. Resentful of injustice, he pardoned a group of anarchists who had been convicted of murder in connection with the Haymarket riots. He did this not because he sympathized with their aims, which he did not, but because he believed with reason that they had not received a fair trial and that there was no adequate evidence to indicate their guilt. But perhaps his noblest act was at the completion of his term. He had been beaten for reelection and he had lost his fortune. At this very juncture, Charles T. Yerkes, the corrupt streetcar magistrate, was getting from the Illinois Legislature a 50-year franchise for the use of Chicago's streets without compensation. Yerkes went to Altgeld, offered him \$500,000 in currency which was in a safety deposit box in Chicago, if he would allow the bill to become law without his signature. Altgeld was sorely tempted. He took the key to the box, counted the money, found it was not marked, and then took counsel with his conscience. At the eleventh hour, he returned the key to Yerkes and vetoed the traction bill with a stinging message which concluded, "I cannot sell out the people of Chicago." Then, his term over, beaten and disgraced, and with only \$7 in his pocket, he took the day coach to Chicago. The only man who met him was Joe Martin, the former gambler who loved Altgeld with all his heart and who had a keener insight into true virtue than most of the self-righteous people.

It was of Altgeld that our prairie poet, Vachel Lindsay, wrote:

"Sleep on, Eagle forgotten,
Under the stone,
Time has its way with you
And death has it own."

But Lindsay continued: "To live in mankind, is far, far more than to live in a name." The tenderness and the integrity of John Peter Altgeld lives on in the people of my State of Illinois and elsewhere.

The third person was Jane Addams, the miller's daughter, who started Hull House in the slums of Chicago in 1889 and who for nearly 50 years fed the hungry, clothed the naked, and cared for the sick in body and soul. Nor did she stop there. Miss Addams and her associates opened the first playground, established day nurseries, started the Juvenile Protective Association and the juvenile court, took care of immigrants, got the garbage out of the streets and alleys and helped with protective legislation for women and children. Believing that the poor should have beauty as well as bread, she sponsored dance classes and a little theater, organized a music and an art school and developed an industrial museum which preceded the great museums of Munich and Chicago. Out of her insight into the humanness of the human heart, Jane Addams became one of our most penetrating and poignant writers. Her books such as *Twenty*

Years at Hull House, Democracy and Social Ethics, New Ideals of Peace, The Spirit of Youth, and the City Streets and The Devil-Baby at Hull House are part of the permanent classics of our literature. A devoted worker for peace and international understanding, Jane Addams went further than most of us would go but she sowed on a wide scale the seeds of active good will.

A citizen of the world, she was also firmly rooted in Halsted Street and the Bloody Twentieth Ward, of Chicago. She combined both character and culture to a rare degree and after knowing her for many years, I would say she was one of the two authentic saints whom I have ever met.

My fourth and fifth selections were both United States Senators. Namely, Robert M. La Follette, of Wisconsin, and his friend and fellow fighter George W. Norris, of Nebraska. La Follette, early in his career, had to decide whether or not he should make public an attempt to influence improperly the supreme court of his State. He decided to do so and was immediately attacked on the ground that he had betrayed a confidence. After several defeats, he was finally elected Governor of Wisconsin in 1900. Here he pushed through numerous reforms such as the establishment of a State income tax, the regulation of private utilities based upon a physical valuation of their property, a reform of the general property tax, the building up of the State university into one of the great free institutions of the land, a workmen's compensation act for industrial accidents and a host of other reforms.

One of these reforms was to establish a genuine system of civil service for State employees. This was 50 years ago; so that Wisconsin ranks with Massachusetts and New York as one of the pioneers in this movement. A problem which always comes up when civil service is first put into effect is what to do with the existing employees who were originally appointed on political grounds. Should they be turned out or retained? If they are of his own party or group, a Governor generally tends to blanket them in as permanent civil servants and thus try to give them permanent jobs. If the employees belong to the opposition, however, it is a common practice for a governor to oust them, replace them with his own men and then put these under the protection of civil service.

But this tends to poison the system from the very start. For when the opposition takes power, they cannot be expected to abide by the results. The new regime will therefore get rid of those who have the jobs on one pretext or another and give the positions to their own followers. Under these conditions, a true merit system becomes impossible and civil service a more or less hypocritical farce.

When La Follette became governor, his enemies manned the State jobs and he must have been sorely tempted. But he refused to fire his opponents and instead gave them civil-service tenure. No one could legitimately doubt his sincerity after that and as a result the merit system has probably been developed more fully in Wisconsin than in any other State. For that full credit should be given to Robert M. La Follette.

La Follette was then elected to the Senate and immediately started out on a vigorous program to preserve competition and prevent monopoly. When he first rose to speak in the Senate, all his Republican colleagues left the Chamber but the time came when not only the whole Senate but the whole country listened when he spoke. He passed a law to protect seamen and worked constantly for a proper physical valuation of the railroads to squeeze the "water" out of their capitalization. His son, Robert M. La Follette, Jr., who succeeded him, served for

20 years more and by his skill and fairness won the title of the "Senators' Senator."

George W. Norris was a Nebraska lawyer who came to Congress in 1902 and found it dominated by big business. The House of Representatives was then ruled by Speaker CANNON who in effect appointed all committees and decided which Congressman should be permitted to speak and which bills could be called up for action. Norris stood this as long as he could and then with a few other Progressive Republicans joined the Democrats to replace the absolute monarchy of the Speaker with what has turned out to be the tempered autocracy of the Rules Committee.

Coming to the Senate in 1912, Norris served in that body for 30 years. He was active in every good cause, but his two greatest works were, first in getting the so-called antilame duck amendment passed which made Congress more responsive to the popular will and secondly, in creating, with Franklin Roosevelt's help, the Tennessee Valley Authority, which has done so much to build up that area. A hard-boiled and cynical politician once told me of Norris, "You can't buy him, nor flatter him nor frighten him. He always does what he thinks is right." And then wistfully with tears running down his face, he said, "I wish I could be like George Norris." And I would add that many of us believe he was the finest and purest Senator of the last century.

In these days of strain and turmoil, we can take strength in the examples of John Woolman, John Peter Altgeld, Jane Addams, Bob La Follette and George Norris, who served the people of this Nation. They were bitterly attacked and criticized in their day, but their lives have stood the test of time.

In the words of George Eliot, they have joined "the choir invisible of those immortal dead, who live in minds made better by their presence." But at times one hopes that mankind can recognize such men and women while they are living and not merely after they have died. I shall close, therefore, with the final words of Bernard Shaw in his play, Saint Joan: "O God that madest this beautiful earth, when will it be ready to receive Thy saints. How long, O Lord, how long?"

Stephen T. Early

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast by Earl Godwin:

This program is known as Earl Godwin's Washington, and this is Washington's Earl Godwin making a special broadcast on this Sunday morning for the people in Washington, many of whom knew Stephen T. Early, who died yesterday, the lad who did so good a job as a reporter for the Associated Press in the days when Franklin Roosevelt was Assistant Secretary of the Navy that in later years Mr. Roosevelt lifted Steve right out of a comfortable and well-paying job in the news reels and made him one of that famed trio of secretaries of the New Deal. Early, Louis Howe, and Marvin McIntyre, and now these men who sat at the source of history and who helped make history have all passed

on. Perhaps to review things with "the boss"—that is the term that Steve and McIntyre used—in affection and reverence. I did not know Louis Howe, except in a formal casual manner, but the two others I knew from the days when we were reporters; \$35 a week was good pay; at any rate, that's all a good reporter got when he should have been getting that much every day. I think I can recall times when we all would borrow a dollar from one another—a dollar seemed to go round and round amongst us on Thursday, the day before payday.

My regard for Steve Early was above the average from the earliest days of our acquaintance. Looking back at it, there comes to me a notion this very early regard was due to a recognition of fine quality and character which has its foundation in the fine strain of good breeding, good family—and by good family I mean the strain of blood which has in its character arrived at by testing—getting over the hard places with honor and integrity and dignity, and being able to look any man in the face and tell him to go to—a phrase I can repeat to myself but I will refrain on this Sunday morning from being too outspoken.

That fine character from well-bred ancestors kept Steve Early on the right path and on equitable terms with the rocking world of events during the whole of the New Deal, for he served Franklin Roosevelt from inauguration day until that tragic day down at Warm Springs. Steve never lost his sense of proportion.

I hasten to say that the good Virginia family of Earlys contained the famous Jubal Early, Confederate cavalry leader who was one of the reasons why the North had a rough time in the Valley of Virginia. The town which can be proud to claim the honor of Steve Early's birthplace is a typical town on the eastern slopes of the Blue Ridge—Crozet is the name. If there is an Early Street or Avenue there may I suggest that they nominate a thoroughfare for that distinction and name it all the way Stephen T. Early Highway.

Well, in the days when Steve Early and Franklin Roosevelt were getting acquainted; Steve as a reporter, Roosevelt as Assistant Secretary of the Navy and part of the time Marvin McIntyre working on the Washington Times when Frank Munsey owned it, and later working as a civilian publicity man for the Navy, Roosevelt showed that amazing and explosive spirit which did things for the Navy in the face of the Old Admiral Cluque which was strong as horse radish in those days. Roosevelt ordered built ships that Congress had never authorized and then got Joseph Kennedy to build them. Joe was afterwards in the Roosevelt administration; his final post being that of Ambassador to Great Britain. His son is now a great success as a Member of Congress from Massachusetts. Roosevelt made news of a delightfully refreshing variety as Assistant Secretary of the Navy and he never got over the habit of calling his superior Secretary of the Navy Josephus Daniels "Boss." Called him "Boss" even when President; and Roosevelt made Daniels Ambassador to Mexico.

I do not know how many publicity men the Navy has today. But in the day I am now recalling the Navy had just one; and the Navy never missed hitting the front pages—why should it? That one man was Marvin McIntyre and his Navy boss was a naval officer named John Heffernan. The millions of dollars now spent on Navy publicity seem to me to get no more of it than Commander Heffernan got with Marvin McIntyre, acting as contact man, leg man, and editor for the entire Navy.

Steve Early was still a reporter for the Associated Press when the Wilson adminis-

tration fell before the onslaught of normalcy and the election of Warren Harding. He covered such tremendous stories: Among them the burial of the unknown soldier at Arlington, followed by one of the greatest and most completely sincere strokes of American statesmanship, I refer to the offer of Secretary of State Hughes to organize the world into a pact for the reduction of armaments, and thus take the burden of the costs of armies and navies from the backs of the people of the world and reduce the militarism which has some part in the launching of wars, say what you will. That was just as sincere as is our own offer today to use atomic energy for peaceful, constructive purposes and lay aside the atom as a weapon.

The nations of the world all yammered and stammered and then just had to sit down and sign the treaty, which reduced Japan to the proper proportion as to her battleships and did other things of a like nature. We scrapped certain ships and we alone of all the nations kept to our reduction promises. By the time we had kept our promise and the others had gone ahead building navies, it looked as if we were inviting trouble for ourselves. I recall Representative CARL VINSON, of Georgia, chairman of the Naval Affairs Committee, getting up and raising a terrific rumpus about this thing I'm telling you—our pure but weak attitude as to naval strength—and from then on we have become the strongest Nation. Let us keep that way as long as we have to live in a world of pirates and liars.

Steve reported much of that, and the episode which stands out most brilliantly in his reporting career was the attention to duty which gave him the scoop of the century—the death of President Harding. He was the reporter in the St. Francis Hotel at San Francisco who stayed on the job while every other man left—rather naturally because we had been assured that all danger of the President's death had passed. We had been on a long, grueling death watch, and when the word came that it would be safe to leave we piled over to the Bohemian Club and relaxed.

Steve Early did not go. He stayed on the story. Now, that particular type of stick-to-it-iveness is characteristic of certain newsmen and it is just that quality which riled the Czechoslovakian barbarians who struck at American Reporter William Oatis like an infuriated rattlesnake.

Harding's sickroom was on one floor of the hotel. Steve's room and office, with a telegraph instrument and operator in it, was on the floor either above or below—I have forgotten that detail. But he kept his eye on the Presidential suite. Early in the evening he saw commotion; someone rushed out; a nurse rushed in. Mrs. Harding rushed in and out, and Judson Welliver, a White House public-relations and contact man, came bursting forth.

Steve's trained senses told him what had happened. He asked the all-fulfilling question of Welliver, "When are you going to issue a bulletin?"

Whatever answer he got caused him to hot foot it to his hotel room and office. He told the Associated Press from there, "Get ready for extra." Newspapers got out extra editions in those days before radio. And when the official bulletin came, Steve beat the world by a long series of minutes, which is a great feat in the news game.

Steve was in a lucrative job in a news-reel company when Franklin Roosevelt decided to run for the nomination, and he picked Steve to help him, also McIntyre. The two remained through the nomination race and the campaign and became secretaries. Steve was one of the greatest successes on his job at the White House that any man could have in any job. He was a practical,

hard-headed, unemotional newsman. He had no fanciful theories. He knew how news develops and how it should be covered. He was loyal to his boss, the President, but at no time did he depart from his manner and method of handling news from the White House nor dealing with the newsmen of press associations and newspapers covering the White House. He had a high regard for the ethics of the newspaper and news profession, and he had no fear of Franklin Roosevelt. Steve was never a mere yes-man, and he was, I guess, the only man in that coterie who had no hesitancy about walking in on his boss if the occasion demanded, even if the boss was shaving.

I am positive that Steve's conservative nature, although he was a Democrat, led him into political and economic beliefs now and then contrary to the boss, but it never showed. He could handle his emotions and personal views so well that he never lagged in the job he was doing. He gained the respect of one and all because everyone knew Steve was all wool and a yard wide and genuine in his character.

He went back into private business shortly after Mr. Truman became President. He helped Truman get going and again went back into private business. Then later, when Louis Johnson was made Secretary of Defense, both Truman and Louis wanted Steve to help, and Steve gave up a good income to go back to the Government as No. 2 man in defense under the new law. One of Steve's crusades was to try to get some life into the other members of the United Nations and get them to send adequate force and aid to our side in Korea. I can tell you now that he and I worked together on that. He, of course, being the important member, but he fired me with the idea that the United Nations was simply laying down on the job; and some of them are yet.

There has never been any question about the high ethical attitude Steve assumed toward his job, one of the most influential in the world.

I suppose actually 10,000 people would give their shirts and other treasures to have been close enough to Steve to influence him to start something—to get a job, to get the boss to look favorably on this or that.

Steve never enlarged the circle of his acquaintances. He never followed the Washington cocktail trail. He could have written the book of all books about the New Deal. Perhaps he should have done so, for the benefit of facts and clarity and truth, but his attitude (as far as he explained it to me) was that he did not believe in capitalizing on his close acquaintance with Franklin Roosevelt. A high-minded attitude, not universal in these days of quick jobs from official pull.

We were speaking of the situation regarding Bill Oatis and the Czechoslovakian episode the last time I saw Steve, a few days ago at a luncheon at the Capitol in Leslie Biddle's office. There, too, were Gen Omar Bradley and Senator Joe O'MAHONEY, all of us good friends.

We brought up the subject of Senator O'CONNOR, of Maryland, who wants iron curtain newsmen in this country treated exactly as those countries treat American newsmen. I recalled to Steve that in his day at the White House (before we declared war on Germany) there was at least one Nazi spy who attended the President's news conferences legally and technically properly under the guise of a legitimate German correspondent. We all knew that Curt Sell (that's his name) telephoned everything off the record—secret and what not—right to the Nazi embassy. I was president of the White House Correspondents' Association and protested Sell's appearance. Steve told me then that the President knew about it and wanted to show

the world that he and we were not afraid to have a known spy in our midst, and incidentally, Steve told me that President Roosevelt sometimes very cleverly used this man Sell, by putting out something that would be labeled secret or background, but which was more or less of a booby trap, just to make sure this tricky stuff reached Hitler for whatever purposes Roosevelt had in mind.

The St. Lawrence Story

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Seaway Proponents Strong, but Foes Out-Maneuver Them," by Leo Sonderegger, which appeared in the Minneapolis Star of August 11, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ST. LAWRENCE STORY—SEAWAY PROPO-
NENTS STRONG, BUT FOES OUTMANEUVER
THEM

(By Leo Sonderegger)

(Fifth in a series)

Getting an objective picture of the St. Lawrence seaway project is not like scooping high-grade iron ore from an open pit mine. It is more like the tough job of extracting iron particles from taconite.

For half a century the seaway proposal has given rise to surveys and reports and arguments and counterarguments, to dreams and statistics and flag waving and ax grinding, to stern warnings and cries of demagogery.

The result is a mass of material as resistant to appraisal as taconite is to giving up its iron. This article and the next two will seek to clarify the main streams of the controversy.

The seaway project has not been stalled for lack of able champions. Every President since Woodrow Wilson has favored deepening the St. Lawrence channel. Every official body that has studied the matter has reported favorably.

The Government has not been alone in advocating the seaway. Powerful labor and farm bodies have thrown their weight in its favor. Recently some influential business interests have joined up.

The support has been strong. But the opposition has been stronger, and more adroit.

The eastern railroads fear that they would be hurt by the seaway, so they fight it. Their chief comrades in battle have been the port of New York and other Atlantic and Gulf ports, the coal companies, some eastern utilities, the United Mine Workers, the non-operating rail brotherhoods.

FOES USE TWO WEAPONS

Proponents of the seaway have repeatedly been fought to a standstill by this phalanx. It has made brilliant use of two principal weapons: argumentation, and selective political pressure.

Men have talked of a deep seaway into the continent for more than 100 years. The talk was stepped up half a century ago when the United States-Canadian Deep-Waterways Commission made a survey and said the prospects were good.

The talk lagged again, but after World War I an international joint commission established by the boundary waters treaty of 1909 went out for another look. It conducted hearings in both countries and added its favorable recommendation to that of the earlier group.

President Coolidge appointed a St. Lawrence Commission and made Herbert Hoover, then Secretary of Commerce, its chairman. Hoover's group also reported favorably.

He continued his interest when he became President, with the result that a treaty providing for joint construction of the project was signed by Canada and the United States in 1932.

PEARL HARBOR PREVENTED VOTE

The treaty received only 46-42 approval in the Senate, rather than the two-thirds majority needed for ratification.

To replace the treaty, an agreement requiring only a simple majority in both Houses of Congress was negotiated with Canada in 1941. The House Rivers and Harbors Committee approved it in November, but Pearl Harbor kept it from coming to a vote.

Most of the time since, the chances of seaway legislation have not seemed robust. It has been bottled in House and Senate committees. The railroad interests have whitelighted airtight stoppers.

Historically, the division in Congress has not been on party lines, but on the basis of local, sectional, or purely economic interests. This year, the dormant political angle was stimulated by a Republican leader who urged his colleagues to vote against the seaway rather than let the Democrats take credit for it.

Whether or not he was successful, the fact remains that when the House committee acted on the measure 10 out of 12 Republican members voted against it. Of the committee's 15 Democrats, 10 voted for the project.

SEAWAY FOES USE NEGATIVE ARGUMENTS

Those who oppose the seaway are necessarily on the defensive; they are fighting a delaying action. They have fought this kind of action successfully for years.

Their arguments are negative: The project is not necessary, it would be too expensive, it would not be used as much as its proponents claim, it would be difficult to defend in time of war, it would hurt railroad and port business.

Proponents of the seaway have the advantages—and the disadvantages—of being on the positive side. They make broad assertions with regard to seaway potentialities, but theirs is the burden of proof.

Spearhead of the opposition is the National St. Lawrence Project Conference. Most elements against the seaway have joined this group.

More than 60 percent of its financial support comes from the Association of American Railroads, another 10 percent from the coal companies. Dozens of chambers of commerce dangle from its letterhead but contribute no funds.

Chairman of the project conference is Carroll B. Huntress, vice president of Republic Coal & Coke Co. of New York. Huntress is a man with a strong east-coast orientation and a jaundiced view of his opponents' motives.

SEES POLITICS AT BOTTOM OF SEAWAY

He is suspicious of President Truman's reasons for pushing so hard for the seaway. He purports to believe that talk of the project's importance to national security is nothing more than camouflage of the administration's real purpose.

To him, the motivation can be summed up in one word—votes.

He lumps together all the Government's top witnesses—Dean Acheson, Secretary of State; Charles Sawyer, Secretary of Commerce; Defense Secretary Marshall; Defense Mobilizer Charles E. Wilson, and others—

with the comment, "After all, they're all in the Army."

When Huntress was asked about the railroads' claim that the seaway would hurt their business, he commented, "If what they say is true it would wreck 'em; if what they say is not true, it would be a tremendous fiasco."

Huntress and Dr. N. R. Danielian, executive head of the rival Great Lakes-St. Lawrence Association, are pretty much agreed that the effect on the railroads is the crux of the disagreement.

Huntress said, "It would be very difficult for the railroads to go against it if it could be clearly shown that it would be paid for by tolls." That would end talk of subsidized competition.

Danielian put it more bluntly: "The only issue is: Are the railroads going to be hurt or aren't they?"

Danielian is a Harvard doctor of philosophy who has championed the seaway for 10 years. In the process he has become the Nation's best informed authority on the project.

Most of the time his work has been generally a lone-wolf proposition. In the past year or so, however, the American companies interested in the Labrador iron-ore deposits have bolstered the association with new money, new arguments, and solid political influence.

FINANCIAL COMPARISON IS CALLED UNFAIR

The new money has given the association funds to more than match those of the project conference. Workers in Danielian's office insist, however, that the financial comparison is not a fair one.

They claim, with justice, that the opponents have not only their stated funds but the services of a network of railroad employees more or less committed to working against the seaway.

The opponents counter with an even more obvious truth—that the St. Lawrence association works closely with Federal departments and can draw on them for propaganda materials.

At any rate, the sound of the grinding of axes is heard in the land whenever the St. Lawrence seaway is argued.

Not all the proponents have motives of flawless altruism; nor do all those who fight the seaway do so from a narrow and selfish viewpoint.

But, generally speaking, those who favor it grind the big ax of national interest, while those who oppose it grind little axes of sectional and economic interest.

Happenings in Washington

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my report to the people of Pennsylvania on August 13, 1951, entitled "Happenings in Washington, Program No. 47."

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON, PROGRAM NO. 47
(Broadcast by United States Senator EDWARD MARTIN, of Pennsylvania)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

In these days of anxiety the American people are worried about war, high taxes, high prices, foreign spending, political corruption, bureaucratic extravagance, and the activities of disloyal elements who prefer communism to Americanism.

Each of these is a source of danger to the safety and security of our country and a threat to the American way of life. There is good reason for every patriotic citizen to be deeply concerned about them and to look to Washington for protection against these dangers.

In this broadcast I want to talk about one of the most important problems to come before Congress. I refer to the taxes which you pay to support the spending by the Federal Government.

This is a subject which should have your close attention because of the cost of government has now reached the highest point in our history except for 2 years at the height of World War II. It affects every citizen. It is your money—taken out of your earnings—that pays every dollar spent by Government.

You know that no government—Federal, State, or local—has a single dollar of income except that which it takes from the pockets of the taxpayer.

No one—rich or poor—escapes the tax collector. Even those whose income falls below the minimum income tax rates pay their share indirectly through hidden taxes included in the price of everything they buy.

Since June 28, the Finance Committee of the Senate, of which I am a member, has been holding hearings on a new tax bill. It had been passed by the House a week earlier after the Ways and Means Committee worked on it for 4½ months.

It provides for financing all the functions and services of the biggest corporation in the world—the United States Government.

That corporation has 150,000,000 stockholders—150,000,000 Americans whose hopes and aspirations—whose sacred freedoms—are directly at stake in its success or failure.

To operate this vast enterprise we now have more than 2,500,000 employees on the Federal payroll, at an annual cost to the taxpayers of \$8,500,000,000. This payroll alone is more than the entire cost of the Federal Government in any peace time year prior to 1940.

In the new tax bill, now being considered, we have to raise the money to meet that payroll.

We have to meet the tremendous costs of our defense program, which means preparation for any eventuality, including the possibility of another world war.

We have to consider the President's proposal that we spend \$8,500,000,000 for military and economic aid to foreign nations in the hope that they will fight on our side if the world is plunged into war.

We have to raise the money—about \$5,500,000,000—to pay the interest on the national debt—the biggest burden of debt ever carried by any nation in all history—more than a quarter of a trillion dollars.

These items are only a few of the high lights. The list is long and the total is staggering.

But the most important objective we must keep in mind is to preserve and encourage the free enterprise system under which we have established the greatest industrial production and the highest standard of living in the world.

We must make certain that we preserve initiative and incentive in order to maintain our economy at its greatest strength through continued growth and expansion of productive enterprise.

We must distribute the tax burden equitably so that each citizen will have to assume no more than his fair share. We must preserve opportunity for the worker and the

little-business man to get ahead and prosper.

Last January the President of this great corporation, the United States of America, told us that he will have to spend \$71,500,000,000 to run our business for a single year which began July 1. This startling figure was \$30,000,000,000 more than was spent in the fiscal year 1951. Later the estimate was reduced to \$68,400,000,000.

At the same time we were told by the President's financial experts that existing tax levies would produce revenues of \$55,000,000,000.

That would mean a deficit of more than \$13,000,000,000.

Now, there are three methods the Government can adopt to meet a situation in which expenditures are in excess of income.

One is to raise taxes by an amount sufficient to balance the budget.

A second method is to go into deficit financing and borrow the difference, thus increasing the already swollen debt.

The third way, and unquestionably the best for the Nation and the people, is to reduce expenditures by applying strict economy and increased efficiency in every department of Government.

And when I say every department I include the military, where I am certain millions of dollars could be saved without curtailing the defense program by careful scrutiny of every item of expenditure.

I am convinced, through studies that have been made, not only by Republicans, but by able, economy-minded Democrats, that Government spending can be cut deep enough to balance the budget with a minimum of new taxes.

But the Truman administration does not believe in economy. It did not offer a single recommendation for cutting down the size or the cost of the giant bureaucracy it has created. On the contrary, President Truman declared that his spending proposals could not be cut and challenged Congress to do so.

He demanded that Congress add \$10,000,000,000 in new and higher taxes on top of the back-breaking burden of taxation under which the American people are now struggling.

If the President had his way it would mean the addition of \$20,000,000,000 of taxes since June of last year.

The House refused to accept the President's \$10,000,000,000 proposal and the bill as passed by the House reduced the new tax levy to \$7,200,000,000.

That was the amount in which the bill came to the Senate Finance Committee.

Many Members of Congress in both Houses are worried because we feel we have reached a point in taxing the American people beyond which we cannot go without robbing the average citizen and without placing the national economy in danger of destruction.

When the bill was being discussed in the House of Representatives, Congressman RICHARD SIMPSON, dean of the Pennsylvania Republican delegation, said we have not only reached the bottom of the tax barrel, but we are cutting into the wood.

I agree with Congressman SIMPSON.

It would mean that nearly 30 percent of our entire national income would go to pay the cost of Federal Government alone. And when State and local taxes are added it would require every worker in the United States to work one day out of every three to pay his tax bill.

Since our committee began its hearings we have heard testimony from nearly 200 witnesses. In addition, several hundred statements and briefs have been filed which must be analyzed by the committee.

We heard from representatives of farm and labor organizations, manufacturers, mine operators, small-business men, bankers, economists, and tax experts.

We heard spokesmen for the Truman administration protest against the cut made by the House in the President's request for a \$10,000,000,000 increase in taxes.

We heard arguments for new types of taxes which it was claimed would produce sufficient revenue without hardship on anyone.

We heard arguments against almost every class of excise taxes.

Some who appeared before us were perfectly willing to tax the other fellow—so long as their particular product was left untaxed.

The hearings have been concluded and we are now meeting in executive session to study the various proposals and suggestions.

Without predicting what the final outcome will be, I am sure I am safe in saying that the Senate committee will cut below the 7,200,000,000 figure in the House bill.

Many of us on the committee have been insisting that appropriations not related to national defense should be cut to the bone.

Considerable progress is being made in that direction. The House has acted on nine appropriation measures and has cut below the President's budget requests by \$1,400,000,000.

Five of these bills have been passed by the Senate and they have been sent to conference to compromise their differences.

I believe deeper cuts could and should have been made and I consistently voted for amendments to reduce these appropriations.

I am still of the opinion that six to eight billion dollars should be hacked out of the President's budget.

If this were done we could balance the budget and any thought of a ten billion tax increase could be dismissed.

We must still pass on the appropriation for the armed services and the President's request for \$8,500,000,000 for military and economic aid to Europe.

This \$8,500,000,000 requested for foreign aid is more than the total taxes collected last year by all the 48 State governments combined.

Pennsylvania's share of this \$8,500,000,000 amounts to \$612,000,000 or enough to run the whole State for a year.

In the face of present conditions, I believe a substantial cut can be made in this appropriation.

How can we justify the spending of our taxpayers' money for economic rehabilitation in Europe and at the same time bear the cost of furnishing them with arms and other military equipment?

My fellow Pennsylvanians, I have stated many times that one of the strongest bulwarks of defense is to keep our country solvent.

It is imperative that we cut Government spending. We must be willing to do without nonessential Government services even though they may be desirable in normal times.

We must be constantly on guard against the proposals of a socialistic nature which are offered under the false label of national defense.

We must constantly guard against taxes so high that they result in confiscation of the citizen's income and his property.

That was what Chief Justice Marshall had in mind when he warned that the power to tax is the power to destroy.

Congress must use that power wisely so that we do not destroy our freedom through economic collapse.

Let me say, as emphatically as I know how, that national bankruptcy, here in the United States, is a greater danger to the future of America and the world than any threat of Communist Russia.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

Education and the Productive Citizen

EXTENSION OF REMARKS

OF

HON. JOHN O. PASTORE

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. PASTORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address by Dr. Earl J. McGrath, United States Commissioner of Education, at the 1951 commencement exercises at Bryant College, Providence, R. I., on August 10, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

EDUCATION AND THE PRODUCTIVE CITIZEN

It is often said that the greatest single asset of the United States is the productivity of its people. Our homes, cities, farms, schools, hospitals, appliances, wonder drugs, and highways all attest to the tremendous material progress we have made. This country's high standard of living has made us the envy of the rest of the world, and the American industrial machine is without parallel in either peace or war. Businessmen, farmers, scientists, laborers, engineers, clerical and professional workers—every segment of American society contributes the know-how which makes possible our technological progress and our constantly expanding productive capacity.

A good share of the credit for American productivity must go to our schools and colleges. There is strong evidence that the more highly educated the citizen, the greater the likelihood of a successful and prosperous Nation and of the development and maintenance of a high level of living. In recent years the fact that education and economic productivity go hand in hand has been well substantiated by many studies, including some made by the United States Chamber of Commerce. Publications issued by that organization show that education pays, that it is an investment in people which yields high economic dividends. As graduates of Bryant College, with its notable record in the field of business education, you may be expected to add convincingly to the proof that education steps up living standards. The economic productivity which I am confident you can develop and sustain will reflect credit on this fine institution and the work you have done here.

But productive citizenship in the mid-twentieth century goes far beyond the economic realm. Our Nation has adopted a long-term program of building and maintaining the defense of freedom. Together with our allies, we are mobilizing to meet the threat of Communist imperialism. We have set upon this course because it is a necessary step in deterring the enemies of democracy from further aggression, and because it offers the best guarantee of national security in the tragic event that a global military conflict should be forced upon us. In accepting the responsibilities of international leadership in the fight against totalitarianism, we have made it clear that we intend to lead from strength.

Mr. Charles E. Wilson, the Director of Defense Mobilization sounded the keynote of America's defense effort recently when he said: "It's strength that works; let's work for strength." To my mind, that dramatic phrase is also the most effective way to summarize the job which will face the members of this graduating class for some years to come.

If it is "strength that works" during these years of tension and crisis, then what kinds of strength must we build? And how can each of us, as productive citizens, help "work for strength?" I should like to discuss these questions briefly with you today, first, by reviewing the strengths we must develop and, secondly, by giving specific attention to the major contributions which your education at Bryant College should enable you to make to the national welfare.

I believe that we must build and maintain our national strength along five fronts: the military, the economic, the political, the psychological, and the moral. The struggle with Communist imperialism is total, encompassing every phase of our society. The disciples of the Kremlin are dedicated to the destruction of all free institutions. To them, the military conflict is but an extension of the battle which they wage relentlessly along the other fronts. The only way to thwart their strategy of subversion and aggression is to strengthen our defenses on every front, the nonmilitary as well as the military.

Since the United Nations moved to halt aggression in Korea, we have been rapidly rebuilding our military establishment. During the next few years many of you will be called upon to lay aside your personal plans and serve in some branch of the Armed Forces. The discussions which preceded the recent amendment and reenactment of the Selective Service Act demonstrated clearly, I believe, that the great majority of our people recognize the necessity of maintaining a strong defensive military position. Those who cherish freedom must be equipped and prepared to defend it.

Secondly, our national economy is being expanded and strengthened to meet the needs of the free world. Through the mutual security program now under discussion in the Congress, we hope to continue the economic and military assistance to our allies which we began so dramatically in 1947 with the Greek-Turkish aid programs and the Marshall plan. The public support which the American people are giving the defense mobilization and foreign economic assistance programs is encouraging evidence that we understand the international role our country must continue to play in promoting economic stability throughout the free world.

Thirdly, in the political realm the United States has taken the lead in strengthening the powers of the United Nations, in supporting the specialized United Nations agencies, and in encouraging the establishment of regional collective security arrangements among the free nations, such as the Inter-American and North Atlantic Treaty Organizations. Our record in world affairs since 1945 is unmistakable proof that we intend to give strong and continuing leadership to the development of an international community dedicated to the maintenance of peace with justice.

On the fourth front, the psychological, the problem of meeting the Communist threat becomes more complex. In recent months we have taken steps to counteract the Kremlin's big-lie propaganda campaign with our own campaign of truth. The Voice of America, together with the privately sponsored Radio Free Europe, is reaching people behind the iron curtain with the truth about their despotic overlords, the achievements of the collective efforts of free nations against communism in Korea, and the record of American democracy. (This campaign is greatly feared in the Kremlin—so much so, in fact, that the Soviet Government employs 1,000 transmitters and over 5,000 laborers in a concentrated round-the-clock effort to jam Voice of America broadcasts.) Our educational exchange arrangements, in which teachers and students go to live and work in other countries, and the

point 4 program for giving technical assistance to the world's underdeveloped areas are likewise proving to be strong psychological, as well as material weapons. They let other people see us as we really are and observe our attitudes, our habits, and our free institutions. Almost invariably we win support for democracy in general and our own country in particular.

It is my belief that Americans generally are awakening to the need for strengthening, the fifth, the moral front, in the present conflict. We are beginning to realize that it is impossible to draw a sharp line between foreign and domestic policy. Our actions at home are inextricably entwined with our policies abroad. There is a growing understanding among us that America's role in world affairs can be seriously jeopardized by inconsistencies between what we profess to believe and what we actually do. If we wish to win the ideological war for the minds of men, we must prove to the peoples of Asia, Africa, the Near East, and South America, as well as to our European allies, that American deeds match the American creed. We must show that we really believe in freedom for all without regard to race, creed, color, or national extraction; and that our policies and practices at home and abroad reflect these convictions.

Those are the five kinds of strength we must build and sustain during this prolonged period of world tension: military strength to deter aggression and defend the free world in concert with our allies; economic strength to stabilize and immunize free economies against the Communist virus; political strength to rally the partisans of freedom to the cause of collective security and international cooperation; psychological strength to counter the propaganda of communism with the truth about democracy; and moral strength to prove the rich spiritual qualities inherent in our way of life.

It's that kind of five-front "strength that works" in these perilous times, and the rate at which we continue to increase our total strength in the months and years ahead will depend primarily on our effectiveness as productive citizens. Graduates of Bryant College, schooled in business education, will have continuing and oftentimes unique opportunities to add new, broad, and exciting dimensions to the concept of productivity. I should like now to outline some of those opportunities for you, to show how you can help your country "work for strength" along the five fronts I've just discussed.

I have already spoken of the personal contribution which many of you will make to the strengthening of our Military Establishment. But the responsibility to serve in the Armed Forces or to assist with the defense effort in some other capacity is only part of the job we now face in connection with the military effort. The Communists are past masters at throwing their opponents off guard and softening them with conciliatory gestures. Today, after our experiences of the past 6 years, it seems impossible that Americans and the other free peoples would allow themselves to be thrown off balance again, that propaganda could talk us into letting our guard down once more. But a strong military position is difficult to acquire and still harder to maintain. Unless we study and understand Communist tactics for what they are—carefully planned campaigns which include deceiving periods of peace and quiet—we run the grave danger of falling into their trap, of letting our military muscles grow weak and flabby. We must have an alert, enlightened public opinion therefore to support our military program—a public opinion that refuses to compromise our national security. That puts the ultimate responsibility for developing the Nation's military posture squarely up to all of us as citizens.

Graduates of this institution should be particularly qualified to render significant services to the economic phase of the mobilization program. With your training in business education, you should understand the intricacies of the free economy, the close relationship which exists among all segments of society, and the contributions which each group—business, labor, agriculture—makes to the total national interest. Many of you will probably be working in distributive occupations and therefore you will be sensitive to many problems that often make it difficult to buttress our tremendous capacity to produce goods with an equitable system of distribution, a system designed to make more goods increasingly available to more people.

Your insights into business administration will help you to lead your countrymen in the fight against our No. 1 domestic enemy—inflation. All of our leaders and economists agree that inflation is a most serious threat to our national well-being and to our international position. Mr. Wilson has stated that the internal dangers from inflation would wreck our economy and bring about extreme social disorganization. It was Lenin, the founder of modern Russia, who said that "the ruination of a nation's currency is the easiest route to revolution." There is much evidence in contemporary international politics to prove that Lenin's midcentury followers are counting on an economic collapse in the United States.

If the concept of productive citizenship is to mean anything at all, it seems to me that it should mean working together to strengthen the Nation's economic system. The factors which contribute to inflation are extremely complex; in order to stop it, therefore, it is necessary for each of us to understand these complexities and act to solve the problem in all of its phases. Prices, wages, profits, national expenditures, taxes, credit, currency policies, farmers, laborers, businessmen, industrialists, Government, salaried people, consumers—all of these factors and groups affect and are affected by the national economy; hence, each is related directly or indirectly to the problem of inflation. Solving that problem is a long, hard, painstaking process requiring knowledge, patience, and determination. All Americans should be working day in and day out to fight inflation, and citizens with backgrounds in business education, because of their special qualifications, should be leading the fight.

The success of American efforts to build political strength in the international community will be measured, in the last analysis, by the breadth and depth of our knowledge about critical world problems and by the extent to which each individual citizen applies that knowledge through active participation in public affairs. For example, today large portions of the world, such as southeast Asia and the Near East, are in the throes of social and economic revolution, characterized by rapid change of political institutions and the growth of nationalism. The Communists take every opportunity to channel those revolutions to their own ends. It is necessary that we understand what is going on in those regions and what the Communists are trying to do there.

If we are to check the spread of communism we must study its strategy and tactics; we must know something about its origins, history, theories, recent developments, and practical consequences on the world scene, no matter how repugnant these things may be to us individually or to our national ideals. If we are to be politically strong, we must not allow ourselves to be maneuvered by our opponents into a defenseless situation, where reason and objectivity and clear thinking are deposed by panic and hysteria and ignorance. Misinformation and intel-

lectual blindness are poor weapons with which to fight the disciplined, subtle, fanatic followers of Lenin and Stalin.

The productive citizen in a democracy knows that he shares the responsibility for deciding critical public issues. It matters not what his specialized vocation may be. Citizenship knows no occupational lines. Whatever your specialized field may be, however competent and efficient you are in exercising your particular vocational skills—your education and training will have come to nought unless you recognize a broad-gauged concept of productive citizenship; unless you help your country work for political strength in world affairs by taking an active interest and part in national and international problems.

On the psychological front the Communists breed strife, suspicion, and distrust among all groups in society—turning labor against management, race against race, neighbor against neighbor. Communism magnifies all political and economic differences into major social ruptures. It thrives on hate and fosters insecurity. It helps engender poverty while claiming to work for plenty. It preaches peace and foments war. It masks injustice, violence, and terror with propaganda slogans about justice and democracy.

We must continue to build strength to meet communism's psychological weapons head on. I have already mentioned the campaign of truth our Government is waging through its information and exchange program—programs which urgently deserve our thoughtful study and support. But beyond that I believe graduates of Bryant College will be equipped to make particularly significant contributions to the psychological struggle against communism in their everyday lives. First of all, you can contribute by developing your occupational competency—your on-the-job productivity—to the greatest possible degree. Communism fears our free productive system because it is tangible and forcible evidence that gives the lie to radio Moscow's incessant charges of "decadent capitalism." By doing your job and doing it well you are helping to forge the weapon of truth about American productivity.

You can also help strengthen freedom's cause psychologically by cultivating socially constructive attitudes toward the people you work with, by recognizing the dignity of work, and by striving to develop better relations among all groups contributing to our economic system. The relations of the worker to his employer, the relations between coworkers, the relations between the worker and his community—these are critical areas in human relations that should be of deep concern to men and women with business training and education. Today the worker must be socially and civically skilled—competent in the art of working cooperatively and living together with his fellow community builders. Those are skills that the Communists don't want us to develop, because once again it gives the lie to their campaign of hate and coercion. A united nation is not easy to conquer.

Building strength on the moral front is perhaps the greatest challenge of all to productive citizenship. For the major problems of our time are moral problems. We cannot hope to answer critical social, economic, and political questions unless we first know what it is we believe in and what we are willing to defend. The challenge confronting us, as citizens, today is as great as that which faced our forefathers over 150 years ago. Then, Americans stated their convictions in a document which thrilled the entire world. "We hold these truths to be self-evident," said the Nation's founders—and our cherished ideal of equality of opportunity was born. The beliefs expressed in the Declaration of Independence and the Preamble to the Constitu-

tion were a ringing answer to the despotism of an earlier day, a reaffirmation of the great moral tenets of our western Judea-Christian civilization. Today, we must reaffirm those convictions in tones no less ringing, in answer to a new despotic ideology which seeks to destroy liberty and justice.

The need for an overwhelming build-up of America's moral and ethical strength was recently summarized by Gen. Omar Bradley, chairman of the Joint Chiefs of Staff, in the following words: "We have too many men of science, too few men of God. We have grasped the mystery of the atom, and forgotten the Sermon on the Mount. We live in a world which has achieved brilliance without wisdom, power without conscience; a world of nuclear giants and ethical dwarfs. We know more about war than we know about peace."

Graduates of our colleges and universities like yourselves have been given the education which can be used to good advantage in living a satisfying personal life. You also have a moral responsibility to use your abilities in creating a better society in America and in the world at large. Concern for the welfare of other men, cooperation with them for goals so worthy as to be universally valid, conviction that such ideals will triumph over lower, more materialistic aims—these moral imperatives are the guideposts to productive citizenship, the wellspring of the "strength that works." I am confident you will work to help your Nation build that strength.

Letter to President Truman From Soviet President Shvernik

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Strictly but Strictly Phony," published in the Chicago Daily Sun-Times and reprinted as a public service by the International Latex Corp., of Dover, Del., in the New York Times on Monday, August 13, 1951.

This editorial shows that the recent peace message from Soviet President Shvernik is a renewal of the same two-faced Soviet policy of talking peace while creating and fostering strife and war.

In reprinting this editorial, the International Latex Corp. has reminded the United States public of the many previous instances in which Communist peace propaganda was poured forth at just the right time to camouflage the Soviet's aggressive efforts at world domination.

We are engaged in an ideological battle for the minds of men. Phony peace propaganda is just as much a part of this battle as is a campaign of military aggression. It is not easy to recognize and combat a false world or idea, but we must do so if we are to win the confidence of the world and enlist ever-broader support in our efforts to put down and prevent aggression.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of August 13, 1951]

STRICTLY BUT STRICTLY PHONY

Americans should beware of being fooled by the Russian Government's latest tactic in the cold war.

The "peace" message sent to President Truman from Soviet President Shvernik is no peace message at all. It is a double-edged propaganda device.

It obviously was written for the Russian masses and as material for United States Communist stooges. It is designed to intensify the suspicion and fear of Russians against America. It tries to convince the American people that it is our elected leaders, and not the Kremlin bosses, who poise the world on the edge of atomic warfare.

The proposal for a five-power peace pact is not new. This was contained in a Soviet resolution turned down as mere propaganda by the United Nations last November.

The latest piece of double talk from the lords of the Kremlin contains downright lies. It says the Soviet Union made repeated proposals for a peaceful settlement of the Korean conflict. Those proposals were blackmail demands, from Stalin himself, that his Red Chinese pals be admitted to the U. N. and allowed to take over Formosa. These had nothing to do with Korea's right to self-government.

And get this. The Russians say flatly that as a result of their recent intervention there has been "a cessation of military activities in Korea."

That's the tip-off that the resolution is primarily designed for home consumption. Russians are being led to believe the war in Korea is over, as a result of kindly suggestions from peace lover Stalin.

It is obvious that the Russian bosses wrote their latest literary epic as an answer to the resolution of friendship for the Russian people passed by Congress and sent to Russia by President Truman on July 7.

In the month that has elapsed, the Russian press hasn't touched the resolution. Every day the Voice of America taunted the Russian leaders to print it. Now that they have rigged up a reply, we can expect America's friendship resolution to be passed on to the Russian people, along with the lying rebuttal.

Much is being made in some circles over the fact that the latest message from the Soviet Union follows other "peace overtures." These include Soviet U. N. Delegate Malik's suggestion for a truce in Korea, the publication of a new English-language periodical, News, which takes a friendly attitude toward outside nations, and the revival of the Soviet line about peaceful coexistence.

The record shows Russia talks peace out of one side of her mouth and strife out of the other.

In 1946 Stalin talked about "friendly and lasting cooperation" while his delegates were torpedoing the Baruch plan for international control of atomic energy. In 1947 Stalin told Harold Stassen he wanted to cooperate with the United States, and 2 months later Russia withdrew from a conference on the Marshall plan.

In 1948 Stalin sent a peace message about coexistence to Henry Wallace which was followed shortly afterward by the seizure of Czechoslovakia and the blockade of Berlin.

The Korean war was triggered off 3 months after the phony Stockholm peace hullabaloo.

And, even while Shvernik makes his play to the American people, Communists are whooping it up against us in East Berlin. The Soviet press tells Russians that displaced persons from Europe are being sold into slavery in the United States. And Pravda, the official Kremlin paper, reminded its readers less than 3 weeks ago of Stalin's

own words that "the Soviet Union is the base of the world revolutionary movement."

In the latest Soviet policy statement, the claim is made that "the Soviet Union has no aggressive plans and does not threaten any country or any people."

This will be grimly humorous to the Poles and Czechs who are caught in the Soviet embrace. It will hardly be convincing enough to relax conditions in Yugoslavia or Iran.

This country must always be ready to talk peace any time that the Russians show sincere signs that they are not engaging in a Marxist tactic of strategic but temporary retreat from their goal of world domination.

But while the Kremlin sends out peace doves (chiseled out of ice in this cold war) General Ridgway is getting a taste of what it's actually like to try to get real peace with the Communists. They are slippery. They break agreements.

General Ridgway is showing on a small scale how we must deal with the Russians on a big scale:

Meet with them. Talk with them. But be ready for a double cross and be prepared to shoot from the hip. (From the Chicago Daily Sun-Times.)

(Presented as a public service by International Latex Corp., Playtex Park, Dover, Del.)

The Forgotten Man

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Forgotten Man," written by William G. Sumner and published in the United States News of several years ago. The editorial still seems to be highly up to date.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the United States News of November 2, 1936]

THE FORGOTTEN MAN

(By William Graham Sumner)

Now who is the forgotten man? He is the simple, honest laborer, ready to earn his living by productive work. We pass him by because he is independent, self-supporting, and asks no favors. He does not appeal to the emotions or excite the sentiments. He only wants to make a contract and fulfill it, with respect on both sides and favor on neither side. He must get his living out of the capital of the country. The larger the capital is, the better living he can get. Every particle of capital which is wasted on the vicious, the idle, and the shiftless is so much taken from the capital available to reward the independent and productive laborer.

But we stand with our backs to the independent and productive laborer all the time. We do not remember him because he makes no clamor; but I appeal to you whether he is not the man who ought to be remembered first of all, and whether, on any sound social theory, we ought not to protect him against the burdens of the good-for-nothing.

In these last years I have read hundreds of articles and heard scores of sermons and speeches which were really glorifications of the good-for-nothing, as if these were the

charge of society, recommended by right reason to its care and protection. We are addressed all the time as if those who are respectable were to blame because some are not so, and as if there were an obligation on the part of those who have done their duty toward those who have not done their duty.

Every man is bound to take care of himself and his family and to do his share in the work of society. It is totally false that one who has done so is bound to bear the care and charge of those who are wretched because they have not done so. The silly popular notion is that the beggars live at the expense of the rich, but the truth is that those who eat and produce not, live at the expense of those who labor and produce.

LOTS OF OUR LAWS MERELY CREATE JOBS

I have shown how, in times past, the history of States has been a history of selfishness, cupidity, and robbery, and I have affirmed that now and always the problems of government are how to deal with these same vices of human nature. People are always prone to believe that there is something metaphysical and sentimental about civil affairs, but there is not. Civil institutions are constructed to protect, either directly or indirectly, the property of men and the honor of women against the vices and passions of human nature.

In our day and country, the problem presents new phases, but it is there just the same as it ever was, and the problem is only the more difficult for us because of its new phase which prevents us from recognizing it. In fact, our people are raving and struggling against it in a kind of blind way, not yet having come to recognize it. More than half of their blows, at present, are misdirected and fall of their object, but they will be aimed better by and by.

There is a great deal of clamor about watering stocks and the power of combined capital, which is not very intelligent or well-directed. The evil and abuse which people are groping after in all these denunciations is jobbery.

By jobbery, I mean the constantly apparent effort to win wealth, not by honest and independent production, but by some sort of a scheme for extorting other people's product from them. A large part of our legislation consists in making a job for somebody.

MUCH WASTE IN MISUSE OF PUBLIC FUNDS

Public buildings are jobs, not always, but in most cases. The buildings are not needed at all or are costly beyond what is useful or even decently luxurious. Internal improvements are jobs. They are carried out, not because they are needed in themselves, but because they will serve the turn of some private interest, often incidentally that of the very legislators who pass the appropriations for them.

A man who wants a farm, instead of going out where there is plenty of land available for it, goes down under the Mississippi River to make a farm, and then wants his fellow citizens to be taxed to dike the river so as to keep it off his farm.

The California hydraulic miners have washed the gold out of the hillsides and have washed the dirt down into the valleys to the ruin of the rivers and the farms. They want the Federal Government to remove this dirt at the national expense.

The silver miners, finding that their product is losing value in the market, get the Government to go into the market as a great buyer in the hope of sustaining the price.

The National Government is called upon to buy or hire unsalable ships; to dig canals which will not pay; to educate illiterates in the States which have not done their duty at the expense of the States which have done their duty as to education; to buy up

telegraphs which no longer pay; and to provide the capital for enterprises of which private individuals are to win the profits.

We are called upon to squander millions on swamps and creeks; millions on the Mississippi River, and many more millions to pensions. This is the great plan of all living on each other. The pensions in England used to be given to aristocrats who had political power, in order to corrupt them. Here the pensions are given to the great democratic mass who have the political power, in order to corrupt them.

We have several hundred thousand Federal officeholders and I do not know how many State and municipal officeholders. Of course public officers are necessary and it is an economical organization of society to set apart some of its members for civil functions, but if the number of persons drawn from production and supported by the producers while engaged in civil functions is in undue proportion to the total population, there is economic loss.

If public offices are treated as spoils or benefices or sinecures, then they are jobs and only constitute part of the pillage.

VOTERS REALLY ARE TO BLAME FOR BAD LAWS

On every hand you find this jobbery. The Government is to give every man a pension, and every man an office, and every man a tax to raise the price of his product, and to clean out every man's creek for him, and to buy all his unsalable property, and to provide him with plenty of currency to pay his debts, and to educate his children, and to give him the use of a library and a park and a museum and a gallery of pictures. On every side the doors of waste and extravagance stand open; and spend, squander, plunder, and grab are the watchwords.

We grumble some about it and talk about the greed of corporations and the power of capital and the wickedness of stock gambling. Yet, we elect the legislators who do all this work. Of course, we should never think of blaming ourselves for electing men to represent and govern us, who, if I may use the slang expression, give us away. What man ever blamed himself for his misfortune? We groan about monopolies and talk about more laws to prevent the wrongs done by chartered corporations. Who made the charters? Our representatives. Who elected such representatives? We did. How can we get bad lawmakers to make a law which shall prevent bad lawmakers from making a bad law? That is, really, what we are trying to do.

If we are a free, self-governing people, all our misfortunes come right home to ourselves and we can blame nobody else. Is anyone astonished to find that men are greedy, whether they are incorporated or not? Is it a revelation to find that we need, in our civil affairs, to devise guaranties against selfishness, rapacity, and fraud? I have ventured to affirm that Government has never had to deal with anything else.

THE FORGOTTEN MAN IS MADE TO FOOT THE BILL

Now, I have said that this jobbery means waste, plunder, and loss, and I defined it at the outset as the system of making a chance to extort part of his product from somebody else. Now comes the question: Who pays for it all? The system of plundering each other soon destroys all that it deals with. It produces nothing. Wealth comes only from production and all that the wrangling grabbers, loafers, and jobbers, get to deal with comes from somebody's toil and sacrifice. Who, then, is he who provides it all? Go and find him and you will have once more before you the forgotten man.

You will find him hard at work because he has a great many to support. Nature has done a great deal for him in giving him a fertile soil and an excellent climate, and he

wonders why it is that, after all, his scale of comfort is so moderate. He has to get out of the soil enough to pay all his taxes and that means the cost of all the jobs and the funds for all the plunder.

The forgotten man is delving away in patient industry, supporting his family, paying his taxes, casting his vote, supporting the church and the school, reading his newspaper, and cheering for the politician of his admiration, but he is the only one for whom there is no provision in the great scramble and the big divide.

Such is the forgotten man. He works, he votes, generally he pays—but he always pays—yes, above all, he pays. He does not want an office; his name never gets into the newspaper except when he gets married or dies. He keeps production going on. He contributes to the strength of parties. He is flattered before election. He is strongly patriotic. He is wanted wherever, in his little circle, there is work to be done or counsel to be given. He may grumble some occasionally to his wife and family, but he does not frequent the grocery or talk politics at the tavern.

Consequently, he is forgotten. He is a commonplace man. He gives no trouble. He excites no admiration. He is not in any way a hero (like a popular orator); or a problem (like tramps and outcasts); nor notorious (like criminals); nor an object of sentiment (like the poor and weak); nor a burden (like paupers and loafers); nor an object out of which social capital may be made (like the beneficiaries of a church and state charities); nor an object for charitable aid and protection (like animals treated with cruelty); nor the object of a job (like the ignorant and illiterate); nor one over whom sentimental economists and statesmen can parade their fine sentiment (like inefficient workmen and shiftless artisans). Therefore, he is forgotten.

All the burdens fall on him, or on her, for it is time to remember that the forgotten man is not seldom a woman.

GOVERNMENT IS ADDING TO HIS BURDENS

It is plain enough that the forgotten man and the forgotten woman are the very life and substance of society. They are the ones who ought to be first and always remembered. They are always forgotten by sentimentalists, philanthropists, reformers, enthusiasts, and every description of speculator in sociology, political economy, or political science.

If a student of any of these sciences ever comes to understand the position of the forgotten man and to appreciate his true value, you will find such student an uncompromising advocate of the strictest scientific thinking on all social topics, and a cold and hard-hearted skeptic toward all artificial schemes of social amelioration.

If it is desired to bring about social improvements, bring us a scheme for relieving the forgotten man of some of his burdens. He is our productive force which we are wasting. Let us stop wasting his force. Then we shall have a clean and simple gain for the whole society.

The forgotten man is weighted down with the cost and burden of the schemes for making everybody happy, with the cost of public beneficence, with the support of all the loafers, with the loss of all the economic quackery, with the cost of all the jobs. Let us remember him a little while. Let us take some of the burdens off him. Let us turn our pity on him instead of on the good-for-nothing. It will be only justice to him, and society will greatly gain by it.

THREATS TO SECURITY OF HIS EARNINGS

The forgotten man is never a pauper. He almost always has a little capital because it belongs to the character of the man to save something. He never has more than a little.

He is, therefore, poor in the popular sense, although in the correct sense he is not so. I have said already that if you learn to look for the forgotten man and to care for him, you will be very skeptical toward all philanthropic and humanitarian schemes. It is clear now that the interest of the forgotten man and the interest of the poor, the weak, and the other petted classes are in antagonism. In fact, the warning to you to look for the forgotten man comes the minute that the orator or writer begins to talk about the poor man. That minute the forgotten man is in danger of a new assault, and if you intend to meddle in the matter at all, then is the minute for you to look about for him and to give him your aid.

Hence, if you care for the forgotten man, you will be sure to be charged with not caring for the poor. Whatever you do for any of the petted classes wastes capital. If you do anything for the forgotten man, you must secure him his earnings and savings, that is, you legislate for the security of capital and for its free employment; you must oppose paper money, wildcat banking, and usury laws and you must maintain the inviolability of contracts. Hence you must be prepared to be told that you favor the capitalist class, the enemy of the poor man.

What the forgotten man needs, therefore, is that we come to a clearer understanding of liberty and to a more complete realization of it. Every step which we win in liberty will set the forgotten man free from some of his burdens and allow him to use his powers for himself and for the commonwealth.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Irony Fearfulness Is Delaying the Seaway," published in the Minneapolis Star of August 11, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN IRONIC FEARFULNESS IS DELAYING THE SEAWAY

Leo Sonderegger's reports on the St. Lawrence seaway project, now running in the Star, are a fine example of how a fresh eye sees things that a tired eye misses. Sonderegger recently came to the Star from the Providence (R. I.) Bulletin.

As he makes acquaintance with the seaway project for the first time, Sonderegger reacts with something like amazement that this entirely logical North American internal development should have been delayed so long.

To upper midwesterners who have lived for years with the self-serving obstructionism, the interregional log-rolling, and seaboard short-sightedness that have blocked the project, these snares seem a sort of fact of life to be accepted like human orneriness.

To a newcomer, encountering them for the first time, they seem shocking in the light of the resources wasted and the senseless hobbles placed on the free growth of the country's great and growing heartland.

The delay in completing the seaway puts the country in an almost shameful position. America could divert the waters of the Colo-

rado to southern California, turn the State's Central Valley into a productive garden, harness the energies of the Tennessee and the Columbia—but the most logical development of all it cannot touch.

And this is the same country that can find billions for the development of Europe and Asia, and that talks of point 4 programs for undeveloped areas.

Sonderegger discovers that interests that have blocked the seaway for years now concede they can't block it much longer. The key to this is the brutal fact that either a channel to deep water will be opened to let in offshore iron ore, or the steel industry will leave the Great Lakes Basin.

To a long-time supporter of the seaway like the Star, this has been obvious for some time. It has also been obvious that when the seaway opens, established patterns of commerce and transportation in the upper Midwest will be wrenched and shifted.

Fear of the stresses a new transportation artery will cause—unwillingness to embrace change in confidence that it will mean progress—is at the bottom of the decisive margin of remaining opposition. This fear is an ironic thing.

In the committee vote that postponed the seaway yet another year, Republican members of the committee voted almost solidly for delay. Had two minority members switched to support, the project would have carried.

The irony of all this is that it was the Republican Party that opened the public purse nearly a century ago to push the railways across the western prairies and mountains before there was anything for the railways to haul.

Price Roll-Backs and the Capehart Amendment

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. DOUGLAS. Mr. President, Woodrow Wilson once said that the Congress is divided into three branches: the House, the Senate, and the conference committees. Of necessity, the conference committee, in ironing out differences between a House and a Senate version of a bill and in reaching compromises, must be given extensive powers in the writing of legislation.

The conference committee on the Defense Production Act amendments of 1951 sat through long, punishing hours, and worked diligently to bring out a bill under heavy pressure from an impending deadline of July 31, when the basic law was to expire. So what I say is not meant in the way of criticism.

It should be remembered, however, that one of the most important provisions of the conference report, which has since come to be known as the Capehart amendment, dealing with limitations on price roll-backs, was suggested in the early hours of the morning, after an exceptionally long session, and was adopted by the Senate little more than 12 hours later. It is virtually impossible for any group to foresee the ramifications of such an amendment in so short a time.

Now there has been time to study the amendment and we know more about what it means. Mr. Alfred Friendly, of the Washington Post, has written a clear and comprehensive article about the effects of the so-called Capehart amendment, which appeared in the Washington Post of August 13, which I ask be inserted in the Appendix of the RECORD.

One of the purposes of placing a limitation on roll-backs, I believe, was to reduce the uncertainties under which business would have to operate. The conclusion I draw, both from letters I have been receiving and from this article, is that the Capehart amendment has not reduced, but has added to the uncertainties of business activity.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW LAW FELT LIKELY TO FORCE PRICES UP
(By Alfred Friendly)

The amendments to inflation control legislation recently adopted by Congress permit prices to be stabilized—but on a plateau substantially higher than at present and at a date still far in the future.

This is the judgment of officials whose job it has been to analyze the new law and to try to carry it out. They have determined on a policy of tough enforcement, but are frank to admit that in certain fundamental areas, administrative problems are almost insuperable.

The result, they feel, is that the law will serve as a positive impetus to higher prices, literally commanding that ceilings be raised.

STRONG ENFORCEMENT PLANNED

Economic Stabilizer Eric A. Johnston was reported to have told the President's Defense Mobilization Board last week that as a result of the amendments Congress made in extending the Defense Production Act, living costs will rise from 5 to 8 percent in a year's time.

Top officials of the Office of Price Stabilization see it about the same way.

Confronted with several possible courses of action on the law, the administration has determined to seek as strong an enforcement of the measure as it can. The alternative, which was to decontrol entirely, in the hope that a free market would lead to a stable price level not too much higher than that obtainable under the feeble law, was an attractive one, but was finally rejected.

The principal reason for this decision, it is known, is the world shortage of metals. Without price controls, items such as copper, zinc, steel, aluminum, and some of the special nonferrous alloy elements would soar out of sight—and inevitably drive other prices up with them.

WORST SINGLE FEATURE

OPS and other administration figures concerned with stabilization are agreed that the worst single feature in the new law is the so-called Capehart amendment.

Dreamed up at 3 o'clock one morning in a Senate-House conference committee meeting, it is more inflationary than any provision in the bills when they originally passed in either Chamber.

It provides that no matter what ceiling OPS may provide for an item or an industry, any person may obtain a price ceiling for his product that reflects all his added costs from the period before Korea until July 26, this year.

Previously, the OPS policy was to set price ceilings based on the pre-Korean level plus all direct cost increases since then, that is, increases in the cost of labor and materials, for the most part. As long as the industry's profits were maintained at previous average

levels, the individual manufacturer had to absorb any increases in indirect costs, such as overhead, advertising, selling, etc.

TRICKS OF ACCOUNTING

Now, however, a manufacturer can obtain a ceiling that reflects increases in all his costs, direct and indirect.

At first glance, that sounds fair enough. But the curious fact is that most manufacturers simply do not know what their unit costs are. Not 1 out of 10 has records that really show the increase of his indirect (as distinct from labor and materials) costs since Korea.

Moreover, in the present stage of the art, one man's cost accounting can be just about what he wants it to be.

A revealing example is an experiment made by a rubber company which figured out the unit cost of one of its products by six different systems of accounting, all acceptable as proper methods. The result was six different figures, varying from the lowest to the highest by 100 percent.

Suppose that manufacturers apply to OPS for 100,000 new ceilings, a moderate estimate. Suppose also OPS can examine their books and records and verify their costs in 3 days, an equally overoptimistic assumption. That would mean some 300,000 man-days of work to be done, necessitating the doubling or tripling of the OPS staff. And even if the job were undertaken, it would be, as indicated above, almost impossible to challenge the cost figures presented by each company in the first place.

As a practical matter, then, OPS is left in the position of pretty much having to grant every higher ceiling price that is demanded. If any industry-wide price is set, it will have to be at the cost level, figured by the Capehart amendment system, of the highest-cost producer.

COULD EXPORT INFLATION

Under the amendment, a manufacturer could buy some metals abroad, at black-market prices double or triple the present domestic ceilings, and force OPS to set a ceiling for his product that reflected the black-market price of the metal. The effect of such a practice on driving up the world price of scarce metals, and exporting our own inflation to our allies abroad is obvious.

The large auto companies have already applied to the OPS for price increases under the Capehart amendment averaging 9 percent. Those increases, plus the higher prices now going into effect for barbers and beauty shops—the new law exempted them from all price ceilings—will alone account for about 1-percent increase in the cost of living, officials calculate.

Another damaging provision in the new law provides that wholesalers and retailers must be allowed to take their pre-Korean percentage mark-ups on the things they sell.

Previously, OPS had restricted them to their old dollars-and-cents margins. Thus, earlier this year when a 3-percent price increase was granted to the auto makers, the percentage increase to the consumer was only about 2 percent, for the seller was allowed to add to his price only the exact amount of the increase to the manufacturer.

Note how this will work in the future. Say that a wholesaler buys a product for \$10, applies a 30-percent mark-up and sells it for \$13. Assume that under the Capehart amendment, a new price ceiling for the manufacturer is set at \$12. Under previous OPS policy, the wholesaler could add his former dollars-and-cents margin, \$3, and sell the article for a new price of \$15.

LIKE ROLLING SNOWBALL

Now, however, he can continue adding his 30 percent, and sell the product at 30 percent above his \$12 cost, at \$15.60.

This addition of the percentage mark-up can and will accumulate like a rolling snow-

ball, at every selling stage from the manufacturer up through the jobber and retailer.

With price ceilings subject to advances of this sort, and with profits therefore mounting, the reaction of labor is not hard to figure out. Under such conditions, the attempt to keep pay ceilings at more or less their present levels will be doomed.

Officials think it makes little sense even to attempt holding the line at its present point and are struggling only to keep wage increases down to a fair ratio with price jumps.

Government analysts of the new legislation believe that not until most of all the added costs up to last July 26 have been taken into account in new and higher price ceilings, can the cost of living once again be stabilized as it has been for the past 3 or 4 months.

The upward adjustments, they think, will go on for the next 9 to 12 months.

Moral Rearmament

**EXTENSION OF REMARKS
OF**

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. SMATHERS. Mr. President, last week a graphic record of how the principles of moral rearmament have helped to settle many business and labor troubles in Miami, Fla., was brought to the attention of Congress in special ceremonies in the offices of the Speaker of the House and the Secretary of the Senate here in the Capitol Building. The record has been compiled in a book entitled "An Idea Takes Wings," which was presented to Mr. RAYBURN and Mr. Biddle.

Presentation of the book was made by the entire crew of a National Airlines DC-6 with members of the Florida delegation attending the ceremony. A message to the Senate and House from Mayor William M. Wolfarth, of Miami, was presented along with the book.

The National Airlines crew, which is based in Miami, was selected to make the presentation because a threatened pilot strike was brought to a screeching halt last January when the pilots and management of the airline announced they had reached complete agreement on a long list of grievances after both sides had applied to the dispute the principles of moral rearmament—complete honesty and not who is right but what is right.

Members of the National DC-6 crew participating were Capt. Samuel Stola, First Officer W. H. Wieland, Flight Engineer William McKendree, and Stewardesses June MacDonald and Nina Davis.

The presentation here in Washington is a part of a world-wide plan conceived by Mayor Wolfarth and a group of Miami-based pilots to take this Miami story to all of the principal cities touched by airlines operating out of Miami, including North and South America and the capitals of Western Europe. For example, Pan American World Airways pilots are delivering copies of the book to 45 Latin-American cities, all on the same day, August 16.

Copies of this book will be distributed to all Members of Congress.

Mr. President, I ask unanimous consent to include in the RECORD the story from the Miami Herald of July 4, 1951, announcing this plan, plus the text of the letter which Mayor Wolfarth is sending to Members of Congress with the booklet *An Idea Takes Wings*.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

IDEA ON WINGS—PILOTS TO FLY STORY OF MRA ACROSS NATION

Airline pilots, sold on moral rearmament for settling their own grievances, will fly that story to two continents.

Plans for the unusual program were laid Tuesday at a meeting of pilots, flight attendants, and MRA leaders with Mayor William M. Wolfarth.

The pilots will deliver personal letters from the Miami mayor to mayors of all principal cities touched by airlines operating out of Miami. With them will go the profusely illustrated booklet called *An Idea Takes Wings*.

This is the story of how principles of MRA stopped a threatened pilots' strike against National Airlines last January. It also is a story of MRA in Miami and of its aims in combating communism.

"We will be salesmen in flight," W. T. Babbitt, regional vice president of the Air Line Pilots Association, said. "We will try to blanket the country with the MRA story."

The plan is for pilots to deliver the letters and booklets in person to the mayors in their offices.

Pan American World Airways pilots have a bit different program. They plan to have senior representatives of the line arrange for airport ceremonies in 45 Latin-American cities where stops usually are no longer than 20 minutes.

"We'll pile the whole crew out of the airplane and make the presentation," Capt. Richard Morrissey said. "It will take about 2 weeks to get things lined up, but we expect to be able to cover the whole of Latin America in 24 hours."

CITY OF MIAMI, FLORIDA,
August 6, 1951.

Senator GEORGE A. SMATHERS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: It is with a great deal of interest that I take this opportunity to call your attention to the wonderful work that is now being accomplished through moral rearmament.

I am enclosing a booklet, *An Idea Takes Wings*, which tells how a near miracle in improved human relations was wrought earlier this year in Miami, Florida, my city.

Through moral rearmament, the great force to which I referred above, a long-drawn-out misunderstanding between pilots and management of National Airlines was settled. Mistrust was replaced, almost magically, by mutual respect and complete agreement. This has been followed by equally impressive developments in other airlines.

The booklet tells how these and other magnificent victories of moral rearmament have caught the imagination of this community and of many leaders of American life throughout the Nation.

This booklet tells how a great and growing force for good will and peace among men might well end up in saving the world from the chaos toward which it sometimes seems to be heading and I feel sure you would like to have a part in this wonderful work.

Very sincerely,

WILLIAM M. WOLFARTH,
Mayor of Miami, Fla.

The Delaware Memorial Bridge

EXTENSION OF REMARKS

OF

HON. J ALLEN FREAR, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which appears in the souvenir program issued for the celebration of the dedication of the Delaware River Memorial Bridge, which will take place tomorrow, August 15. The statement was prepared by Mr. J. H. Tyler McConnell, of the Delaware State Highway Department, and Mr. W. A. McWilliams, chief of the Delaware River crossing division.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE DELAWARE MEMORIAL BRIDGE

The Delaware Memorial Bridge, containing the sixth longest suspension span in the world, is the culmination of 2½ years of dramatic marine and highway construction which was preceded by many years of careful planning and study. It involved the expenditure of some \$44,000,000 and for the first time physically connects the States of Delaware and New Jersey. By connecting these great States with a four-lane divided highway of concrete and steel, it affords a vital and much-needed link in their respective highway systems and greatly strengthens the transportation network of the Nation.

Pleasure, business, and commercial vehicles traveling along the Atlantic seaboard, whether between the great industrial areas such as Boston, New York, Philadelphia, Wilmington, Baltimore, and Washington, or from any of the metropolitan areas of the East to Florida or the Southeast, will find that the use of the bridge will save them at least half an hour and frequently many times that in crossing the Delaware River. When used in conjunction with the soon-to-be-completed New Jersey Turnpike, a saving of several hours can be realized. During the first year of operation it is anticipated that the average daily traffic over the bridge will be 13,000 vehicles and that on peak days over 30,000 vehicles may use the bridge. The bridge is designed to accommodate any vehicle regardless of size or weight which could legally operate over the highways of the State, even though such vehicles were lined bumper to bumper over the four lanes of the bridge.

The Delaware Memorial Bridge will keep alive and improve those American habits of industry and pleasure which have so unalterably committed this country to highway transportation. In order that these benefits may be enjoyed at once, the bridge is being opened to traffic immediately upon its structural completion even though such use is in advance of the final completion of painting, lighting, and other finishing work.

The bridge, including its approaches, extends for a distance of 3½ miles with the bridge itself measuring more than 2 miles from abutment to abutment. It has a suspended span of 2,150 feet in the center with side suspended spans of 750 feet each. The clearance under the center span is 190 feet above mean high-water which is sufficient to permit the channel underneath to accommodate the largest naval and commercial vessels afloat. This is a necessary requirement since the Delaware River alone affords access to the port of Philadelphia,

its large navy yards, and other shipping centers which crowd its shore.

The piers of the two main towers of the bridge extend 89.5 and 118.5 feet, respectively, below the average river level to a foundation of stiff marine clay. The cables over the tops of these towers are 440 feet above the water, giving to the structure a maximum over-all height of 558.5 feet, which is roughly equivalent to the height of a 45-story office building.

The huge anchorages which hold the ends of the cables on which the actual bridge floor is suspended have over-all heights of 233 and 257 feet, respectively. Two hundred and twenty automobiles could be parked on the area of clay covered by one of these anchorages, the lowest portion of which rests under water in a 32-foot thick layer of 27,000 cubic yards of concrete which required seven and one-half continuous days to pour. The concrete in one anchorage alone is sufficient to have paved a 24-foot wide concrete highway for a distance of 23 miles, and contains over 5,000 tons of steel.

The clay beneath the major foundations was compressed during construction and will continue to consolidate at a decreasing rate until final stability is attained. During the construction period, these massive supports have settled an average of 3 inches, which is actually less than was predicted. An additional downward movement of about 4 inches is anticipated before they come to final position after some 50 or more years of use.

The towers, cables, suspending and suspended structure contain over 20,000 tons of steel and enough pencil-sized wire in the cables to measure 50 times around the State of Delaware. The total amount of structural steel used throughout the entire project is approximately 43,000 tons. Notwithstanding this, the structure is necessarily designed to perform in a flexible manner. Under various conditions of loading, winds, and temperatures, the tops of the towers are expected to move as much as 14 inches toward the shore line and up to 15 inches toward the main span. The accompanying up and down motions at the center of the main span will raise the roadway 4 1/4 feet or lower it 6 1/2 feet. Under the greatest anticipated wind velocity, the main suspended span may move as much as 8 1/2 feet from its normal position. All such movements, however, occur so slowly and cover such a period of time as to render it imperceptible except with instruments.

The entire planning and construction of the project was carried on under the direction of the Delaware State Highway Department and was financed on a self-amortizing basis by bond issues authorized by the Legislature of the State of Delaware. The completed project is dedicated as a magnificent memorial to those men and women of the State of Delaware and of the State of New Jersey who gave their lives in the Armed Forces of the United States of America during World War II.

J. H. T. McCONNELL,
W. A. McWILLIAMS,

WILMINGTON, DEL., August 1, 1951.

The St. Lawrence Story—III

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third of a series of articles entitled "The St. Lawrence Story,"

which appeared in the August 9 edition of the Minneapolis Star. This article deals with the power aspects of the St. Lawrence seaway and power project:

THE ST. LAWRENCE STORY—GREAT SOURCE OF POWER WASTED AS SEAWAY LAGS

(By Leo Sonderegger)

(Third of a series)

The mightiest undeveloped source of hydro-electric power on the North American Continent is bleeding its strength into the Atlantic because Congress has not approved the St. Lawrence project.

Since the enabling agreement between Canada and the United States was negotiated in 1941, more than 18,000,000 kilowatts of power that could have been produced from the Long Sault has drained away.

Since the original treaty with Canada was signed in 1832, the loss has amounted to nearly 36 million kilowatts.

Those figures compare with annual needs of about 300,000 kilowatts to run the city of Minneapolis. If the comparison were made on the basis of kilowatt hours, the unit that home electric users find on their monthly bills, the figures for Minneapolis would be well over the billion mark. Those for the Long Sault project would be astronomical.

A little arithmetic produces the fact that six cities the size of Minneapolis could have been lighted and powered by the Long Sault's energy during all those years.

PROJECT RANKS WITH GRAND COULEE

This kind of figuring is not entirely fair to those who oppose the project. It ignores the obvious fact that there will have to be a long period of hard work between official approval and the actual production of power.

But the figures translate into tangibles the meaning of the congressional delay. And they underline the magnitude of this phase of the St. Lawrence development.

The biggest power project in the world is Grand Coulee Dam. Its ultimate capacity will be 1,974,000 kilowatts. At present, following installation of the sixteenth of 18 generators just last April, its capacity is 1,758,000 kilowatts.

That is slightly under capacity of the projected Barnhart Island powerhouse on the St. Lawrence. There, the Long Sault will generate 1,881,000 kilowatts to be divided equally between Canada and the United States.

TREMENDOUS WATER FLOW IS UNIFORM

A good measuring stick in the Midwest is the Missouri Basin development, with its several dams scattered over many hundreds of miles. Initial capacity now under construction is something over 600,000 kilowatts. Another 1,782,000 kilowatts has been authorized.

Two things give the St. Lawrence River its prime value as a source of hydroelectric power. One is its tremendous flow, an average of some 237,000 cubic feet per second. The other is the uniformity of that flow.

The seaway is a series of steps from Lake Superior, 601 feet above sea level, to the Atlantic. The descent of this staircase by a great bulk of water builds up vast energy.

The long row of turbines spinning at Barnhart Island would extract some of that energy to the tune of 2,200,000 horsepower a year.

The Great Lakes not only account for the size of the flow, but they provide a reservoir which keeps it remarkably uniform through wet months and dry. The maximum flow is only a little more than twice the minimum.

That is of major importance in the production of power. The engineers don't have to worry about creating a new reservoir. They already have one containing about half the world's sweet water.

On other big power-producing streams the problem of variation in flow is much greater. TVA engineers, for example, had to contend with a ratio of 115 to 1 between maximum and minimum flow on the Tennessee River in the Wilson Dam area. At the Bonneville Dam site on the Columbia River the ratio was 33 to 1.

Two dams and a powerhouse are contemplated to harness the Long Sault Rapids. The main works would be footed on Barnhart Island in the vicinity of Massena, N. Y.

A dam would connect the American shore with the island. And from the other side of the island the 3,600-foot powerhouse, really an extension of the dam, would be pushed across to the Canadian shore.

About 22 miles upstream, near the start of the International Rapids section, a control dam is planned at Iroquois Point. This would regulate the flow and maintain the normal Lake Ontario level.

ONTARIO, NEW ENGLAND, NEW YORK NEED POWER

The power generated by these works will have no direct effect in the Midwest. Its impact on the national economy will be relatively minor except in an important but narrow field. In the Northeast and lower Ontario, however, it will mean new strength for years to come.

A 300-mile circle drawn with Barnhart Island as its center encloses an area with a growing and thus far insatiable appetite for electrical energy. The need is great in New York and the New England States. In Ontario it is acute.

Lionel Chevrier, Canadian minister of transport, has pointed out that the Long Sault is Ontario's last chance. If that is not exploited, the province will be forced to turn to steam plants to keep the wheels of its expanding industry going.

Steam plants, which virtually double the cost of power, are the alternative to hydroelectric developments in the Northeast, also.

Ontario and New York State have sought to develop the St. Lawrence power themselves. They want permission to go ahead and let the navigation phase come along whenever Congress gives the nod.

The Federal Power Commission turned down their application after public hearings. This action was taken because the Commission, according to its chairman, concluded that the power project "should be undertaken by the United States itself as a part of the St. Lawrence development."

FOES CLAIM POLICY HIDES REAL REASON

Opponents have not hidden their suspicion that the real reason can be stated more boldly. They say the administration fears that permitting New York to construct the power facilities would rob the seaway project of strong eastern support.

It is clear that the administration does fear this. John E. Burton, chairman of the power authority of the State of New York, put the matter bluntly:

"They (the administration) in effect have held power in the New York area in ransom to bring along the seaway."

This may or may not be the administration's chief motive in insisting that the seaway and power project be considered as a unit. Actually, the question is not vital.

One point stressed by those favoring the seaway is worth particular attention. Plentiful, cheap power, they say, is increasingly important in the production of defense—or war—matériel. Our shield of airpower is a shield of aluminum, and power in a quantity is a prime requisite for manufacturing aluminum.

ALUMINUM PLANT NEEDS CHEAP POWER

It happens—but really by design, seaway opponents hint—that one of the Nation's major aluminum plants is located at Massena, N. Y. That is almost on the site of the proposed dam and powerhouse. This plant turned out great quantities of aluminum for

World War II. It was reactivated not long ago.

To keep on producing, the Massena plant has to draw its power from some distance away. It does not have access to the thundering energy of the St. Lawrence but uses power generated by coal and steam.

Because of that, the Government is paying a premium of 6 cents a pound for every pound of aluminum the plant manufactures.

South Carolina's Fourfold Pattern of Progress

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. DORN. Mr. Speaker, South Carolina's remarkable economic progress is attracting the attention of the entire Nation. This development is reaching phenomenal proportions. South Carolina has the climate, natural resources, and a people unsurpassed. The State has a sound progressive legislature and its chief executive is internationally famous and respected, in addition to being an excellent governor. The story of South Carolina's growth and the opportunity it offers can be obtained from Gov. James F. Byrnes or the Honorable Charles Plowden, the able director of our research, planning, and development board in Columbia.

Mr. Speaker, the following article deals with the amazing program now under way in South Carolina. This article, from the May 1951 issue of the *Progressive Farmer*, was written by William Poe after a recent trip to South Carolina:

SOUTH CAROLINA'S FOURFOLD PATTERN OF PROGRESS—A DYNAMIC COMBINATION OF AGRICULTURAL, INDUSTRIAL, AND EDUCATIONAL ADVANCES PROMISES BALANCED PROSPERITY FOR THE PALMETTO STATE

(By William D. Poe)

From Clemson to Charleston, from the mountains to the sea. That was the trip we made recently. We saw a lot of South Carolina, heard a lot of its people talk. And we liked what we saw and heard.

In a way, the trip constituted national recognition for the State. For we were accompanying the agricultural committee of the American Petroleum Institute. Eighteen of its members came from all over the United States—one from Canada—to observe South Carolina's progress on the tour arranged by Clemson College.

Beginning with a full day at Clemson, we made a two-day swing across the State by chartered bus. To Anderson, Blackville, Orangeburg, Summerville, and Charleston we went. And before us spread the new State pattern of progress that is bringing with it a richer way of life.

It is a broad pattern of progress—a dynamic pattern. Fourfold in its scope, it embraces:

1. More power.
2. More and better education.
3. "Two-armed farming"—crops balanced with livestock.
4. New industries—agriculture balanced with industry.

Let's see how each of these four elements fits into the picture of progress we found everywhere.

I. THE PLACE OF POWER

"There simply isn't enough power in a mule to support a family. Yet for many years our farmers struggled to prove there is."

So wise Extension Director D. W. Watkins told our group. From 1940 to 1950 the number of tractors in South Carolina increased 487 percent—the greatest increase made by anyone of all the 48 States in the Nation. As the number of tractors has gone up, the number of horses and mules has gone down. On our entire swing clear across the State we saw scores of tractors at work. How many teams of mules? Only two. South Carolina is casting off outmoded methods, is gearing itself with efficient production tools. And an important byproduct of this transition is the release for productive use of thousands of acres formerly required to feed the work stock.

Another vital power development is in rural electrification. In 1939 only 14 percent of the State's farms were electrified. Today only 13 percent are without electric service—87 percent have it. Electricity is generating power for both better farming and better living.

A third form of power we saw is irrigation—the power to supply water when needed. On the truck farm of Newman Buck, Charleston County, we saw a dramatic demonstration of the possibilities of supplementary irrigation. His drainage ditches feed runoff water from heavy rains into three farm ponds. In times of drought, water is then pumped from these three reservoirs onto thirsty crops. We saw his portable system irrigate a large field of cabbage. In a few minutes time he could move it to another field to water another crop.

At Clemson we saw tangible evidence of the State's emphasis on power development. There a modern \$250,000 agricultural engineering building has been completed to project all modern forms of power to the farmer. Keen young Agricultural Engineer George Nutt and his staff are proud of their new building, eager to press it into full service of the State's agriculture.

So much for the first part of the South Carolina pattern for progress; South Carolina is developing the power to do a good, efficient production job.

II. THE RULE OF EDUCATION

But power without knowledge of how to use it is of little value. The farmer needs sound education and guidance to keep abreast of all of today's rapid scientific developments. Clemson College, through its extension service, experiment station, and resident teaching, is constantly advancing vital information. Listen—

Four-H clubs have an enrollment of 51,000 boys and girls, more than 1,100 to the county.

FFA members total 7,299, more than 150 to the county.

Veterans-on-farm training classes have a total of 12,892 enrolled, more than 275 to the county.

What does all this mean? Simply that South Carolina is now developing a whole new generation of farmers who are attuned to science and progress.

The Soil Conservation Service's outstanding job in planning land use and helping farmers conserve soil, water, and timber resources is shown by this fact: Farm plans have been made for almost half the State's individual farms. Free services are available to farmers who request them. "Soil conservation men down here have turned literally worthless land into top-notch pastures and truck farms," a Charleston County farmer told us. The handiwork of these scientific soil savers is written indelibly on the land of the entire State.

County agents, vocational agriculture teachers, soil conservation specialists, experiment station specialists—all are at work in

the vast task of education. And in most cases there seems to be fine cooperation among them. Said Anderson County Agent J. H. Hopkins as he showed us through the county's \$300,000 agricultural building (which incidentally was built without Federal aid): "All agricultural agencies in the county have their offices here. We have a county agricultural council with a representative of each agency as a member. The chairmanship is rotated each year. We work together harmoniously. This cooperative effort has played a big part in our county's progress."

Nor is Negro farm education being neglected. One of the finest dairy herds we saw was at South Carolina A. & M. College, the Negro land-grant college at Orangeburg. This college has 1,288 students, with 150 enrolled in agriculture. Graduates go out over the State to lead their race in farm and industrial progress. Young Negro farm boys have their own organization, similar to FFA, with 1,970 members.

Such is another part of the pattern of progress. Farmers and farm boys are getting sound training for modern farming.

III. BALANCING CROPS WITH LIVESTOCK

"Twenty-five years ago," said Clemson Agronomist H. A. Woodie, "South Carolina was growing 2,000,000 acres of cotton but had almost no pastures worthy of the name. Now the State is growing only about 1,000,000 acres of cotton, but it is pushing hard toward 1,000,000 acres of improved pastures. We are making a successful effort to balance crops with livestock."

Although the coldest winter since 1879 had just ended, we almost never got out of sight of green pastures on our swing from Clemson to Charleston. A few years ago most of these fields now nourishing livestock would have been bare, bleak, and idle—idle except for the erosion that would have been busy after every shower—with farm hands and mules awaiting the cotton planting season.

"Agronomists from other sections say no other area can match the South in livestock production," continued Mr. Woodie. "We have the advantages of (1) a longer growing season, and (2) cheaper land. Also (3) winters are so mild no expensive buildings are needed. Folks are coming into South Carolina by the hundreds from many States. They are buying land we used to think worn out for \$40 an acre and converting it into good pasture."

At Clemson and at Edisto and Summer-ville branch experiment stations we saw intensive work under way on year-round pastures and pasture drainage.

That's another part of the pattern: South Carolina is diversifying its agriculture, is balancing crops with livestock.

IV. BALANCING AGRICULTURE WITH INDUSTRY

"For many years South Carolina has had nearly as great cash income per acre of cropland as Iowa. But we have had five times as many people per land unit as they have. To get greater per capita income we must increase the size of our farms and decrease the number of people on them."

So said Clemson's C. G. Cushman, leader in dairy extension work. Grassland farming requires much less labor than crop-farming and is bringing on just such a translation. And in crop-production tractors are displacing farm hands. Where are the surplus people going—those no longer needed on farms? Into industry, most of them. South Carolina has been one of the leading States in the Nation in increasing industry since the war. And many of its farm people are filling the thousands of jobs that industry is providing.

Since 1945 more than 800 new industries have been built in the State at a total cost of \$385,000,000. Major expansions have been made in more than 1,000 additional

plants at a cost of \$269,000,000. Notable among the new industries is the tremendous Du Pont plant near Camden. The Singer Sewing Machine Co. is building a \$10,000,000 plant near Clemson. The vast textile industry in the Piedmont is booming. Near Charleston there is a potential industrial area of nearly 10,000 acres with a fresh-water supply so abundant it has drawn national attention through a leading article in the Saturday Evening Post.

But by far the most spectacular recent industrial event in the State is the erection of the United States Government's \$600,000,000 H-bomb plant on a site of some 250,000 acres along the Savannah River. This plant will employ an estimated 8,000 workers. Its effect depicts in miniature what the coming of industry is doing all over the State. Farmers in the area know it will make farm labor scarce. They are rushing to buy more farm equipment. This will enable them to tend more land, will eventually mean larger farms.

That rounds out the fourfold pattern of progress: South Carolina is balancing agriculture with industry.

Such is the fourfold pattern we saw spread itself before us as we rolled from the mountains to the sea. It is a dynamic pattern, at times ruthless. But the direction is ever onward and upward. It was fascinating to watch this ancient agricultural State casting off the shackles of a one-crop system and marshaling all its forces for the better day ahead. And South Carolina farmers and agricultural leaders are the vanguard of this new forward march.

Power of Choice

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, August 14, 1951

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address entitled "The Power of Choice," delivered by Archibald MacLeish, at commencement exercises at Radcliffe College, and published in a recent number of the Atlantic Monthly.

There being no objection, the address was ordered to be printed in the Record, as follows:

THE POWER OF CHOICE
(By Archibald MacLeish)

I

What is in question in this country is the survival of the American confidence that men can choose the future.

For some weeks past we have been listening to a national argument which the American press agrees to call the Great Debate. The consensus of opinion seems to be that the press is wrong: that the Great Debate is neither great nor much of a discussion. Senator WILEY's early demand that the highest and most responsible military officer of the Republic be required to testify to what the Senator called personal feelings and private animosities raised understandable doubts as to the elevation of the proceedings. And the effect of the whole dispute on the Congress and the country has been something less than illuminating. When the principal arguments were all in, the popular verdict apparently came to this: that General MacArthur was wholly right and that General MacArthur's opinions were altogether wrong.

Nevertheless the press, for once, was wiser than the people. The confused and interminable altercation now going forward in Washington and in the Republic is, without any doubt whatever, a debate, and the debate deserves the adjective. Upon its issue will depend the kind of country this country is to be.

What is in debate is not merely our policy in the Far East, whether or not the Korean war should have been extended to China. What is in debate is the underlying question General MacArthur was obliged to face when his proposal was challenged on the ground that the extension of the Korean war might mean war with Russia and so a third world war. What is in debate is the view of human history, of the freedom of human choice, which we as Americans are prepared to hold.

In the past it has been our American conviction, a conviction implicit in our actions rather than explicit in our words, that history is made by men, not men by history. It is not only possible, we have thought, but a self-evident truth that a free people, if it possesses the virility and the inventiveness and the daring, can choose for itself the kind of world it wishes to live in and then create that world. A free people is capable, that is to say, of the pursuit of happiness, the pursuit of human happiness. We have not believed that men's lives, or the forms of their societies, or the future to which they are committed, are determined in advance by the patterns of the stars or the prophecies of the books or the necessities of the blood or the character of the countryside into which they are born, or even by the laws of economics. Above all, we have not believed, as older societies believed before us, that the events of human history, either disasters or triumphs, are inevitable.

The whole idea of the inevitable has been repugnant to us. Nothing, we have opined, is inevitable but death and taxes. Anything else in the world can be changed, including—including particularly—the prophecies. Anything else can be changed and, for the most part, has been: forms of government, dogmas of belief, methods of husbandry, habits of life, even the man himself, even the compulsion of the blood, the shape of the head, the length and weight of the body, and the color of the hair. We have had no respect for fate, we worshiped God, not fate. We have had no particular reverence for history; we believed in men, not history. History was the history men made, not the veiled divinity that told them what they had to be.

Our confidence, in brief, was in the future. Which is to say that our confidence was in the power of human choice to make the future. We considered that a free people can make the future for itself, master its destiny.

That was the American position: the position made evident in our actions from the first movement west across the continent; made articulate sometimes also in our words. We had no illusions about the orthodoxy of our view. We knew perfectly well that the great majority of mankind disagreed with us and always had. The orthodox conception of man's place in the universe, man's relation to time and to event, had always been the very different conception that man is the victim of the inevitable, whose only escape from the ineluctable design is to accept it. The authors of that reckless and willful phrase about the pursuit of happiness in the Declaration of American Independence had every reason to know how their affirmation would be received in older, wiser, and less courageous countries. We have learned since, throughout the history of our literature, how stubborn, how bitter, and how vindictive that reaction can be:

how scornfully the believers in fate can speak of our precarious belief in man and in man's future; how sneeringly the servants of determinism can dispose of our "idea of progress," as they choose to call it; how contemptuously the worshipers of certainty can dismiss our self-confidence, our self-reliance, above all the rash implety of our willingness to think for ourselves, and say as we think, and do as we say.

Nevertheless, and until this time, we have held to our convictions. We have nourished an inarticulate belief that there is a relation of some kind between the individual human freedom we mean to have and the rejection of the dogma of inevitability. Freedom and inevitability, we have thought, cannot live together. No nation can be free which does not keep the future open in its people's minds.

Now, it appears, we are no longer certain. The world has changed. The dogma of inevitability has made new converts throughout half the earth, and the menace of their fanatic faith has made still further converts, even among us. Fear has accomplished what persuasion never could. Americans—many Americans it seems—are ready to accept the doctrine of inevitability for themselves and to force it on their fellow citizens. Unless we accept the inevitable, they tell us, the inevitable will destroy us. And the country listens, ponders, doubts. And the issue is joined. The petty debate over the personality of a man becomes the great debate over the destiny of the Republic.

II

The MacArthur controversy is, of course, the occasion of the Great Debate, not the cause. General MacArthur did not invent the view of human history he apparently accepts. The controversy which centers on his name has, however, posed the underlying issue in terms which no one can mistake, and has related it to a decision which the country, largely because of the controversy, can no longer avoid. That decision is a decision affecting our survival as a people and, very probably, the survival of our world.

Only on the surface is the difference between MacArthur and his critics a military difference. Actually it is a difference of belief, a difference of essential philosophy—a difference touching the freedom of the people of the United States to choose, in the greatest dilemma they have ever faced. Fundamentally what General MacArthur and General Bradley disagree about is the freedom of the people of the United States to pursue their traditional policy of peace and the defense of human liberty in the modern world. To General MacArthur the risk of Russian intervention and, so, of world war should not deter us from extending the Korean war to China and winning a victory, because the risk of Russian intervention has already been taken: because events, that is to say, are out of our hands. To General Bradley, the chance of Russian intervention should deter us because events are not out of our hands—because, as the general puts it, we have avoided war with Russia thus far and if we can continue to avoid it long enough we may be able to avoid it altogether.

Neither general knows or pretends to know what Russia will actually do. Both agree that Russia may attack us at any moment—that the rulers of Russia will be restrained neither by humanity nor by moral scruple—only by fear. Both are aware that the Russians themselves regard war between the Soviets and the United States as inevitable—their doctrine of economic determinism makes it so. The difference between the two men is a difference as to our freedom of action under these circumstances. To one, we can still choose between the struggle for freedom and peace on the one hand and world war on the other; to the second, we are already, in effect,

at war—the millstones are turning, the grain must be ground.

This is the difference also between the two opinions which have been formed, regardless of party, behind the principal figures of the debate. Those on the one side talk in terms of what they call realism and courage, by which they mean the realistic acceptance of the inevitability of war, and the courageous adoption in China and, presumably, elsewhere of a policy based upon what they regard as the unblinking recognition of that fact. Those on the other continue to talk in terms of hope, contending that we have not yet lost control of the great election between peace and war; that it is still possible, if we have the courage and the patience, to avoid world war on the one hand and Communist domination of the earth on the other.

To men of the second opinion there is room for maneuver in the narrow strait between these two dangers. We can make ourselves too strong to attack and too important to the world to isolate; the party of peace and the fortress of power; the standard of effective freedom to which men, still free, can rally. We can gain allies for ourselves and arm them. We can strengthen the economy of the free world and build backfires of hope in the exploited areas where hunger and despair make tinder for the Russian torch. We can put together regional alliances—strong points of mutual confidence such as the Atlantic Pact—with in the structure of the United Nations and find means to give the defeated peoples of Germany and Japan a stake in the common future. We can implement the Charter of the United Nations by building out of the United Nations command which already exists in Korea a permanent United Nations police force and so enlist the universal longing for peace behind our purposes rather than the purposes of the Russians. We can turn our faces toward a free and peaceful future for the world, planning it, organizing it as we can under the point 4 program or otherwise, giving mankind a measure of hope instead of a certainty of slaughter, and so breaking the evil spell the Russians, with their alternatives of spiritual slavery or inevitable war, have woven.

III

To men who hold the first opinion—to the realists—all this is folly if not actually something worse than folly. It is folly to talk of avoiding war: we are already at war. So MacArthur: so Wedemeyer. It is nonsense to concern ourselves about what our allies think: our allies have no choice, they will think as we think or go without. So MacArthur: so the McCormick-McCarthy fringe. It is ridiculous to offer relief to suffering peoples: there is no time for relief—we cannot even be sure the grain we send to the starving in India will help us. As for the United Nations and regional alliances and the Atlantic Pact—all this is legalistic trifling. In the last analysis there are only the Russians and ourselves. The chips are down. The time has come to act; to act in China—to act wherever action is necessary—to act, that is, by force.

It is this latter position which reveals the true issue of the great debate. If you ask the realists why the chips are down; why there is no time; why war with Russia and hence world war is inevitable, they will reply, many of them: Because the Russians are committed; because the Russians will allow us no time; because the Russians say war is inevitable. But this can hardly be the actual reason. No American believes, and least of all the patriotic Americans who urge this view upon the country, that the Russians possess the exclusive power to decide the future for us all: that American intentions no longer count in the great decision. Certainly no American who knows

the facts of record could believe anything so humiliating to his country and so false. It has yet to be demonstrated that American determination and persistence, backed by American strength and the strength of our friends in the free world, are incapable of deterring the Russians from an action which would precipitate the most terrible of all wars—a war fought with the weapons of extermination. On the contrary, the facts of record powerfully suggest that the Russians have already been deterred and may be deterred again.

No, the real reason why the advocates of this opinion believe in the inevitability of a war which has thus far been avoided—a war which no one wants and every decent man must dread for the world's sake if not for his own—the real reason why the advocates of this opinion believe in the inevitability of war is that they accept the inevitability of war as dogma. War between the United States and Soviet Russia is inevitable to them, not because we cannot continue to avoid it in the future as we have in the past, regardless of Russian desires, but because war between the United States and Soviet Russia is inevitable. It is not that they want war. MacArthur's partisans are no more the war party than Truman and Acheson and Marshall and Bradley are friends of the Communists. Both characterizations are insults to the public intelligence. MacArthur is doubtless as honest in saying that he hates war as Acheson in demonstrating by the record of his office that he has been one of the foremost opponents of communism. But MacArthur and his supporters, however they may hate war, accept it. They accept it as already here. They accept it as inescapable. They accept it as inevitable in the nature of things. They accept it for reasons beyond reason. And, accepting it, they reject as weakness, or as folly, or as what they call appeasement, the notion that the United States can continue to avoid war and still stand firm: that a free people can shape the future for itself even in a world which holds the Russians: that men can master their destiny even though destiny presents itself in the vast, impersonal terms in which it shows itself to us, and even though whole peoples make a religion of submission to it.

Whether General MacArthur's "realists" realize it or not, it is their position and not the position of their opponents which approximates the philosophy they detest—the philosophy all decent men detest. The dogma of the inevitability of war between the United States and Russia is Communist dogma. Its origins are Marxist. Long before it was orthodox belief among MacArthur's followers here, it was orthodox belief among the Communists in Russia. A full generation ago when the economic and political interests of the United States and the Soviet Union conflicted nowhere on earth and no American newspaper publisher—not even the most unprincipled—shouted for a Russian war, war between Russia and the United States was already official doctrine in the Soviet Union. The commissars had consulted the oracles. The sacred viscera had been observed. The holy texts had been deciphered and the flight of birds. War was in the tarot cards and war would therefore come. Why? Because the theory said so. Because the words were written in the book.

The whole proposition was, in its origins, a product of authoritarian superstition—a superstition which reads the future of mankind in the tea leaves of the economic systems: War or peace, life or death. And it was by authoritarian propagation that it was domesticated in this country. The first to tell us that war between the Soviet Union and the United States was inevitable were former Communists, men who had left the discipline of the Communist Party but had

not lost the habit of the party's thought. And the first to welcome the assurance were those in the United States whose inclination had always been authoritarian and who found authoritarian ideas—even the ideas of their enemies—more palatable than a traditional American liberalism they had never understood.

Indeed, even at the present moment, the propagation of the dogma of inevitable war by certain politicians and certain publishers pursues the authoritarian pattern. Those who criticize the dogma are to be silenced. An administration policy aimed at the avoidance of war is to be discredited as motivated by Communist sympathy if not actually by subversive purpose. Advocacy of peace is to be stigmatized as treason to the United States. And the full Communist doctrine of the inevitability of war between the United States and Russia is to be forced upon the country as American doctrine until—ultimate irony—all who refuse to accept it can be denounced as Communists.

What the consequence of the great debate will be in terms of military policy is not, I think, in doubt. The country plainly prefers our present attempt to shape a future narrowly for ourselves between the two disasters of war and communism to any "realistic" alternative thus far advanced. Indeed the country would welcome a determined and an idealistic effort to make that future more truly ours in place of the mere negation of communism which we seem now to intend. We do not want war with Russia or with anyone else, and we will avoid war so long as it is in our power to do so. We are not yet convinced that we have lost that power.

But whether, in rejecting the proposal now before us, we will reject also the authoritarian philosophy on which that proposal rests, depends upon our willingness to see what the issues of the great debate actually is.

Those who would impose the dogma of inevitable war as the determining consideration in the great decision we have to make are so vociferous in their claims of superior patriotism that they may confuse the actual issue in the minds of many men. The actual issue is whether we still believe, in a time of totalitarian governments and authoritarian ideologies and the mechanization of human life, in the proposition which the founders of this republic regarded as self-evident: Whether we still believe that history is lived by men, not men by history; whether we still regard the future as open to our aspirations, not foreclosed to us by our fate; whether we still think of the "arable field of events"—Kant's great phrase—as arable by men, not frozen around them by any icy will; whether we still consider mankind to be capable of the pursuit of happiness or whether we have grown ashamed of that highhearted language and think of men now as mechanical figures helpless in the predetermined web of time.

The actual issue, that is to say, is the issue which torments our generation everywhere: the choice between the belief in ourselves and the belief in authority, in the predetermination of events. It was never, perhaps, in human history, more difficult or more dangerous for men to believe in themselves. But it was also never more necessary—never more necessary, surely, for us in the United States. For unless we can hope, unless we can keep the future open, unless we can continue to believe in our power to shape the future for ourselves, the future will be war and the war will be destruction for the world. It is, to me at least, inconceivable that in a country in which the tradition of belief in man is as vigorous as it is with us—a country shaped, indeed, by that tradition—the dogma of inevitability should take hold. And yet the seed is here. The labor is to crush it.

Southeast Kentucky Affords One of the Very Best Locations for New Industrial and War Plants—There Is an Abundance of Surplus Labor, Excellent Railroad Facilities, Plenty of Coal and Electric Power, and a Keen Desire Among All the People That New Plants Be Located Among Them

EXTENSION OF REMARKS

OF

HON. JAMES S. GOLDEN

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. GOLDEN. Mr. Speaker, with the tremendous expansion of the industrial might of America and with the desire to disperse many of our industrial and war plants in localities where there is not presently a concentration of industry, southeastern Kentucky affords some of the best locations in all of the United States for this purpose.

Coal, which is one of the basic industries and which supplies fuel and power for most all other factories, industry, and plants, is there in abundance. We have excellent railroad facilities extending north, south, east, and west. The recent decision of the Interstate Commerce Commission to readjust freight rates so that there will be no further discrimination against the South will remove a serious handicap that has existed for more than 50 years.

The climate in this section is moderate and at the present time there is more unemployment in southeastern Kentucky than most any other place. An abundant supply of labor of all kinds can be had and the chambers of commerce and other civic organizations in the 17 counties of southeastern Kentucky, comprising the Ninth Congressional District, are all organized and working toward the plan of inducing new industrial and war plants to locate in this section. Every help and inducement will be afforded to our local citizens and the United States Government will give to new factories and plants connected with the war effort tax advantages that will materially assist them in the construction and operation of new plants and branch plants in new territories.

This section of Kentucky lies in the valley of the Cumberland River. Tremendous new developments of water power and electricity have just been installed in this region and Cumberland Lake, created by the Wolf Creek Dam across Cumberland River, has created one of the largest inland lakes in America, it being more than 100 miles long, and tremendous amounts of hydroelectric power will be available.

This section of southeast Kentucky is protected by mountain ranges and is far separated from other industrial centers that may be attacked in case of war.

To further illustrate in more detail the great opportunities in this section for new business, I am attaching hereto and

making a part hereof, two articles taken from the current edition of Kentucky's Business Magazine. One of these articles is entitled "Coal: Foundation of the Defense Effort." The other article is entitled "The Cumberland River," giving a detailed description of the \$100,000,000 dam and electric installations in the Cumberland Valley.

The very large generating plant of the Kentucky Utilities Co. creates an abundance of electric power and is centrally located in this section of southeast Kentucky.

Timber and all of its products can be produced in abundance in southeast Kentucky.

The articles follow:

COAL. FOUNDATION OF THE DEFENSE EFFORT—KENTUCKY'S BLACK DIAMOND PRODUCTION HAS CLIMBED TO 15 PERCENT OF THE NATION'S TOTAL

If all the coal produced in Kentucky last year were made up into two separate freight trains, one train, originating at Hopkinsville, would be long enough to branch into every major city from Michigan and Minnesota through Alabama and Louisiana. The other would be made up at Middlesboro, from a zig-zag route across all States in the East, and extend to London, Paris, Berlin, and Stockholm.

More than 87 percent of the State's 77,900,000-ton output was, in fact, loaded on freight cars for shipment to at least 36 States and almost every European country east of the iron curtain. Eight and one-half million tons stayed at home to warm Kentucky's homes and power her industries.

The eastbound superfreight train would get its 55,900,000-ton load in the bountiful fields of eastern Kentucky, whose product is sought as a source of coke and chemicals, as well as for home heating and a variety of other manufacturing uses. The Hopkinsville special's 22,000,000 tons would come from the 13 coal-producing counties of western Kentucky, whose yield is widely used for general steam purposes and in the domestic field.

Kentucky's over-all production figure for 1950 was 24 percent higher than for the previous year. The war in Korea brought notice that the United States must undertake a gigantic mobilization program, and coal—of necessity—was first to be alerted. As long as materials of protection and destruction are to be delivered on a mass-production basis, coal will remain the basic ingredient in the formula.

The importance of coal in modern warfare was well recognized during World War I, for it was then that Lloyd George, Prime Minister of England, made this significant statement: "In peace and in war, 'King Coal' is the paramount lord of industry. It enters into every article of consumption and utility."

England's first minister of World War II also paid special tribute to coal's role in the conflict. It was in October 1942, that Winston Churchill included this famous remark in one of his numerous famous addresses: "War is made from steel and steel is made from coal. . . . coal is the foundation and, to a very large extent, the measure of our whole war effort."

One of the principal uses of coal in wartime is in making the coke that is essential for making the steel that goes into airplanes, tanks, guns, ships, ammunition, land mines, underwater mines, jeeps, radar and radar equipment, and numerous other items of armor and armament. And from coal comes explosives, synthetic rubber, road tar for landing strips, protective coatings for all types of implements, and countless other war products of the chemical laboratory.

SHIPMENTS ABROAD

Besides meeting these demands and filling its normal peacetime requirements, the United States coal industry has been called upon to make up serious shortages that have threatened the economy of all the nations of West Europe. From the less-than-a-million tons of American coal that went to Europe last year, trans-Atlantic shipments for 1951 must be in the vicinity of 20,000,000 tons if cold homes and shut-down factories are to be prevented in allied nations. A considerable part of the United States coal going overseas will come from the mines of Kentucky.

The combined resources of eastern and western Kentucky give this State one of the most generous supplies of bituminous coal in all the world. The State's original coal reserves have been set by the United States Geological Survey at 123,000,000,000 tons, with only about 2,000,000,000 tons having been extracted in the past century and a half of mining activity.

But nature alone is not responsible for the fact that Kentucky is the Nation's third largest producer of bituminous coal, exceeded only by West Virginia and Pennsylvania. Since the close of World War II, operators in this State have opened or placed in development a total of 48 deep mines with a daily capacity of 500 tons or more each. In addition, many smaller mines and a number of surface mines have been opened, and the new capacity more than offsets mines that have been worked out, retired for obsolescence, or closed for other reasons.

MECHANIZED MINING

Heavy investments in modern machinery have made the American coal industry the most highly mechanized and efficient in the universe. Through mechanization, coal mines have become mass production factories both underground and above ground, and today's miner is a skilled operator of power equipment. He works in an industry where about 98 percent of all coal is cut mechanically, and where over 75 percent of it is loaded mechanically.

In the evolution from the pick and shovel and horse-drawn wagons to electric drills, cutters, loaders, and transportation equipment, coal mining has become progressively safer, and America's bituminous mines have set new safety records in each successive year since 1948. The industry spends \$80,000,000 annually on safety methods, equipment, and instruction.

Mining communities in both eastern and western Kentucky reflect the progress that has come about in recent years. One of the best paid workers in all industry, the coal miner has a standard of living so far above that of his contemporaries in other countries that comparison would be uncharitable. Electricity, movies, radio, and the automobile have brought the same social benefits to coal regions in the United States that are available in metropolitan areas, and there are public schools within proximity of every family. Indeed, Kentucky colleges and universities can always point to outstanding scholars and star athletes in their student bodies who are offsprings of mining families.

HISTORY OF KENTUCKY COAL

The first reference to coal in Kentucky, according to Howard N. Evenson, nationally known coal historian, was made in 1750 by travelers who wrote of a "coal land" near the present site of Middlesboro. By the early part of the next century, coal was brought into Lexington and Frankfort from Lee and adjacent counties. Meanwhile mines were developed in Henderson, Davies, and other western Kentucky counties, and by 1830 coal was being transported by barge to Louisville from these fields.

Coal was gradually replacing wood in all the cities and towns where it became available, but with the advent of the Civil War

most of the mines in Kentucky ceased operations and the State's total production dropped from a high of 181,400 tons in 1860 to only 4,100 three years later. But it started up again in the following year, and climbed steadily to go over the million-ton mark in 1879.

Kentucky has finally become established as a coal State, yet it was not until after World War I that the State contributed a substantial percentage of the Nation's total output. In the period of 1920-29, 10 percent of America's coal supply came from Kentucky. The figure went up to 12 percent in the 1940-49 decade, and a new high of 15 percent was reached in 1950.

As production methods have improved, so has the quality of Kentucky's coal. To increase the utility value of the product and to make it more attractive to consumers, operators have built giant preparation plants that screen, size, grade, and wash the coal before it is sent to market. By December 1949 there were 52 mechanical cleaning plants in operation at Kentucky mines, and the number has risen considerably in the past year and a half.

STATE CONSUMPTION

For State consumption, most of Kentucky's coal goes to retail merchants for delivery to homes, schools, commercial buildings, apartment houses, and farms. Coal performs a host of duties on the farm. One new development is a stoker-fired crop curer to dry hay in the summer and corn in the fall, and another is curing tobacco through coke, which is made from bituminous coal.

On the industrial side, utility plants are using more and more coal to provide the power for producing electrical energy. Last year Kentucky's power-generating plants used 1,616,000 tons of coal—an increase of 32 percent over 1949. Manufacturers in Kentucky consuming large quantities of coal include food processors and tobacco companies; and industries specializing in primary metals, stone, clay, glass, chemicals, lumber and furniture, and textiles and apparel.

Railroads serving Kentucky are themselves important coal consumers. Last year 4,370,000 tons of coal were purchased by the Illinois Central, 3,132,000 by the Chesapeake & Ohio, 2,628,000 by the Louisville & Nashville, and 1,331,000 by the Southern.

In the near future, according to fuels experts, gasoline and oil will have to be extracted from coal if there is to be enough liquid fuels to go around. The United States Bureau of Mines is experimenting successfully with coal hydrogenation at its plant in Louisiana, Mo., and Secretary of the Interior Oscar L. Chapman is advocating construction of similar plants on a commercial basis in order to safeguard America's oil supply. Such a project, according to Mr. Chapman, is the first step to allow coal, the largest fuel reserve in the United States, to begin to carry some of the heavy demands for liquid fuels.

The coal that comes from Kentucky's mines is highly satisfactory for conversion to liquid fuels. When the new industry is born, Kentucky will have ample supplies for use in the synthesis process. Meanwhile, the State's 2,360 mines and 69,135 production workers are in the middle of the Nation's mobilization effort, and from all indications the freight trains of coal produced during the current year will be even longer than the ones which carried the all-purpose fuel out of the fields of eastern Kentucky and western Kentucky to a thousand-and-one jobs in 1950.

THE CUMBERLAND RIVER

In the spring of 1750—when Kentucky was still a vast hunting ground in which the savage tribes of Cherokees, Creeks, Catawbas, and Shawnees stalked elk and buf-

falo—Dr. Thomas Walker and his sturdy band of pioneers made their way westward to Cumberland Gap. Passing through the gap, into Kentucky, the Walker party followed the "great war road," which was to become known as "the wilderness trail." On Easter Sunday, March 15, the company set up camp on Clover Creek. Two days later, Dr. Walker went hunting down the creek. Approximately one mile below camp at the mouth of the creek, he came to a river which, he says in his journal, "I called Cumberland River."

The Cumberland River of today is a far cry from the sleepy stream of the eighteenth century which the Indians had dubbed Shawnee River. Today, the Cumberland ranks as one of Kentucky's vital river arteries.

What is the value of a river? Is it to be measured by the richness of the soil in its basin or the productivity of the land that surrounds it? Is it to be judged by the amount of kilowatt-hours of electricity which are created by its great dams or by the amount of industrial development along its banks? Is it to be graded by the commercial tonnage which passes up and down its course or by the growth of the communities located along its path? The Cumberland, which winds its way through the mountainous country of eastern Kentucky and then returns to the Commonwealth in the western part after a sojourn into Tennessee, fulfills all these requirements.

CIVIL WAR OPERATIONS

As early as 1840 the Cumberland had become an important transportation artery. During the Civil War the Confederacy relied upon the Cumberland for carrying all of its manufacturing equipment to Nashville—a key manufacturing center for the rebel States during the war. Commerce on the river was never completely sealed—even by orders. In November 1861 a confiscated Union steamer and barge, captured near Memphis, was loaded with much-needed gun mounts and manufacturing equipment. Its destination was Nashville. All hands aboard the ship were Confederates dressed as Yankees, and the equipment, packed to resemble cotton bales, was forged with the official seal of the customhouse inspector of the Union Army. The boat had to travel northward on the Mississippi River to the Ohio, then up the Ohio—through Union-held territory—to the Cumberland. Union guards, checking the customhouse seals and noting on the orders that the shipment was consigned to "Union men," gave permission for the boat to pass up the Cumberland to Nashville. The safe arrival of this equipment is credited with the forestalling of the fall of Nashville for several months.

The upper Cumberland was used by the Confederates for getting coal and salt out of the area to their war plants in and around Nashville. Shipments down the Cumberland were heavy until that city fell to the Union forces on January 16, 1862.

COAL OR IRON?

Long before the Civil War and until that conflagration caused an abrupt stoppage of all manufacturing in the area, the lower Cumberland Valley—from the mouth of the river near Smithland to the Kentucky-Tennessee border—thrived as one of the leading iron and steel-producing centers of the Nation.

There is evidence of the operation of a steel mill near Kuttawa as early as 1837. The furnaces were operated by a man named Kelley, who developed and first used the Bessemer process for steel making. Between 1841 and 1862, furnaces were in operation in Trigg and Lyon Counties. General Grant's campaign in western Kentucky in 1862, however, forced their closure. After the War Between the States and during the reconstruction period that followed, the mills once again went into operation, reaching their greatest expansion in 1890, when a huge

mill at Grand Rivers turned out boiler plate, chains, and kettle steel. These forerunners of today's giant steel industry used Kentucky iron deposits, which geologists have found along the Cumberland basin from end to end. The discovery of the rich, accessible Mesabi Range deposits and the high cost of coke drove the Cumberland's steel makers out of business.

The presence of iron ore throughout the Cumberland Valley was first authenticated in 1875, when Nathaniel Southgate Shaler, teacher of paleontology at Harvard University, conducted a geological survey of the region. Of course, Kelley and other iron-making pioneers were familiar with the lower Cumberland deposits many years earlier, but Shaler's survey gave the first account of industrial possibilities for the upper Cumberland.

When officials of the Louisville and Nashville Railroad learned of Shaler's plans to survey southeastern Kentucky, they immediately employed him to report on the advisability of extending that firm's railroad lines into the Upper Cumberland area. His surveys showed, in addition to coal deposits, the presence of rich iron ores all along the valley. He advised the railroad to build its lines immediately so that it might tap what Shaler referred to as "one of the Nation's most promising industrial areas." Foremost in his mind was iron. Coal was secondary. It seems rather ironical that, to this date, the L & N, which followed Shaler's recommendations and constructed a line to the area, has not yet pulled out a car of iron ore. Its early location in that area, however, has given the line transportation franchise on one of the Nation's richest coal fields. Shaler was sure that the ore could be pigged and shipped at a profit—even to Europe. He advised the establishment of manufacturing industries within the valley. Unfortunately, his dreams of industrial development in the Upper Cumberland area have not yet come true, although recent moves have rekindled the spark of industrial potential for the region.

TOPOGRAPHY

The Cumberland River—one of the major tributaries of the Ohio River—is located entirely within the States of Kentucky and Tennessee. The basin, somewhat crescent shaped, embraces a large part of southeastern Kentucky, the northern part of Middle Tennessee, and a wide corridor across Western Kentucky. It is bounded on the north by the watersheds of the Kentucky and Green Rivers and minor tributaries of the Ohio, and on the south and west by the watershed of the Tennessee. The total area of the Cumberland basin is 17,720 square miles, of which 7,560 square miles are in Kentucky.

The topography of the basin varies from rugged mountains in the eastern portion to a rolling plateau of the western part, with elevations ranging from 4,150 feet above mean level in the Cumberland Mountains to 302 feet in the pool water at the mouth of the river—an average slope of 1.2 feet per mile along its 693-mile course.

PLANS FOR DEVELOPMENT

As the river began to take a place of national importance, Congress in 1870 and again in 1875 authorized surveys of the river. Upon these surveys was based the initial project for navigation improvement. Throughout this 81-year span from 1870 to 1951, the Corps of Engineers has been actively engaged in improving the Cumberland in accordance with congressional authorizations with major emphasis presently being placed on the development of flood control, power and navigation features, but fully integrating a well rounded utilization of the water resources of the Cumberland Valley.

The present plan for the development of the Cumberland River provides for the effective utilization of all the water resources through the construction of 16 projects. The exploitation of the hydropower potential

of the valley, the control of devastating floods, and the improvement of navigation facilities all have been given major consideration.

This plan includes Wolf Creek Dam on the Upper Cumberland, Dale Hollow Dam on the Obey River, Center Hill Dam on the Caney Fork River, Stewarts Ferry Dam on Stones River, Three Island Dam on the Harpeth River, and Rossview Dam on the Red River for flood control and power production. For power production and navigation improvement, three structures on the Upper Cumberland designated as Old Hickory Dam, Carthage Dam, and Celina Dam were also authorized. Three additional projects on the lower Cumberland were also authorized for navigation improvement; namely, Cheatham, Dover, and Kuttawa (Eureka). Bills have been introduced, however, in the present session of Congress to modify the plan of development for the lower Cumberland utilizing the original Corps of Engineer recommendation for a two-dam system. It now appears likely that the section of the river below Nashville will be developed by the construction of the lower Cumberland Dam near Kuttawa, Ky., and the Cheatham Dam near Ashland City, Tenn., in lieu of the three-dam plan as presently authorized.

Of the six authorized multipurpose projects, two have been completed and one is now under construction. The Dale Hollow Dam was completed for flood-control purposes in 1943 and the powerhouse was placed in operation in 1948. This dam, located in Tennessee, impounds Dale Hollow Reservoir, a large portion of which is located in Kentucky. The Center Hill Dam was closed during the past year and was effective for flood-control purposes during the past winter. Construction of the powerhouse at the Center Hill project was completed during the current year. The Wolf Creek Dam is complete and the reservoir impounded. Construction of the powerhouse is being continued at an accelerated pace. Initial power from this project will be produced in the fall of the current year with completion of the powerhouse scheduled for 1952.

In addition to the 12 authorized projects, four other projects near the headwaters are proposed for later development. These projects are identified as Rockcastle Narrows on Rockcastle River, Laurel on Laurel River, and Helenwood and Devils Jump on the south fork of the Cumberland.

The completion of the six multipurpose projects will control the flood run-off from approximately 66 percent of the watershed, and will provide complete protection for the Cumberland as far down as the city of Nashville, and to a large extent for Clarksville and the lower Cumberland. Flood control benefits from the Dale Hollow, Center Hill, and Wolf Creek projects are estimated to have exceeded \$2,000,000 during the period 1943 through the 1950-51 flood season in the Cumberland River Basin alone. Additional benefits were also apparent in the Ohio and Mississippi River basins.

A POWER PRODUCER

The estimated annual energy output from the entire system, including the lower Cumberland project, if authorized, will approximate 3,500,000,000 kilowatt-hours. The annual energy output from the Wolf Creek project alone will exceed half the total industrial, commercial, and domestic consumption of the greater Louisville area served by the Louisville Gas & Electric Co.

Commerce on the Cumberland is increasing annually and reached an all-time high in 1950 of 1,560,000 tons. The principal commodity moved last year was petroleum products; however, there was a marked increase in the tonnage of package freight over preceding years. Another major item is that of newsprint paper which moves over an all-water route from Labrador to Nashville.

The comprehensive improvement of the Cumberland River Basin has one of the

highest benefit-to-cost ratios of any project presently underway. In determining the economic justification of the projects, all charges including construction, operation, maintenance, and interest on investment are average for amortization over a 50-year period. In the case of the Cumberland River Basin project, \$1.63 in benefits is returned for each \$1 of investment.

VACATIONLAND

While flood control, power, and navigation are the prime objectives in the development of the Cumberland Valley, other features of the water resources will be utilized to the fullest extent. A reservoir management program is developed for each impounded reservoir which provides recreational benefits for the maximum number of people and includes provisions for reforestation, pollution abatement, malaria control, agricultural and grazing utilization of marginal lands, preservation of game and fish, and other sustaining benefits for the general public.

No story of the Cumberland River would be complete without mention of Cumberland Falls—one of Kentucky's leading tourist attractions and the highest falls south of Niagara. The falls and its rare moonbow are the major attractions at the Cumberland Falls State Park—a 1,098 acre expanse of beautiful forested land in Cumberland National Forest, offering swimming, hiking, picnicking, and horseback riding to the tourist.

Lake Cumberland—the 101-mile-long body of water impounded by gigantic Wolf Creek Dam—is destined to become one of the Nation's best fishing spots and recreational areas. Construction of several small cottages along the lake's shores is already under way. Additional development is scheduled as soon as building bans are lifted by the Government.

INDUSTRIAL DEVELOPMENT

Just now are the dreams of Surveyor Shaler becoming a reality. Although coal mining and agriculture are the two biggest operations along the winding route of the Cumberland, heavy industry has been eyeing the valley for possible plant sites during the past year or two. This is particularly true in the lower Cumberland region around Kuttawa, Grand Rivers, and Iuka.

The Great Lakes Carbon Co. recently purchased 600 acres of land near Grand Rivers on the west bank of the Cumberland. Many big-name companies in the field of synthetics are also considering locating in the area.

The Cumberland River has become a vital factor in the economic welfare of Kentucky. Since Dr. Thomas Walker charted the Wilderness Trail across the river over 2 centuries ago, the development of the area has been nothing short of miraculous.

Improvements have stepped up considerably in the past 3 decades and it is doubtful that anyone familiar with the river today can accurately conceive the vast importance of the Cumberland River in the years to come.

Great Increases in Value and Production in Eastern Oregon Farm Areas

EXTENSION OF REMARKS OF

HON. LOWELL STOCKMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. STOCKMAN. Mr. Speaker, the Bureau of the Census has just made a

summary of the reports from the 1950 census of agriculture with respect to the 18 counties in the Second District of Oregon which I have the honor to represent in the Congress. The figures in this report indicate the great progress which has been made in these counties which are east of the Cascade Mountains in Oregon during the past 5 years and show substantial expansion in production and values.

The following news release issued by the Bureau of the Census on July 29, 1951, indicates what an important contribution the Second District of Oregon makes to the economy of the Nation, and I am, therefore, glad to have the following release included in the CONGRESSIONAL RECORD so that the facts set out in it may be available to all Members of the House and the Senate:

According to the 1950 census the increase in values of farm and ranch land and buildings in the 18 counties constituting the Second Congressional District of Oregon exceeded \$300,000,000 during the 5 years since the 1945 Census of Agriculture. Farm and ranch income in this area represented by the sale of farm products increased proportionately during this period.

The 14,985 farms and ranches in this vast area containing 15,479,992 acres reported a value in 1950 of \$462,858,949. The reported values of the 15,445 farms existing in this same area in 1945 were \$261,517,355.

Sales of farm products resulting from 1949 production in these 18 counties amounted to \$137,254,690 compared with \$109,019,968 5 years earlier.

The Second District of Oregon is one of those few unique congressional districts in the United States in which the acreage and the magnitude of agricultural operations are out of all normal proportion to the human population. In 1950 census enumerators found only 247,383 people in this vast area, but there were 725,806 cattle—an increase from 714,523 5 years earlier; 484,534 sheep—a decline from the 616,961 figure in 1945, and 74,738 hogs—a decline from the hog population of 101,330 in 1945.

It is easy to compute that if every one of the 435 Members of the House of Representatives represented as many acres as Congressman LOWELL STOCKMAN represents, the United States would have to contain more than 6,700,000,000 acres of farm land, which would be more than six times as much farm land as there is today in the United States. Moreover, if every Member of the House represented as many cattle as Mr. STOCKMAN does there would be 315,725,610 cattle on American farms—nearly four times as many as now exist.

With the exception of Hood River where more intensive, smaller-unit operations prevail, nearly everything in the Second Congressional District is of giant proportions.

Eight of the eighteen counties have more than 1,000,000 acres of land in farms and ranches, and no county in the district, with the exception of Hood River, has less farm acreage than 445,226, which Jefferson County has. Hood River's farm acreage is 42,691 and at the other end of the scale is Umatilla with 1,527,807 acres in farms and ranches. Approximately 400,000 acres was added to the farming area of the district in 5 years, and this fact, combined with the reduction in number of units from 15,445 to 14,985, served to keep the average size of farm tracts close to the figure of 1945 when the average size was 976.03 acres. The 1950 average size of farm tracts was 1,033.03 acres.

Of the 14,985 farms and ranches 13,289 are reached by electricity and their average monthly electric bill is \$9.82. The district

contains 1,269 farms or ranches that had sales of farm products exceeding \$25,000. The ratio of tenancy is low in the district and made a still further reduction during the last 5 years from 14.3 percent to 13 percent.

Dollar value of production per acre varies greatly in these 18 counties, depending on the character of operations. In Hood River County, farm sales per acre were equal to \$136.46. In Malheur the figure was \$17.54 per acre; in Umatilla \$14.50; in Deschutes \$12.87; in Klamath \$12.78; in Sherman \$12.11; in Jefferson \$10.25, and in Union \$10.13. Lowest dollar production per acre was in Wheeler with \$2.07. The production per acre for the entire vast area was \$8.86 average, compared with \$7.23 5 years earlier.

The average value of land in 1950 was \$29.90 per acre against \$17.34 5 years earlier. Of the \$137,254,690 of farm-product sales, \$75,320,594 represent sales of crop products and \$60,722,758 represented livestock and livestock products. The ratio of increase in the last 5 years was greater in the latter category. Highest volume of product sales was \$22,162,330 in Umatilla. Malheur had \$21,429,811 and Klamath \$14,608,478. Indicating its more intensive production from smaller acreage, Hood River had sales of \$5,825,703. The smallest farm revenue was registered by Wheeler County with \$1,703,850.

The Washington Press Corps

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Independent Editorial Services, Ltd., for August 9, 1951:

THE WASHINGTON PRESS CORPS

The art of compounding the infinitely intricate affairs of the Government into simple, declarative sentences which the average reader can understand is not the work, ordinarily, of privately employed newspaper and radio people.

It is the task of information personnel employed by the Government, and no charge is more vicious, baseless and untrue that the Government employs "hundreds of press agents."

Without these specialists, little of the news of the doings of Government would ever be generally known, for the Government has no gazette or official publication to tell what it is doing.

The CONGRESSIONAL RECORD is the organ of the legislative branch. Most of the time it is very instructive reading, although the matter is poorly presented according to our modern views.

But there is just no way for the bureaus to publish their regulations and such of them as are of general interest are given to the press. Those of special interest are generally handled by the press. But all of them come out of government in the traditional, stilted style which require expert treatment at the hands of trained people before they become lucid and readable.

To call a man or woman who labors in the field of public information a "press agent" is just a smear. By far the greater number of those employed in this work, serve the press and information agencies, and if the bill for their services were presented to the newspapers the howl would be heard from coast to coast.

Therefore, when John Jones, Washington correspondent of a local newspaper, writes glibly for day after day on many subjects, economics, politics, defense problems and the like, he gains an undeserved reputation of being a big brain.

The work is done for him in 9 cases out of 10 by diligent workers in the various departments. The average Washington correspondent does not have the time to dig up a story in his daily round. Hence the hand-out system, and hence the temptation on the part of the bigger bureaucrats to salt the hand-outs with mention of their deeds.

Our Government information division started all releases with the name of the head of the agency, and that "worthy" rarely knew about the story or its subject matter. The press quickly eliminated his name and a different system was brought about. The new system was to use his name in the second line because it was harder to cut out.

It does not seem possible to cover the news of Washington without the hand-out system or without the commentators. They serve to complete the Washington picture, hit-or-miss at times, but it is the best picture discernible until the Government has an official publication covering all acts and regulations.

Johnson Committee Work Shows Benefits

EXTENSION OF REMARKS

OF

HON. WINGATE H. LUCAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr LUCAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Worth Star-Telegram of July 30, 1951:

JOHNSON COMMITTEE WORK SHOWS BENEFITS

Two reports heard by the Senate preparedness subcommittee must have been gratifying to its members as evidence that they have done their job well. The reports showed that the United States now is approaching the point of self-sufficiency in regard to rubber and that its reserves of tin are sufficient to place it beyond the danger of being held up by price-gouging in that strategic material.

Both these developments are of inestimable value to the Nation's defense effort and to its civilian economy. And the outcome of United States policies in regard to these materials undoubtedly will have its effect on both the supply and the price of other imports which are essential to the rearmament program. This means that the country will be assured of at least the minimum quantities of these materials necessary to defense, and that they will be obtainable at a price which will not add exorbitantly to the cost of the arms program and put additional pressures behind inflation.

For this happy situation, Senator LYNDON JOHNSON of Texas and his Senate subcommittee are entitled to full credit. The subcommittee has drawn most attention by its hard-hitting reports on the needs and shortcomings of the defense program in this country, but it has done equally effective work in dealing with problems involving critical materials which must be purchased abroad.

As the Korean war broke out and foreign interests foresaw a heavy demand for certain of their products for military purposes, the prices of these items began to soar. Prime examples of this were natural rubber, mainly a product of southeastern Asia, and tin,

whose price and chief sources were controlled by a foreign cartel. The Johnson committee immediately insisted upon the reactivation of more Government-owned synthetic plants to make the United States increasingly independent of foreign sources of supply. It also spurred an arrangement by which the Reconstruction Finance Corporation became the only importer of tin and recommended that it stop all purchases until that vital metal reached a more reasonable price level.

Both these recommendations have paid off by putting the United States in a position to meet its needs for critical materials from abroad, and at a price which will not prove disruptive to our economy. In concrete and demonstrable terms, as well as in its more intangible effect in accelerating the tempo of the defense effort and correcting some of its errors, the Johnson subcommittee has performed and continues to perform a valuable service for the American people.

Governmental Survival

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following remarks of Dean Paul H. Appleby, Maxwell School of Citizenship and Public Affairs, Syracuse University, Syracuse, N. Y., at a lecture of the Annual Harvard Summer School Conference on Educational Administration on July 23, 1951:

EDUCATION AND GOVERNMENT

The day I was invited to speak to you I received a letter from a daughter which shaped my plans for this discussion. Trained as a psychologist, now a housewife, she is a member of an adult study group in a certain city. She wrote not in the concern of a psychologist, but in a concern acquired perhaps as my daughter, to say: "Whenever we are discussing anything involving government, there is disclosed by members of the group a general conviction that politics is evil, and that people who work for the Government are generally crooked, incompetent, and arbitrary." The members of her group are good and educated American citizens, rather typical, in fact, of those having a good deal of social leadership. The convictions my daughter reported are widely shared, but are, I believe, seriously erroneous.

Also widely shared, I believe, is a conviction that democracy is good—even democracy as practiced here in the United States. The wide holding of such conflicting beliefs cannot but reflect great confusion, some great failure in understanding. Criticism of government is essential to the democratic way, but to accept criticism which is pointed actually toward perfecting government as meaning that politics and the agents of government are largely evil, is to turn counsels of perfection into counsels of cynicism and despair. Politics is the special hallmark of democracy, the prime method of democracy, and democratic government is the peculiar agent of popular, diversified politics. Politics, politicians, and government are one and inseparable, and in the large are entitled to respect, and even devotion, while at the same time subjected to our judgment keenly discriminating between better and worse politicians, better and worse aspects of government, better and worse political struc-

tures and functions. We often hear as the counsel of reform, "Let's take it out of politics." This means literally "Let's take it out of democracy, let's put it where the people will not have the capacity to control it." This always means that some group less than the public will have the capacity to control it; that is not democracy, unless the public consciously elects that course, and unless the public is left in a position to reassert its capacity for control.

Why are we confused about such matters? I suppose it is because civilized life as a whole is confusing. Civilization brings so much variety and complexity into life that it is very much harder to understand life than it was in earlier times. Perhaps the problem is simply illustrated by a true story concerning the Manhattan Project in which the atomic bomb was developed. That understanding, as you know, was chiefly a project in the science of physics. In one of the important work units where nearly all concerned were physicists, the physicists were so specialized in various aspects of their science that they could not communicate effectively with each other. An English professor was brought in and given the job of facilitating communication between those physicists, it was a full-time job.

Now if one looks broadly at society he sees a proliferation in specialization, in fields of learning, in fields of work, in situations, in organizations, in preoccupations. All this creates whole new vocabularies, even though all in one language in a single society, a new and unprecedented Babel of tongues. Areas of ignorance for any one person expand much faster than he can enlarge his learning and understanding. The task of relating all these things to one's own life is enormously difficult. The English professor working successfully in the Manhattan Project at relating a group of physicists to each other would himself be at a great loss in relating chemistry, law, medicine, physics, English, French, philosophy, political science, bricklaying, local government, automotive mechanics, meteorology, State government, the United Nations, dairy farming, wheat farming, and National Government—to name just a few of the elements of society which must be taken into account.

All of our pluralism, if it is to be truly enriching and meaningful, must somehow be related. Most of our energies are expended in differentiating ourselves, our competences, our interests and points of view. The result is a greatly increased interdependence. The task of dealing in relationships must be attended to. This is done, so far as it is done, primarily in three ways. One of these is the intellectual way; we all develop more or less some philosophy, some rationalization relating us to society and life. One of the ways is the functional way; we take one job to engage in an activity which is a part of a large, organized activity, which, in turn, chiefly through other specialized employees is more or less related to other organizations with other groups of functions; in this way we have a sense of playing a part and of being related, without seeing very much of the ramifications of our relationships. The third way is the way of politics, whereby in debates and through adoption of complementing and integrating activities of government we compromise, balance, and equate all of these pluralistic factors. Without such means of managing our relationships, pluralism could not endure, civilization would not be manageable or feasible. In the effort to make sense out of things, desperate resort would be to the cruder, impoverished order of authoritarianism. Government is the crucial general device of generalization, in a world distinguished by specialization. Governmental generalization of the social scene there has ever been and always will be. The paramount issue is not more government or less government, but the kind and quality of

government. And in the whole long history of mankind no theory or practice of government has demonstrated such capacity for relating and serving pluralistic values with equity and compassion as democratic government achieved through popular politics. Politics is not dirty business, politics is the only calculus man has ever been able to develop capable of systematically and functionally equating many, diverse, and unlike values for whole peoples.

Education, of course, is a principal source of the specialization which begets complex pluralism. It is not strange therefore, that educators as specialists often act like other specialists in taking a parochial view of affairs. I have heard one eminent scientist—not a social scientist—proclaim publicly that “only a scientist has any right to be President; only scientists have any right to be Cabinet members.” I have dealt with foresters who thought that no President was qualified to deal with governmental matters adequately unless that President was a forester; economists tend to feel that only an economist should be President; lawyers, industrialists, merchants, bankers, cotton farmers all tend to have similar attitudes. Any one of us, indeed, is likely to think it very regrettable that our friends haven't had the experience we've had and come to the conclusions we have reached. This is an unconscious inclination to authoritarianism, with ourselves constituting the authority, of course. The alternative is political leadership, politically arrived at, politically controllable and politically removable.

Education, in spite of its bent for specialization, has a function of generalization, of providing a rationale for the relating of one's self to others and to society and the social complex. The secondary schools are on the whole more constantly conscious of and struggling with their obligation in this direction than are the colleges. The secondary schools and their personnel have, therefore, a very great obligation to try to help relate their students to politics and government. Since so many of the secondary schools are public schools, they have another reason for understanding the public function as contrasted with the private function. While education, because of its peculiar character, must be especially free from restraints that would impair that character, education has also a peculiar obligation to live up to its public function. This is true of all education, whether public or private, but it is peculiarly true of public education. It must be so organized and conducted as to be reflective of and responsive to the aspirations and concerns of the society appropriate to it.

The public character of public education is perhaps hard to see when it is discussed merely as education. In those terms the whole matter is likely to be dismissed as something that only educators are competent to determine. This is exactly equivalent to saying that only economists should determine public economic policy, that sociologists should determine public social policy, and that political scientists should determine political policy. That wouldn't work, and it isn't democracy. I read a few years ago a long paper written by a chairman of a sociology department—not in my university—the whole point of which was to contend that no one except the members of the sociology department should have any right at all to determine anything involving the conduct of a sociology department. The writer of that paper did have one sentence in the course of his 70 manuscript pages in which he casually admitted that “sometimes for budgetary reasons the administration would have to make some decisions affecting the department.” That one sentence identified but evaded all the problems he was seeking to address. There is an institutional responsibility, and an adminis-

trative role for the institution, there is for the institution a public responsibility, and consequently there is a role for the public.

In a democratic society, therefore, education has a public responsibility, and a definite relationship to the public. Public education in particular has this relationship. Public educational administration is, therefore, a branch of public administration. It has not been sufficiently considered in this light. While making the point, I must myself confess that I have not pursued the study sufficiently in those terms to venture in one lecture to carry that point further.

What I should like to do this evening is, with the foregoing remarks as background, to turn to the other point of common concern as between teachers in general and teachers of government and public administration. This is the point already suggested, that teachers in their aspect as participants in general education have special need for an understanding of the generalizing organ of society that is government. For this purpose I have it in mind rather briefly and dogmatically to challenge some of the common beliefs about our Government.

It is commonly believed that nearly all public employees are put in their jobs by partisan politicians for partisan purposes, that consequently these employees work only casually and have party service more in mind than public service. President Jackson asserted that “to the victor belongs the spoils,” and it might therefore be believed that in his administration he turned out all, or nearly all, of the incumbents of positions in the National Government, and appointed persons of his own choosing. There was no civil service then, of course. Yet two studies by historians arrive at surprisingly similar results. One reports that in the eight entire years of the Jackson administration only 16 percent of the national governmental personnel was displaced. The other puts the figure at 17 percent. Those in the know would guess, too, that not nearly all of the replacements were made from Jackson's own party. The Government was relatively simple in those days, but it required continuity and a good deal of expert knowledge and skill, without which the administration would get into so much trouble as to hurt itself more than it would gain by giving jobs to its partisans.

Today, these needs for continuity and expertise are vastly greater, and of course we have an extensive civil-service system. Today, according to studies I have made, just about one-half of 1 percent of the jobs in the National Government can be dispensed with partisan considerations in mind; the actual number is probably smaller. It is highly significant that after 18 years of having a Democratic President and a great growth in number of personnel in the National Government, the voting in suburban Virginia and Maryland has grown steadily and rapidly more Republican. The only part of Virginia where Republican strength has increased in these 18 years is in the Washington suburbs, where it has grown enormously. The same thing is substantially true in Maryland. The vote in those areas is more heavily Republican than it is in the Nation at large. No one knows the situation in the District of Columbia, where there is no popular franchise, but one would guess that the same partisan trend has been present there. Technicians seem to be preponderantly Republican. Republicans may argue that this is a result of their special competence. The Democrats may argue that it is a result of the narrowness of technicians.

It is commonly believed also that the National Government has been growing in size by taking functions away from State and local government. While some functions have been so assumed or partially assumed by the National Government, this is not the explanation for any large part of the growth

of National Government. In any case, to offset the movement of affairs to the national level, there has been at the same time a very great growth by State and local governments. Their growth has been most rapid during the period of most rapid growth at the national level. And during the same period the growth of State and local governments has been enormously more rapid than ever before. The States altogether spent just \$180,000,000 in 1902, and in 1950 they spent almost exactly 13 billions. The growth in the National Government has been overwhelmingly in the field of national defense, international affairs, and in handling the fruits of war, as in the Veterans' Administration. Before the Korean affair, more than 80 percent of the expenditures of the National Government were in that general area of activity, and the personnel had a roughly comparable deployment. Before Korea, there were almost 2,000,000 civilian employees of the National Government, of whom about 750,000 were employed in the defense establishment. Add those in the State Department, the Atomic Energy Commission, Central Intelligence, ECA, other foreign activities, the Veterans' Administration, Treasury employees handling debt and other fiscal matters largely the product of war, and we account for very substantially more than half of all civilian personnel—a number about equal to the total of military personnel. Of the remaining civilians, just about half are employed by the Post Office Department.

Lump together the military personnel and civilians engaged in international, defense and fruits-of-war activities, and we find certainly more than 75 percent of all public personnel at the national level accounted for. Add the postal employees, the internal revenue employees engaged in collecting taxes, those in the Weather Bureau, research agencies, statistical agencies, the Bureau of Public Roads, and others engaged in rather non-controversial programs, and we account for all but a very small percentage of the National Government's personnel. Many employees in the General Accounting Office, the Civil Service Commission, and the Office of Central Services are indirectly engaged in defense and war-related work.

It is commonly believed, as I have already suggested, that public employees are in some special degree dishonest. I wish to assert a contrary view: that Government itself reflects especially elevated aspirations of the people, and that on the whole the National Government operates on a higher ethical level than any other heavily action-laden organization. This is true in part because many of the special influences that would lead to favoritism at a lower level of government or in other types of organizations tend to cancel themselves out at the national level. In other words, there would be no net political gain at that level in responding to certain types of particular influences; responding would irritate as much as, or much more than, it would please. Many astute politicians believe, for example, that there is no net partisan gain at the national level in patronage. And certainly to award a contract to a firm other than the low bidders would arouse bitter hostility on the part of all other bidders.

The ethical performance is supported, too, by red tape. That is a chief purpose of red tape, much of which is imposed by Congress and the rest by administrators to make sure there can be no undue favoritism, no conspiracy, that everything is done by group judgment, checked by other groups, and records made easily facilitating review and investigation. A business consultant who has come to high success and prominence in his profession came into the Government during World War II. He there complained to me that the Government was wasteful in the lengths to which it goes to prevent venality. “In business,” he said, “when we get the losses of that sort down to a small

decimal percentage of the business done, we know it doesn't pay to try for a still further reduction. But in Government you don't care how much you spend." I told him that the values were not the same, that in Government we were concerned about conserving the moral capital of our society. I think as laymen you will agree that just now some very mild irregularities which may not reflect any real perversion of Government are the most serious political liability of the present administration. Certainly long-lived politicians and officials at the national level know that it is good politics to avoid even the appearance of wrong-doing. We expect much more of our National Government in this respect than we do of any other organization. That, of course, is as it should be. Local Government has a much more difficult job. It deals with the hard business of crude forces straining at elementary standards of social order, deals with it close up. It also faces influences that do not cancel themselves out so fully as the same influences do at the National level. Corruption of Government in every important way, let me remind you, stems from private efforts to corrupt it.

It is one of the virtues of democratic government that its agents seek to please all comers as much as possible. This is truest in agencies responsible to politically responsible officers. And of course this virtue may become a vice. More often, it is subject to weak or inadequate judgment about how fairly to dispense governmental services. Public officials who are thought to act arbitrarily, don't wish to be arbitrary; they wish to please. They usually appear to be arbitrary because of systematic restraints on them, operating in the direction of general equity, and because of their own desire to please others than those who are before them. They must seek the general public interest more than the service of particular interests brought before them.

The most important problems of morality in government are problems of equating legitimate but different private interests—farm and labor, industry and commerce, producers and consumers in their manifold interactions. Central to morality in this sphere is political responsibility. A one-party jurisdiction, and any jurisdiction where the opposition party is not a constant threat, is less responsibility handled than a jurisdiction where the outcome of elections is always uncertain. Agencies not subject to control by identifiable officials who can be politically removed, are not truly responsible. We tend too much to create autonomous structures within government. We tend to have too much bloc government, and too little majority government. These are problems of high importance in governmental and political organization. (FS story, central control and responsibility.)

Let us turn now to the problem of governmental efficiency. It is commonly believed that government is notably inefficient, just as it is believed that business is notably efficient. The public doesn't scrutinize public administration rigorously—especially at the national level, where 5,000 correspondents and reporters apply themselves to that job, where the opposition party is trying constantly to find things that may even appear questionable, where interest groups are vigilantly contending with each other and critically watching governmental units affecting them. The scrutiny tends to make government more efficient. Very few citizens have ever thought about how to think about relative efficiencies.

I began to consider that subject as a young man. Publishing a small newspaper and engaging in the printing business, I found myself often unable to compete in the printing field with other, usually larger, printing establishments. I began to talk whenever I could to those who ran various sizes and

kinds of printing businesses, exploring the question of printing efficiency. I shall not burden you with the details of the story, but I think it may be useful to show where my thinking led. I got to considering the relative efficiencies of the New York Herald-Tribune printing plant and the Saturday Evening Post printing plant. Both, obviously, are printing plants, and one might think them, therefore, comparable. Yet I concluded that no one could ever tell which was the more efficient. The Herald-Tribune plant was not designed to, and was not desired to, produce the Saturday Evening Post; the Post plant was not designed or desired to produce the Herald-Tribune. About all one could say is that the Herald-Tribune plant is the most efficient plant for producing the Herald-Tribune anyone has been able to devise and develop, and the Post plant is the most efficient plant for producing the Post. Both are subject to improvement tomorrow, next week, next year, next century.

The Government of the United States can also be improved tomorrow, next month, next year, next decade, next century. But it must be improved in terms appropriate to its peculiar character. No activity within the Government is or should be precisely like, or precisely evaluated, in the same terms as some similar-appearing activity in other organizations. Everything in the Government is and should be somehow affected by its peculiar public character, its peculiar political character. In the large, the Government is very difficult indeed, and in the large, we damage it rather than improve it when we try to make it "like business," which is just about as sensible as trying to make business like Government.

Chester Barnard, long-time president of the New Jersey Bell Telephone Co. and now president of the Rockefeller Foundation, has said in his classic book, "The Functions of the Executive," that there is no objective test of efficiency except survival. Thinking of that sort should turn us away from such familiar clichés as "that government is best which governs least." Such a dictum rates alongside the one that "that meat market is best which gives shortest weight." I cannot find any source in Jefferson for the cliché. It comes rather, I think, from Herbert Spencer, the philosopher-prince of the politically illiterate.

Our own sense of the values of government comes clear when we face the problem of governmental survival. We then act as if we knew that the Government of the United States is the best mechanism for producing the Government of the United States that all of us—including the tens of thousands in the Government and in academic specializations who most constantly work at it, have been able, up to now to produce. When war comes, we look afresh at that Government which we have, in the democratic way, been treating with jealousy, criticism, and abuse as "the Government." For its survival we then offer our resources, ourselves, and our sons in militant devotion to our Government—the generalizing vehicle of our highest common aspirations.

Doorway to Slavery

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. CLEMENTE. Mr. Speaker, under permission previously granted me, I include in the Appendix of the RECORD the

last in a series of articles on teen-age drug addiction published recently by the Long Island Daily Press:

"HOW I BECAME A DOPE ADDICT BEFORE I WAS 18"—LUCY ENDURES AGONIES IN KICKING OFF HABIT

(Last in a series of stories on the ordeal of Lucy D., teen-ager, who became a dope addict and peddler before her eighteenth birthday. These articles have been presented because many addicts now being picked up on Long Island are 19. Furthermore, hundreds of other teen-agers who succumb to the habit without knowing its horrors, never come to the attention of authorities because their parents find it out in time and see to it that they are cured. Yesterday, after nearly a year of living only for "fixes of H" (heroin), Lucy was arrested as a dope peddler by Federal narcotics agents.)

(By Geraldine Scott)

Kicking off the narcotics habit means days and nights of agony, Lucy told me during our final chat in the pleasant suburban apartment of her parents.

When anyone involved in the dope racket is arrested there is generally complete cooperation among Federal, county, and local police authorities. Consequently, Lucy was sent to a city hospital so doctors could determine how far gone an addict she was.

"By that time I had been spending about \$15 a day of my \$150 a week earnings for H. Any doubts that I had about undergoing the ordeal of being cured ended when my mother came to the hospital."

Tears filled the eyes of Mrs. D. who had been present while Lucy told me her tragic story.

"I thought I would faint when I saw my child. She was so pitifully thin, her eyes were completely sunken, her once pretty skin was all broken out."

"And that horrible blond color I had dyed my hair," Lucy giggled. She had done that, at the start of her addiction, so that her parents and the police would be less likely to locate her. Now her hair was back to its natural auburn color and she was almost back to her normal weight. But her skin was still spotty. She had told me she felt it would never be really fine texture again.

Because Lucy had been arrested by Federal agents, she was tried in a Federal district court. With the aid of her parents, she managed to convince the judge she really wanted to be cured. The rate of cure among dope addicts is not high. Once picked up, a large percentage are rearrested after their release. The judge arranged for Lucy to be sent to a Federal hospital for dope addicts at Lexington, Ky. There are two such Federal institutions specializing in mental hygiene for hypos. The other one is at Fort Worth, Tex.

The agonies of kicking off the habit began for Lucy at the hospital the day after she had been arrested.

"My nose began to run. My eyes watered. By night I was in bad shape. They had to give me a shot of morphine."

With her mother as escort, Lucy was sent to the hospital at Lexington to begin her cure.

"It took me 2 months—two horrible months.

"I was just left alone, with a cot, a blanket, and a toilet. Every 2 hours someone would come by to look at me. Meanwhile, I felt as if I were covered with lacquer, and one by one the layers were being pulled off until just your nerves are left. Then you have a dull aching in your bones and you throw up. All your body begins to function normally again, and it is utterly horrible.

"You can't catch your breath. You want to scream. It's merciful when you lost consciousness."

For the first week she was in the hospital, Lucy couldn't lie still. Her bones ached and she had pains in her stomach. Her temperature was 104. Her legs ached unbearably.

At one point they had to strap her down. She didn't sleep a wink the first week and had to be fed intravenously.

At the end of the first week, Lucy recalled, "I could breathe again." But it took a month before she felt anywhere near normal and another month of consultations with the hospital's specialists to assure herself—and them—that she was cured.

Despite the insistence of most policemen that youthful dope addicts are generally out-and-out juvenile delinquents who tried other law-breaking operations first, Lucy believes dope addicts should not be put in jail. She remembers the tales her former friends used to tell.

"If you're a girl thrown into jail, you're usually surrounded by pervers. And all they talk about is dope. It's a strange and unreal world. They give you candy to lure you. They become your friends. And when you're released, where do you go?"

"Your new-found friends take you under their wings. If you haven't been fixed before, they'll take care of that right now. When you run out of money, you learn to hustle. All that is important now is to get money so you can continue to be fixed. So you're picked up again and thrown into jail. Another 90 days. And out again and back to your friends. It's a vicious circle."

Lucy says anybody who claims he or she is taking dope for mental kicks is lying.

"I'm thinking of that woman blues singer and of a young male band leader. That's what they said when they were arrested. But it's strictly physical, don't let anybody kid you."

It's been more than a year over again. Her marriage to Ralph was annulled.

"I'm not likely to see him again. He jumped bail the last time he was arrested."

For 6 months Lucy recuperated at home, taking vitamins to help her regain physical normality. Then she took a job in a department store in her home town. She hopes her day-to-day contacts selling pretty clothes will encourage her to keep building herself up—to keep trying to become as pretty as she once was.

There's an old saying, "Once a hype, always a hype," but I don't think that's entirely true. I think if you're young enough and haven't been on it too long, there is hope.

"But you must always keep building a wall around yourself and talking against it. That's why I think it would be a good thing to have a narcotics anonymous started. There's one in New York. A man named Dan Carlsen has done wonders in helping many users to get straightened out. It would be a place for ex-users to gather like alcoholics do and talk against their habits."

Lucy also believes there should be special hospitals in every State to care for dope users. Obviously, the two Federal institutions cannot handle every addict and must pick the ones most likely to be cured.

Finally, Lucy says she never would have been cured had it not been for the understanding and patience of her parents.

"It wasn't their fault that I became a user of dope, although in most cases of teen-agers succumbing the parents are to blame. Teen-agers' use of dope always goes up in postwar period, the narcotic agents told me. That's because parents were so busy making money during the war they neglected their children. After the war, it's too late. The kids are busy breaking the law."

This story doesn't have a rose-colored ending. Lucy isn't dating again, yet. She's still a pretty lonely girl and she knows it will take some time before she feels physically attractive enough to go out socially, and whenever she toys with the idea of going out on a date she remembers that fateful

date with Hank, the boy who gave her her first marijuana reefer.

"I hope all the teen-agers who are tempted to fool around with marijuana, heroin, or cocaine will read my story and stop before they fall," Lucy D. declared. "It's no good, kids. Stay away from it."

"That is just the beginning on the road from which, too often, there is no turning back."

OPS Propaganda

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. CURTIS of Missouri. Mr. Speaker, the following exchange of correspondence between myself and the Kansas City office of the Office of Price Stabilization might be of interest to Members of Congress and the public as an example of the lack of candor with which serious requests for information and explanation apparently are treated. My letter, which follows immediately, is sufficient, I believe, to fully explain the matter about which I wrote and I feel that no further comment should be necessary:

Mr. STEPHEN MILLETT,
Office of Price Stabilization,
Kansas City, Mo.

DEAR MR. MILLETT: A cartoon entitled "Mike at the Dike" and a statement entitled "Crumbling Dikes" and "The Lesson To Be Learned" recently were sent to me with a notation that they originated in the Kansas City office of OPS.

If this is true, I suggest most strongly that it was in very bad taste to capitalize upon a serious flood disaster to propagandize for the Office of Price Stabilization. Further, I am most interested to know how many of these cartoons and statements were prepared and distributed; (2) the cost of such preparation and distribution, and (3) under what authority was this money expended?

Your immediate and complete answer to these questions is requested.

Sincerely,

THOMAS B. CURTIS.

Below quoted is the answer to the above letter:

Hon. THOMAS B. CURTIS,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. CURTIS: I have been planning on writing to you for several days to express my appreciation of your support of the legislation in regard to price and wage controls. I was glad to get acquainted with you when I was in Washington several months ago.

Your letter of August 1, in regard to the cartoon entitled "Mike at the Dike" has been referred by me to the regional office of OPS for attention. Mr. H. Roe Bartle is the regional director, with offices at 112 West Ninth Street. I am now the district director of OPS for 66 counties in the western half of Missouri and 2 counties in Kansas. Our district office is located at 220 Admiral Boulevard.

The cartoon was prepared by and mailed out by the regional office. I happen to know that the cartoon was prepared prior to the disastrous flood that struck the two Kansas Cities.

While we are on the subject of price controls, I would like to call your attention to an editorial by Malcom Forbes in the August 1 issue of Forbes Magazine of Business. I hope that we will always merit your support.

Sincerely yours,

STEPHEN J. MILLETT,
District Director.

Prevent World War III—Help the Slaves of the Communists Overthrow Their Tyrants

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, on March 16, 1950, at the University of California, Secretary of State Acheson said:

However much we may sympathize with the Soviet citizens who, for reasons bedded deep in history, are obliged to live under it, we are not attempting to change the governmental or social structure of the Soviet Union.

On April 22, 1950, in Washington, D. C., before the American Society of Newspaper Editors, the Secretary of State said:

We do not propose to subvert the Soviet Union. We shall not attempt to undermine Soviet independence.

The above position, still the administration's policy of appeasement, abandons the people now enslaved by the Communist tyranny. It fails to recognize, and it fails to make an ally of, the strongest force against communism in the world—the hatred of 800,000,000 people for police state rule by murderers and their burning desire for liberation.

Under this present incomplete foreign policy we are faced with either all-out war or long years under a garrison state.

The alternative to this bleak prospect is the adoption of a positive foreign policy of aiding these millions of Russian and non-Russian people to overthrow their Communist oppressors.

Such a positive foreign policy particularly recommends itself because—

It is the only just policy. The present policy of avoiding subversion of the Soviet Communist regime implies acceptance of the barbaric regime as a legitimate form of government contrary to the sound principles of our own Declaration of Independence.

It is the only humane policy. To refuse to assist our brothers in Europe and Asia who have fallen among thieves, in servile fear of the thieves, is the epitome of a despiritualized philosophy. We must remember that each of the 800,000,000 victims of Communist oppression is a man of flesh and spirit, identical to ourselves as a creature of God.

It is the only sure policy. There is no sounder base for a government than on the expressed will of the people. What surer policy can we follow than to try to help these victims of communism

establish their own government? The present policy of perpetual containment promises no betterment and no end except in a destructive war.

In the following article which I include herewith, Mr. Koslaw Byela, a former general staff colonel of an eastern European army, tells how we in America can help these poor unfortunate people overthrow their oppressors.

Mr. Byela, whose real name I withhold for security reasons, is the author of various military books and studies, and a former professor in military schools. He comes from a country which is today enslaved by the Communists, a man of experience and with a brilliant career.

When World War II started he was appointed chief of the military cabinet by the prime minister of his country. He was taken prisoner, escaped, and became an underground leader and guerrilla commander. Later he was recalled to the war ministry of his exiled government.

During his war adventure Mr. Byela closely collaborated with United States Army Intelligence.

CAN WE PREVENT WAR IN EUROPE?—CAN WE WIN A WAR IN EUROPE?

(By Koslaw Byela)

The answer is yes. We can if we know what to do and are determined to do it.

We should realize first of all that unless certain factors are taken fully into consideration our strategy and our defensive preparations in Europe are not only inadequate, but are based on a wrong concept of war. I fear that the most indispensable factors for preventing a war, or for fighting a war if it starts, have been neglected, misunderstood, and forgotten.

No one will object to the great amount of energy and money we are devoting to organizing divisions for a conventional war front. But all who know the conditions and the situation in Europe and the strategy of the future war must certainly deplore the fact that we are giving so little, in fact practically nothing, to support the unconventional front which already exists in the countries behind the iron curtain. Unfortunately, this front is almost unknown and is consequently ignored.

Do we believe tanks, planes, and bombs alone will be sufficient? Do we think the atom bomb will win the war for us? Do we imagine that American and European divisions, even if available in time and placed along the Rhine, in Germany and in Austria, just by their presence there alone, will frighten the Soviets and force them to renounce their plans of aggression? Stalin would like us to believe just that. Russians do not fear our armed strength. They have the manpower and the arms to oppose us. Russian manpower is expendable. Russian losses in battle would never be counted or even considered. The Russian youth has already been lost to its families forever. Stalin reasons that great losses on both sides would weaken our morale and leave his own most sensitive points untouched.

If we think that our victorious armies might penetrate into old parts of Russia by taking their territory, we are also mistaken. Napoleon's tragedy of 1812 would be nothing compared to ours. There are other more effective ways of reaching the Russian people and given the chance, the Russian people will do the job of freeing themselves of communism.

SOVIET SABOTEURS POISED FOR ACTION

The Soviet concept for future war foresees and prepares long in advance not only for a

war with armed forces but for an underground war with fifth columns, guerrillas, and sabotage; a war in which the fighting between two ideologies will engage every Communist and non-Communist; a war waged behind the lines, over there, here in the United States, practically everywhere where its forces can contribute to victory in any way, by any means—fair, brutal, or not.

A Soviet army of saboteurs, guerrillas, and underground workers is being built up all over the world. Special undercover forces have been organized in France, Italy, Germany, Belgium, and the Netherlands to support the Red Army and its advance toward the Atlantic Ocean. Other forces are being trained in Sweden, Norway, and Denmark, and in the Balkans, Greece, Turkey, and Yugoslavia. The importance of these armies to Soviet strategy should not be minimized.

It is a well-recognized fact that the mobility of motorized troops today makes the Soviet European front comparatively narrow, and that the great speed and radius of action in modern aviation threaten the flanks and close rear of a Red army advancing toward the west, especially where they will be exposed on the Baltic seacoast. The Soviet planners are well aware of this danger and intend to eliminate it.

First, they will open the Baltic Sea to allow their strong Baltic submarine fleet to emerge and attack European maritime communication lines across the Atlantic. The Kattegat and Skagerrak have become the No. 1 Soviet objective of the war, of more importance than Murmansk.

In order to open these straits they plan to attack and occupy Denmark and the southern part of Sweden. A part of the fleet and the bulk of Soviet airborne troops will be employed in this operation. Today they are hurriedly constructing large army and naval bases and depots along the entire south Baltic seacoast intended exclusively for these operations.

The undercover forces in Sweden and Denmark will plan an all-important role in these actions. In addition to these regular missions of sabotage, espionage, signaling the disposition of allied troops and fleets, great dependence will be placed on them for the successful establishment of beachheads. Russian troops notably lack experience in this highly complicated, difficult, and risky undertaking.

In the Balkans the pro-Soviet fifth column will greatly facilitate the liquidating of the Balkan danger for the Red Army and in capturing the Dardanelles, which is considered today as Soviet objective No. 2 in the European war theater.

These Communist masses, the army outside mother Russia, have already received their instructions and orders from Moscow. When mobilization is declared and the war starts they will take full-scale action. As the Soviet troops near their borders they will increase the strength and ferocity of their activities.

Can we believe that these forces will not carry out their orders? Can we suppose they will remain passive and help their own governments in the struggle against their brother Soviets? Even today they are doing all they can to harass economic and social stability and generally weaken their own countries. They do not consider themselves traitors but believe that they are performing sacred duty.

The magnitude of our danger can be foreseen today if we are realistic enough.

UNITED STATES ALWAYS ON THE DEFENSIVE

And what are we doing today?

We are consistently ignoring the facts, or if we do recognize them at all, we consider them only in a defensive sense.

Why do we allow ourselves to be placed in the risky position of a defender on all fronts? Why are we constantly the defender

who humbly pushes away the enemy's strokes? Why should we not employ the same means and the same tactics? Why not beat the Soviets at their own game?

When we think of the future we have too much confidence in ourselves and underrate the danger. Perhaps we trust too much in our superiority in techniques, production, inventions, and atom bombs. We should know that these alone are not sufficient for waging and winning wars. Victory depends on other elements also. The morale, not only of the troops, but of the population will be among the most decisive factors. And this is as true for the enemy as it is for us.

Perhaps we may think that underground activities, sabotage, espionage, fifth columns, guerrillas, etc., are not honest means. They are not. Nevertheless, we all should know that some such force forms an integral part of each army, an indispensable arm, a necessary operation in time of war. Stalin is particularly stressing this type of warfare and exploiting it ruthlessly. We have to face this fact openly. We must counteract it and fight fire with fire.

UNITED STATES HAS ALLIES BEHIND IRON CURTAIN

Unless we radically change our concept to match the Soviet concept we will involve ourselves in unnecessary sacrifices and losses of life. We should count not only on ourselves but on the European armies and particularly on the potential that already exists behind the iron curtain. This last is strongly emphasized and should become an indispensable arm of our strategic forces. To deprive our own planners of this powerful force would be to place them in a decidedly disadvantageous position.

Inactivity in this field will certainly contribute to the prolongation of a war and perhaps to the loss of a war itself.

The American public should be informed that the enslaved peoples of Europe hate communism and would like to be free of it and that they are asking each day for our encouragement and help. These people can constitute a front which extends from the Baltic Sea to the Black Sea, a front which is 500 miles deep and has the strength (not counting the Russian masses) of 120 millions of democratically minded people, a front which if organized and put to work might well be the equivalent of more than 50 United States divisions on the Rhine.

The "soldiers" of this front are composed of men and women, young and old, who are ideologically opposed to the Soviet and are already psychologically prepared for battle. They have the will and determination to fight for their freedom. For them tomorrow may settle the question of life or death. Today they are on the spot. They are a positive force and might well be a decisive factor because they represent a tremendous majority of the population. If they grow stronger and stronger—and they will—if we help them, the Soviet leaders will be forced to ask themselves seriously whether they can afford to start aggression with such a force practically in their midst.

If this force cannot actually prevent Soviet aggression it would at least be able to delay the action. And the importance of delay cannot be overestimated. Time is the most necessary element in our strategy.

And what if the Soviets start the war this year or the next? We may be sure they will outnumber the American and European divisions on the front. But will they outnumber our "invisible" front line troops from the Black Sea to the Baltic? The answer is no. This they can never do unless they withdraw their troops from these countries and give them complete liberty and freedom. Until such improbable time the people will continue to resist communism to the utmost of their abilities.

It might be said that we will get these people in trouble if we encourage and support them now. But this is not true. We have connections with the underground there and know the facts. The Soviets can do no more than they are doing already. They have prepared long lists for deportation and are keeping these lists up to date. When the call for mobilization comes the Soviets are prepared to cart these people off by the thousands and massacre them if they attempt to resist. And they will resist rather than face the prospect of slavery in the concentration camp.

UNDERGROUND NEED OUR HELP

According to the numerous daily reports we receive through our channels the people of these countries have their own secret organizations, their resistance groups and armed men in the woods. They are engaging today in sabotage and small harassing acts against the Communist rulers and authorities. Where active resistance is not possible the masses resist passively. Against Communist terror they respond with terror. The numerous trials reported in the Communist papers and the more numerous unreported trials secretly reported to us confirm the actual state of affairs as they exist in the countries behind the iron curtain today.

The people of these countries will fight whether we lead and support them or not. But they are asking for our help. They say that we should lead them. They know that a unified leadership guarantees the coordination of action and insures the timing which is very important.

Should we deprive ourselves of this, our strongest and most effective arm?

And what exactly can these people do?

And how can we help them do it?

These questions can best be answered in the words of the underground leaders themselves. Here is what some of them say:

"We will undertake full strength action at the time mobilization is called for we are sure that this is the right time to start and that mobilization means war. Our goal will be to harass the mobilization plans and paralyze the satellite armies. Every one who understands mobilization in our countries knows full well that it is a most delicate and sensitive operation and its success depends entirely on the will of the population. We are the ones who must give the soldiers to the armies. We are the ones who must give our horses, carts, and trucks. Without them the army cannot mobilize and move.

"We plan to cut off the railroads and other communication systems which are indispensable for the mobilization and concentration of troops against the west. If we have the means we will be able to paralyze the communication system, delay military transports and poison the food and water. The confusion we will create will certainly lead to delaying the aggression and might even have greater repercussions. With vital communications cut the Soviet troops will find themselves threatened on all sides.

"We can very easily organize armed resistance of formidable proportions. All those on the black list for deportation and forced labor will be the first to flee to the woods with no other choice but to fight. Those who refuse to respond to the mobilization call, deserters from the troops and hundreds of thousands of others will join them. It is not too much to expect we might eventually have almost completely armed units with us. We will certainly have a number of people for whom we must provide arms.

"We will need explosives for harassing transportation and communication lines. We will need radio sets for good communications between us and abroad. We will need printing presses and small radio broadcasting stations. But above all, we will need good, capable technical leadership to channel our efforts in the right direction, according to the means of United States strategy.

"Our front is large and deep. If we employ all our means, military and political, in all fields of activities, our territory could become an enormously large area in which great numbers of enemy troops would perish.

"Psychological warfare against enemy troops, sowing disobedience and sapping morale, will contribute perhaps ever more than rifles.

"Soviets are not morally strong. The average Russian lacks morale not because he fears United States armed might or the atom bomb but because he suffers the hardships of communism. Many Red soldiers from the last war saw better life and prosperity in the 'capitalistic countries' than in their own homeland. Everywhere in Europe they met friendly people. They are convinced by all this that they have been misled by the Communist Party. We have an excellent opportunity at this critical time to affect the morale of the Soviet soldiers quoted in our own countries. The more Soviet troops that are concentrated in our areas the more we can do.

"Our own native sons are not Communists. The Soviets can expect but little from them. They might try to deport them to the interior of Russia as security troops but we foresee mass desertions, disobedience, and revolts.

"With your help our front will grow stronger and stronger. We believe that it will not cost too much money and we are positive that each dollar will be repaid a thousandfold. You could not make a better investment for a better world, for humanity and your own safety. The money you spend to organize one division alone could support many armies here.

"If such a strong front were organized today it could delay the beginning of a war. If we could make it as strong as we wish it could perhaps prevent a war. But if the Soviets do attack, you may be sure our forces will be of enormous importance and a definite influence on the final decision.

"And we have the opportunity now to organize such a front. Communism, oppression, liquidations, deportation, concentration camps and general misery have ranged all chances on our side. This is an indisputable fact."

The above is what the underground leaders in the enslaved countries of Europe think and propose. And they are right. They are not trying to discover America. They are proposing to do what the Soviets have been doing for a long time.

The war potential of these countries is very large. Poland can mobilize 2,250,000 soldiers. Eastern Germany can raise 1,750,000. Czechoslovakia 1,250,000. Rumania 1,600,000. Hungary 900,000, and Albania 125,000. This constitutes an army of approximately 8,000,000.

COUNTERREVOLUTION A REAL POSSIBILITY

We cannot expect to have these millions entirely on our side but we can expect to deprive the Soviet of its use. Furthermore, the troops of these armies if transferred into Russia as unemployable on the western front might well become a destructive element in the part of the Soviet empire. If properly prepared they might start a counterrevolution.

And what about a counterrevolution in Soviet Russia?

Some people think that a counterrevolution in Russia is Utopia. Some think that it is not possible today. But others, who know Russian history, who understand the soul and mentality of the Russian people, think that it is possible. The Polish journalist and political writer, Ryssard Wraga, author of works on Soviet Russia, agrees with the view of all Russian patriots "that only revolutionary methods can bring positive results in the struggle against Bolshevism." He goes on to say in the January

1951 Eastern Quarterly, "the relative passivity of the people, caused as it is by overwhelming terror, does not necessarily preclude that a tyrant should be considered as the genuine representative of the national will. Bolshevism is acting against the interests of the Russian Nation just as it acts against the interest of other nations subjugated by it. Russian hatred of Bolshevism is immense and the revolutionary passions accumulated in the Russian masses against the government and its agencies are infinite. The question that arises today is not how to stir up or rouse this force, but how to organize and direct it."

We should not forget that the Russians hoped to rid themselves of communism and the Kremlin leaders when World War II started. In the first 8 months of Hitler's aggression more than 3,500,000 of Stalin's first-line troops surrendered or deserted to the German invasion. It was a political not a military surrender. Even the Russian population greeted the German troops as liberators and offered their services under arms.

GERMANY'S FAILURE IN RUSSIA

Stalin was saved from the complete disintegration of the Red army and from the danger of a counterrevolution by the ignorance of Alfred Rosenberg, Hitler's adviser on Russian ideology.

When the Nazis started to massacre the Soviet prisoners of war, the deserters and the Russian population wherever they went, the Russians then realized that there was no sense in exchanging Stalin's tyranny for Hitler's. Hitler's promises were lies. The war was not being waged to smash communism but for the annihilation of the Russian people: for the German Lebensraum thus one tyrant helped the other tyrant.

I, myself, witnessed the loading of German trucks with Soviet dead. This was in the prisoner of war camp in Nuremberg in the autumn of 1941 where I was brought to die. Heaps of dead Russians were thrown in the trucks like firewood. From the window of my barracks I conversed with Russian soldiers. "We die here like flies," they said. "We have nothing to eat. Ten grams of bread and ersatz tea is all we get for a day. Each morning trucks are loaded with our dead comrades. They are exterminating us." As they spoke they were eating grass from the ground, like cattle. They hardly moved because their bodies were like skeletons.

But in spite of this ruthless Nazi policy of extermination, more than half a million of Stalin's soldiers enrolled in the General Vlasov's army to fight against communism on the side of the Germans. The Azerbaijan, Tartars, and the Great Russians joined. The Cossacks alone raised an army of more than 50,000 men.

Today many experts on bolshevism think that Vlasov's action is the best proof of how much hatred and despair has been stirred up among the Soviet Russian people by Stalin's rule in the Communist system.

Wraga says "the Vlasov army was unquestionably a spontaneous move, and it is extremely tragic that the victorious west helped the Bolsheviks to liquidate the leaders and a large majority of the partisans of this movement."

And it is true that no nation gave more support to the Germans than the Russians did. What a contrast to World War I when tyrant Emperor Nicholas II was ruling Russia in the Kremlin. Not a single captured Russian soldier joined Kaiser Wilhelm's army. Not one donned the Weermacht uniform.

But what about the morale of the Russians today?

The present day living conditions in Soviet Russia are not better. The deportations, forced labor, concentration camps, the extinction of family life and church, poor

clothing, bad food, and the fear of persecution, are the normal schedule. It is the same, if not worse than it was before World War I.

Millions of POW's, deserters, deported persons, and Soviet troops have returned to Russia since World War II. Some of them were immediately liquidated. Some were deported to Siberia as dangerous germs. Posters were put up warning the people, Do Not Believe All Returned Soldiers. Those who survived have convinced their closest friends that at this time nobody wishes to annihilate the Russian people, that the cause is one of self-defense, shared alike by the Russians and the peoples of the west.

In conclusion, I can only repeat that our policy should be to approach and deal with the people behind the Iron curtain. They are a powerful factor on which we can count in fighting totalitarian tyranny. If we help them they may destroy war before it starts.

Our strategy should be to use the same means the Soviets are using to destroy us. The possibilities are enormous. The chances of success are far greater for us than for the Soviets. And the opportunity is ours for the taking.

If we hope to be the arsenal of democracy, then we should not hesitate. Every dollar may spare the life of one of our American boys.

American Legion Has Done Much Valuable Work

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Washington Post on Tuesday, August 14, 1951. The editorial entitled "Legion's Opportunity" follows:

LEGION'S OPPORTUNITY

Veterans and nonveterans alike will congratulate the American Legion today on the dedication of its handsome new building at Sixteenth and K Streets NW. The seven-story limestone structure, which on its outside wall bears a striking relief composite of soldiers from 1917 on, is not the national headquarters of the Legion. That remains in Indianapolis, but the fact that a new building is necessary to house the Washington staff is evidence of the impact of the American Legion on national affairs. Likewise, the Legion's thriving membership running into the millions is testimony to the fact that it continues to capture the allegiance of veterans of both the first and second World Wars.

The Legion has done much valuable work in citizenship and allied activities. In an age in which more and more and more of the male citizens are becoming veterans, the responsibility of veterans' organizations increases. By force of circumstance, if for no other reason, the veterans' welfare and the national welfare are becoming synonymous. The constructive field for veterans' activities lies now not in partisan or class appeals, but in broad efforts to inculcate the responsibility that belongs to American citizenship. So long as the Legion views the veteran in the larger context of his duties as well as his rights, it will continue to thrive.

President and Congress

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the CONGRESSIONAL RECORD an editorial which appeared in the Washington Post of this morning relative to the record of the Eighty-first and Eighty-second Congresses as compared to the record of the Republican Eightieth Congress.

The Washington Post has generally taken a position favorable to the administration on the various legislative issues. But even the Washington Post has to admit that the Republican Eightieth Congress' record is superior to the present Congress on both a quantitative and qualitative basis. Facts are facts.

The fact is that the Republican Eightieth Congress had a program and it courageously put that program into effect. The fact is that the Republican Eightieth Congress served the best interests of all the people, with special favors or benefits to no particular group or segment of our economy. The fact is that the Republican Eightieth Congress dealt with fundamental and basic problems, without fear and without favor.

The American people now realize how they were misled by the Truman campaign of misrepresentations and distortions of fact in opposition to the Eightieth Congress. The American people now realize that the Truman program has been nothing more or less in substance than special benefits for each and every group that cannot possibly be granted without destroying the rights and privileges of all groups. He promised something for everyone which in the end would mean nothing for anyone.

The American people want again a Congress like the Republican Eightieth Congress that will deal with fundamental problems rather than one that is floundering with empty political promises.

The editorial follows:

PRESIDENT AND CONGRESS

The Eighty-first and Eighty-second Congress have been less active in passing legislation than their Republican predecessor and have given little heed to White House recommendations. W. H. Lawrence points out in the New York Times that the Eightieth Congress had passed 388 public laws by August 10, 1947, the Eighty-first Congress had passed 220 public laws by the same date in 1949, and the present Congress only 110 by August 10, 1951. Quantity, of course, is very poor gage of a legislature's performance. However, on a qualitative basis the record is perhaps even less favorable to the present Congress, as indicated by the nature of the recently enacted controls bill. The President is said to be so chagrined that he is contemplating a barnstorming trip around the country as a method of putting pressure upon Congress.

The primary cause of the disappointing legislative record to date is the lack of cohesiveness within the majority party. The

administration has a majority only on paper. Actually many Democratic Senators and Representatives from the South are hostile to most of the administration's domestic program. But this is not the whole trouble. Mr. Truman has failed to supply the cohesiveness that is needed to hold his party together. Even many legislators who are in sympathy with his program have lost all incentive to cooperation. For example, Senator DOUGLAS has been alienated by the President's stubborn insistence on appointing to the Federal bench in Illinois two men who are far less acceptable to the bar than the candidates recommended by the Senator. Senator GILLETTE had a similar experience. Senator FULBRIGHT has not been happy about having his good work in the RFC investigation called asinine. In considerable part the gulf between Congress and the White House is of the President's own making.

Can this situation be remedied by a stumping tour to arouse public sentiment? We doubt it. Any direct assault upon Congress under its present leadership would probably add bitterness to the present lack of confidence between the White House and Capitol Hill, for the President would in effect be assailing the legislative leaders of his own party. The immediate result might be less (and worse) legislation. And the hope for long-range improvements would be slender, for this would involve the replacement of legislators who are dragging their feet, and, as President Roosevelt's efforts showed in 1937, any White House campaign to "purge" members of the President's own party is likely to backfire.

Indiana Must Have Additional Federal Judges

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder of the Gary (Ind.) Post Tribune reveals Indiana as an "orphan" State in the Federal Judiciary Department.

A number of States in the Union with one-half of Indiana's population have twice as many Federal judges. The Federal court docket in Indiana is so congested with pending cases that it would take several years to clear the docket if Indiana had two more Federal judges. One of Indiana's two Federal judges has been in the hospital for several months by reason of overwork.

ANOTHER JUDGE FOR INDIANA

A third Federal judge for Indiana would be provided by a bill just approved by the House Judiciary Committee. The new jurist would be a "roving" judge, serving as needed in both the northern and southern districts.

On the basis of comparative figures, Indiana should have the additional judge. Fourteen States smaller than Indiana have three, four, or five judges. Each of the Hoosier districts has about 2,000,000 population, while the average Federal judge in the Nation serves about 640,000 people.

There's Illinois, for example, with not quite twice the Indiana population but with 12 Federal judges. Because of the overload of work on the two Indiana courts, it frequently has been necessary to call upon an Illinois judge for help.

The average case load for the Indiana courts is 418 annually, as against a national average of 205. The southern Indiana district last year had the heaviest load of any district court in the country, and the northern district was far above the average. Judge Luther M. Swygert, of Hammond, is off the bench now because of illness blamed on overwork.

Probably many Federal judges aren't working up to capacity; extra courts often have been created in the past as nice bits of patronage—judges are appointed to lifetime jobs at quite satisfactory pay. But it does appear that Indiana has been getting short-changed in the judiciary business.

The "roving" judge proposed in the Senate bill would be a welcome helper to Judges Swygert and Steckler. However, it's doubtful if that would be a long-range solution to the problem. There probably should be four Federal districts in Indiana with a judge permanently assigned to each.

The Late Quintus E. Camp

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, yesterday the disabled veterans of this country lost a loyal friend in the sudden passing of Quintus E. Camp, who was the assistant national director of claims for the Disabled American Veterans.

Mr. Camp was a disabled veteran of World War I, who had devoted all of his life since 1919 to the cause of the disabled and their dependents. He was a native of Toomsba, Miss., and had held every post in the Gulfport, Miss., DAV chapter. In 1923 he became national service officer for 11 Southern States with offices in New Orleans.

In 1934 Mr. Camp was transferred to the Washington office of the DAV, and in 1935 he became claims and appeals representative for the American Legion. He was made a member of the rating schedule board of the Veterans' Administration in 1944, and a year later became assistant national director of claims for the DAV.

Members of the Committee on Veterans' Affairs have depended a great deal upon the advice and judgment of Quintus Camp. His wide experience and broad knowledge of the technicalities of veterans' claims was invaluable in the consideration of legislation. He testified many times before our committee, and always commanded an attentive and interested audience.

He was a kindly man, as thousands of disabled veterans can testify. He loved his work and died doing it. He passed away in his sleep yesterday while attending the national convention of the Disabled American Veterans in Milwaukee, Wis.

All who knew Mr. Camp will miss him greatly. To his widow goes the sympathy of hundreds of friends they had made during a long, happy life together.

German Competition With American Industry

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. CURTIS of Missouri. Mr. Speaker, I should like to introduce into the Record the following letter which I received from Mr. Walter Siegerist, a constituent of mine from St. Louis:

Thank you very much for your letter of May 31, and also the copy of the Department of Commerce letter of May 16.

I am glad to note from the Department of Commerce letter that they have received similar complaints, as they call them, from other United States firms. However, they really have not added very much in the way of additional information, because we had already learned from our own experience that deliveries of the German firms are rather extended. I might add that we have been offered such things as roll forgings for our straightening machines at prices that are about 60 percent of the United States prices, these prices are delivered in St. Louis, however, we are not interested in bothering with these items of German manufacture because of the uncertainty of delivery, the uncertainty as to the quality of the goods, and thirdly, the extremely long delivery they always offer.

I am greatly chagrined, however, by what seems to be a lack of understanding on the part of the Department of Commerce. I refer to the statement as follows: "with respect to the constituent's comments about prices paid for raw materials by German firms, it is important to keep in mind that the west German recipients of raw materials are charged the full landed cost in German currency, whether or not the materials are ECA financed." I am aware of this practice, as a matter of fact, this is true for all ECA operations in all other countries but the Department of Commerce should learn some day that a Nation's economy is no different than an individual's economy. If all of the credits added together do not equal the amount owed, then there is a deficit and, if somebody doesn't make up the deficit, the individual or the nation must get busy and produce more or do without, because eventually it will not be possible to continue to get things without paying for them. I believe that I have a good understanding of what is going on in Germany, because, as you recall, I spent my own money to go to Frankfurt to have a whole day's conference with the Joint Export-Import Administration (JEIA) at their request on this very subject of the dumping of German goods all over Europe.

I think that the question to ask the Department of Commerce is what difference does it make how many German marks the recipient must pay for the goods if these German marks do not reach the manufacturer who delivered the goods. Furthermore, the \$64 question is, Who determines what the full landed cost of the raw material price is, expressed in German marks? This is the one question I finally pinned down when I was in Frankfurt. There is no answer that will stand up under a free-trade definition. The answer is that some official or committee of JEIA decides what the landed cost in German marks is.

You and I know that if the German people would be required to pay all of the cost of the expense of the occupation, plus all other costs, then they would be required to price

their exports so that they could balance the German marks received for the export against the German marks they must pay out to get the raw materials. At the present time, the United States taxpayer is making up a very large portion of this lack of balance, plus all of the expense of the United States occupation, plus 90 percent or more of the expense of the French and British occupation. That is why every manufacturer in the United States is being sold down the river by our Government when he loses an order to a German manufacturer regardless of what part of the world he loses it in.

I came to the conclusion after my visit to Frankfurt in 1948 and I still am of the same opinion regarding this export trade matter that we will have difficulty as long as the following procedure exists.

1. The German manufacturers have the know how to manufacture certain special machinery and machine tools that they have always been accustomed to furnish to the industries in the continental countries, Great Britain, and to some extent in the United States.

2. The French-, German-, and United States-occupied areas of Germany still manufacture practically the same items they did before under the classification of peacetime products. Only the so-called implements of war are forbidden.

3. The processes of foreign trade have not changed. When one country delivers something that crosses the border into another country it is essentially a barter transaction. Germany delivers a machine to Switzerland to the Von Moos Iron Works, where my company recently lost an order for a centerless bar turner. The Von Moos Iron Works bought this machine because they could purchase it at between one-third and one-half of the price of the American machine. It is true that the delivery time was somewhat extended, but they anticipated their needs more than 12 months in advance and, therefore, delivery time was not so important.

4. The Germans have a signed contract, the German manufacturer named his price in German marks, we will assume that 18 months have passed and the machine has been shipped out of the British section of Germany into Switzerland. Now what happens. My understanding is that the German manufacturer could not get permission to ship the machine until he got a license from JEIA. Therefore, the British give him his German marks at the time the shipment is made or whatever time it is agreed upon, but, nevertheless, the German manufacturer receives German-mark credit. He perhaps now gets credit through the British either in pounds in London or in Swiss francs in Switzerland. However, in 1948 he could not get credit in Swiss francs because the British wanted the Swiss-franc credit. Therefore, the German manufacturer got British-pound credit.

5. The German manufacturer now has some British pound credit. He wishes to buy raw material or even finished material. It is true that he will pay for this on the basis of the landed cost in German currency but it is all a farce because some JEIA committee or official supervised the granting of the credits in the first place and who, I ask you, determines the value of the German mark with reference to other currency?

The only conclusion I can reach is, that you can't beat this game as long as the British and French, plus our naive Fair Dealers are mixed up in it.

With best personal regards, I am,

Yours very truly,

WALTER SIEGERIST.

P. S.—It might be interesting to learn from your brother in Zurich, how many French and British are "holidaying" in Switzerland this summer. I was astounded

at the number that were there in the summer of 1948. Put this down as a fact, every vacation spent abroad by a national of a nation receiving a hand-out from the United States is paid for by the United States taxpayer or by an increase in our national deficit.

Why Not Subvert the Soviet Union?

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, the weak, defensive position taken up by Secretary of State Acheson that we must not dare attempt to subvert the Soviet Union finds little support from people who have studied the possibilities of psychological warfare.

I include herewith an article by Paul M. A. Linebarger, which appeared in the April 1951 *Nation's Business*. Mr. Linebarger served in the Psychological Warfare Branch of the Military Intelligence Service in World War II:

HOTFOOT FOR STALIN

(By Paul M. A. Linebarger)

How much do you think it costs Russia to scare the United States, including you and me? Has it ever occurred to you that the Politburo is waging a fantastically cheap war against us? They are—because it is not only the Red Army that is frightening us, but the Communist use of satellites and fifth columns throughout the world.

It's a thrifty business, this Red subversion. So thrifty in fact that it's possible the Communist movement in the United States, far from costing the Russian people or Government any money, actually has shown a net profit to the world Communist movement.

But this isn't the only way that Americans pick up the tab. Parrying these Russian attacks with such weapons as the Marshall plan, ECA, point 4, and military aid runs into billions of dollars. It is rare for our expenditures in these categories to be less than \$1,000,000 per country aided per year.

Why is there such a tremendous disproportion?

Why can the Russians start sedition, subversion, or armed insurrection for a few hundred thousand dollars and have us spend billions in warding it off?

The answer is simple: Revolution is cheap and war is expensive. Starting trouble costs very little money. Meeting trouble or suppressing it costs a lot of money. As long as the Russians are attacking and we are defending, the disproportion will remain. Somebody could argue, "Why don't we spend the same kind of money on the same kind of thing?"

The catch is obvious. Subversion is an offensive weapon, not a defensive one. It operates against settled communities. We cannot counteract one fifth column with another. Therefore, except for limited cases, no matter how cheap and attractive the opportunity may seem, we cannot do much if we confine ourselves to our own or allied territory.

Subversion operates against the status quo, against life-as-usual. Therefore, if we are going to attack low-cost Communist subversion from our side, we've got to do it in their areas. This means attacking them by subversion, either within the U. S. S. R. or in

the satellite countries. Once we do this, we shift from high-cost orthodox warfare into low-cost subversive activities.

Why haven't we done this? Or are we doing it so secretly that the American people themselves don't know it?

Take the second question first. I don't think we are doing it, at least not on an effective scale. Subversion is secret, but its consequences are not. If we had a fifth column inside Russia, the Soviet Union would be screaming much more loudly about American spies and counterrevolutionaries than it is now doing. Furthermore, we aren't likely to have a fifth column abroad unless it is supported by the people at home, not only financially, but morally. We couldn't have a secret war so successful that its results were secret.

Suppose we don't operate inside Russia now—why don't we? There are several reasons which can be epitomized like this:

1. Subversion is unfriendly.
2. It is not nice.
3. Americans don't believe in interfering with other people's lives.
4. We can't do it.
5. We should use the Army, Navy, and Air Force instead.

Let's take these arguments one by one. Perhaps it would have been too unfriendly of us to have planted a fifth column inside Russia a few years ago when she was getting her networks in shape within the United States and Canada. I don't see how anyone could support this argument now.

Again, some officials say that revolutionary techniques are not nice. But subversive techniques at least avoid mass battles. The cost of subversion in nerves is great. Measured in number of lives lost, it is not so bad.

The idea of noninterference is also obsolete. Interference is already occurring. Washington and Moscow are acting as poles of power and there is not much neutrality left anywhere on earth.

Another objection is based on the assumption that Americans can't do the job. This line is silly. Plenty of Americans already have learned the job.

For example, Col Ray Peers was in command of the hush-hush OSS Detachment 101 which operated with Lt Gen Joseph Stilwell's very loose permission in Burma. He started with only 20 Americans and at war's end had accounted for 5,447 Japanese. The secret of his success lay in rallying the wild jungle people of North Burma, giving them arms and elementary indoctrination. The Kachin tribesmen learned so well that they not only shot up a whole Japanese division during the war, but still are intermittently shooting up the present Government of Burma.

Dr Gordon Seagrave was convicted recently of treason by the Burmese Central Government for having given medical aid to Kachin rebels, who were first brought into being as a military force by the few dozen OSS agents sent in to raise a disturbance behind the Japanese lines.

There was the case of the imaginary "Commander Norden" of the United States Navy who performed the amazing radio feat of talking German U-boats up from the depths of the Atlantic to surface and surrender when their craft became damaged, rather than fight to the end as the Nazis Government had expected them to. This was one of the "special operations" undertaken by the American Navy's secret outfit headed by Rear Adm. Ellis Zacharias.

Zacharias used a brain trust of two brilliant Hungarians, Stefan Possony and Ladislav Farago. But in both the cases cited above the commanding officers were Americans—Zacharias an Annapolis graduate and Peers a regular Army man.

We don't even have to use regular military personnel. Preston Schoyer was one of the

most dangerous men in Japanese-held eastern China during World War II. With the help of Chinese unfriendly to the Japs, he circled around and around the outskirts of occupied Shanghai, tying up hundreds of Japanese in the search for him and creating the illusion of secret American forces deep within enemy territory.

Schoyer was a member of our air rescue service and his job consisted of trying to get American pilots out from behind Japanese lines. In peacetime, he is an instructor in English literature and a novelist.

Another American—whom I cannot name because he has friends whom Communists might punish—operated entirely as a civilian. This man somehow or other accumulated 20,000 armed local boys under his personal command in China and was busy fighting both the Axis and the Communists, even then active in the area.

There's no end to the stories that can be told about adventurous Americans. Under the name Carmichael Smith I published a spy story called *Atomsk* about a nervy American, who looked like a Japanese, getting in and out of a Russian atomic plant 2 years ago. Soon after the book was published I talked to an American officer whose real-life exploits had topped the wildest adventures of my imaginary hero. When I told him what my spy novel had been about he said:

"You couldn't get anybody to believe that. It's too wild * * *."

All this officer had done was to ride around on trains in enemy territory, stealing documents by the process of walking into enemy headquarters, picking them up, putting them in a briefcase, and walking out. His work was technically espionage, but the knowledge that he existed, conveyed to the enemy mind, was a form of psychological warfare.

Americans can do the job. We have Americans of every size, color, language, and skill—Japanese-Americans, Russian-Americans, Ukrainian-Americans, Hindu-Americans. There isn't any kind of American we haven't got.

So why insist that we fight with armed forces only? Revolutionary techniques can fill in a tremendous gap between our global commitments, for one part, and our military, logistic, and financial capacity to put actual armed forces around the Soviet Union, for another part. Half a billion dollars is very little money in orthodox military terms.

Russia's downfall could be gotten ready by the use of three instruments: (1) Political warfare; (2) white psychological warfare; and (3) black psychological warfare.

Political warfare consists of the use of politics to supplement the winning of war or to achieve purposes comparable to those usually accomplished by war.

White psychological warfare is the term for propaganda carried on in the open.

Black psychological warfare is the trade name for secret propaganda, waged either by disguised agents or by other clandestine means.

What could we accomplish with \$500,000,000 spent on black operations directed against Russia and her satellites?

Let's guess at the budget. Three armed rebellions at \$50,000,000 each; another good-sized underground just short of rebellion for \$50,000,000. Forty major political conspiracies at \$2,500,000. Twenty thousand rumor-mongers, saboteurs, assassins, racketeers, and other revolutionists at an overhead cost of \$20,000 per man. These are guesses, but they are pretty good guesses. Would \$500,000,000 be worth while?

No. It would be a complete waste if money alone is spent. We can't buy enthusiasm. We can't buy hope. We can't buy martyrdom or heroism. We can get these intangibles only by offering the offensive spirit ourselves, only by being willing to look beyond the downfall of the Communist regimes to a good world for the whole human

race. The moral effect, the nervous and emotional wear and tear of deciding to support our own fifth columns against Russia would be substantial.

For \$500,000,000 plus enthusiasm, on the other hand, we could launch a massive and terrifying campaign of political, white, and black psychological warfare and some economic warfare against Moscow.

Even if we did not stop Russian aggression for the time being, we could cause it to falter. By taking the offensive we could make the U. S. S. R. and its satellites spend big money in meeting our small money. Increased police measures, lower economic production, higher defense budgets, greater security expenditure, wider and more wasteful deployment of troops and police—these would be some of the initial results of Americans giving a hotfoot to the Politburo.

Political warfare could support anti-Soviet governments-in-exile for all the iron-curtain countries. Take one example.

The world needs a democratic Russian Government very badly. Obviously such a government cannot be set up in Russia in the face of millions of informers, spies, militarized and special police, but an anti-Stalin government could easily be set up outside of Russia. Even if Russia's seat in the United Nations were not given to the new government, it could at least send its own delegation to protest in proper form every time Stalin's delegate opened his mouth. The Russians themselves have a case against Stalin, and if they know that others outside of Russia are encouraged to work for their liberation, we may get a real reaction.

We even have our choice of leaders for such a democratic Russian Government. In the United States we have the last legitimate president of Russia, Aleksandr Kerenski. He represents the first wave of refugees who left after World War I. Then there is Constantine Boldyreff, another leader who left after World War II. There are hundreds of others.

Often governments-in-exile can exist on the basis of recognition by only a few governments. The Royal Hungarian Government is, for example, still recognized by Franco Spain. The Spanish Republican Government is still recognized by Mexico. Recognition helps the governments-in-exile to keep going. Such exile governments send their own spies back to home territory to obtain information, sabotage military preparations, rescue political prisoners or captive workers, and provide a safe haven for defectors.

Along with prodemocratic governments, we could help set up friendly armies from the iron-curtain countries. We would challenge the Reds with the presence of a liberation force which might be turned against them and set up a way to support those who escape from Communist dictatorships.

What can we do with Polish majors, Russian lieutenant colonels, Bulgarian captains who come over to our side? What can we do with members of the Red secret police who are fed up with the totalitarian way of life? Such men would find our democratic, free enterprise society bewildering. If they could join armies on our side for a while, it would ease the shock of leaving their friends and families. General Anders' Polish Army and the Russian Liberation Army could be reconstituted almost immediately; many staff and commanding officers survive. Other units could be added.

Communism is multinational. Many armies will be needed to stop and to defeat it. America should not be so proud that it tries to maintain a monopoly on dying; if other people want to shoot Communists, too, we can help them get set.

A few months ago I talked with a prominent Communist political officer who had just deserted the cause and who was temporarily locked up, for his own safekeeping,

in the military prison of an anti-Communist government. I said:

"Don't you realize that many other Communists have had to leave communism for reasons of conscientiousness? Don't you realize there are many others like you who have seen the cruelties and mistakes of Stalin and who would welcome you in carrying on the real fight for human decency and the welfare of the common people of the world—the fight against Stalin?"

The man's eyes shone. He almost looked as though he were going to cry, saying, "No, no, I never heard of them. . . . Where are they . . . ?"

Another technique consists of splitting the Communists apart from each other. Tito already has broken loose from the dictatorship of Moscow. Another Communist leader, now living in retirement on Formosa, is the last president of the Chinese Soviet Republic, Chang Kuo-tao. President Chang did not salvage his brand of communism from the clutches of Mao Tse-tung.

Perhaps it is not too late to help turn the Chinese Communists against Moscow. Communist leaders both big and little break away in the satellite countries almost every week. Country by country the United States would have a major decision to make.

Should we support the all-out anti-Communists like Kerenski and Boldyreff, or should we help the heretic Communists like Tito and Chang Kuo-tao?

In Burma, India, and Ceylon there are rebellious factions of the Communist movement; in Hungary, Bulgaria and Czechoslovakia there were. The Communist schismatics in Eastern Europe did not, with the exception of Tito, obtain our effective help in time to stay alive.

In many situations we might find it necessary to support secretly or openly both the anti-Communists and the schismatic Communists for the time being.

White psychological warfare could take the form of the Voice of America for example. The Daily Worker is an example from the Russian side. In each case the source of propaganda is what it professes to be.

This type of warfare can supplement subversion. It can encourage the overthrow of dictatorships. It can promise a point of refuge. It can boast about the clandestine operations without giving them away.

Without adding anything to its present budget, the State Department—under its Voice of America program—could boast about the effectiveness of the espionage sabotage, subversion, and other activities carried on behind the iron curtain.

When I was one of a small group of Army officers detailed to the Office of War Information policy center during the war, I found that one of the allied themes most certain to get a heated axis response was the statement that we had friends in their territory.

Right now Mao Tse-tung's radio is boasting about how many thousand American-inspired spies the Chinese Communist police and army are catching. What would happen if they came to the point where they really believed that a big American-supported revolutionary network was moving into China? At the other end of the Communist world it's the same story. The trials at Budapest, Bucharest, and Prague keep harping on the theme that capitalism has corrupted once-honored Communist leaders. If we give them a taste of the reality we can count on them to expand the story themselves.

Black psychological warfare would involve either Americans or anti-Stalin Russians publishing underground newspapers within Russia. Combined with political warfare, it would attempt to organize Russian intellectuals, technicians, workers, and peasants into conspiratorial groups designed to overthrow Stalin with or without the help

of the United Nations or American Armed Forces, when the time came for Russia's liberation.

In specific cases, sabotage, assassination, and similar methods might be needed. The value of subversion lies in the effects to be derived from it.

Black psychological warfare could do to Russia exactly what she is doing to America, while giving the Politburo no more legal grounds for war against us than we already have for war against international communism.

Finally, economic warfare techniques would supplement these other open, semi-secret, and secret methods of attack-short-of-war. The Russians are known to have printed excellent counterfeits of United States currency. They are known to have sabotaged factories, to have encouraged the destruction of raw materials, to have promoted economic chaos within non-Soviet countries. Americans are just as bright as Stalinist Russians and anti-Communist Russians are probably brighter, when it comes to working on Russian territory, than either Americans or Stalin's career boys.

There is no trick in the whole Communist arsenal of subversion which we could not match if we decided to do so.

Such a program could start with \$500,000,000. That amount spent on ordinary weapons will produce three divisions at the front; with economies it might produce five of six. But \$500,000,000 for subversion would have the effect on Communism of at least 30 American divisions.

With that sum we could turn the cost accounting of black strategy the other way around. We could let the Russians spend the big money fighting our little money. We could let them wonder about where we were going to strike at them next.

Not only where, but at whom? And with what? And through whom? And when? And why?

If we spent \$50,000,000,000 on defense. I suggest we spend one one-hundredth that much on the revolution for freedom. The methods might not be tidy, but the goal, a free and democratic Russia in a wholly constitutional and war-free world, is worth almost any price the human race is able to pay.

William Randolph Hearst

EXTENSION OF REMARKS OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. VELDE. Mr. Speaker, we were saddened to learn of the passing of William Randolph Hearst, Sr., the renowned newspaperman, author, and legislator.

Mr. Hearst was one of the early pioneers of our great and ever-expanding newspaper and publishing business. He was a devout advocate of the free-enterprise system, and dedicated his life to freedom of expression as provided for in the Bill of Rights of our Constitution. Mr. Hearst's life was a very rich and full one, studded with innumerable good deeds and worthy accomplishments.

To the bereaved Hearst family, I would just like to say that your profound loss is being shared not only by the great enterprise William Randolph, Sr. represented, but by the Congress and all the American people as well.

International Kiwanis Convention Adopts Timely Resolutions

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. DOYLE. Mr. Speaker, under unanimous consent heretofore granted me, I am pleased to herewith call to your attention and the attention of each and every Member of the Eighty-second Congress, the resolutions which were adopted by the thirty-sixth international convention of the International Kiwanis at St. Louis, July 17, 1951.

Having been presented with the first past-president's pen of the Long Beach, Calif., Kiwanis Club, and having been a member of that club for many years, I am not unmindful of the very inspiring and constructive patriotic devotions of the rank and file members of the International Kiwanis.

In addition to the text of the following resolutions, I find that the annual report of the secretary, O. E. Peterson, shows amongst other things, as follows:

Monthly club reports vibrate with thousands of such heartwarming examples of Kiwanis in action. Typical of the innumerable services rendered by clubs the past year are such items as those: Over 2,138,000 young people were provided with supervised recreation; nearly 10,000 baseball and other athletic teams were sponsored; almost 61,000 youths were helped through conservation of hearing activities; 7,033 juvenile delinquents were assisted, 3,298 scouting and camp fire units were sponsored, or an average of one per club.

In the field of community and national services we find nearly 42,000 Kiwanians serving on local school boards, hospital boards and other civic boards; over 140,000 farmers entertained at Kiwanis-Farmers meetings; 2,235 separate activities promoting economy in government, 2,087 physically handicapped persons employed; Government savings bonds sold by Kiwanians exceeded \$7,500,000; over \$9,750,000 raised for the Community Chest, Red Cross, polio, cancer and tuberculosis.

The resolutions follow:

RESOLUTIONS ADOPTED BY THE THIRTY-SIXTH ANNUAL CONVENTION OF KIWANIS INTERNATIONAL AT ST. LOUIS, MO., JUNE 20, 1951

AGGRESSIVE CITIZENSHIP

Whereas we are the trustees of freedom in our land and in our time, and upon us fall the duties, the responsibilities and the opportunities of preserving and maintaining our individual liberties and democratic institutions; and

Whereas democracy at home can be lost by default if, through apathy, indifference, neglect, we fail to make intelligent use of our elective franchise; and

Whereas in this crisis of our nations, greater efficiency in government, balanced budgets, and the elimination of nonessential expenditures become vital to our continued free existence; and

Whereas it has been demonstrated through the valuable services of the Hoover Commission in the United States that great possibilities exist for the promotion of economy and efficiency in our governments but there still rests upon us as citizens the duty to create and sustain a reawakened public conscience that shall serve as our safeguard

against unnecessary governmental expenditures: Now, therefore, be it

Resolved, by Kiwanis International, That we foster a better understanding and appreciation of our voting privileges and urge that every citizen vote in all elections; that we insist upon the elimination of unnecessary governmental functions and other waste; that we renew our demands that the recommendations of the Hoover Commission be made wholly effective and implemented.

ORGANIZED CRIME

Whereas the disclosures of the Kefauver committee of the United States Senate and other agencies have revealed corruption of public officials and law-enforcement officers, and the existence of organized crime operating defiance of law and public decency: Therefore be it

Resolved, That Kiwanis International, through its clubs and members, maintain a sustained effort to induce all legislative bodies to enact effective laws to prevent these illegal and immoral practices and to enforce severe penalties on all those guilty of such offenses.

INTEGRITY IN PUBLIC OFFICE

Whereas the investigations of the Fulbright committee of the United States Senate have revealed practices among officials in Government which are base and mercenary and in flagrant disregard of public welfare: Now, therefore, be it

Resolved, That Kiwanis International vigorously condemn all such misuse of official influence and power; and be it further

Resolved, That Kiwanians awake from general complacency and fulfill their citizenship responsibilities by denouncing the improper use of public office and by seeking the election and appointment of men of unquestioned honor and probity.

INFLATION

Whereas the present inflationary trends are recognized as a serious threat to national solvency and the security and well being of our people: Therefore be it

Resolved, That Kiwanis International commend those legislative committees and individual Members of Congress and Parliament who are endeavoring to eliminate and curtail unnecessary and extravagant budget items, and that we extend to such representatives all possible encouragement and support by refraining from all demands upon governmental bodies which tend to cause unnecessary governmental expenditures, and be it further

Resolved, That we urge all citizens to accept their responsibility to make this resolution effective, working together as partners in our economic system and avoiding all such action as will lend impetus to inflationary trends.

COMMUNISM

Whereas there are many subversive forces seeking to overthrow the Governments of the United States and Canada; and

Whereas Kiwanis International has always opposed and vigorously continues to oppose communism in any form; and

Whereas these subversive groups attempt to use the names of outstanding people and organizations of unquestioned integrity to further their unlawful purposes: Be it

Resolved, That we urge all Kiwanians and Kiwanis clubs to investigate thoroughly all organizations, committees, and individuals asking support or endorsement before permitting or countenancing the use by such bodies of individual endorsement or sponsorship by Kiwanis; be it further

Resolved, That we cooperate with the proper authorities of Canada and the United States in reporting any subversive activity which may be dangerous to the internal security of our respective countries; and be it further

Resolved, That we urge the support of the general public in banning Communists from Federal, State, provincial, or local governmental payrolls, and from offices or positions of public trust.

UNITED NATIONS

Whereas history shows that peace is the product of law and order; and

Whereas disarmament and world peace can only be achieved by world order under international law; and

Whereas the United Nations as presently constituted, although it has many notable accomplishments to its credit, lacks authority to enforce its orders and decisions, and under its present charter is incapable of restraining any nation which may foster, foment, or wage war: Be it

Resolved, That Kiwanis International reaffirms its complete confidence in the purposes of the United Nations, and gives wholehearted support to its ideals, aims, and objects, and calls upon the leaders of Government in the United States and Canada to initiate such amendments to the United Nations Charter as will strengthen the United Nations, so that it will be capable of insuring world peace and securing to all peoples their right to maintain their own domestic, political, economic, social, and religious institutions, be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the Prime Minister of Canada, and all members of the Federal legislative bodies of both countries.

THE KOREAN WAR

Be it resolved, That Kiwanis International express its deep sense of obligation and gratitude to all who are engaged in the military service of our countries, and our sympathy to those who have sustained casualties; be it further

Resolved, That all Kawanians cheerfully and promptly make all necessary sacrifices to win the war and assure a world at peace.

CANADA-UNITED STATES FRIENDSHIP

One of the principal objectives of Kiwanis International is the fostering of friendship, good will, and understanding between Canada and the United States.

The attainment of this ideal has been made possible by the fact that our peoples have never permitted artificial barriers to stand between them but through personal contacts, cooperative association, and mutual understanding, have reaped the benefits of active individual participation in those human relationships which bring peace on earth and good will among men.

The harmonious relations between the peoples of Canada and the United States are conclusive evidence that common understanding and respect between peoples and nations provide the best answer to problems of international peace and security: Now, therefore, be it

Resolved, That Kiwanis International shall continue to stress as one of its major objectives an increasing appreciation of the benefits which both countries enjoy from the friendly relations between Canada and the United States, and advance this practical example of how two nations and two peoples can live harmoniously as neighbors when each respects the rights, privileges, and achievements of the other.

STATEHOOD FOR ALASKA AND HAWAII

Be it resolved by Kiwanis International, That the admission to statehood of Alaska and Hawaii is in the national interest, and we urge the Congress of the United States to give immediate and favorable action on their petitions for statehood; be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the President of the Senate, the Speaker of the House, and each Member of the Congress of the United States.

LABOR MANAGEMENT

The continued success of our economic system of free enterprise requires the cooperation of labor and management. This cooperation can result only from a complete and thorough understanding of the aims and desires of each group. It is essential that leaders from labor and management meet and discuss in an objective manner their common problems. We believe that Kiwanis should take the initiative in bringing labor and management together. We recommend that Kiwanis clubs actively strive through club programs, labor-management committees and use of the membership classification of organized labor, to bring labor and management into a closer and more harmonious relationship.

INDIVIDUAL ENTERPRISE

Whereas there is a growing tendency in the United States and Canada to substitute state socialism for private enterprise; and

Whereas our countries have achieved the highest standard of living known and afford the greatest economic opportunities to the individual under a free competitive enterprise system which, in two world wars has demonstrated the power and accomplishments of freemen acting through private initiative; and

Whereas there is at present a concerted effort by individuals and groups to substitute state socialism for the present free-enterprise system and democratic form of government: Be it

Resolved, That Kiwanis International does emphatically condemn and deplore this tendency and energetically opposes socialistic encroachment upon all fields of private enterprise as contrary to our way of life. We urge that Kiwanians wage a vigorous campaign of education to expose the false premises of socialism and to impart the knowledge of the benefits enjoyed under a free and independent economy.

DISABLED VETERANS

Whereas we are mindful of the disabled veterans in Government hospitals and at home, and we realize that were it not for the patriotic sacrifices made by these loyal and faithful members of the Armed Forces of these nations, we would not now enjoy the liberties and blessings of free men. Now, therefore, be it

Resolved, That we urge our families and friends to show them greater consideration by more frequent visits and other manifestations of appreciation; be it further

Resolved, That all Kiwanis clubs be asked to broaden the scope of their activities to demonstrate to our sick and disabled veterans that their services were not in vain, that we are ever mindful of their part in the preservation of these nations, and that their sacrifices are continually in our memory.

SAFETY

Whereas the loss of life and injuries due to traffic accidents constitute a great national calamity, and it is apparent that most of these accidents are due to negligence and carelessness, and are avoidable: Be it

Resolved, That all Kiwanis clubs attack this problem on a community basis, giving accident-prevention programs a definite place among their activities; and be it further

Resolved, That we favor uniform traffic laws, their rigid and impartial enforcement, and that driving instructions and safety programs be made a part of the curriculum in our schools.

CONSERVATION

Whereas for the welfare of our nations it is fundamental that we properly conserve our natural resources, make proper use of our soil, and increase the fertility thereof;

Whereas Kiwanis International has for many years encouraged and supported programs looking toward improvement of soil

practices and expansion of conservation methods: Now, therefore, be it

Resolved, That we continue to encourage and support this work and endeavor to obtain a more coordinated and constructive conservation program; that we request our clubs to cooperate in further development and extension of these projects so that our natural resources may be better conserved for the benefit of ourselves and our posterity.

SUPPORT OF CHURCHES

Whereas we are living in an era of unrest and uncertainty when the thinking of national and world leaders is confused because of the stress of national and world conditions; and

Whereas this confusion and uncertainty in material and mundane affairs has permeated the moral and spiritual thinking of our peoples and is having a disturbing effect on their faith in the future and their faith in the Almighty God: Therefore be it

Resolved, That Kiwanis International reaffirm its strong faith in the true and everlasting God and the religious concepts of Canada and the United States; that we reiterate our faith in the future of our homes, our churches, and our schools—the great institutions of our nations; and that we rededicate our efforts to maintain high spiritual ideals in our lands; be it further

Resolved, That Kiwanis clubs continue their active support of the churches and their programs devoted to raising the moral and spiritual level of our peoples; and that all Kiwanians be encouraged to work incessantly through their homes, churches, and schools to renew and to strengthen the spiritual lives of our people, our communities, and our nations.

YOUTH

To the youth of our international sphere will come the task of preserving the ideals of our way of life. Knowing that proper preparation is essential for their work in the years ahead, we hereby recognize our responsibility to assist in their training and education. We pledge the efforts of our clubs in the sponsoring and furthering of youth activities that we may do our part to foster character building, citizenship understanding and leadership among the youth of today—the men of tomorrow.

NATIONAL KIDS' DAY

Whereas National Kids' Day has now become an integral part of the Kiwanis youth program and is a major contribution to the work of the National Kids' Day Foundation: Be it

Resolved, That all Kiwanis clubs are urgently requested to participate in this movement in September of each year and make it an annual project of primary importance in their club program of youth activities, thereby acquainting the public with the interest of Kiwanis in the life of the young people in their communities.

V. I. P.'s

EXTENSION OF REMARKS

OF

HON. JOHN A. MCGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. MCGUIRE. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an editorial entitled "V. I. P.'s," from the Meriden (Conn.) Record of August 13. This editorial points to the shameful exploitation of servicemen that is so prevalent in com-

munities surrounding military areas, a situation that President Truman and many of us in Congress have condemned on numerous occasions:

V. I. P.'s

The President's got something there. When he calls the great body of young servicemen V. I. P.'s meaning very important persons, he hits the nail on the head.

The President made his reference to V. I. P.'s last week when he was dedicating the Presidential lounge in the Union Station in Washington. He dedicated it to the young people who are in the Armed Forces. "We ought to see to it that they have proper recreation, decent housing for their families, and the kind of treatment they deserve in the towns and cities of this country. They have not been getting the right sort of treatment. Let us give it to them," he said.

The President had reference to the prejudice and discrimination raised against servicemen in many areas, especially near large military installations, where men off the post are often exploited. Lack of recreation facilities, poor housing accommodations for their families, and a general bilking by shopkeepers and proprietors of restaurants are among some of the accusations often made by servicemen.

The President's designation of the men in service as V. I. P.'s is a recognition befitting their status, for they are very important persons; very, very important, in the present state of world affairs. And it behooves all citizens to treat them with the consideration, courtesy, and friendliness which they are entitled to.

The Dream of Two Jerseymen

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. HART. Mr. Speaker, no sweeter character has ever blessed the earth with his presence than Joseph P. Tumulty, who served as Secretary to President Woodrow Wilson during his two terms in the White House. Recently there has been published a book Joe Tumulty and the Wilson Era, written by Prof. John M. Blum, assistant professor of history at the Massachusetts Institute of Technology. A review of the book and comments on the character and personality of Mr. Tumulty recently appeared in the Newark Sunday News, Newark, N. J. The article is written by one of its distinguished correspondents, Mr. Henry Suydam, who is thoroughly familiar with the personality and accomplishments of Mr. Tumulty as well as with the political history of Woodrow Wilson. I take pleasure in including in my extension of remarks this article by Mr. Suydam:

THE DREAM OF TWO JERSEYMEN STILL BRIGHT IN MAN'S HOPE

(By Henry Suydam)

It is almost a commonplace that Presidents of the United States, whatever their achievements in the domestic realm, arrive at the end of terms with the hope of being remembered for some outstanding accomplishment in the field of foreign policies.

Without question it is Mr. Truman's ambition, through the United Nations and

western rearmament, to prevent a third world war. It was Mr. Roosevelt's aspiration to win the Second World War, a goal that was in sight before his death. Mr. Hoover will be remembered for his moratorium on inter-Allied war debts, Mr. Coolidge for the Kellogg-Briand Pact outlawing war, as it was hoped; Mr. Harding for the first great effort at limitation of naval armaments and for the attempt to stabilize the political and geographical balance of the Pacific.

The name of Woodrow Wilson will ever be associated with the idea of maintaining peace through international organization. That the United States declined to become a member of the League of Nations and that the League failed to do not diminish Wilson's tragic fame. The vision of Wilson as a peacemaker has become dimmed in some memories, but it never faded in the heart of his New Jersey secretary, Joseph Patrick Tumulty.

ORIGINS

Mr. Tumulty, who went from the Horse-shoe in Jersey City to the White House, via Trenton, is the subject of an excellent portrait from the pen of John M. Blum, assistant professor of history at the Massachusetts Institute of Technology, working under a grant from Harvard University. (Joe Tumulty and the Wilson Era, Houghton Mifflin Co., Boston, Mass., \$4.)

Of the Wilson era an enormous amount has, of course, been written. Mr. Tumulty himself has written about it, in Woodrow Wilson as I Know Him. The late James Kerney, editor of the Trenton Times, wrote Political Education of Woodrow Wilson. These dealt, in part, with Wilson's nomination for Governor of New Jersey in 1910, his difficulties at Trenton, his clashes with some of the leading Democratic politicians in this State, who had helped him to the governorship and his preparations for the Democratic National Convention at Baltimore in 1912, which nominated him for President on the forty-third ballot.

FATHER AND SON

Much of this material is recited in detail in Mr. Blum's book, with special emphasis, of course, on the rise of Mr. Tumulty to prominence, first, in New Jersey, then in the Nation, because of his association with Wilson. The relationship was at the beginning and even in the earlier phases of Wilson's Presidential tenure of the order of the relationship between father and son, for Wilson, despite his final bitter experiences at Princeton, was affectionate and appreciative of the qualities of those close to him. It was not until the harrassments of the White House began to change him that he became suspicious, resentful, and, after his illness, querulous, unstable, unpredictable.

Mr. Blum, author of this new work, was born in 1921. It was in 1921 that Woodrow Wilson, stricken in health, left the White House. Mr. Tumulty retired, too, to the financial compensations of a private law practice. Thus Mr. Blum never saw the subject of his book in the secretarial office.

SPIRIT

Whether he knew Mr. Tumulty afterward, there is no evidence. If not, he has, to a remarkable degree, caught the spirit of the man. Mr. Blum is the first to have been given access to Mr. Tumulty's private papers, and perhaps that is the reason. He has further had the benefit of conversations with several members of the White House staff during the Wilson era, with various of Mr. Tumulty's associates, and with his children.

Still, there was a sensitive, lifting quality about Joe that is hard to put down on paper. He had the mobile face of an actor and much of what actors call "projection." You felt his presence in a room, and it was a good feeling. He exhibited, with middle

age, an appearance of real distinction. He was the most generous of men, even to those to whom he had no reason for gratitude.

Volatile, romantic, and imaginative, qualities without doubt derived from his Gaelic blood, Joe Tumulty had an enormous range of interests. Yes, he was a patronage dispenser, familiar with the ignoble, practical side of politics. But his acquaintanceship at the White House was far broader than political. He was interested in all that revolved around the Presidential office—persons, events, manifestations of human behavior.

He liked personalities of the theater and stage, artists, writers, and, above all, newspapermen. He did not like all newspapermen, but whether he liked them or not, he fought their battle, for he thought a free press was essential to a free government.

GRAND MANNER

In Wilson's time there was but one Presidential secretary, not three as there were from Hoover on. Mr. Tumulty carried out his secretarial duties in the grand manner. Woodrow Wilson was the passion of his life. His unstinted and unquenchable admiration for Wilson withstood all discouragements.

When Wilson died, Joe saw a vision—a vision of peace. It has never faded. Perhaps, please God, Wilson's dream which came to be no less Tumulty's will still come true.

The St. Lawrence Story—IV

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the fourth of a series of articles entitled "The St. Lawrence Story," which appeared in the August 10 edition of the Minneapolis Star. This article relates to the importance of the St. Lawrence seaway and power project in guaranteeing to this country an adequate supply of iron ore:

THE ST. LAWRENCE STORY—GROWING STEEL DEMAND BOOSTS SEAWAY BACKING

(By Leo Sonderegger)

(Fourth of a series)

The final barrier to approval of the St. Lawrence seaway project may be unlocked with a key of iron.

The highest defense officials in the country are rattling this new key in an old lock, and the opposition does not relish the sound it makes.

Much of the seaway debate in recent months has oscillated between two vast magnetic poles. One of these is the Mesabi range in northern Minnesota; the other is the iron hills that rise deep in the Labrador-Quebec wilderness 1,500 miles to the north-east.

Positive and negative currents of argument flow steadily between these opposite poles. The argument principally concerns two sides of a single coin:

How great are the Mesabi reserves, and how rapidly are they dwindling?

How badly do we need the Labrador deposits?

It has been known for a long time, of course, that the iron ore reserves of the Lake Superior region are not bottomless. But

the ravenous demands of the allied war machine in World War II, coupled with steadily mounting steel needs in the foreseeable future, have given the problem a sharper focus.

HIGH-GRADE ORE IS LIMITED

The hills of Minnesota have provided the bulk of this Nation's iron ore for two generations. It is not a simple matter to figure out how much is left. All a layman can do is consult the experts. The experts differ.

Interpretations of what the experts say differ even more. It seems reasonable to conclude, however, that there is a sharply limited reserve of high-grade, direct-shipping ore that can be mined by open-pit methods.

That is the kind of ore the Mesabi Range has been famous for, the kind that is scooped out of the earth, dumped into cars and trundled off directly to the ore ships.

Just how many years' supply of this top-notch ore remains, no one knows. Some experts think it will be gone in 10 years, some add a few to that.

Their estimates express in figures what the mammoth Hull-Rust-Mahoning pit expresses in physical terms: Where a hill of iron rose 50 years ago there now is a 3-mile-long crater dug by man.

DISCOVERIES KEEP PACE WITH MINING

It is true, of course, that ore-supply figures are not static. New reserves are steadily being proven. The discovery of ore has almost kept pace with the mining.

It is also true that Minnesota tax policies encourage the mining companies not to "discover" ore on their land until it is needed for operations. However, there is not much doubt that the days of easy scooping are nearly past.

The mining people have a word they like to use—expansible. The direct-shipping ore is the rapidly expansible kind. If needs suddenly rise, as in time of war, production can be doubled by putting more steam shovels and railroad cars to work.

The other ores, the underground stuff and the middle-grade ore that requires beneficiation, are not as expansible as the direct-shipping ore.

Taconite is even less so, because obtaining iron from this extremely hard rock is practically a manufacturing process.

If the question is narrowed down to supply alone, it is apparent that the Mesabi is going to be producing substantial amounts of iron ore for a long time to come. The limits on taconite are astronomical.

Nevertheless, the fact remains that the hills of Minnesota have been turned inside out and shaken of their iron for half a century. No matter how hard we shake the hills from now on—by scouring bedrock, by utilizing ores of lower and lower grade, by speeding up production from taconite—our blast furnaces will yawn for more than the Mesabi can give them.

DEMANDS FOR STEEL CONTINUE TO GROW

A year ago the annual capacity of our steel industry was about 100 million ingot-tons. It was expected to go up to about 102 million tons by the end of 1952, with a probable rise to as much as 110 million by 1960.

Now, with the Korean war and our mobilization program superimposed upon an expanding economy, steel is expected to hit the 110,000,000 figure by the end of this year. The National Security Resources Board (NSRB) says that by 1960 capacity will be some 130,000,000 tons.

There is a growing shortage of scrap. This means that to turn out 130,000,000 tons of steel in 1960 we will need about 160,000,000 tons of iron ore. Where will it come from?

NSRB figures that the Lake Superior region will be producing about 80,000,000 tons annually at that time, exclusive of taconite.

An optimistic estimate for taconite provides another 15,000,000 tons.

Other domestic sources and the Steep Rock deposits in Canada north of Lake Superior are expected to boost the total to 120,000,000.

Seaway opponents make much of the Steep Rock reserves. Their argument is that as the Mesabi shrinks there will be plenty of ore from Steep Rock and, thus, no real need for the Labrador ore.

There is a lot of contradictory testimony as to the amount and quality of reserves in the Canadian deposits north of Lake Superior. Apparently much of the ore will have to be mined by costly underground methods.

It seems a fair conclusion, after the available evidence has been considered, that Steep Rock is not the answer to the iron problem.

A domestic total of 120,000,000 tons leaves 40,000,000 tons to come out of foreign reserves. The Security Resources Board thinks that deposits in Venezuela could provide half of that by 1960, with places such as Sweden, Chile, and Liberia good for another 4 or 5 million tons.

The big trouble with these sources is that, in wartime, the ore ships would be prime submarine targets. This brings the discussion, in what seaway proponents consider an eminently logical sequence, to Labrador.

FOUR HUNDRED MILLION TONS PROVED IN LABRADOR

The hills there have not been shaken of their iron. They are still green with forest, waiting for the great shovels to begin their work.

The Labrador deposits are rich and large, and rapidly expandable. Some 400,000,000 tons have been proved. Estimated reserves are much greater.

The M. A. Hanna Co., a Cleveland mining firm, and five American steel companies have joined forces with the Hollinger mining interests of Canada to exploit the Labrador deposits. More than \$200,000,000 is being poured into the development.

A railroad line is being constructed from Seven Islands, a St. Lawrence River port town, 350 miles north to the mining concession on the Labrador-Quebec border.

The schedule calls for the first shipments of ore in 1954, with 10,000,000 tons a year moving by 1957. Facilities for a 20,000,000-ton operation are being installed.

The trick is to get the ore from Seven Islands, terminal point of the company railroad line, to the Midwest steel mills.

With the St. Lawrence seaway, huge carriers of the lake type could haul the Labrador ore to the Erie ports that have gulped Minnesota ores for 60 years. Even with the contemplated toll of about 50 cents a ton, this would be the cheapest way of doing the job.

THREE ALTERNATIVES CONFRONT SHIPPERS

There are three alternatives. One is to ship the ore from Seven Island out the gulf and down the east coast some 1,500 miles to Baltimore or Philadelphia. From there it could be transported by rail 400 or 500 miles out to the lower lakes furnaces.

A second alternative is to ship ore in big vessels up the deep channel from Seven Islands to Montreal, transfer it to rail cars there, and trundle it down to the mills.

The third alternative is to transfer the cargo from big ships to canallers at Montreal and send it up the present 14-foot canal route to the Erie ports.

Any of these alternatives or a combination of them would make the seaway unnecessary, the railroad people claim. They contend they could handle the entire Labrador production.

The railroads point out that plans already have been made to ship 10,000,000 tons of

ore from Labrador without benefit of the seaway. The steel companies do acknowledge that they could move this tonnage by using the alternatives outlined above. They are much less optimistic about handling double that amount.

The argument boils down to three elements: the danger of open sea transport, the high cost of rail shipment, and the railroads' capacity. The railroad people don't make a very good case on any of these points.

The submarine danger in time of war is obvious. The cost differential between rail and water transportation is well known.

As for the third point, capacity, the burden of proof rests with the railroads. It is significant that they have no adequate answer to the perennial complaint of a boxcar shortage.

Experience the past winter in Minnesota doesn't argue very well for their ability to transport large quantities of iron ore over long distances. An experimental haul of an intended 3,000,000 tons fell far short of the goal.

The railroads hint at the obvious, which is that interests exploiting the Labrador deposits are pushing the seaway mainly because it would give them a favorable mine-to-mill haulage rate.

The steel companies also recognize the obvious; they admit that low cost transportation is what they are after. But they insist that part of their zeal springs from the hazards of supplying the furnaces in wartime without an inland water route.

That is the main consideration, so far as this Nation's present interests are concerned. Top security officials are convinced that the seaway is the answer. Heavy odds say they are right.

Caught in a Trap

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, home folks just cannot understand why it is that our Representatives in Washington—at least those who profess they are for economy and efficiency in the Federal Government—vote for appropriation bills calling for the expenditure of billions of dollars.

An illustration of why, no matter how determined one may be to prevent waste and unnecessary spending, he is caught in a trap, is found in this week's proceedings in the House which culminated Thursday in the passage of a bill calling for \$56,000,000,000 for the armed services. Now, many of the Congressmen know—they just do not think—they know—that the bill carried several billion dollars which, if good judgment and sound thinking was used, would not be needed.

One example: To aid in salvaging surplus property, the Army asked for \$10,000,000; the Navy, \$4,000,000; the Air Force, \$3,000,000. Have your 8-year-old girl or boy add the three. The result will be \$17,000,000, but in the bill, the request was for \$25,000,000—just a slight error in addition of \$8,000,000. One would think that when this error of \$8,-

000,000 was caught and called to the attention of those handling the bill on the floor, the amendment to make the correction and save the \$8,000,000 would be accepted. But no. We had to have a vote on it. That just illustrates how millions and sometimes billions are appropriated and afterward spent and how difficult it is to cut appropriations.

But you ask if I and other Congressmen know, as we do know, of so much waste, extravagant buying and downright corruption, why did we vote for the bill. The reason is very clear and it is also humiliating.

Over the years, in spite of everything which I, and others of like mind, have said and done—and it has been more than a little—the administration and its advisers have encouraged, harbored, had on the payroll in policy-making positions, Communists whose objective was the destruction of this Government, wasters who insist upon needless spending.

Sincere, patriotic individuals believe that world peace can be brought about if we join, and become subservient to, some Old World organization, aid other nations with our dollars and matériel, participate in wars which it is said would establish peace. The net result has been that we have contributed more than \$117,000,000,000 to aid other nations, that we fought World War II and are now in world war III.

Our men are fighting and dying in Korea. If administration plans go through we will soon have 4,000,000 men in Europe and however much we may deplore and resent our present situation, I and other Members of Congress, cannot refuse to vote the money needed to feed, clothe, and equip our own men who, some without their consent—others despite their protest—have been conscripted to fight abroad.

I want no part of the Marshall-Acheson-Rosenberg program which, to date—unintentionally, if you will—has aided the Communist cause, given China to Russia and if followed to the bitter end, will destroy us as a Nation just as certainly as would Stalin's army if it were victorious.

But, while I will vote funds to protect and aid those of our men who are fighting—even though they fight for other nations—I will not vote away our dollars to aid other nations if and when it is clearly shown that by following such a course we will, as was last week stated editorially in the Saturday Evening Post "by aimless dispersions of power," strip ourselves "of the ability to defend anything."

THERE IS A LIMIT

For the fiscal year which ended June 30, 1951, the Congress gave the armed services \$56,000,000,000. Of that amount \$20,000,000,000 remains unexpended though obligated. Yesterday, the House gave them for this fiscal year another \$56,000,000,000. Today comes the authorization for \$4,800,000,000 additional to build bases abroad. Soon will come a request for \$8,500,000,000 more for foreign aid. I had no part in getting us into this mess—I hope to help get us out. That is better than \$69,000,000,000—but

not all of the program. This is on top of a national debt of \$260,000,000,000. If you are interested, figure your share of this debt. And still there's more to follow. No one knows how much.

If a majority of our people still think that the New Deal, the Fair Deal, and wars abroad are necessary or desirable, I hope they will take at least one more look before election day in 1952.

Floods and Politics

EXTENSION OF REMARKS

OF

HON. FRAZIER REAMS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. REAMS. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD a portion of an editorial in the Toledo Blade of August 10, 1951, entitled "Floods and Politics:"

President Truman is quite right when he charges that politics has had a lot to do with blocking efforts to get on with a comprehensive flood-control program for the Missouri River Valley. He's right, too, when he contends that the people in the States most directly affected will have to play some politics of their own by electing the kind of men who will take the lead in getting congressional action.

If it appears that we're using the word politics ambiguously in this discussion, it's just the inevitable result of an old American custom of assigning an element of approbrium to the word which it really doesn't deserve. For politics actually is the word which best describes the process by which representative government is carried on. That the process may be, and often is, abused doesn't alter the fact that things get done by governments by means of politics or they don't get done at all.

There has been talk of need for a comprehensive Missouri River Valley program for a long time. But because it has been mostly talk up to this time, so little has been done that the most elemental problem—flood control—has been neglected.

This delay is due in part to the fact that it has been impossible to get any agreement among the representatives of the States most directly affected on the kind of program they want. It is due in part to the lack of strong and consistent congressional and executive leadership which insists that something be done. And it is due in part to the fact that the voters of States like Kansas, Nebraska, Missouri—which are right in the heart of the Missouri River Valley—send to Congress the kind of men who scream bloody murder about socialism and paternalism whenever a comprehensive program is mentioned.

If there is to be such a program of flood control and conservation for the Missouri River Valley, which might or might not be patterned after TVA, it must be a single, inclusive plan, administered by a central agency. Experience has proved that there is no other satisfactory method, especially in an area so sprawling.

To secure congressional approval of such a program is going to require political activity on the part of many people. President Truman must apply pressure, practice cajolery, and be as enthusiastic for a Missouri River Valley program when he talks with congressional leaders as he is when speaking for

public consumption. The men who represent these States in Congress must compromise their differences and agree on a program that will meet the area's needs. And perhaps the voters of States like Kansas, Nebraska, and Missouri will have to engage in politics themselves by electing as their representatives men who understand the problem and the need to do something about it.

Yes, floods and politics definitely are related. For it is only through politics that the necessary steps can be taken to do something about preventing floods, instead of bemoaning them after they have happened.

The President's Gift Elephant

EXTENSION OF REMARKS

OF

HON. CLAUDE I. BAKEWELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. BAKEWELL. Mr. Speaker, as every Member of this body knows, the problems confronting one occupying an elective office are numerous and complex. I think that most of my colleagues will agree that the frequency and complexity of the problems increase in direct proportion to the importance of the office and the number of citizens eligible to vote for the candidate. This being the case, I think that we are all inclined to be sympathetic to the problems which confront anyone occupying the office of President of the United States.

The present incumbent of that office has had more than his share. There have been the deep freezes, the mink coats, those in the official family who could not resist temptation to turn a fast buck in the commodity market and others who could not help thinking of the RFC in terms of fees and personal aggrandizement. Then, too, there were those letters which constituted a continuing temptation and a continuous problem.

One would think that such travails would be more than the fair share to be visited upon a single individual. Unfortunately, Mr. Speaker, such has not been the case, for now there comes the biggest of all embarrassing problems—physically, that is—in the form of a Cambodian elephant now en route from the King of Cambodia to Blair House. And Job thought he had trouble!

Now, Mr. Speaker, we are all aware of the external physical limitations of Blair House. Some are even familiar with its internal limitations. I must confess, Mr. Speaker, that I have lain awake at night and devoted many sleepless hours to thinking about how to fit a Cambodian elephant into the confines of Blair House or its limited back yard. Despite these cerebrations, I have found no answer. Therefore, I am all the more sympathetic with the person to whom the solution of this exceedingly difficult international problem will be entrusted. He is truly on the spot.

Although I have not been informed as to the identity of this individual, I

can think of several who are eminently qualified from background, training, and experience. First and foremost is the great panjandrum of the White House entourage—Gen. Harry Vaughan. Truly he would cut an impressive figure seated in an elaborately brocaded howdah atop the Cambodian elephant. What better coign from which to display his manly chest resplendent with the foreign decorations which he has been receiving in such large numbers of late? How dashing a figure he would be en route from his home in Virginia to the White House. What an attraction for the tourists. And what an adornment for parades in honor of visiting dignitaries or in observance of national holidays. Of course there would have to be a mahout to control the elephant and insure the safety of General Vaughan. Perhaps Mr. William Boyle would be available for this chore, although I do believe that his availability might be dependent upon the monthly retainer fee which went with the job.

But, on the other hand, it might be that this is primarily a diplomatic problem involving international relations of a high order. After all, the gift of an oriental potentate cannot lightly be brushed aside or relegated to the ash heap. To do so might cause grave international complications. It might involve us in a war or at least cause a friendly ruler—as a result of hurt pride—to seek solace and comfort from the Red Bear which roams at large behind the iron curtain. That being the case, perhaps it is a problem for the State Department. I am sure that some of the master minds, the bright young men who in such large numbers inhabit that Department of the executive branch of the Government could come up with a solution. Probably some of the junior geniuses who planned and executed our strategy in China since 1945 are now at liberty. I refer, of course, to the "let the dust settle in China, they're only agrarian reformers" strategists. They have held themselves out as specialists in oriental problems. I would like to see what they can do with this one. The solution might be as brilliant as was the one they worked out in China.

Mr. Speaker, I am not alone in my concern over this important impending international incident. Far from it. Many others have cudged their craniums, beat their brains, gestated their gray matter, nonplussed their noodles, and crebrated their cerebellums, all to no avail, in an attempt to find a solution. It is time we turn it over to better minds for solution.

As corroborative evidence of what I have just stated, I would like to include an editorial which was printed in the St. Louis Globe-Democrat for Sunday, August 5, which is as follows:

COUP DE GRASS

On the basis of reports from usually unimpeachable southwest French Indochinese sources at this moment there is en route from the King of Cambodia to President Truman, one de luxe model elephant—either *loxodonta africana*, the kind with the big flapping ears, or *elephas maximus*, the one that looks better than it hears. Whichever,

it is a sort of thank-you note on the hoof, inspired by the President's recent accreditation of Cambodia's first Minister to Washington. That's what comes of being kind to people—they send you beasts and things.

Anyway, now comes the crisis-facing. Blair House being a trifle on the cramped side, what does one do with an uninvited elephant? Is the problem referred to a Be Nice to All Gifts No Matter What Department headed perhaps by Major General Vaughan, or does the President simply dash him off one of those famous notes guaranteed to shrivel anything to desk size? So far Mr. Truman has confined himself to a casual hint about hieing him off to the Washington Zoo. But can you do that to a Cambodian elephant arriving first cabin and with diplomatic certification? Anybody can be sent to a zoo; in fact more people need to be. The fact he would probably be happier there than hanging around Mr. Truman's Federal jungle takes no thought of protocol.

There is, however, one way out of this lethal international situation. Lately Mr. Truman has been losing his zing. His barbs are slipping, no pyrotechnics in his tongue. How can he expect to cling to the White House like that? So how about tethering this ageing, hungry elephant just outside the door. It might remind him of something.

The Oatis Case

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Newark (N. J.) Star-Ledger of August 14, 1951:

UNITED STATES SENATOR MARGARET CHASE SMITH SAYS UNITED STATES MUST RETALIATE FOR JAILING OF OATIS

As a former full-time newspaperwoman, I may be less objective than I should be about the Oatis case—the imprisonment of William N. Oatis, Associated Press correspondent in Prague, whom the Communists of Czechoslovakia have jailed under false charges of spying. But I don't think so. More than just an individual American is involved.

Nothing less than the prestige and the free position of the United States is involved. Oatis was jailed only for doing his job—legitimate news reporting. He was not spying—unless reporting the truth is spying. Of course, in the Communist countries telling the truth has become a crime. And that was the crime of William Oatis.

It is even more than that. Actually, the Czech Communists just wanted to make an example of some American to show the rest of the world how they could kick the United States and its citizens around and get away with it.

The objective is clear—to ridicule the United States through pushing around one of its citizens on charges that the Czech Communists knew the rest of the world wouldn't believe. They didn't want the rest of the world to believe the charges, because the more obvious the mockery of the charges, the more emphatic the slapping that the Red Czechs were giving to the United States.

The Czech Reds, in trampling and reviling the rights of an individual American,

have insulted and defied the United States and every citizen of our country. They haven't hit just William Oatis. They have hit you.

The first step of our country was to make diplomatic complaints. To the Czech Reds this was only a sign of weakness. They slapped us in the face again and rebuffed our complaints with a derisive snarl. Then Congress started speaking up through its Members and in the consideration of resolutions of condemnation.

That is fine. But words are not enough. They roll off the Communist like water off the back of a duck. Action is vital here. The Communists have no capacity for reason or discussion. They have no respect for human dignity. They respect only action that hurts them either economically or physically.

For a muchly maligned State Department, it must be said that it has taken some effective action after its diplomatic words and the words of Congress have failed to make the Red Czechs realize that they are not going to get away with this without retaliatory action. The State Department has moved to curtail trade with Czechoslovakia. And that will hurt because the Czechs need American dollars.

I hope Congress will pass the stiffest possible resolution to let the Czech Reds know they can't get away with it and to encourage the State Department to take faster and stiffer action if Oatis is not released.

We've restricted trade. It may be necessary to cut off all trade with Communist Czechoslovakia to get justice and raise the American flag out of the dirt that they have trampled it in before the whole world. I am sure that if true Czech patriots and leaders like Benes and Masaryk were alive they would feel that way.

Iron Curtain Must Be Pierced

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Drew Pearson, from today's Washington Post:

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

IRON CURTAIN MUST BE PIERCED

(This column was written from Europe which Mr. Pearson is now touring.)

NEAR THE IRON CURTAIN IN CENTRAL EUROPE.—The most important answer to the alarming question put before Congress recently by Secretaries Marshall and Pace—"Will there be war with Russia soon?"—lies in the long stretch of barbed wire extending from the Black Sea to the Baltic which Winston Churchill named the iron curtain.

Most Americans, including the United States Government, have neglected the importance of this barrier between east and west.

We have failed to realize that there will always exist the danger of war with Russia as long as this curtain exists; as long as the Moscow radio can tell the Russian people anything they want about us and the Russian people have no way of knowing the opposite; and as long as there is no free parliament, no free church, no free press, no free public opinion to prevent the Kremlin from declaring war.

We have also failed to realize that even if we fight a war with Russia and win, actually our victory will be temporary unless we can convert the Russian people to friendship with the United States of America. Until we have done that, we shall have to fight wars all over again.

Finally we have failed to realize that Russia has never been conquered by force of arms. Napoleon tried it and got bogged down on the road to Moscow. Hitler also tried it and got swamped in front of Stalin-grad.

But the Kaiser, having been stopped in Latvia, picked up Lenin in Switzerland, put him on a special train with drawn blinds, and sent him to Russia. It was after this that Russia, under a new Bolshevik regime, finally surrendered.

In other words, it was propaganda and politics which really defeated the Czar.

Weather balloons

That is the one reason why I have been hammering home the idea that we should use any and all kinds of propaganda, including weather balloons, to penetrate the iron curtain and get the truth to the people of Russia and the satellites.

No matter what else is happening inside Russia, one thing is certain. Stalin has imposed the iron curtain for the specific reason that he fears contact between the Russian people and the outside world.

He knows and a small segment of the Russian people also know, how American and Soviet troops drank vodka together, toasted their mutual friendship together on the shores of the River Elbe at the end of the war.

He also knows how soldiers of the Red Army who have visited Vienna, Warsaw, Prague or even shell-pocked Berlin, have returned to tell their friends about the culture and economic progress of the free world lying beyond the Soviet border. Some of these soldiers have shown such enthusiasm over the West and such skepticism over communism that it has been necessary to isolate them, following their discharge, from their native villages.

Stalin also knows that when the Nazis advanced into Russia in 1940 the astounding total of 3,600,000 Russians surrendered to the Germans.

We in the West did not know about this wholesale surrender until after we had seized German documents and interviewed German officers after VE-day. But Stalin knew. And he knew that the German Army never would have penetrated Russia as it did if many of the Russian people had not actually welcomed it, and if whole segments of the Red Army had not been eager to surrender.

The Kaiser's army in 1915-17 advanced only to Riga. It never actually reached the soil of Russia proper. Hitler's army in 1940 marched two-thirds of the way across Russia, right down to the Caucasus. In other words, the Czar, with all his tyranny, commanded more loyalty than Stalin.

These are some of the reasons for the iron curtain. These also are some of the reasons why we must make the iron curtain a lace curtain if we are to prevent war; if we are to win permanent peace over a period of years.

Counterpropaganda

Propaganda balloons floated across the iron curtain have their drawbacks. If they disrupt satellite and Russian public opinion enough, the Kremlin is bound to start the rumor that they are carrying bacteriological warfare—germs aimed to ruin the crops of the Communist people.

The Kremlin may also plant a bomb with an alleged propaganda balloon, arrange to kill someone and then claim that Westerners are trying to murder the Russian people.

Some counterpropaganda like this is almost certain to happen. But when two na-

tions suffer such strained relations as the United States of America and U. S. S. R. you can't make those relations any worse, and sometimes revolutionary methods and radical surgery improve them.

Independent States: "Quo Vadis?"

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. DAVIS of Georgia. Mr. Speaker, in this day and time when some would change the watchword of our country to "security" instead of "opportunity," it is reassuring to know that there are still people actively working at the task of preserving America as the land of opportunity and the home of liberty.

The last few years have brought us face to face with the problem Benjamin Franklin had in mind when he said: "We have a Republic, if we can keep it." We are now solemnly asking ourselves the question, Can we keep this Republic which has belonged to us for 175 years? In the period which lies immediately ahead of us, we shall have the answer. If we Americans of this generation have in our make-up the stamina, endurance, courage, and patriotism, which the Americans of Washington's generation possessed, the answer will be "Yes." If we can forget self, if we can regard security in its proper relation to other things, if we can forget ease, idleness, and gain, and plan to transmit to our posterity for generations to come the government of liberty, freedom, and opportunity, which our ancestors established and transmitted to us, then the answer will be "Yes."

If, on the other hand, we cannot look at this thing we call security in its proper perspective, if we cannot look to the future instead of the present, if we cannot think of posterity instead of ourselves, if we will not take the time and the trouble to face the facts as they are and to understand them and then face the sacrifice and hardships which those facts make necessary, then the answer will be "No."

I do not believe that regimentation has replaced liberty in our national conscience. I do not believe that America is willing to trade unlimited opportunity for uncertain security.

I have had the privilege to look at Plymouth Rock in Massachusetts where the Pilgrim Fathers stepped ashore in 1620. I have seen replicas of the crude one-room houses they built there with their hands. The floor was dirt, and they cooked in the fireplace. A ladder led to the loft where the children slept. There was a musket on the wall, and a fence around the fort. This was the only security which they knew, and they furnished this security themselves.

Associate Justice Bond Almand, of the Supreme Court of Georgia, is one of those who understands America and ap-

preciates what it stands for. He delivered an address to the Georgia Bar Association at its annual meeting at Savannah, Ga., on June 1, in which he dealt realistically with these matters. In that address Justice Almand said:

I speak for a hardy race of men and women, who carved out of the soil, forests, and rivers of North America a free and independent Nation—loving freedom and liberty, fearing a just God, and restrained only by a Government of their own creation as to their own conduct which affected injuriously the rights of others.

I know of no one better qualified to speak for this hardy race of men and women than Justice Almand. He has spoken eloquently for them and their descendants, and for us of the present generation. His address is one which should be read and studied by good Americans everywhere. Pursuant to leave granted, I insert his address herewith:

INDEPENDENT STATES: "QUO VADIS?"

It seems to be an unwritten axiom that an appellate court judge should be a tongueless mummy, who is confined to recording his opinions in legal tomes where they are thus embalmed and interred, to be read in most instances only by the lawyer who lost his case. It is said that such a judge may speak on the Constitution, the glory of Greece, the grandeur of Rome, and the price of peanuts in Patagonia. But about politics, religion, or economics, no. On all these subjects, about which he is required to know something, he is required, it is said, to be voiceless.

There are but few general rules without an exception, and without doing violence to the rule or offending those who, in their robes symbolizing a funeral silence, think that judges should only en banc discuss the problems of the State and Nation, I think I have found a ground upon which I might speak publicly upon a living subject. According to law, I am still a lawyer. Before I was a lawyer, I was an American citizen. At my birth I inherited the rights, privileges, duties, and liberties of a Government that my forebears for eight generations, as colonists and Americans, had, through sweat, blood, and tears, helped to create and preserve for my generation. So, speaking as their representative, I bring myself within the exception to the general rule of judicial silence.

I speak for a hardy race of men and women, who carved out of the soil, forests and rivers of North America a free and independent nation—loving freedom and liberty, fearing a just God, and restrained only by a government of their own creation as to their own conduct which affected injuriously the rights of others. For those that built their homes without an FHA loan; that tilled the soil without a government subsidy; that educated their children without public funds; that for 4 years fought for their rights and lived in abject poverty under the bayonets of a military government; who reconstructed their social and economic structures without the aid of a Marshall plan or point 4 program; who knew not of vitamins, penicillin or Hadaool, but with asafetida, calomel and sassafras roots lived on the average beyond their Biblical span; families that supplied the needs of their neighbors when sickness, death and adversity struck; a race sturdy, self-reliant and thrifty, who believe that one was only entitled to what he had earned—not a day's pay for half a day's work—that never had the benefit of Government charity and never wanted it—who in old age never had their mental peace or happi-

ness marred with worries about a monthly pension check, and why "that rich and ungrateful Government did not make it larger."

As one of the inheritors of the benefits and blessings handed down to a free America, I am honored to speak for those who now sleep in peace.

The query topic of this address is taken from an ancient legend, which relates that Saint Peter, fleeing from Rome and away from death, met his Lord Christ on the Appian Way, and said to Christ, "Domine quo vadis," which translated, means, "Lord, whither goest Thou?" "To Rome to be crucified again," was the reply. St. Peter thereupon turned back to Rome and his own martyrdom. Some may say the States, as we understand their powers and functions historically under the Constitution, have already been merged and submerged with the Federal Government, that they are martyrs to federalism, and therefore this subject is obsolete. But though sound principles of government, like truth, may be crushed to earth, they never die, but live to rise again. There is still hope for the return of a government of laws under a written constitution—a government of free and independent States—a government that exists to preserve and protect the individual rights and liberties of all the people against tyranny of political expediency—one that does not exalt the few at the expense of the many—a government that should remember from the basic experience of its creation that taxation with misrepresentation is just as bad as taxation without representation.

In this era, when democratic governments are falling like tenpins to the onslaughts of totalitarian dictators and socialistic dreamers, many thoughtful political students in the United States are apprehensive that the strongest democratic nation on earth may succumb to the ideologies of either state socialism or communism. These fears exist notwithstanding the fact that we have 48 independent States and a Federal Government that governs only by virtue of a Constitution written and adopted by separate sovereigns whose creation and existence is controlled by written constitutions adopted by the will of the people of the respective States. All of the constitutions being adopted by a society that believes in the following principles:

(a) All governments owe their creation and existence to the consent of the governed,

(b) That government is merely the agency to whom the governed have delegated certain powers for their protection and the mutual welfare of all;

(c) That the best society is one that is least regulated;

(d) That inherent in all men are the basic freedoms of life, liberty, and the pursuit of happiness in the individual; the private ownership of property, and that government is instituted to protect these rights, and not to destroy them;

(e) That the right to change the form of government is reserved to the people and is delegated neither to the legislative nor the judicial departments of government.

Today some of the charges made are as follows:

1. The Federal Government is exercising powers not granted to it by the Federal Constitution.

2. The States are no longer individual sovereigns in powers not expressly granted to the Federal Government, but are fast becoming mere voiceless geographical areas exercising only taxing and police powers of local government.

3. That under the granted powers to tax for purposes expressed or implied and to regulate interstate commerce, the Federal

Supreme Court has upheld acts of Congress that have changed our form of government.

4. That under assumed powers, private business and individuals have been so regulated, regimented and controlled by the central government that the basic freedoms guaranteed by the Federal Constitution have been impaired if not destroyed.

5. That by construction and judicial legislation, the Supreme Court has in effect amended the Federal Constitution, whereby the powers reserved by the States have been taken away without a formal amendment to the Constitution.

In assessing the reasons for the complaints we hear today about the centralization of government and the trend toward socialism, the invasion of States' rights—and seeking to find the answer to the question of where we are going, we have divided our subject into four phases: First, the Federal Union of States as conceived by those who wrote the Constitution; second, the assumption of power by the national Congress arising from so-called national necessity and the retention thereof in normal times, with the aid of the Federal judiciary; the atrophy of State power by the States' defaulting in the performance of their duties; and fourth, the need for a rebirth and resurgence of the early American concept that a government of men rather than of laws ultimately leads to man's enslavement.

I

All of you, I am sure, are acquainted with the story and occasion out of which the Federal Union was founded. The Constitution as finally written was a compromise between the delegates of the large and powerful States with the representatives from the smaller and weaker States. The smaller States were apprehensive that if the Federal Government was granted too much power, it would work to the ultimate injury and destruction of the smaller States, and after the Constitution was adopted in convention, before the smaller States would ratify it, they were assured that by virtue of article 10 of the Constitution, all powers that were not expressly granted to the Federal Government would be reserved by the States. The letters of Hamilton, Madison, and Jay, now known as the Federalist, were written and published in the nature of what we today call propaganda, to assure the smaller States that no harm would come to them by reason of the adoption of the Federal Constitution. Though Alexander Hamilton led the fight for a strong central government, the ideas of Mason and Luther, who held the view of Thomas Jefferson, won out over Hamilton in the convention. At that time it was thought that the chief powers that the Federal Government would have to be concerned mainly with were, the raising of armies for national protection; the power to tax for the support of the Federal Government; and the freeing of interstate commerce from restraints and interferences by the various States.

The framers of the Constitution did not reach into the ethereal blue and draw therefrom a new system of government. Nor was the Constitution the result of divine inspiration, although the framers had, in my opinion, divine guidance. That document was written by thoughtful and serious men, who knew the good and bad of all civilized governments that had previously existed. They were acquainted with governments that were ruled by hereditary kings, by ecclesiastics, by emperors, by despots, by military dictators, by pure democracy or mobocracy, and by parliaments. In the creation of the Federal Union by the consent of two-thirds of the 13 States, they sought to create a Federal Government having limited expressed powers and reserving to themselves all the powers not delegated, whereby the National Government would be a rep-

resentative, and not a democratic, form of government, in which the States, as such, would be represented by Senators chosen by the respective States, and the people would be represented by Congressmen chosen by the people of their respective districts. As an independent and separate check on both the legislative and executive departments, they created what was unknown up until that time—a judiciary that would have authority to interpret the Constitution and declare invalid, with finality, the acts of either of those departments outside of the Constitution.

The framers of the Constitution were familiar with the treatises of political philosophers from Plato to Rousseau. They were acquainted with what John Locke had written in 1690: "The legislature cannot transfer the power of making laws to any other hands, for it being but a delegated power from the people, they who have it cannot pass it over to others." The people "retain the supreme power of saving themselves from the attempts and designs of anybody, even of their legislators, whenever they should be so foolish or so wicked as to lay and carry on designs against the liberties and properties of the subject."

II

In the early beginning of our history there was not much litigation in Federal courts, and for the first few years of its history, the Supreme Court played very little part in the formulation of governmental policies. It is said that John Marshall took the blueprint of the Federal Government and was the judicial carpenter who constructed the Federal Government. Certainly, by his opinion in *Marbury v. Madison*, he left no doubt as to what power the Supreme Court had. Though commerce in the early days was confined to business carried over post roads and navigable streams between States, the interpretation of Marshall in *Gibbons v. Ogden* has been stretched and expanded until today any transaction between individuals or businesses that involves the slightest or remotest effect on or concern of interstate commerce or communication has been held to be interstate commerce. It is doubtful that if John Marshall were alive today he would say that the ruling in *Kirschbaum Co. v. Walling* (316 U. S. 517), which holds that the wages and hours of a person running elevators in an office building where a small percentage of the occupants therein were carrying on transactions in regard to interstate shipments, constituted interstate commerce and was subject to Federal legislation, is a direct blood descendant of *Gibbons v. Ogden*.

The charge is frequently made that since 1932 our country has gone through a political and economic revolution, and that practically overnight our form of Government has been changed. Some attribute these revolutionary changes to the fact that we have become primarily an industrial Nation; while others charge that the change has been due to a change in the personnel of the Supreme Court in the last 14 years. We will not pause here to examine the causes of background out of which these charges arise, but since these radical changes have been brought about by reason of approval of the Supreme Court of the United States, which approval was a complete reversal of many previous decisions of the same court, it is important to examine the substance of the last charge.

In the period between 1937 and 1947, there was a complete change in the personnel of the Supreme Court of the United States. Between January 1935, and May 1935, that court declared invalid 11 pieces of congressional legislation, which dealt with conditions growing out of the depression. Practically all the New Deal economic and social program was set aside by the Court as unconstitutional, but when the new appointees

comprised a majority of the Court, on reenactment of the laws which had been declared to be unconstitutional, such reenacted laws were declared to be constitutional. To uphold the Agricultural Adjustment Act, the Fair Labor Standards Act, and the National Labor Relations Act, the commerce clause of the Constitution was stretched to cover all acts or services that were closely or remotely connected with the physical acts of transportation or communication. In *National Labor Relations Board v. Jones & Laughlin Steel Corp.* (301 U. S. 1), it was held "The congressional authority to protect interstate commerce from burdens and obstructions is not limited to transactions which can be deemed to be essential part of a flow of interstate or foreign commerce. Burdens and obstructions may be due to injurious action springing from other sources." How far this doctrine has been carried is illustrated by *Wickard v. Filburn* (317 U. S. 111), which holds that a farmer raising 23 acres of wheat, none of it being produced for interstate commerce, was subject to marketing penalties under the Adjustment Act; and further, by the recent case of *Amalgamated Association of Street Electric Railway & Motor Employees of America v. Wisconsin Employment Relations Board* (71 Sup. Ct. 359), decided January 9, 1951, which held that Federal labor legislation applied to a privately owned utility whose business activities were carried on wholly within a single State and prevented local regulation. The power of Congress to tax for the payment of benefits under the Social Security Act was upheld in *Helvering v. Davis* (301 U. S. 619). Under the interpretation by the Court of the words "general welfare," as contained in article 1, section 8, paragraph 1 of the Federal Constitution, it was held that the concept of general welfare is not static but adapts itself to the crises and necessities of the time, and that the courts should not overrule the determination by Congress of what acts come within general welfare, unless the congressional legislation is plainly arbitrary. Under this interpretation, there are now pending many bills in Congress which would impose many billions of dollars in taxes for the support of many social welfare schemes. By Court decision, the power of Congress to regulate commerce of navigable rivers has been expanded to include the power to control nonnavigable tributaries, on the theory that the water from the smaller streams go to make up a navigable river. *Oklahoma v. Phillips* (313 U. S. 508). So, if you are planning to build a minnow pond on your farm across a creek ankle-deep, that eventually finds its way into a navigable stream, you had better find out first from Washington whether it will consent or not.

It may be true that in a national emergency such as a national economic depression, to preserve the Nation it is necessary that individual rights of citizens be subordinated to the general welfare of all. Such Government action may be compared to the quarantine or isolation of an individual who has smallpox. His right to free movement is restricted until he has recovered, in order to protect those who have not had smallpox, but his restraint ends when he is well again. It is not so with Washington. Laws restricting individuals, regulating business, and the multitude of administrative agencies, when there is no depression, still carry on.

All the radical changes which have occurred during the last 18 years were initiated and enacted by a Democratic Congress and approved by a court whose majority were members of the Democratic Party. This Party was founded by Thomas Jefferson, and the Democratic Party today calls itself the party of Jefferson, and annually pays tribute to his memory, and loudly proclaims that the program of today is the program of Jefferson. This, notwithstanding the fact that in
